93680. Do you select your lodging-houses?—Yes; and I must say one finds, as a rule, that the keepers of common lodging-houses are most considerate and kind to the men whom we send.

93681. In your receiving homes, you have told us that you take the men in for three days, but they may stay longer?—Yes, and they do stay longer.

Receiving Homes.

93682. Do you lose on those receiving homes?—Not at Banner Street. That, which is our largest receiving home, is so well managed by Mr. and Mrs. Hodder, that we do not lose.

93683. I should like now to go to the labour farms for a minute. You had two farms I think you said?—Yes. We had one in Surrey, Green's Farm at Newdigate. That was first used as a place to send inebriates to. We used to take in inebriates who had been sentenced to lengthened terms of confinement in an inebriates' asylum; but we had to give it up, we found it was so expensive, although we were well paid by the authorities responsible for sending the men. It took about twelve inebriates to do one agricultural labourer's work.

Inebriates farm in Surrey.

93684. Do you lose much on your Labour Farms?—I have not had an opportunity of going through the figures, but Mr. Lloyd Jones has prepared a Statement about Hempstead. I ought to say that Hempstead was given to us. It was a derelict place then, and it was in a dreadful state when we had it; but we have used it for the last two or three years as a training home for emigrants.

Church Army labour farm at Hempstead.

93685. Is there any paper put in as regards the results of the labour farm?—Mr. Lloyd Jones has prepared one, and it shall be sent to the Commission. I think I ought to say about that farm that it has been almost entirely used for emigration purposes (*see Appendix No. XI. (F.)*).

93686. Have you got anybody on the other side who looks after your emigrants?—Yes. I know all about the emigration work, because I am the secretary of the Committee; that is my particular work. We have an agent, Canon Renand, at Montreal; and a Church Army

Emigration by Church Army.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones. Captain, Captain Blake, at Toronto. We have another Church Army Captain, Captain Stephens, at Winnipeg.

93687. On the whole, are you satisfied with it?—Perfectly satisfied. After the many statements that were made with regard to the lack of employment in Canada, we wrote out to Captain Blake at Toronto to ask him whether there were many of our emigrants who were out of work. He wrote back to say that only about twelve of the number who had passed through his hands were out of work, and that he was getting work for them. They have done excellently, and they were people as a rule of very good character, judging from the letters we have had. We always take, not a legal agreement, but some agreement from the men that they will repay a proportion of the fare that we advance. During the year ending September 30th, 1907, we received from men who had gone out there over £1,200 on account of the money we had advanced them.

93688. (*Mr. Lansbury.*) How many men would that mean?—We sent out altogether this year a little over 1,500 people, some of whom were women and children who went with the married men.

93689. Shall we have the figures to show the proportion of women and children?—They are given in par. 56.

93690. (*Mr. Gardiner.*) Does that £1,200 refer to the 1,500 persons sent out?—Not altogether; during the year 1907, £5,203 was advanced to persons emigrated, and out of £1,736, the instalment due to be repaid, £759, has been up to Sept. 30th, and £400 since that date. In addition, £456 was received for money advanced in 1906.

93691. (*Chairman.*) Apparently the Farm Colony has been a decided success, judging by the results?—Yes, so far as training the men goes; but it has not been a financial success. As I say, Hempstead was in a derelict condition, but it is now being put into good condition, and we are hoping that in future we shall nearly balance expenditure. The difficulty, of course, is that we have to deal with men who are really not agricultural labourers and that they do not do so much as an agricultural labourer would.

93692. Who are the persons who superintend your Labour Depots and this Farm Colony?—The Church Army captains.

93693. They are influenced a good deal, I suppose, by religious motives?—Yes; but we consider other qualifications as well, because a man may make a very good Evangelist and a very bad head of a Labour Home. We keep a man as an Evangelist who is a good Evangelist and if he is not a good disciplinarian and able to exercise a good influence over the men in the Labour Homes, we do not send him there. We try to pick the men.

93694. It has been represented to us that men and women animated by a religious spirit do contrive to get a remarkable influence over the unemployed; if you were to extend your operations, do you think you would find a lack of persons who are ready to undertake that work?—I do not think we should. I should like very much to see, I will not say Church Army Labour Homes, but Labour Homes managed in somewhat the same way all over the country.

93695. Taking your own society, I suppose your operations have been rather extended of recent years, have they not?—Yes, they have.

93696. Have you found a difficulty in getting the right class of person, that is, a person of a certain practical capacity, who is at the same time animated with this altruistic spirit and a desire to benefit his fellow-creatures?—Are you referring to the committees?

93697. I am referring to the workers in personal contact with the men?—You should understand that those are paid, but they are paid very little. We sometimes find it a little difficult, but we think we could do it.

93698. I suppose you attach very great importance to it, do you not?—Very great importance indeed. May I say with regard to Glasgow that we have a Church Army Labour Home there, and I think the Established Church there has now started a Labour Home which they are managing on exactly the same lines. I do not see myself why this work should be confined to the Church of England; I do not see why a great many of our religious associations should not do the same kind of work.

93699. Have you been hampered, or have you found any difficulty at all, from having no powers of detention?—(*Mr. Lloyd Jones.*) I am not quite sure that it affects us, as our whole system has been based on voluntary work. But it must be recognised that a great many of the men who apply for help from societies like the Church Army would be benefited by detention. A number of the men physically unfit, and a number of them are undoubtedly workshirkers. Another trouble that I think might be lessened is the number of men who exploit various societies. I think we cannot help recognising that, that the trouble exists and it is at present quite impossible to check it. The Church Army tries to stop this by saying "If you leave us, you shall not come back under twelve months." But there is nothing to prevent a certain number of them going to other societies for two or three months, and I am afraid many of them do.

93700. Have you any persons sent you by boards of guardians or other authorities?—Yes. I have a return dealing with the men who have come to us from casual wards and workhouses in the London districts.

93701. You say "who have come," but I take it you mean who have been sent to you?—Yes. They have been sent to us from thirty-one workhouses in London, and from West Ham in Outer London. I will put in a table summarising the result. (*See Appendix, No. XI (H).*) We have had a total altogether of 590 from the workhouses, and 127 from the casual wards in London, excluding West Ham; and out of those we have found situations for seventy-five.

93702. That is over a period of how many years?—This is for a period of one year.

93703. Have any of those persons taken their departure?—Yes. It is all analysed in this table.

93704. And you have no power of detention?—We have no power of detention. A number have gone back to the workhouses.

93705. I understand from your evidence that there are a certain class to whom, if this method of training is to be used for their reformation, it would be necessary to apply some powers of detention?—Yes. I have read some of the evidence and the Report of the Committee on Vagrancy, and I think it would be a great help to us and a great help to our work if those men who are destitute and who can work but will not work were compelled to go to a Penal Colony, and were kept there for a considerable time, on very much the same terms as they are kept in Merxplas, in Belgium; except, of course, that Merxplas deals with criminals as well as with the destitute. I think if Penal Colonies of this kind were formed, the Church Army and other similar institutions would be able to deal with the unemployed who are willing to work and cannot get work.

93706. You seem to think that there are a considerable number of the unemployed who are willing to work and would be able to work if they were disciplined to it?—And if you could find work for them.

93707. That class you think you could deal with, but your efforts are hampered by idlers and others who are work-shy?—Yes.

93708. You take a considerable number of discharged prisoners, I think?—Yes.

93709. Do you mix those up with your other people?—Yes.

93710. Is there any objection to it?—I do not think so. (*Mr. Lloyd Jones.*) We find rather an objection the other way. At one time we had a small home where none but ex-prisoners were kept, and it was suggested to us that it was rather an interesting little nest where these men could plan sundry little *coups*, in the way of burglaries, &c., in the neighbourhood, I suppose. We have one institution which is set aside for ex-prisoners, but nearly all of the men live out, and I think we have only about eight or ten men living indoors, that is in London. We find employment for the star-class men, and I think last year we dealt with about 200 of them; but, as I say, nearly all those men are living at home, or living out, at any rate they are not living with the Church Army. We deal with a great number of ex-prisoners through the Labour Homes.

93711. If you were at all to be utilised as an agency for rehabilitating people of good character, or at least people who had not lost their character, though they may have had struggles to get employment, it would occur to one that they might more than dislike to be associated with ex-prisoners?—(Mr. Hamilton.) Yes, that is so.

93712. What is your answer to that?—You should understand that it is only single men who go into our Homes, and that the married men are dealt with differently—they never come into the Homes at all, as we help them in their own homes. We should welcome classification in the Labour Homes but under present circumstances it is not possible.

93713. Are there no ex-prisoners amongst these married men?—No, there are not, because they are only persons of good character. We have a society called the Friends of the Poor, and they sometimes help ex-prisoners. I know the case of a burglar who was sent to Canada and who is doing very well now—but not as a burglar. I do not want to say where he is, but he is earning very good wages, and his wife earns 35s. a week washing. I ought to say the Church Army declined to send him to Canada. I told the lady who wished to send him that we could have nothing at all to do with him, because under the Canadian Emigration Laws no person who has been convicted of a crime involving moral turpitude is allowed to land there, and if we sent such a person there and they discovered it, they would send him back at the expense of the Church Army. Of course, sometimes we are deceived, but we make it a rule now not to send out a person to Canada who has been convicted of a crime involving moral turpitude. If we have any doubt as to what is moral turpitude, we go and consult the Superintendent of Emigration. For instance, we had one case of a man who was convicted of going to an hotel and obtaining goods on credit; he was really a very respectable young man till he got into trouble. For that he was sentenced to twelve months' imprisonment. We thought that was a case in which there was no moral turpitude, and so we sent him over, and he is doing extremely well.

93714. Did this man pass through a farm Colony?—No; this particular man was a very good French scholar, and he is now working out there as a corresponding clerk, and he is doing very well.

93715. Do you work with the Discharged Prisoners' Aid Society?—Yes.

93716. Are the prisoners who come to you persons who have been as a rule some little time out of prison, or do they come to you directly?—Some come directly. Some do not.

93717. What is your experience of those prisoners; do you find them reclaimable as a rule?—Yes, many of them are quite reclaimable. (Mr. Lloyd Jones) 466 ex-prisoners were good cases last year. (Mr. Hamilton) Out of 1,762, 466 were good.

93718. I suppose the prisoners are in pretty good physical condition when you get them?—Yes. I have seen them come into the Church Army, and they appear to be in good physical condition.

93719. That would tend to be the rule with the men just discharged, would it not?—Yes.

93720. In that sense they would have an advantage over a man who is run down from lack of employment?—Yes.

93721. At the end of your Statement you have an Appendix G., (see Appendix No. XI. (G)), in which you make some suggestions in regard to Land Colonies?—Those really were Mr. Carlile's suggestions, and I think they could be very much simplified.

93722. We may just run down them. First of all, the paper deals with Compulsory State Land Colonies, which it is suggested should be divided into two classes?—With regard to that, may I say this? You know very well the nature of the Colony at Merxplas; there they deal with men whom we should class as rogues and vagabonds, I suppose; that is, they are destitute and always wandering about. If a vagrant is found in Belgium, as I understand, he is apprehended and sent somewhere or other, I think to a house of refuge or to

Merxplas; that would depend upon the magistrate who hears the case. If we had an institution like Merxplas to which magistrates could send men who really could work and would not work and detain them for a minimum period, say of two years, I think that would be a very useful alteration of our law.

93723. Your Class 1 would be at the bottom of the Compulsory or Penal Colony?—Yes. I would say that those men who did not behave well should have the minimum diet and should not be allowed to buy little things for themselves; but those who worked well should have money or tokens given to them, as they have at Merxplas, and should be allowed to purchase extras to eat; they should also have better sleeping accommodation.

93724. Now we will pass on to the Temporary Voluntary State Colonies?—Personally, I am not responsible for this Appendix, and I think I would only have Penal Colonies. State Colonies for the first class, and I would not have Voluntary State Colonies; I would let that work be done by such institutions as the Church Army and Labour Homes.

93725. The State should have a Penal Colony with powers of detention?—Yes; and voluntary associations should have the Voluntary Homes.

93726. Is it your idea, or Mr. Carlile's, that some of the existing workhouses in the rural districts should be turned into a sort of Farm Colonies?—I think that should be done. There are far too many bodies at the present time dealing with the administration of the Poor Law. In the old days there were only parishes; then there were unions. I think probably if the body was still larger, if it was a county body, administration might be much simplified and economies might be effected.

93727. I see that in all these proposals you suggest that men should be credited with a certain sum for their work?—Yes.

93728. That, of course, does not exist under the Poor Law?—No. I think it is an encouragement to work if they find that they are to get something for it, it is one of the strong points in our Labour Home system.

93729. That is your experience?—Yes. We say to many men in our Labour Homes: "Before we can send you out to Canada you must earn a surplus of £2—£1 for an outfit, and £1 to take with you." That is a very great stimulus.

93730. So that when they go out, or are able to go out, they have something to start with?—Yes.

93731. Dealing with the Church Army Voluntary Labour Homes or Colonies the paper suggests that these institutions should be supported by "(i.) State grants for maintenance of men sent from the State Colonies; and (ii.) State and municipal grants for persons from workhouses and casual wards"?—I do not think there need be all this elaborate classification. I think myself if you have two great classes—State Penal Labour Colonies and Voluntary Labour Homes or Labour Colonies—philanthropy will be able to deal with the latter.

93732. Should you suggest that these Voluntary Homes should be supported by or get grants from public funds for the work done?—I think they should to a small extent. If they had that, it seems to me that they must have powers of detention; at any rate if public authorities were to send persons to them, I should think it would be well to have some powers of detention. If you send a man to a Labour Home and he behaves badly, I should think that he should then go to the Penal Colony, and the local authority, or whoever pays the grants, should only pay the grant in respect of the number of days during which the man is at the Home—in other words, if he goes to the Penal Colony the grant should cease.

93733. (Sir Samuel Provis.) It would not be in fact a grant; it would be a payment for maintenance?—It would be a payment for maintenance, and I think myself it would be very much cheaper for a union to do that, than to try and support the men in the workhouses.

93734. (Chairman.) The suggestions you make seem to me very much to depend on whether you can get the class of persons you want to work these institutions; otherwise there is no particular advantage in voluntary associations undertaking what the State can do; and so

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones.

24 Feb., 1908.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones. I come back to my old question: Do you think you can get persons influenced by that sort of devotion to their fellows who would, for moderate payment, be able to undertake these duties?—Yes, I think so.

24 Feb., 1903. 93735. You have so far found no lack?—No. Of course, we have been hampered; our funds, after all, are only limited; but I see no reason at all why there should not be these Labour Homes in every town.

Voluntary colonies.

93736. As regards your own officials, should you say that the inducement was rather a wish to do good than the pay?—Yes.

93737. The pay is sufficient for maintenance, but not much more?—That is so. Some of the men and their wives are most devoted workers. For instance, Mr. Colin F. Campbell suggested that prisoners' wives and children should be looked after while the prisoners are in prison, the wife of Mr. Hodder who manages Banner Street, is doing most extraordinary work for the wives and children—keeping the homes together while the men are in jail. We gave a tea-party to 2,000 of the wives and children of prisoners just lately; many people take a great interest in the work, and we are able to keep these homes together while the husbands are in prison.

Proper authority to administer Labour Colonies and other Poor Law institutions.

93738. There are some interesting suggestions in your Appendix G, (see Appendix No. XI. (G)), about the reorganisation of the Poor Law, and I think they are suggestions that speak for themselves. You suggest, as regards the management of the Poor Law, that the Labour Colonies and other Poor Law institutions should be administered by a Board of Commissioners under the Local Government Board; that is Mr. Carlile's idea, I suppose?—Yes. I have discussed this with him frequently. He thinks the work would be very much better done by a Central Board than by the guardians, and that it would be done more economically and more thoroughly.

Advantage of Receiving Homes and Labour Tents over casual wards.

93739. Practically, he would put all Poor Law Institutions under a Central Board?—Yes. There is just one thing I would like to say about Receiving Homes and King's Labour Tents. I do not believe that these are ideal institutions unless you can pass the men on to Labour Homes; but in my opinion they are better than casual wards. When a man goes to a casual ward he waits about in the afternoon—I have seen them at the Strand Union in the winter—sometimes two or three hours. Next morning, when he might be going out to find work, he cannot go out because he has to do his task. I would suggest that it would be very much better to allow him to do his task the evening before, so that he can get out the first thing in order to try and get work. All I can say for our Receiving Homes and King's Labour Tents is that they are better than the casual ward; they do allow a man a chance of getting employment.

Objections to free food and shelters.

93740. What is your view about the Shelters?—Personally, I would like free food and free shelters done away with altogether.

93741. What is your objection to them? Is it that they aggregate people together of the same class?—Partly that, and partly this—there are many men who seem to have sunk to such a condition that if they can get free food and free shelter they have no inducement to work and they live a very low life. To those men a prison is almost a palace.

System at vogue at King's Labour Tents.

93742. Would you say that your Receiving Homes avoid some of the faults of the Shelters?—Yes, because we do not give them free food. Our plan is this: The Captain who is in charge of the King's Labour Tents goes down to the Embankment and there he distributes about 800 tickets per night. These tickets entitle a man at the time stated, to go up to the King's Labour Tents where he gets a bowl of soup and a piece of bread; he works for that two or three hours wood-chopping; he then gets some more soup and bread, and an order for a bed at a lodging-house. They are taken on in shifts of three hours. I think a man must really want a bed and something to eat, if he is willing to wait about and do that work.

93743. In the King's Labour Tents there is no food given without work, then?—No, except this, that when a man comes in of course he is famishing, and he is given something to eat before he starts. But he never goes away without doing his work.

93744. Do you give food and lodging gratuitously on tickets?—No; never, it is a fixed rule that we do not.

93745. What are these tickets used for then that are purchaseable?—They entitle a man to go to a Labour Home and work. May I say one thing about that? It is rather strange, but these tickets are given out in very large numbers, and if every person who had a ticket went and applied at a Labour Home for work, he would not be able to get it; but as a matter of fact only a very small percentage of the tickets are presented. It is the same in Germany. What it means is that a man who asks for assistance really wants money, and he does not want food tickets or labour tickets.

93746. Then, of course, a great many people who buy those tickets do not get rid of them all?—That is quite true.

93747. Coming back to the re-organisation of the Poor Law, do you generally agree with Mr. Carlile on those points?—I agree, except that I think his suggestions too elaborate.

93748. I suppose that what Mr. Carlile thought would be better done by a central board would be classification?—Yes.

93749. And I suppose you attach great importance to classification?—Yes, I do.

93750. His system, of course, would necessitate a tax which he proposes to generally levy through the Inland Revenue authorities?—Yes; but I think it had better be left to experts to decide how a tax is to be levied.

93751. Of course, if the administration is central, it would be difficult to maintain it by a local rate?—Yes.

93752. (*Mr. Lansbury.*) In Paragraph 17 of your Statement you give us some figures showing why people are unemployed, and the first reason you give is "through fault of worker"; could you tell us what fault is really meant there?—Sometimes a man is dismissed either because of inattention to his work, or because he has left work without giving adequate notice, or because he has been drunk while he is at work. We sometimes find work for men and take great trouble over them, and then, after they have been working a little time, they come back again, and we ask: "Why have you left that situation?" Then it turns out that they have done something which they ought not to have done, and so they have been dismissed.

93753. Would any of these cases have been caused by labour disputes?—No, I do not think so.

93754. I understand that you have verified these figures?—Yes. We send to the employers to know why the men are out of work.

93755. So that the bulk of the men, according to your figures, are out of employment practically through no fault of their own?—Yes.

93756. Then their unemployment would have something to do with causes that the individual man could not control?—Yes, economic causes.

93757. That you have verified in the case of most of the people who have come to you?—Yes.

93758. Then about the actual work that you do, so far as I can gather it is in the main firewood-chopping?—Yes.

93759. The Chairman asked you a little about some evidence which we have had, which is in flat contradiction to your Statements, in reference to the effect of firewood-chopping by your organisation. We have had the Secretary of the Firewood Choppers Trade Association before us, and he tells us that you have forced out of employment 1,000 self-supporting work-people?—Of course that I have no means at all of checking. It is quite possible that many of these people, for after all, firewood-chopping is a very low form of hand labour, are being employed on higher kinds of labour.

93760. I suppose you know that they went to the President of the Local Government Board and put certain statements before him?—No, I do not know.

93761. You do not know that he has issued a circular to the Poor Law Boards about it?—No, but Mr. Lloyd Jones may know (*Mr. Lloyd Jones.*) The question of the effect on the skilled wood-chopper, as you know, has been very much to the front for several years. The Autumn before last the Secretary of the Firewood Choppers Union—not the society which has been agitating so much, and which consists almost entirely of manufacturers and not workmen—came to us, and the question put to him was this: "Do you accuse us of under-selling?" "No." "Do you accuse us of under-paying?" "No."

Poor Law re-organisation.

Unemployment through fault of work.

Church Army wood-chopping and question competition with private firewood traders.

Then he was asked: "What is it you want?" He said: "We want you to give up this work." We pointed out to him that that was impossible. Now that man could only speak for 400 or 500 men who were members of his union, and naturally I think it is fair to assume that he represents a very small proportion of the wood-choppers. As a matter of fact, the wood-chopping industry cannot in its present condition be controlled by any society of workers. We have no quarrel with the Association, but the facts are very difficult to get at. If you care to inquire into the facts privately, I should be glad to inform you, but there are many points that one does not like to make public statements about. For instance, it is a fact that we buy at times, when we are pressed, from members of that self-same Association at a less price than they profess to fix as the market price.

93762. Might that not be because they are so glad to do it at any price?—One man said: "I can sell to you at 1d. less, because it pays me on the cartage to send 5,000 to one place, instead of having to deliver 200 here and 100 there; I can afford to do it, and I carry on my business in my own way."

93763. Of course, there was a difference in the circumstances and the conditions under which he supplied to you?—Yes. May I point out another thing? We have felt for some time that, owing to the increase in the price of wood, there ought to be an increase in the selling price. Only last week I sent two officers out at the request of the secretary to see what they could ascertain about the selling price in the West End districts. We found one man, a very large manufacturer of firewood, delivering firewood bundles out at Harrow at 2s. 9d. The Church Army could not possibly afford to do that; neither could any other trader under ordinary circumstances, and it shows how difficult it is to fix a regular trade price.

93764. He probably would answer that he is driven to do that, because of the fearful competition that you have set up?—The majority of these men are driven to do this for this reason, that the firewood industry is very peculiar. The majority of the large firewood manufacturers buy firewood because they are obliged and not because they want it; the people on the other side sell wood that is fit for box-making and wood that is fit for fire-woodmaking all together, and if a man wants the wood for one thing he has to take it for both. The result is that a great deal of stuff is landed which is not useful for box-making and which a man has to dispose of for firewood. That man pays say £4 10s. to £5 for a fathom for this new wood and he must dispose of it. How is he going to compete with another man who is using old wood, (which is preferred by many for firewood purposes) and which can be bought here in London for £2 or £3 a fathom? It is no use that man complaining about the competition. The raw material differs from 25 to more than 100 per cent. in cost and he cannot get any more for his bundles simply because they are made of new wood and many makers quite ignore these facts. (Mr. Hamilton) I suppose we must admit that if we do wood chopping on a large scale, we must compete with labour outside the Church Army. It must be so. All that we take care to do is this—that we do not undersell outside people.

93765. That is just a point that we have got very clear evidence upon on the other side. It may not be true, but we have had a very clear statement put in print before us to this effect: "Where a shopkeeper has been paying, say 3s. per 100, the Army will supply at 2s. 10d. or 2s. 8d. and will give a larger bundle"?—(Mr. Lloyd Jones) That is not true.

93766. Here is another statement: "In order to prove how impossible it is to compete with the Army-made bundles of firewood, I would inform you that a trade made 13-inch bundle of firewood, made from the cheapest material obtainable, costs 3s. per 100 to produce, of which 1s. 4d. represents labour alone, and on which price there is no profit, yet the Church Army sell 15-inch bundles at 2s. 8d. per 100, and I am informed at even lower prices the main object being to get rid of the enormous quantities made in their homes"?—That is quite false; it is a misapprehension. In the first place, the price for the 13-inch bundle, which is not 13 inches but 12½ inches, though the trade call it 13 inches, has been 2s. 9d. for years. I have been with the Church Army twelve years and twelve years ago the selling price of the 13-inch bundle, which was then rather larger than it is now, for they have shortened the

length of the stick, was 2s. 9d. and the raw material was cheaper than at present, and last winter the price was 2s. 9d. to 2s. 10d., so that practically the price has remained the same all the way along. Three shillings is not correct. The majority of the Church Army bundles are sold direct to private customers at 3s. 6d., and the proportion which is sold to shopkeepers is ridiculously small in comparison with the output.

93767. If you sell to private people direct, there is no need for the shopkeeper?—We cannot be accused of selling direct to the consumer at an increased price, and also of underselling the trade.

93768. They challenge your statement, and I should think their statement ought to go in to the Church Army, because it is a case of hard swearing?—(Mr. Hamilton) If that statement is sent to the Church Army, I will undertake that it shall be looked into.

93769. They say that you have titled canvassers, ladies of title, one of whom was presented with a piece of furniture for her earnest work on behalf of the Army in getting customers?—I never heard about it, but I will inquire into that too.

93770. It is here in print?—(Mr. Lloyd Jones.) I think it is not worth serious attention.

93771. You are both very reliable looking gentlemen, but the other man looked a very reliable man too?—(Mr. Hamilton.) May I say that I will have it looked into, and have it answered.

93772. I have always understood from Mr. Carlile that he maintains that you pay as much for getting it done?—More.

93773. And that you charge as much?—Yes.

93774. He has always maintained that the Army pay, taking everything to-day, was as high as the ordinary reliable wood-chopper got, and that you get as much as, and sometimes more than the ordinary people do for your wood; but I think in face of this document from the Firewood Trade Association, we ought to ask you to give us chapter and verse for that?—I will do so with pleasure.

93775. Can you tell me whether it is true that a lady of title has been given a present by the Church Army, because of the success of her endeavours in getting orders?—I understand this arose in a joke. There was a Church Army bazaar, and there were bundles of firewood there, and a lady of very distinguished rank was there. Mr. Carlile playfully said: "You have been very successful in helping us, may I present you with a small table." It was a joke.

93776. She did get it, anyhow?—Yes.

93777. Then it is said that part of the wages of the men are paid in kind?—That is so. May I say that I have given evidence on that point before the Truck Act Committee, so that I do not think it is worth while repeating that. I think I satisfied the Lord Advocate that we did not come within the Truck Act, because there was a certain section of the Truck Act which exempted us.

93778. I am not saying that you did come within it, but you do pay these men in kind?—We charge them 6s. for board, lodging and laundry.

93779. That is rather low, is it not?—I do not think we overcharge them.

93780. No, I should not think you did. Would it be true to say that the Church Army pay a price of 8d. per hundred for making 15-inch bundles of firewood, when the trade union price would be 1s. 3d.?—(Mr. Lloyd Jones.) No, it would not be true.

93781. Could you tell me what is your price per 100 for a 15-inch bundle?—I am not quite sure that there are any 15-inch bundles now made by the Church Army. The Church Army bundles are 13 inches and 14 inches, the bulk of them being 13 inches. The Church Army price is the same as the trade price—1d. per inch. I think one thing ought to be made quite clear, and that is, to all married men coming to work for the Church Army, the basis of the pay is 1d. per inch, which is the trade price as far as there is any trade price, but, unfortunately, it does not obtain all round. With regard to the men who are engaged in the Labour Homes, a percentage is stopped from the men for the excessive waste they make, otherwise they are all based upon the 1d. per inch scale.

93782. Would they be single men in the Labour

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones

24 Feb., 1908.

Question of underselling by Church Army in fire-wood trade.

The Church Army and the alleged unfair competition with the fire-wood trade.

Which any wood-chipping and competition of private wood choppers.

Question of underselling by Church Army in fire-wood trade.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones.

24 Feb., 1908.

The Church Army and the alleged unfair competition with the firewood trade.

Homes?—Yes, and they are living with us. The Church attitude towards the men is this: "We bear the loss on your board and lodging, and we bear the loss in carrying on the trade, but you cannot expect us to bear the loss on your excessive waste in making as well."

93783. So that really they do get a little less?—They do get a little less, as a matter of fact, in that way. The suggestion has been made that if this is a technical point in regard to the rate of pay in the Labour Homes, we should increase that and also increase the charge for the board and lodging. But the Church Army's contention is that the firewood trade is only fairly entitled to protest against the Church Army if their methods of production enable them to undersell, which of course they do not. The relationship between the Church Army and the inmates of its Labour Homes is a very peculiar one, because it is not that of the ordinary employer and employed, for the simple reason that the Church Army is not making a profit in the case of these men; for instance, the net loss on these men last year was £9,000. (Mr. Hamilton.) The important thing is that we try not to undersell the trade.

93784. (Mr. Phelps.) Your contention is this, that you sell at a price which is the price at which the trade sell, but how that price is made up is a matter of indifference?—It is quite immaterial.

93785. (Mr. Lansbury.) But, on the other hand, if a large number of very philanthropic people put not only their money in it, but their energies also into getting customers for the Church Army, it would be rather an unfair competition with the ordinary person. Supposing you started making boots in that same way, and ladies of title and other people interested in your work got you customers; you might ruin the boot trade?—(Mr. Lloyd Jones.) I think that the question with regard to the lady—

93786. I will leave out her, and I will say the general body of your supporters?—I think the methods of the Church Army for obtaining this work are the same as those of any other people engaged in a similar business. Naturally the Church Army would come to you in your neighbourhood and say, "We are helping so many of your men, give us your orders."

93787. I was coming to that, because this is so not only in a district like the West End where the well-to-do people live, but in a place like Bow. We are all canvassed, everybody is canvassed, and we are canvassed on the plea that philanthropic work is being done?—Yes.

93788. I only want to point out that if that were done in industries other than firewood chopping, you might have exactly the same thing happening in them as has happened in the firewood trade?—(Mr. Hamilton.) May I point out that in this case it is the middleman who suffers and not the labourer. The labourer gets just the same wages.

93789. It is another set of labourers who are getting the work. You displace one set and you employ others. I will put this to you. It is admitted, I take it, that you do not decrease the volume of work, but that you simply shift it; on the other hand, the point I am making is that while you have not decreased it, you have not increased it?—I do not suppose the people who buy from us consume more firewood in order to increase their orders. (Mr. Lloyd Jones.) There is rather a curious point here which I would like to bring home to the members of the Commission. I am only speaking of my personal experience. Twelve years ago, it was quite a difficulty to get firewood in the West End. Many shopkeepers stocked firewood for the convenience of customers rather than for the profit it brought (it takes up so much storage room that in many shops it does not pay to keep). The consequence was, they did not encourage the business. The Church Army has made it so easy for the consumer to obtain these goods that the consumption has greatly increased—it may be wasted, but the fact remains that more wood is used for firelighting.

93790. That might also be due to your philanthropic methods? People might say, "We will assist the Church Army by burning more firewood," I mean I do not think you have shown there is an economic argument for the increase?—(Mr. Hamilton.) You may take my admission that you cannot deal in any commodity without coming into competition with other people.

93791. I only want it to be emphasised that that is

true of the Church Army, and of anything else of that nature that may be undertaken, whether by a public authority or by a private body?—Certainly.

93792. (Mr. Benthams.) Could we have a proper balance sheet, showing the cost of the materials and what you pay your men?—I have a number of balance sheets here of the individual Homes, which I should be glad to put in.

93793. (Mr. Lansbury.) That is what we should like?—Very good; they are all full balance sheets.

93794. (Mr. Benthams.) If the balance sheet for the principal Labour Home could be put in evidence, that would probably suit the purpose. We cannot possibly, from the figures you have given us in your Statement, bring out what has been paid in material and what has been paid in wages, nor what you get for it?—Very good, I will hand these in (handing in balance sheets). (See Appendices No. XI. (I.) and (J.).)

93795. (Mr. Lansbury.) Now about the Banner Street Home being self-supporting; what does that exactly mean?—We pay no rent for Banner Street, because that is a building which belongs to the Houseless Poor Society.

93796. Are there any rates on it?—Yes.

93797. Are the rates paid before you reckon that it is self-supporting?—Yes.

93798. What kind of men have you there, are they single men, or married men?—They are single men.

93799. Are they all single men?—Yes.

93800. Is the work that they do all wood-chopping?—Yes; but there we have some power; we have electric motors there for sawing wood but not for chopping or tying.

93801. So it is not done by hand?—It is not all hand labour there.

93802. It is done on up-to-date lines?—More up-to-date than the other Labour Homes. (Mr. Lloyd Jones.) There is not working space there for hand labour. (Mr. Hamilton.) That is our difficulty. We are thinking of taking a bigger place. We should be glad to employ more on the work than can work now because there is not room for them in the yard.

93803. Banner Street is run more like a commercial concern?—It is so far only as the woodchopping industry is concerned.

93804. Where machinery can do the work, the men are not engaged on it?—That is so with regard to sawing only.

93805. What about the other places?—In the King's Labour Tents there is no machinery at all; it is all hand work.

93806. So that Banner Street cannot be compared with your other Homes; that is a point I want to make?—Just so.

93807. It is a matter of opinion probably, but you said it was not right to start a new industry if you could; surely it would be better to start a new industry?—I did not say that.

93808. I understood you to say it?—You are quite right, I did say it, but in this way: Our money is entrusted to us by charitable people, and we ought not to speculate with that money, as we might lose it all.

93809. I only suggest to you that it might be worth while to speculate with a portion of it in trying to find a new industry, rather than sticking at this one?—I quite agree, if only you could suggest some new industry which we could start. I wish we could do it. I think it is a defect in our work that we have not a larger number of industries in which to employ the men who come to us.

93810. Do you know anything about the mortality amongst emigrants? We hear of the successful ones, but are there people able to tell you how many survive? Some die, the children especially, I understand?—We only began emigrating just after 1904-5 when there was so very much distress, and our experience is that emigration is the best way of dealing with unemployment, and that nearly all our emigrants have done well.

93811. Have the bulk of them been single men or married men?—The bulk have been single, but a number have been married.

93812. I am trying to get some figures as to the number of people, especially children, who really survive the Canadian winters?—Do you mean who are alive now.

93813. Yes?—I will try to inquire. I did not hear

that there was any unusual mortality, in fact most of the letters we have say that Canada is very much healthier than the place from where they have come.

93814. For those of course who are strong and can stand it; still, if you can get any figures, I should be glad of them?—I will try to get them if I can, certainly.

As to this the Witnesses subsequently sent the following note:—

With reference to Mr. Lansbury's question on infant mortality in Canada, I have enquired from our officer in Winnipeg, who states that so far as he can ascertain there is no abnormal mortality amongst the children of emigrants. I have also received a letter on the point from the Assistant Superintendent of Emigration in London, who says there is no excess of mortality of the children of emigrants over that of other children in Canada, and that there is no justification for the statement that children emigrated to Canada are more subject to fatal diseases than children born in the Dominion, unless it should be in isolated cases where children have been born of parents who themselves were not free from organic diseases.

93815. As I understand it, the main opinion you have about Appendix G, (see Appendix No. XI. (G)), is that only the vagrant colony, the colony for the very worst class, should be under State control?—Yes.

93816. Have you formed any opinion as to the number of that class and what percentage they bear to the total?—From our experience I do not think the percentage is so very large.

93817. Do you think it is quite small?—(Mr. Lloyd Jones.) I think you are looking at it from rather a different standpoint. Our statistics deal with selected cases to start with. For instance, we say we will not keep a man unless that man is physically fit to maintain his place on the labour market after we have succeeded in restoring him to health, and have helped him to get back there. (Mr. Hamilton.) And we will not have him, unless he will stay three days in the Home and work.

93818. Have you any statistics to help us in arriving at the number of men who are work-shy, as you call them?—I do not know that any of our statistics would help you in that, but I should think that the number that should be sent to the Penal Labour Colony would not be so very large. At Merxplas they have about 5,000 to deal with, but then that includes criminals.

93819. Would you say that it is any use having a Penal Colony merely as a Penal Colony, unless it offered some hope to the men who got there?—I think a Penal Colony should offer some hope. I think in a Penal Colony there should be power given to some one, when a man is behaving well, to release him.

93820. What would happen to him when you have built him up and made him a decent citizen; where is he to go to then?—If he cannot go out into the world and keep himself, let him go into a voluntary colony for a while; let him go from the State Penal Colony to the voluntary colony.

93821. I understand you to argue that organisations like the Church Army, if this small fraction were taken out, could deal with the rest; did you really mean us to understand that?—What I think is this, that if you take out the vagrants, the Church Army and other religious and philanthropic associations, with some aid from either the local authority or the State, could deal with the honest unemployed.

93822. There are 25,000 registered in London alone just now?—So I see.

93823. Do you think the religious organisations could deal with those?—I think they might.

93824. Why have they not done it?—At present we are paying very large amounts for poor rates, and the feeling is that every man who is unemployed can go to the workhouse and get employment; but if a radical alteration were made in the Poor Law, by the establishment of these Labour Penal Colonies and the establishment of these Voluntary Colonies on a large scale, I think the problem could be dealt with.

93825. What I want to find out is why it should be done by the Church Army or the Salvation Army or any religious organisation, and not by the community through the State?—My view is that men who do the work from love of it and not because it is a part of official

routine, would do it better. What you want to do is this—you want to take an individual interest in the men and to become their friend, and help them. You cannot expect a State official to do that, or else the relieving officers would have done it long ago.

93826. Do you think the bulk of the relieving officers do not take any interest in their cases?—That is my impression.

93827. What would be the cause?—I think they get hardened.

93828. That is because they run up against the bad side of life all the time?—I do not know.

93829. Do you think that the Church Army official would not also get accustomed to this kind of thing?—Judging by our experience, the Church Army official in charge of a Labour Home still takes a personal interest in the men and does his best for them.

93830. We have an established clergy, have we not?—Certainly.

93831. I suppose they take an interest in the work?—Yes, many of the clergy do help.

93832. Why should not the State service, the social service, do exactly the same thing?—I do not look upon a clergyman quite as an official of the State.

93833. He has his income assured for doing a certain amount of work. What is the difference between a man getting his wages from the Church Army for doing philanthropic work, and getting his wages from the community for doing what you probably would call social work for the community?—I am afraid I do not quite understand the question. We are now going into collectivism or Socialism.

93834. This is right at the bottom of the question. Excuse me, but you have been telling us this morning that your scheme will give us very much better men?—Yes, I think so.

93835. I want to know why? I put it to you that the Established Church has a service of clergymen who are paid at settled rates, and most of us think they do their work or try to do their work for the love of their work. I want to know whether that is so?—May I suggest that the work of a clergyman really deals with the souls rather than the bodies of men? Speaking for myself I do not believe unless you can reform the moral nature of a bad man that you will ever make him a very good citizen.

93836. You have told us that the very bad men are to go to the State, and to be dealt with by it—that is where I think the weakness of your position is—and that it is the good men that are to be dealt with by the philanthropic people?—May I say this, that directly this bad man, who will not work, but who ought to work, shows any sign of improvement, he might go to a Voluntary Labour Colony, where that little spark would be fanned and by-and-by it would burn, so that he would do very much better.

93837. I suggest to you that badness is never overcome by harsh methods or penal methods, but that it is more likely to be overcome by the methods that you are trying to advocate?—When I say that I believe in a Penal Colony, I mean that there should be opportunities given for a man to show that he really was a better character, and that he was working well. If that were the case, he should be released and he should go into these Voluntary Labour Colonies.

93838. I only want finally to suggest to you that this is the colony which requires all the love and consideration and sympathy, rather than the colony where the good men and women are to be?—May I say about that that the Church Army has prison missions, and that we send a number of our very best Church Army captains to hold missions in prisons and to do our best for the prisoners. If you will look at the report of the prison department you will see that very much good has resulted. Besides that, our Honorary Social Secretary, Mr. Cecil Campbell, is allowed to see convicts privately and to make arrangements to meet them when they come out, and we try to find employment for them. We do this work for them, and we would do exactly the same for the Penal State Colony if we had the chance.

93839. The colony which would need all the altruism is the colony where the worst are?—We should try to put the same altruism into work done in that colony as we do in our other work. We should be very glad indeed if we had the same opportunities of going into the State Penal Colonies that we have of going into the prisons.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones.

Possibility of religious and philanthropic organisations dealing with the unemployed.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones. 93840. (*Mr. Bentham.*) In Paragraph 22 you refer to a bonus paid of from 50 to 100 per cent.—Yes.

93841. I suppose that is a bonus over and above the regular rate of payment for work done, according to the size of the families?—Yes, they get piecework rate just the same, and then in addition to that they have this bonus of from 50 to 100 per cent., depending on the number of dependents upon them.

93842. Have you any printed scale showing what a man is entitled to in the way of bonus? For instance, a single man would be paid his 1d. per inch for the bundles?—Yes, but we do not have single men in these homes at all. These are the married men's depots; they do not live there at all.

93843. They simply go there to work?—Yes.

93844. And the wage then is not a fixed wage per bundle, it varies according to the number in the family?—They are paid a fixed wage per bundle, and to this is added this particular bonus.

93845. It does not run so much per bundle?—No.

93846. Is the bonus a fixed amount per day?—If he earns 1s. 6d., we will say, a man might have a bonus of another 1s. 6d., that would be 3s. In order to fix the bonus he first of all has to earn the money at piecework. I remember two men came complaining that they could only earn 1s. 4d. and 1s. 3d. at the labour yard; and it was pointed out to them that a skilful wood-chopper could with ease earn 4s. a day without bonus. Then one of them said: "But was I put on piecework? When he was told "Yes," he said "I have been very badly used. If you had told me I had been put on piecework. I could have earned two or three times the money." That is why we put them on piecework.

93847. You say that no person is allowed to earn more than 3s. 4d. per day in London including the bonus?—Yes.

93848. Why should you give the bonus if a man could earn 3s. 4d. without the bonus?—Some of them do it. Some of them who are honest say: "I do not want the bonus, I can earn 3s. 4d.; put me on as a skilled wood-chopper and I can earn more;" and we allow him to do it then.

93849. Of course, they each get to their limit of 3s. 4d.?—No, some get to the limit of 3s. 4d. Some can reach it in half a day, but not many.

93850. What you mean is that without a bonus every man could not get to 3s. 4d. a day?—No. We find that the average earnings in the Labour Homes come to between 12s. and 13s., about 12s. 8d., for five days' full work and half a day on Saturday. The men to whom we give a bonus are married men, and we try and keep the home together while they are out of work.

Finances of Church Army's wood chopping. 93851. Taking the wood-chopping industry as separate from the rest of the receipts and expenditure of the various homes, would it be possible to give us a return? I notice in this balance sheet the whole of the receipts and expenditure are mixed up the one with the other, there is not a separate account for wood-chopping?—It would be possible certainly, the accounts would show it.

93852. Just a wood account?—Yes.

93853. It would show whether there is really a loss on every 100 bundles that are made, apart altogether from anything else?—Yes, we can show a wood account if the Commission would like it.

93854. So that we can see exactly what 100 bundles cost, what the men get in wages, what the wood costs, and then what the average price is?—Mr. Lloyd Jones suggests that after all we are traders, but I do not know why we should not give it.

93855. There would be no difficulty, I presume?—I do not think so.

As to this the witnesses subsequently sent the following note:—

With regard to the point in your letter that I promised Mr. Bentham that I would show exactly what 100 bundles of firewood cost; what the men get in wages; and what is the average selling price, I am sorry to say I am unable to show the cost, as on going into the matter I find that in the Homes the material varies so considerably in cost, and in the London Homes the wages for a large proportion of the bundles made are paid at the rate of from one and a half times to twice the trade rate of pay—being made by married men employed at our

depots (*see* Paragraph 22 of my Statement of Evidence), the bundles so made being sold through the Labour Homes. The wages total includes not only the cost of making, but also the money paid to men at the depot for stacking and handling the wood. In the Bow Labour Home, to which Mr. Lansbury referred, the cost of materials and wages exceeded the selling price.

Reference to the total figures sent you of the wood trade for the year 1907 shows that the sales realised £38,226, while the materials cost £23,779 and wage amounted to £13,507, making a total of £37,286. This left a margin of £940 for working expenses, such as motive power, repairs to plant, stable expenses, etc., which came altogether to £2,400. The officer's salary is not included in the wages above stated.

With regard to selling prices, taking one East and one West London Home as typical of the whole, the average selling price at the Bow Home for 1907 was 36 1d. per 100 bundles, the largest-sized bundles made being 14 inches and the smallest 10 inches, and all the material used being old wood. At the Marylebone Home only one sized bundle is made, viz., 15 inches, and the average selling price for 1907 was 41 2d. per 100, also all made from old wood.

I am not sure whether these particulars will answer Mr. Bentham's purpose, but I think they will clear up the point that the average selling prices of the Church Army compare more than favourably with trade prices.

93856. With regard to your Receiving Home, is there anything done at the Receiving Home in the way of returning men to their own homes and to their friends before they are drafted on to the colony?—Yes, they are called Receiving Homes, but you must not understand that every man who goes there is either restored to his friends or sent on to a Labour Colony. We cannot deal with so many.

93857. You say the man is free to go after breakfast on the second day?—We give a man at least three days' work.

93858. Not at least; you say he is free to go out after breakfast the morning after his admission, or he may stay three days?—He is free to go out if he likes to seek for work.

93859. Then any man may come and get a night's lodging practically free, if that is so?—He has to work.

93860. It does not say so here, does it? He may go out after breakfast the day after admission?—(*Mr. Lloyd Jones.*) The man has to work, it does not say when; a man when he comes in can work from the time he comes in in the afternoon. (*Mr. Hamilton.*) It is what I was suggesting: If a man in the casual ward could work the night before and be free to get out the next morning instead of being compelled to work when he might be finding work for himself, it would be better.

93861. This paragraph is not quite clear; it says: Each man on admission is compelled to take a bath and his clothing is fumigated, and he sleeps in a bed provided with the usual bedding. He works from 6 a.m. to 6 p.m., and is provided with four good meals during the day. He is free to go out after breakfast the morning after his admission, or he may stay for three days, working in return for board and lodging?—The answer is that he must do work for his board and lodging.

93862. And then he is not at liberty to go out?—I suppose he does it the evening before. (*Mr. Lloyd Jones.*) Besides, you cannot stop him, he walks out if he wishes to do so.

93863. Of course, many of these men who might be strangers would like to get back to their friends. If they were allowed to go out so soon it seems to me that they would not come under the personal observation of the man in charge, and there would be precious little chance of these people being restored to their homes and friends. Take a boy adrift in London of sixteen to eighteen years of age who gets into the Army Home one night. He may easily escape if he is allowed to go out without that influence being brought to bear which I understand is the object of your homes?—(*Mr. Hamilton.*) Yes, he may in that case. I think I said before, I look upon the Receiving Homes and the King's Labour Tents as being merely palliatives; they are very useful, and better than the casual ward, because they allow men a chance of getting employment; but personally I should be very glad indeed if we could do away altogether with this special distress work and have only Advantage of Church Army Home over casual wards.

Advantage
of Church
Army Homes
over casual
ward.

our Labour Homes. In speaking of Receiving Homes I am only referring to the cases which are not retained for more than three days.

93864. How do you mean they allow men to get work?—When a man goes into a casual ward he gets his night's lodging and food, and the next morning he has to perform an allotted task which takes him several hours. He is not allowed to leave until he has done that work. If he is a dock labourer, for instance, his chance of getting work for the day is gone; in many cases you can get work early in the morning, but cannot get it in the middle of the day, therefore, the people who have not been in the casual ward get the work in front of him.

93865. It is not quite clear to me that there is any difference between that and the Church Army Homes?—There is this difference, we make the man work the night before for his lodging.

93866. That would depend on what time he comes in, entirely?—No doubt, but that is the rule. It may, perhaps, be sometimes more merciful to break a rule, but our rule is that a man shall not receive anything either in the way of lodging or wage unless he works for it.

93867. That is exactly the same as a casual ward?—Except there is this difference: That we set him to work the evening before and the casual ward does not.

93868. That is only an incident?—It might be altered of course.

93869. It would depend entirely upon the time he applied for admission whether it is feasible to do it the night before?—It makes no difference with the casual ward: You cannot work the day before as I understand. You do not get there until it is about six o'clock: You wait about there outside, and at six o'clock, or whatever the time is, you are allowed to go in, and then you have your bath and go to bed.

93870. It is not a very great difference, though?—It is a very important difference, if I may say so. We have often heard men complain it is no use going into a casual ward, because they have not the chance of coming out early; there is this also, that every man who goes into a casual ward is liable to be detained three days. Mr. Lloyd Jones reminds me that a man is much better fed in the Receiving Home than he is in the casual ward.

93871. He certainly gets enough food in the casual ward, does he not? It is a fixed quantity and it is supposed to be quite sufficient?—It is supposed to be.

93872. It is not so palatable, I suppose we may say that?—I do not suppose it is.

93873. The quantity may be good. When a casual is kept, you notice he gets out very early the following morning, so it answers exactly the same purpose as your suggestion that the men should get out early in the morning?—If he gets out early in the morning it does.

93874. That is the second day: the only thing is that he has had an additional day in?—A day he has not been allowed to go out. We would rather that the man should go out and find work for himself.

93875. It struck me you are doing very much the same kind of work as is done by the casual ward?—I look on it as being better than the casual ward. Personally, I should be glad to see that kind of work dispensed with altogether if we could.

93876. For the man who has no home and no lodging? I suppose if you dispense with it a similar scheme would be set up in order to provide that man with a night's shelter. What would you substitute for the work you are doing?—I do not know that I quite understand your question.

93877. You said you would like to see this done away with—both casual wards and these Receiving Homes, I understand?—Yes.

93878. The Receiving Home is like a casual ward, and I put it it is exactly in the same category: You do not see the good of these Receiving Homes?—If the law is altered so that a man who is a vagrant can be committed to one of these Penal Colonies, I should think very likely the need for these casual wards and Receiving Homes might be done away with altogether. I do not suppose there are so many people in London who are vagrants. There was a census of the London County Council of people who were sleeping out, and I think it was about 3,000 people. Some of those I am afraid are habitual vagrants. If so, they would be dealt with

by the Penal Labour Colony, and they would not require any assistance.

93879. How would you get at those if they put in an appearance at the Receiving Homes of the Church Army, and you proved they were vagrants, would you say that would be sufficient to detain them in a Labour Penal Colony?

—Under the present law a man if he is idle and disorderly appears before a magistrate and gets a small punishment. If he has been convicted of that once and he appears again, then he can be convicted as a rogue and vagabond; if he appears again after being convicted as a rogue and vagabond he may be convicted of being an incorrigible rogue and vagabond. I would give the magistrates some discretion with regard to that. If the police were to enforce the law about sleeping out, and the law is that if a man sleeps out, unless he has visible means of subsistence or can give a good account of himself, he should be punished, then if it were only a slight offence he might be sentenced to a day's imprisonment, and would be discharged at once, but the next time I think he should go to a Labour Colony, I would leave it in the discretion of the magistrate. If the police were to do that, our streets in London would be cleared of people sleeping out.

93880. What you suggest is that the law is not carried out to-day because there is no proper means of dealing with them?—I do not think the law as to sleeping out is carried out properly.

93881. They are sent to prison for a short period, and it is no good?—They are very rarely arrested.

93882. Do you think if colonies were set up for that purpose, the law might be more rigorously carried out, and it would be far better for the men and the general public?—Certainly.

93883. It would still be open to a philanthropic society like yours to set up a home in order to prevent persons being detained in a colony, that is to provide them with a night's lodging to keep them out of the streets?—Certainly.

93884. Would not it exactly obtain as it obtains to-day, free lodging and so on, because they would say it is a hardship for a person to be committed for a period to a Penal Colony merely because he is unfortunately out of work, and people are apt to put the construction on it that most people are out of work because they are unfortunate, and there would be a great amount of sympathy extended to these people against being sent to a Penal Colony?—Certainly, but the magistrate would exercise his power with discretion.

93885. But I was thinking of something being set up against the magistrates, that is that societies like yours would set up free shelters to enable people to keep out of the clutches of the magistrates?—What I should be afraid of in setting up free shelters is that there may be men who are just on the verge between being habitually idle and not, if they once had the idea that in London it does not matter, they can go to London, it is a more attractive place than the country and that in any event the worst that can happen to them is that they will get a free shelter somewhere or another, it may encourage vagrancy.

93886. No doubt it does. Is it not rather a serious suggestion you are making that these people who have no reasonable means of subsistence should be taken and detained?—That is the law now.

93887. Public feeling and sympathy is against its being carried out. I am only suggesting to you that the same feeling might obtain even under the new arrangement?—Of course, it depends, in some counties it is very rigorously carried out. I understand in Lincolnshire the law as to vagrancy is rigorously carried out, with the result that there is very little vagrancy in Lincolnshire. It seems to me that a case like you are putting is one in which the magistrate would say, this is a case in which the Probation Officer, or in London the Police Court Missionary, should be asked to do something for the man, and we should be very glad indeed to receive proper cases into our Labour Homes. I think it would be a very good suggestion to put to a man: You are unfortunate, but here is a Labour Home you can go and work at; will you go there? We should be very glad indeed to have him, and bring him into our Labour Homes, and subject him to good influence.

93888. That is possibly a way out. It seemed to me it would be difficult to carry out the law if a person were merely caught for the first time doing nothing, and that he was to be detained for a long period in a Penal Colony,

because he happened to be unfortunately out of work?—I would not suggest that. I should rather think it would be a case in which a man would be brought before the magistrate; of course if it were only one night he would not do anything at all, he might dismiss the case, or he might say to him: "I will hand you over to the Probation Officer; he will take you to a home, and he will either find work for you, or you can go into a colony and work."

93889. Another suggestion would immediately be made, would it not, that is, that the person should not be committed by a magistrate, or detained in a colony, unless he had had a chance to work prior to such conviction. That he should have a chance to earn his own livelihood, and the opportunity should be provided by the State?—That of course is Mr. Ramsay MacDonald's new Bill, which he has introduced this year into the House of Commons, which I have read with interest. If it can be provided by voluntary effort I should prefer that an opportunity should be provided that way, but of course, in a Labour Penal Colony the State will have to provide the work. I prefer that the two things should be separate, that the honest unemployed, and the unfortunate unemployed should be dealt with by philanthropic agencies, and that other people who will not take advantage of them, such as vagrants, should be dealt with by the State. Personally, I am all in favour of giving every man as many opportunities as possible.

93890. I am afraid there would be very large demands made on your society and others, if they had first the chance of going to you in preference to going to a Penal Colony?—I am not so sure. I see Mr. John Burns' stated the other day that the number of able-bodied paupers in the workhouses was between 8,000 and 9,000; I see by the *Board of Trade Journal* that there are about 11,000 able-bodied paupers, so that after all it is not such a very large number.

93891. That does not cover the whole field. How many of those would be considered able-bodied that you deal with at your place?—I think all we deal with are able-bodied.

93892. Would the medical officer of a workhouse call them able-bodied, and classify them as able-bodied?—I think they would, the men we deal with. We do not take a man who cannot earn at wood-chopping practically enough to keep himself and to have a small margin.

93893. It would depend on medical classification, would it not, as to how many of your people would be considered able-bodied in the eyes of the Poor Law?—Our test is this, if a man cannot do wood-chopping, really he is not able-bodied for our purpose; if he cannot earn at least 6s. a week to pay for his board and lodging, we do not consider him able-bodied.

93894. You do not have any medical inspection, do you?—No.

93895. They are not medically examined?—No. For emigration of course we always have medical inspection.

93896. But not for work?—No.

93897. Is it not likely that a good many of the men you put to wood-chopping would be classed in a workhouse as not able to work?—I do not think so.

93898. It would depend on the workhouse very largely, would it not?—It might. I think the men there are really able-bodied from a reasonable point of view. (Mr. Lloyd Jones.) Is there not some little misunderstanding on this point? The inmates of the Labour Home are selected; a man must be not over forty-five years of age, and he is not admitted unless he is physically capable of doing ordinary unskilled labour work. I think all the men passed into the labour Home would be considered sufficiently able-bodied by the workhouse people. They are selected.

93899. What do you do with the others?—We do not take them; they are sent to other Societies.

93900. They are refused admission?—(Mr. Hamilton.) Yes.

93901. Is that stated in this statement?—Yes. I think you will find it there. (Mr. Lloyd Jones.) The age limit I think is down there. The qualifications for admission are in Paragraph 27. (Mr. Hamilton.) Freedom from such infirmities as would prevent a man earning his livelihood in the ordinary course. Willingness to work, and to abide by the rules and regulations. Must not be under sixteen years of age or over forty-five. The limit

of stay is four months, and each man has to undergo three days' test of his willingness to work and capability of working, before he is entered on the books. We give statistics showing how many have failed to pass the three days test.

93902. With regard to the displacement of labour, if I may put it in that way, which is caused by your selling these chips in the open market, I take it you do not commit yourself to the statement that the amount of labour you provide chopping chips displaces an equal amount of labour in the open market apart from the statement made by your Secretary that there may be more chips burnt—apart from that altogether?—We do more by hand, whereas outside they do more by machinery. We get as much hand labour as we can. If we were to do wood-chopping as a trade or business, instead of having a great number of depots, we should have one depot and one distributing depot. Instead of doing the great part of the work by hand, we should have the best and most improved machinery, and for distribution, which is now a great deal done by barrows on purpose to give the men work, we might have motor wagons.

93903. I am afraid I did not make my point quite clear. It was suggested that if one man in your shelter is chopping chips—Do not say shelter, please.

93904. I beg your pardon, in your Labour Home—is chopping chips and earning 3s. 4d. a day, that some other person somewhere is earning 3s. 4d. less.

93905. (Miss Hill.) Is that not true of all work you give anywhere. If you take a housemaid you do not take two house-maids, some house-maid is out of work. (Mr. Bentham) I only want to ask the witness if he committed himself to that statement. It has been stated that that is the net result?—I cannot say. I do not think it is quite so, as I said before, because I assume for the sake of example that we do much more hand work, and we may displace a machine.

93906. But you do more than that, do you not, if you provide work for idle hands, the demand outside may be a little less for that particular commodity, but there is another demand set up by the work of that man which probably is equivalent, it may or may not be, to the amount of work which is displaced in wood chopping?—It may be.

93907. I suggest to you is that not the answer?—I suggested once before I think that it is possible that the work displaced in wood chopping might be applied in a more highly organised trade, and a better trade, so that a man may go from a very inferior kind of trade to a better paid trade.

93908. (Mr. Phelps.) Do you in the Church Army Labour Home co-operate at all with the guardians?—Yes. We take a number of cases. There is a return here of cases which we have taken from the workhouses and casual wards. I think I have referred to it before. (See Appendix No. XI. (H).)

93909. Would you describe your methods?—(Mr. Lloyd Jones.) With regard to the casual wards, in the first place in London we keep an officer going round to the casual wards regularly, and if there are any likely cases he gives them an opportunity of coming into the Church Army Labour Home. In the provinces, with the permission of the guardians we put cards in the casual wards offering men able and willing to work employment in the nearest Church Army Labour Home. With regard to the inmates of the London Workhouses, we have approached some Unions and others have approached us with a view of taking able-bodied men from them. We have taken a great many during the last year. I think the number taken from the London workhouses has been 590, and from the casual wards, 127. The largest number from any London Workhouse is ninety-nine from Camberwell and the next eighty from Southwark. With regard to these workhouse cases, we consider that for real able-bodied men, not what the Poor Law call able-bodied, but men who are really able to maintain their place on the unskilled labour market we ought to prove a useful outlet. We used to take them quite free of charge, but latterly we have made a charge of a few shillings per week towards the working expenses.

93910. On whom?—On the workhouse authorities, but that only applies to two or three workhouses. The majority of them make us grants according to the work accomplished. With regard to the majority of the workhouse cases which come to us, they are very difficult to deal with.

93911. We will stop there for a moment. You say

Numbers of able-bodied paupers.

Question as to how far men dealt with by Church Army are able-bodied.

Qualifications for admission to Church Army Homes.

Question of displacement of labour by Church Army's firewood business

Co-operation of Church Army with guardians

you go to the casual wards in London and give this opportunity to the inmates? Is that with the permission of the guardians in the various unions?—Yes.

93912. How often would your officer visit an average casual ward?—He would visit them all once during the week, and some he may visit twice.

93913. With regard to the inmates of the workhouse, how many of the Board of Guardians in London do you co-operate with?—We have received men from thirty-one workhouses, thirty-two with West Ham.

93914. What I want to get at is how many boards of guardians have you a real understanding with?—I could not tell you how many we have a working agreement with; all these workhouse cases that are taken here I believe are sent to us by arrangement with the guardians.

93915. By the master of the workhouse?—If the master of the workhouse or the clerk of the guardians approach us and ask the Church Army to take a man, whether we have a working arrangement with them or not, if we thought the man was a likely case we should take that case.

93916. How many guardians have you got to pay this few shillings?

93917. (*Mr. Lansbury.*) Is it 10s. a week?—No, nothing like that.

93918. (*Mr. Phelps.*) How many boards of guardians have you any contract with to that extent?—I cannot say; I do not think more than half a dozen.

93919. In London?—Yes.

93920. Not in the provinces?—No, none in the provinces.

93921. Do you co-operate with the guardians as regards the able-bodied in the workhouses in the provinces?—Yes, we are in touch with the guardians. Our officer is supposed to be in touch with the casual wards and the workhouse master.

93922. Is that where you have a station?—Yes, a labour home.

93923. Would your officer go to the workhouse and see the people that are admitted?—No. He would make the acquaintance of the workhouse master, and he would have permission to put up in the casual ward what we call a casual ward card offering the men work. He would say to the workhouse master: "The first time you have a decent man we might be helpful to, send him along to me, and we will take him."

93924. (*Sir Samuel Provis.*) Did not you say you had sometimes been paid by results?—According to the number of cases the guardians pay us. For instance, the Paddington people give us about £10 a year.

93925. (*Mr. Phelps.*) As a subscription to your general fund?—Yes, but in the case of about half a dozen workhouses we have a payment per head per week.

93926. How with regard to gaols?—The same thing applies with regard to gaols. With regard to convicts, we are licensed to visit convict prisons. Mr. Colin F. Campbell visits the convict prisons periodically; he is notified of the men who are shortly coming out, and he inquires from them whether they would care to be discharged to the Church Army. Those men come to us directly to be dealt with. With regard to the short time prisoners, many of the cases we receive at either the Local Discharged Prisoners Aid Society or the Governor or Chaplain communicates with us, and frequently our own officers are in direct touch with prisoners. Where a Discharged Prisoners Aid Society is already at work the Church Army does not appear in the matter.

93927. You might co-operate with them?—We do of course always. I think the majority of our prison men come through our own officers or the Discharged Prisoners Aid Societies.

93928. Have you any organisation for visiting Police Courts?—(*Mr. Hamilton.*) I can speak about that. Nearly every Police Court in London has its own Police Court missionary. I think many of those Police Court missionaries have been trained in the Church Army. Under the new Probation of Offenders Act which came into force on the 1st January, we have had a number of Church Army Officers appointed Probation Officers for the different Police Courts in London. We have one home which we have reserved for women who are discharged to a home under Probation Order.

93929. With regard to a certain portion of your people you send them to a farm at Hempstead?—Yes.

93930. How long is the average stay there?—(*Mr. Lloyd Jones.*) I think about thirty-four or thirty-five days.

93931. When you send them to Hempstead, what is your intention with regard to them, or your hope with regard to them?—(*Mr. Hamilton.*) To train them and to emigrate them.

93932. You do not look forward to migrating them to different parts of England?—Not at present.

93933. In the average case, how long a period of residence at Hempstead do you think necessary?—Do you mean in order to make them trained?

93934. To qualify them for emigration?—The longer we have them there the better. They do learn a good deal, but really an agricultural labourer to my mind is a skilled workman.

93935. I quite agree?—It is only rough work that they can learn in that time, but they improve in health and strength. When they first go down there they catch colds at once, but after a while they get weather proof.

93936. On your farm colony have you any discipline?—Yes.

93937. How do you enforce discipline?—It is enforced by the farm bailiff. If a man misbehaves he would be sent away.

93938. Have you ever had to take a man before a magistrate?—Never to my knowledge.

93939. Have you any public-house in close proximity?—We had one, but we bought that and closed it. The cost of the purchase is part of our capital expenditure.

93940. Is there any bar upon entering a public-house. Is that an offence on the part of the inmates?—Yes.

93941. It would be dealt with as an offence?—Yes, that is one of our conditions; we do not receive anyone unless he is a total abstainer while with us.

93942. Do you think on the whole the emigration has been a good result?—Yes, I know a great deal about that, because during the last year I have read almost all the reports of the cases, and judging by the reports we have received from Canada, the cases have been most successful. I think I went and saw off every batch of Church Army emigrants that went away from the Great Central Station. I spoke to many of them; they were a very good class of people.

93943. You do not emigrate the worst type?—No. We are very much limited. The fact is that the Dominion Act as to emigration in Canada is very strict.

93944. Have you looked into the schemes which are proposed for re-afforestation in England?—I have read about them.

93945. Do you think that anything in the way of a State forest service would help you in that particular?—I am not an expert on that matter, and I would rather not give an opinion. I noticed the other day that there was some evidence given about a reclamation scheme which was undertaken by a company on the Wash, and the company have been most unsuccessful. They found it a most expensive business, and they suggest that it should be done by the State. I fancy all the expensive schemes of afforestation and reclamation would be handed over to the State. If it could be an economic success it would be done by the owners of the land I imagine.

93946. Have you looked at it in the light of applicants for small holdings?—I think the Small Holdings Act, if worked properly, would be a very useful thing.

93947. Could you see your way to placing out any of your people from your farm?—We have had that in our minds. Of course, we have not had our farm colony long, but we have considered whether it would not be possible to use part of that land in establishing people who would have a long lease at a comparatively low rent, and to give them a chance of living out of the land. I think that is an experiment we shall try before long.

93948. What procedure do you take with regard to women, do you take single women?—We do rescue women vagrants. Practically there are no women tramps and no women vagrants.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones.

Small holdings.

Women's rescue work by Church Army.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones.

24 Feb., 1908.

Women's rescue work by Church Army.

93949. With regard to your rescue work, what occupation do you find for those people?—Laundry work is the successful occupation. Women's work is most costly, we cannot find them employment like we can the men. Laundry work is the work that is most paying, but with regard to needlework and things like that, we do not get much more than the price of the material.

93950. Do you take in laundry work?—Yes.

93951. Do you have any complaints about competition?—I do not think we ever have had.

93952. With regard to the future of those women, do you look forward to their earning their own livelihood as laundresses afterwards?—Certainly; we keep in touch with them, and many of them are most capable indeed.

93953. Are most of your cases brought to you by private agencies, or do you find them in public institutions?—Sometimes some of our Sisters go out into Hyde Park and bring them in, especially if they are young.

93954. With regard to the workhouses, have you any co-operation with workhouses?—As regards women?

93955. Yes.—I do not think so.

93956. Or gaols?—We do sometimes take women from gaols, because I remember Miss Walker, the head of that department, saying one woman was rather refractory and said she was not going to stay a day longer. She said: "It is a pity to go away, what will you do; have you a good character?" The woman looked at her and said: "Oh, well, I only murdered my husband and had five years for it." Anyhow, she stopped, but I am sure we do take prison cases.

93957. Do you co-operate with Aylesbury as you do with the male convict prisons?—No; that matter has been discussed.

93958. Do you know any cases of female inebriates?—Yes.

93959. Do you have homes to which they can sign in?—We have homes.

93960. Where you have compulsory powers of detention?—Not compulsory powers. We had one at Newdigate and took men; we had that for some years, but the expense was so enormous, their physical inefficiency was so great and they were so hopeless in every way, that we gave up taking them; apparently they had no craving for drink when they were there, it was an offence to go out, but if they did go outside and saw a public-house and they had any money in their pockets, they got drunk at once.

93961. You had no distinctive home for the female inebriates?—No, not under the Act. We have voluntary homes for them. We think our voluntary homes do show very good results.

93962. (Mr. Chandler.) With the exception of your farm at Hempstead and your wood chopping, you really have no other employment?—I think at one or two of the provincial homes they tried market gardening on a small scale. We leave it to our local committees to do very much what they please. All we do is sometimes to supplement their deficiencies.

93963. Unlike the Salvation Army, you have not yet started business as contractors?—No, and we do not intend to. I may say it was suggested to us when we started emigration that we should undertake the business of emigration agents. I said: If you do, I will have nothing to do with it; I am here for philanthropic purposes, not for trade purposes, and I shall decline to be a party to it.

93964. In your Appendix C (see Appendix No. XI. (C)) there are the terms of the agreement under which the men undertake to do their best after the first month to obtain work for themselves independently of the Church Army?—Yes.

93965. Are there any facilities given to the men to carry that out?—Yes.

93966. What are they?—They are allowed to go out.

93967. And come back at night?—Yes, after doing work, and there are facilities given to them in the day time.

93968. Do a large number avail themselves of that?—Many do go; many leave to seek situations. We call those doubtful cases, but we have reason to believe that many of them get situations, only they do not keep in

touch with us, because they naturally do not want to be connected too much with us.

93969. I see from an analysis of the cases you have 44 per cent. of good ones. I suppose through the agency of your organisation that 44 per cent. have been assisted into situations?—Yes, into good situations.

93970. I see you favour labour bureaux, you recommend national bureaux?—I do; I think it is very important there should be. Of course, there are bureaux now under the Unemployed Act, but they are only partial. They seem to work with very great success in parts of the Continent. I think there should be a general labour bureau with telephonic communication between the branches and a clearing-house.

93971. Do you keep up any such communication between your various depots over the country?—We have no registration bureau.

93972. You have in each depot a large number of men?—We have telephonic communication between all our London homes and most of the country.

93973. Do you find that useful for the purposes of exchange?—Yes.

93974. I was wondering whether, having tested it in the limited sense you have been able to do by your organisation, it would not be something as a guide to the others?—I feel sure, if you had bureaux which communicated to all parts of the country, saying that they wanted labour, it would be very helpful. May I mention a case in my own experience. Someone saw one of our advertisements saying hundreds were out of employment, and came all the way up from Cornwall, saying he could hardly believe it; he said: I want so many men in Cornwall; can you send them? and he took them.

93975. (Miss Hill.) How many stopped there?—The last time I heard, they were still there; they were men who wanted to work and were quite willing to work, and he had the work for them.

93976. (Mr. Chandler.) Was it agricultural work?—It was not quite agricultural work, but work on an estate.

93977. (Sir Samuel Provis.) How many were there?—Four or five. We have a League of Friends of the Poor now, what has been very successful. Of course many of the "friends" are very well-to-do people, but it is quite extraordinary the number of situations they are able to find for the unemployed.

93978. (Mr. Chandler.) I was interested in your account of the distribution of tickets on the Embankment here. Do you find a very large percentage of these men take advantage of that ticket and use it by coming up to your homes?—Yes, nearly all.

93979. In spite of that if you go along here every night they are sitting about on the Embankment?—Yes, we do all we can, but there is not enough to go round. I sometimes go into the Labour Tents. I once said to Captain Robbs, who looks after the King's Labour Tent: "Do you discriminate so as to refuse the men who have been here before?" and he said, "No. I tried to discriminate once, but was nearly torn to pieces, since then I have always given the tickets out in rotation."

93980. You deal with a large number of men who have served various terms of imprisonment?—Yes.

93981. What result, from your observation, has prison life had on the habits and character of the men; did you notice anything different?—I cannot say that I of have come across them individually. It is Mr. Jones who attends to that; I have seen some of them.

93982. Does prison life operate in the way of forming habits or character, which would distinguish them from the other men who have not been in prison?—Do you mean whether there is a prison type?

93983. Whether there were special traits in a man's character?—We have a portrait gallery at the Church Army containing portraits of all those—

93984. I think the idea is, do you find them more tractable, and more anxious to do right?—(Mr. Lloyd Jones.) It is the general experience of the Labour Home officers that they would rather deal with prison cases than the workhouse men. A prison man has energy but it is misdirected. The other man does not seem to have any energy at all; you have to supply energy

and direction. (*Mr. Hamilton.*) I am not sure that the same observation applies to tramps sent to prison.

93985. (*Mr. Chandler.*) Could you put in a comparison showing whether the applications for food and shelter in London are increasing generally?—They are not. In 1904-5, and 1905-6, the number of applicants to our Tents and Receiving Homes was very much larger than in the present year. (*Mr. Lloyd Jones.*) It has been 2,000 and over per day in some previous winter, but this winter it has been from 800 to 1,000.

93986. With regard to the detention and employment of vagrants and unemployed men of bad character, you suggest compulsory State Land Colonies?—(*Mr. Hamilton.*) Not land compulsory State Colonies. I would like to see a colony like the one at Merxplas, where there are a variety of employments.

93987. Who do you suggest should commit them to these colonies?—The magistrates. In Belgium I think it is the *Juge de Paix*; he commits. There is no appeal from him, but here you can appeal to the Home Secretary. I have read their rules. In Merxplas it is not a prison; there are no walls round, and if they escape, unless they are re-arrested as vagrants, they are at liberty to be outside.

93988. You think that would do in this country?—Yes, it shows some energy if a man wishes to escape, and he eludes observation, and does not beg; I do not see why he should not do so.

93989. With regard to your system of training for emigration at Hempstead, what provision do you make with regard to the wives and children while the men are with you?—We send single men alone there. We do send married men away, but we do not send them there for training. Many men have applied to us who are farm hands.

93990. The question of their wives and children would not apply?—No. May I say this; we make it a rule never to emigrate a married man, without his wife and children.

93991. In paragraph 60 you give us £1,215 as being refunded by emigrants for the advances made to them? Yes. That was up to the 30th September, 1907.

93992. What percentage is that of the total that should have been refunded?—It is really a considerable percentage, because it was the first instalment, which was an instalment of one-third. £759 has been repaid of £1,736 due in November last.

93993. This question is asked because the evidence of the persons connected with the newspaper funds has been that it was hopeless to get the money back from the people. You have been more successful?—The East End Emigration Society and the Charity Organisation Society, who have an emigration scheme between them, have said the same thing. When I first had to consider this question, forms were sent to me, under which, under the Canadian Act, if you sent a man out to work there, and he went on to a farm, he had to remain there for twelve months, unless he could give some very good excuse, otherwise he was sent to prison. Under this same form of agreement you were able to recover the amount advanced to a man and unless he paid you could also send him to prison. That was discussed, and I said I would not be a party to such agreement. I would leave it to their sense of honour and see what happened.

93994. (*Miss Hill.*) Do I gather that your general objection to the casual wards is their not letting the people out to get work in the morning?—That is one great objection.

93995. And that you do see a difficulty in dropping the King's Labour Tents and the Labour Homes, mainly because you cannot use the casual ward for that reason. Are there other reasons?—Of course, there is some religious influence brought to bear upon the men in the King's Labour Tents as well as in the Receiving Homes. But the time is so short. It is very little you can do for a man who only remains in the King's Labour Tents three hours. It would be much more satisfactory if we had more Labour Homes, and instead of sending them there we could send them to a Labour Home. That is my ideal.

93996. You would not regret to see that part of your work drop, if the casual wards would take the people and let them go out early enough to get work?—That is so.

93997. In Paragraph 63 you speak about having trained people for emigration, but you say that little has been done for fitting men for agricultural employment at home. Is that because there have been no openings, or few openings, or because the men will not take the agricultural work?—I think part of it was this: That there were so many men applying for emigration purposes that we could not use the farm for that purpose. We never seriously have tried to prepare men for agricultural work at home.

93998. There is a demand for agricultural labourers, is there not?—There is. In fact, one so often wonders, when you have talked to a man, why he came up from the country. The reason for their dislike to the country is that it is so dull. They like the life of the town, and the amusements of the town. I hope we may be able to devise a scheme under which a man may have his own land practically to farm.

93999. That is starting him at the top of the tree rather than at the bottom?—I would train him, first of all.

94000. The man who stays steadily in the village and works hard is the man you would expect to make a good settler. Unfortunately we are not working for the good, it is the other class. As a rule the good can take care of themselves.

94001. You mean these people who drift up to the towns? If they are to be started back in the country at all, it seems to me that they should begin as labourers; and there is a demand for labourers?—There is a demand for labourers; we try wherever we can to find work for them.

94002. Those people you have sent to Cornwall have stayed on so far, have they?—Yes.

94003. You say it is not pure agricultural labour?—No, it is on an estate.

94004. (*Sir Samuel Provis.*) With regard to the casual wards, you are aware that the Act contemplates that a casual pauper should remain two nights in the casual ward?—I had forgotten that for the moment.

94005. That being so, he can do his task of work on the day which he must pass in the casual ward?—I think it would be a very great improvement.

94006. There is an Order of the Local Government Board which provides that when he has done his task he is to be allowed to go out in the summer at half-past five and in the winter at half-past six in the morning?—I do not think that is generally known or acted upon.

94007. You think it is not generally known or acted upon?—I think not. That is the complaint the men make about the casual ward. (*Mr. Lloyd Jones.*) May I voice the opinion of some men who voice it to me very strongly indeed?

94008. Are they places where they have been allowed to only stay one night?—These are two-night places.

94009. There is, in fact, an Order which was issued I think in 1892, to the effect that a casual pauper who has been detained for more than one night, and who represents to the workhouse Master that he is desirous of seeking work, who has to the best of his ability performed the prescribed task of work, may discharge himself between half-past five in the morning, between Lady Day and Michaelmas Day, and at half-past six the rest of the year. That really meets your point, does it not?—(*Mr. Hamilton.*) Yes. Our men can go the next morning, if they please, if they have done the work.

94010. The law says that save in exceptional cases they shall be detained two nights so that it may be deterrent?—Is it not the practice to allow them to go away if they choose the next morning?

94011. In some cases that is done.—That is my point really, that a man has not a fair chance of getting employment.

94012. This gives it to him, if detained for the two nights?—Yes.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones.

24 Feb., 1908.

Demand for agricultural labourers, and cause of rural depopulation.

Casual ward and question of men getting out early to seek work.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones.

94013. (Mr. Bentham.) At the present time in London is it not the fact that the casual wards let the men out the first morning without a task at all?—I am glad to hear that, I did not know, I cannot say.

24 Feb., 1908.

Labour exchanges.

94014. (Miss Hill.) I think workhouse officials have nearly always told us that when they think a man is anxious to work, or has the chance of it they let him out?—These casuals may make that an excuse.

94015. (Chairman.) You attach considerable importance to establishing a general system of labour bureaux?—Yes.

94016. Have you ever thought it out at all, or is that a general opinion?—I have read a good deal about it. I have read the report of Mr. Schloss.

94017. Would you make it purely optional, or would you go so far as to force employers to get their casual employees through the labour bureau?—No, I do not think I would go so far as that.

General failure of unemployed insurance schemes on the continent.

94018. Have you ever thought whether it is possible to work a labour bureau for casual labour with a system of insurance against unemployment?—I have carefully considered all the schemes of insurance for unemployment on the continent; and it seems to me that they all of them fail. It is only the people who are usually unemployed who come in.

94019. The schemes seem to have promoted unemployment funds amongst the skilled and organised trades, but not among the casual?—Not among the casual at all; and even then according to the actual figures it does not seem to have been successful.

Likelihood of employment being found through labour exchanges.

94020. There are at the present moment a considerable number of persons out of employment who would be able to get it if they had more accurate knowledge of the particular wants?—I think so. I think it would be one of the ways in which unemployment would be remedied.

94021. Is that based on your experience, or is it merely theory?—It is based partly on this. We do find that our friends in the League of the Friends of the Poor are able to find employment in some way or other, so there must be employment. I think people would co-operate with a bureau; an employer, I think, would be glad to get hold of employees in that way. It seems to work most successfully in Bavaria.

The League of the Friends of the Poor.

94022. What is the League of the Friends of the Poor?—It is one of our new organisations. It consists of a number of persons each of whom is willing to look after a poor family and help them with counsel and advice. They are not allowed to give them money. If they want help, they come to the Church Army and we help them, and look after them for a period, when, but for that help, they might go to the workhouse. They visit them and look after them.

MR. JOHN RICHARDSON, M.Inst.C.E., called, and Examined.

Mr. John Richardson.

94039. (Chairman.) You have been kind enough to send us a Paper in which you have answered certain questions which were put to you, and you have drawn up a scheme at the end. If you will kindly hand that in, we will treat it as your Evidence-in-chief?—Very well. (The Witness handed in the following Document.)

24 Feb., 1908.

Question I.—What is the general effect:—

- (a) Of the spread of machinery;
- (b) Of more highly organised processes; and
- (c) Of industrial legislation on the demand for labour?

Effect of spread of machinery and of more highly organised processes.

Answer I.—(a) The general effect of the spread of machinery is certainly to diminish the demand for labour. This does not take place at once, as the cheapening of the product by the use of machinery leads to a greater consumption of it, or an extension of its use. This for a time causes such an increased demand, that as much, or more, labour is required. In the long run the production overtakes the demand. When this occurs, there is a decreased demand for labour, and a lower rate of wages for the skilled worker.

(b) In highly organised processes the effect of machinery is not only to cheapen but also to perfect the production of the details which make up the pro-

94023. And through its instrumentality you find The League of the Friends of the Poor situations for a good many?—Yes.

94024. Rather unexpectedly, I suppose?—Yes.

94025. Because that was not the primary object of this society?—It is an object certainly to help in any way we can.

94026. But you did not think this would be an instrument in getting employment?—We thought it would be a way of helping people.

94027. By getting them employment?—Yes. We have sent some to Canada who are doing extremely well.

94028. Do you organise this League of the Friends of the Poor, or do they organise themselves?—They are organised under the Church Army; they have rules and a committee.

94029. They are really a number of local committees of the Church Army with limited power, is that it?—No, we have a central committee. That work is all done in London. Of course, many of the "friends" have country places.

94030. What starts one of these?—It is only one League, we have a Central Office at Bryanston Street: Miss Collin is the Honorary Secretary and she gets as many as she can to join it. Much of the work is done in London, but we are able to find work in the provinces.

94031. Who maps out the districts?—Miss Collin, the Honorary Secretary.

94032. It is all done from the centre?—Yes. It is practically only in London, but there is no reason why it should not be spread over the country.

94033. How long has it been in existence?—This is our second year.

94034. Has it increased much?—Yes, we have now 792 "friends" who have between them 734 cases.

94035. Is it not rather difficult to work the whole of London from one centre?—It is difficult. We try and get a friend who lives somewhere in that district to look after the case.

94036. Does it work at all with the relieving officers or is it quite outside the Poor Law?—It is outside the Poor Law.

94037. They have no funds?—We have subscriptions.

94038. From the parent society?—The Princess Louise Augusta of Schleswig-Holstein who is the President of the League and takes a personal interest in its working, arranged a concert at the Aeolian Hall from which we received nearly £400, and we also get subscriptions from the members.

duct. This obviates the need for so much skill in all but a few of the workers, and sinks many of them almost to the level of machines.

My own experience of some 50 years, shows me that the highly skilled workman who could turn his hand to anything has almost ceased to exist. Self acting tools, automatic and semi-automatic, have been introduced to such an extent, that nearly every process in the manufacture of an engine is now done by very perfect machinery instead of by hand. I have frequently been able, within a few hours, to teach a farm labourer how to superintend the working of such a machine, and in a week or two's time he would get quite skilled at it.

Care and attention is what is required, and such a man is often able to turn out from three to ten times as much work as was formerly done by a skilled mechanic, while he would get little, if any, more than half the wages.

(c) Industrial legislation in many respects has been good. Thus the raising of the school age, and the Factory Acts limiting the age at which boys may be employed at overtime and at night, has been an un-mixed good to the worker.

The laws which provide for factory inspection, and which compelled the fencing of dangerous machinery, have reduced the number of accidents enormously.

Effects of industrial legislation.

Still more has been done in this direction by the Compensation Acts. To those who remain in work this last is a great boon, but it has led, without doubt, to the discharge of many old and comparatively feeble men. These are got rid of for fear they should have an accident and bring heavy claims for compensation.

Question II.—In particular, do modern developments tend to displace:—

- (a) *Middle-aged by younger persons;*
- (b) *"All-round" skill by specialised mechanical skill;*
- (c) *Skilled labour by unskilled; and*
- (d) *Adult men by women and young persons?*

Answer II.—Without question modern developments do tend (a) to displace middle-aged men by younger and stronger ones, and (b) all-round skill by specialised mechanical skill. In all highly-organised engineering shops most of the workers, both boys and men, are taught to do one part of an engine and nothing else. I have had men working for over 20 years at the same little job. One forging nuts by machinery, another superintending a tapping machine, a third turning their ends, a fourth shaping their sides, another hardening them, and a last one polishing them after hardening. Thus six men, each doing day after day for many years, one portion of so small a thing as a simple screwed nut. (c) The result of such specialisation is that skilled labour is displaced by unskilled, and (d) adult men by women and young persons.

In Lincoln, one of the chief centres of steam-engine manufacture, women and young persons of the female sex are not much used, as the work is rather heavy, and custom and tradition is against their employment. This is, however, beginning to break down, and they are now employed in some of the smaller engineering shops.

I am acquainted with many machine factories in the Birmingham and Coventry district where the work is done principally by women and girls. They are, of course, got at a much lower rate of pay.

Question III.—Do modern developments tend to reduce temporarily or permanently the total demand for labour within the trade where such developments occur?

Answer III.—Modern developments tend first to the displacement of labour; then to its temporary re-absorption owing to increased demand due to cheapness of produce; then to its permanent displacement when sufficient machinery has been introduced to overtake the demand. It also tends in many industries to the production of low priced and comparatively worthless goods, as they can be so cheaply made.

Question IV.—Are the changes indicated in Questions I. and II. fully compensated for by new demands in other directions for the labour displaced?

Answer IV.—The changes indicated in answer to Questions I. and II. are very inadequately compensated for by new demands for the labour displaced.

Question V.—Do such changes call for greater mobility of labour:—

- (a) *As between different trades, and*
- (b) *As between different branches of the same trade?*

Answer V.—Greater mobility of labour is a good thing in itself; but, under present conditions, it would not make a great or permanent difference in the lot of the worker, as nearly all trades and all branches of all trades are more than supplied with labour. Skilled stone masons who can also do sculpture are the only ones of which I have found a lack.

Question VI.—If so, in what way is the mobility being, or should it be, provided for?

Answer VI.—"Mobility" is not being provided for now, and is getting scarcer. It should be provided for by giving all workers the opportunity of learning and practising all the branches in their own trades, and by teaching apprentices at least two trades; but this is not so profitable to the employer as specialisation.

True, there is sometimes a demand for labour in one trade and a surplus in another, and greater mobility would enable the demand to be more easily met; but even now it is very rarely, if ever, that such a demand cannot be met by the absorption of the unemployed in the trade needing them.

Question VII.—If the demands on the adult worker are now more exacting and if the apprenticeship system is falling into disuse, how would you suggest that youth be trained? *Mr. John Richardson.*
24 Feb., 1908.

Answer VII.—The demands on the adult worker are more exacting as regards quantity, but less as regards quality, *i.e.*, he is expected to do much more; and thus works under a greater strain, but with the help of the tools, templates, and appliances which are at his service, while the quality of the product may be equal or even superior, the quality of his labour is less. As regards apprentices, the old system under which they were properly taught all the details of their trade has ceased entirely with the small employer.

In the large factories, unless a heavy premium is paid, the apprentice is taught to carry out some small process for many months after he has learned all that can be learned from it. As he gets bigger and stronger, he may be put to another process at which he may be kept for years, working for the profit of his employer, not for his own instruction.

The way in which I think youths of both sexes should be trained is shown very fully in my book "How It Can Be Done," chaps 2 to 5. Briefly, all are taught two trades (handicrafts); all have also the opportunity of learning more if they wish it, *i.e.*, any art, science, or accomplishment. The school life of all is extended to the age of twenty-one, by which time they are much more than self-supporting. The theoretical and practical training goes on side by side. In this way the highest skill and the greatest mobility would be secured. Four years' employment at full time in the university workshops, farms, etc., pays very amply for the balance of the cost of their education and training.

Question VIII.—In view of the greater complexity of economic conditions, do you consider that some public organisation (such as, e.g., Distress Committees, Labour Exchanges, and the like) is necessary?

Answer VIII.—In view of the much greater complexity of economic conditions at the present time, public organisation of employment on an extensive scale is, in my opinion, absolutely necessary. Anything, however, in the nature of the present Labour Exchanges and Distress Committees is useless, for, though making at great cost a slight alleviation in the condition of a few, they can effect no real or permanent improvement in the condition of all.

On the average from 4 per cent. to 5 per cent. of the skilled, and an equally large proportion of the unskilled, labourers are always out of work.

The reason they are out of work is this: We carry on nearly all our industries, not for the sake of public utility, but for private profit. Thus, when a man needs to be employed the private employer or his agent does not ask if it would be a good thing for the man to be employed, or a good thing for the nation that he should produce wealth for his own or national use; but only, can he (the employer) get any profit out of the man's labour? Very often he cannot, and so the workman remains unemployed, and becomes a burden instead of a source of wealth to the nation.

District Committees and Labour Exchanges can do no more than transfer the burden, *i.e.*, they may at great cost obtain work for some instead of others, but they do not, and cannot, materially increase the total demand for labour. Thus A is employed instead of B, but the number out of employment remains practically the same.

Private enterprise and the efforts of Labour Exchanges and District Committees to obtain employment for labour cannot in the nature of things ever solve the unemployed problem, as it is very much to the interest of the private employer that there should be always a man out of work when for any cause he wants one.

Any effort also to prevent sweating by penal enactments must fail so long as any willing worker is out of work.

All sweating and all improper employment of female and child labour, as well as unemployment, will stop as soon, and only as soon, as we give an opportunity for work and fair wages to all willing to work, at all times, and in all parts of the country.

This can only be done in connection with State farms, forests, and factories. State employment.

These State workers should not be set merely to make or mend roads, chop firewood, or break stones, as has often been done in the past, nor to do anything which

Mr. John
Richardson.

24 Feb., 1908.

meant competition in the open market. That would only raise further difficulties in disposing of their products. The right way is to let them supply their own and each others needs, *i.e.*, to grow, reap, and prepare food for themselves, to build houses, and dwell in them, make tools and use them, breed and tend sheep and cattle, and eat them; make leather of their skins and produce their own boots; spin and weave their own wool, and make all their own clothing and furniture. With the exception of raw cotton and a few spices and tropical fruits, the communities would be entirely self-contained and self-supporting.

With their labour properly organised, these workers would produce far more wealth than they could possibly consume, so that there would be no difficulty in finding the small proportion that would be required to exchange for cotton, tropical fruits, etc., and to make provision for old-age pensions.

Cost of dealing with the unemployed.

We have now unemployed some 500,000 persons, and to deal with them all properly there would be required a national credit (not cash) to the extent of at least £25,000,000. This would not be required all at once. This is a large amount, but it is much less than the sum that we actually expend every year on our criminals and paupers, *viz.*, about £32,000,000. Long before we had reached our maximum expenditure the greater part of this latter cost would be saved.

Relation of crime to poverty.

A long experience of some twenty-seven years as a magistrate has convinced me that much more than half our crime is due merely to poverty. This cause of crime would be removed with the national provision of work for the unemployed. Pauperism would then be limited to the very young and to the aged and helpless.

It may be objected that the class of labour we should get is of a low grade. To a certain extent that may be true, but to a much smaller extent than is generally supposed, as there are thousands of quite worthy, highly-skilled men out of work. If even some of them are second and third rate, they rapidly improve under good conditions.

As a Visiting Justice of Lincoln Prison and Chairman of the Borstal Committee, I have taken a great interest in the care and reformation of criminals. These we have to deal with are a much more degraded class than the worst of the "out of works," and on their reception some of them seem quite hopeless. Nevertheless, a few months of regular habits, school, and useful work, transforms most of them into quite different and better characters; they become bright, intelligent, and skilful. If, when their term of imprisonment was over, we could be sure of regular and remunerative employment for all of them, I feel sure that nine-tenths of them would become useful and honourable citizens, as some do now; with the unemployed this is still more certain.

Estimated expenses of training and providing work for the unemployed.

It must be remembered that the average earnings (not wages) of all workers in England is now, in spite of the wasteful way in which much of the work is carried on, over £3 a week, allowing for a somewhat lower class of worker in the unemployed, we may safely take their average earnings to be two-thirds of this amount or £2 a week. Then assuming that we absorbed all the unemployed, we should have 500,000 persons earning £2 a week for forty-eight weeks in a year = £48,000,000.

The contra account would be as follows:—

By wages of workers— <i>i.e.</i> , credit in the national stores at an average of 32s. per week each for 48 weeks	- £38,400,000
15,000 instructors and foremen at £150	- 2,250,000
500 superintendents at £500	- 250,000
50 district superintendents at £1,000	- 50,000
One chief at £2,000	- 2,000
Clerks, bookkeepers, etc., say	- 1,000,000
Raw material, such as cotton, dye stuffs, spices, and tropical fruits, which cannot be produced on their own land, say	- 2,000,000
Total	- £43,952,000
Balance for old-age pensions, sick fund, education, etc.	- 4,048,000
	- £48,000,000

In addition there would be a saving to the nation in the reduced expenditure over crime and pauperism of not less than - £10,000,000

Such is the scheme which I would suggest, when in its entirety, and it would have to develop to these dimensions in order to absorb all the unemployed. Naturally it would begin on a much smaller scale, but it would be well to acquire all the land required at once. About 250,000 acres would be needed for forests, farms, factories, and dwellings, and it is for this purpose and for purchase of the original stock that a large part of the credit of twenty-five millions, say, about ten millions, would be required.

The land should not be all in one place, but in at least ten different centres, so that it would comprise all kinds, containing coals, minerals, and stone and slate quarries, as well as forests, grazing and arable land, and it must be well watered.

About one-tenth of the total number employed would be engaged in agriculture and cattle raising. These would begin at once. Then those engaged in food preparation, such as bakers, butchers, etc., then brickmakers, joiners, carpenters, and blacksmiths.

Coal and iron mining should be commenced as soon as possible, and blast furnaces and ironworks should be set up. Thus the materials for tools, houses, and factories would be prepared.

As materials were accumulated, houses would be built and furnished, and farm buildings and factories erected. Army tents could be used for the shelter of workmen until this was done.

The national stores in the various centres would be the first to be erected, and for the first year these would have to be supplied with food and some clothing from our credit, afterwards by the produce of the workers. These stores would absorb about £4,000,000 of our credit, and supposing that we started with 10,000 persons, and went in the first year up to 50,000, there would be spent in organisation another £300,000.

Thus:—	
Land and stock would take	- £10,000,000
Stores	- 4,000,000
Organisation	- 300,000
Raw materials, say	- 700,000

Total £15,000,000

Beyond this there would be required:—

Seed for the root and corn crops, seedling and transplanted forest and fruit trees. The whole would come well within the credit of 25 millions, and the whole of this, with the exception of about six millions, would consist of remunerative capital expenditure.

By the end of the first year, vegetable and animal food enough would be produced; flour mills would be erected, then cotton and woollen mills, clothing and boot factories, wood and metal works, and factories for engineers, machine and agricultural implements in proportion only as they were needed.

The number employed might be added to at the rate of 50,000 a year, thus absorbing all within ten years, but making an immense difference from the very first.

After the first three years no further credit would be required, and when in full operation the results would be as shown above and would continue a constant source of revenue to the nation.

94040. (Chairman.) Some of these questions are very technical and abstruse, and involve answers of a similar character. You seem to think, and I think your testimony is rather contrary to a good deal of the evidence we have had, that the effect of the general spread of machinery is to diminish the demand for labour?—At present it is so; it was not always so, but it is now.

94041. How long do you think it is since this change has occurred?—At any rate during the last ten years I should say it began to turn, and from that time year by year machinery is displacing labour to a greater extent.

94042. I think you are a civil engineer?—I am.

94043. Have you a factory?—For forty years I was Partner and Managing Director of an engineering works.

94044. Your opinion is that the demand for labour has in the last ten years, in consequence of the spread of machinery, been checked?—That is so.

94045. You have no figures, I suppose, to prove that; it is theory a good deal, I suppose, based on your own observation?—That is so. I have known many cases where the introduction of machinery has operated so that one man has been able to do as much as four, five, or six, and in some cases a dozen men, and the introduction of such machinery is becoming more general.

94046. Do you not think it may be you are more conscious of the effect of displacement in the immediate locality, but you may not be conscious of the increased demand for commodities which cheapening processes produce, and therefore you may be unaware of the movement which is going on outside elsewhere?—I do not think so. My business extended, not only all over England but all over the world practically.

94047. I suppose you would agree that the diminished cost of an article increases the demand for it?—That is so. I have stated that in my evidence. The first effect is to increase the demand, but now and for ten years past, and increasingly year by year, the production has overtaken the demand, and more and more skilled men are being displaced.

94048. You do not think that the general fall in price, or the fall occasioned by the introduction of machinery in price, has resulted in an increased demand for other commodities outside?—Not nearly to an equivalent extent.

94049. You think that the Workmen's Compensation Act has rather curtailed the age at which people used to be able to get employment?—Decidedly.

94050. You have no doubt in your mind about that?—No doubt whatever that the old men are got rid of.

94051. We have had that in evidence too, but there has been a difficulty in the previous witnesses finding figures; I suppose you have no figures in respect to that?—I have no figures in the way of statistics, but I can put my hand on a good many men who have been displaced merely because they were old.

94052. I think you do assert that the strain on the men working in some trades has increased of recent years?—That is so.

94053. The machinery has been speeded up?—Yes.

94054. On the other hand, longevity seems to be greater than it was?—Yes, but there are other causes which produce that, our towns are better sanitarially dealt with than they used to be.

94055. You think the working life of a man, partly from legislation, and partly from the speeding up of machinery, has not been extended but rather contracted?—From that cause contracted, but extended from other causes.

94056. His natural life has been extended, but his working life has not?—His working life has been contracted.

94057. Going on to some of your suggestions, I take first that with regard to the youths. I think you endorse the opinion which has been given by previous witnesses that one of the evils of the present day is that so many boys rush into unskilled trades directly they leave school, casual employment?—My own experience is that there is a tendency for boys to rush into unskilled trades, it depends on what you call the clerk. I do not find many boys try to rush into unskilled labour.

94058. The tendency rather is to run into clerical work?—Yes, there is a tendency that way.

94059. As opposed to manual work?—Yes. That is counteracted. I may say that sons of the working classes rather have a tendency to go into clerical work, but sons of professional men, and even landowners sometimes, come into mechanical work.

94060. Mechanical work of the highest kind?—Yes.

94061. I suppose you would say the tendency of our modern education has been to encourage boys to go in for a profession where they wear black coats?—That is so, but that I think has been overcome. I should say that was strongly so ten years ago, but I think we have got past the worst of that. It was an evil thing, and many of them to-day are put to something better.

94062. At present we are told there is an abundant supply of clerical labour which can be obtained on very cheap terms?—That is so.

94063. As regards the school life, you say here, you would like the school life to be extended to twenty-one?—Yes, to twenty-one years of age.

94064. By which time, you say, they would be more than self-supporting?—Yes.

49065. Of course, that would have two effects, it would on one hand deprive the parents and others of the wages that the boy might earn, and would also entail the State or Public Authority maintaining those people while they are so at school?—Where their homes are not convenient and good enough for them, it would entail them being maintained by the State.

94066. That would be a heavy expenditure?—It would be a heavy expenditure, but, on the other hand, the production of their labour would go to the State, and they would earn more than they could consume; that is after they were sixteen years of age.

94067. Do you contemplate their doing anything that would be of such a character as to contribute to their maintenance?—Yes, decidedly.

94068. They would be partly self-supporting?—Partly self-supporting, and entirely self-supporting after sixteen or eighteen years of age; I would rather say eighteen. They would contribute a good deal at sixteen, and be entirely self-supporting at eighteen.

94069. The State should make up the difference up to a certain age, and after that age they would be self-supporting?—Yes.

94070. You do not propose the cost on the State should be extended to twenty-one years, but only that it should go up to the period until the boy became wholly supporting, which you put at eighteen?—I put it at eighteen. It is quite clear by the time this proposal of mine had been in operation for some years it would leave a revenue for the State, rather than be a burden on it, but the State would need to supply a good many millions, perhaps £10,000,000 the first year, and a little less the next year, of and so on; but within twenty years it would begin to reap a revenue.

94071. You draw up a very large scheme for our contemplation, and you start from the supposition that at present an employer does not employ anybody unless he can get a profit out of his labour?—That is so; I have never known an employer who did.

94072. That would be the natural state of things?—Yes.

94073. You think that there are about some half a million unemployed, and you think it would be possible for the State so to organise them as not only not to lose by the transaction, but even to make, independent of other advantages, a little profit out of it?—I think to make a good deal of profit out of it.

94074. It is a big scheme, but does not the whole scheme depend on this, that you can make the work of these unemployed worth £2 a week?—It does depend on that.

94075. Is not that a big supposition. Should you say the work of the great mass of the people of the wage-earning class in this country is worth £2 a week?—Most of it is worth £4; £3 on the average at least. Most of it is worth £4 and some £5.

94076. You would argue, I suppose, that the employer gets the whole difference between the £3, or whatever sum put as the worth of the labour, and the wage he pays?—No, he wastes more than half of it in his trade expenses, the expenses of competition; he keeps a little for himself at the end.

94077. This big scheme you put before us all depends on these 500,000 persons earning £2 a week for forty-eight weeks in the year. Of course the scheme is a very big one and would entail a most enormous expenditure; but supposing they would only earn £1 a week, which from my own experience I should think would be putting it very high, there would be a very large deficit at the end of the year?—If they only earned £1 a week, that would be so but they could and would do more. I do not see why a man should earn any less when working for himself than he did when working for an employer.

94078. Do you not think those who are unemployed, these 500,000, are practically the worst, or the least efficient workers in the labour market, and that is the reason they are not employed?—No, I have known some of the best and most highly skilled men to be thrown out of work.

94079. But they can form a small proportion? Take London for instance. You would not deny that in London

Mr. John Richardson.

24 Feb., 1908.

Extension of school age.

Scheme of State organisation of unemployed.

Economic worth of workmen.

Character of unemployed.

Mr. John
Richardson.
24 Feb., 1908.

the great mass of those out of employment are the inferior labourers ?—I am afraid that there are wasters, in London especially, somehow or other.

94080. Your 500,000 unemployed would to a large extent come from London and the other centres of population ?—I do not think so, if the suggestion I make were carried out, that one of our centres was in Scotland, and another in Ireland, and two or three others in the North of England. If we put our Colony near London we should get all the worst, but if we made at least ten colonies, we should then get the best from the various districts.

94081. You start with 15,000 instructors and foremen ?—I do not start with that ; I should only need those 15,000 if we had the 500,000 workmen. That is strictly *pro rata* to the number.

94082. You put one to thirty ?—Yes, about one to thirty. That is about the proportion I generally had of foremen to workmen. One to fifty sometimes, and in some high skilled work perhaps one to twenty-five, but on the average one to thirty.

94083. How many acres would you want for say 10,000 people ?—We ought to have at least half an acre per man ; I should prefer an acre.

94084. Half an-acre per man would not be enough would it, because they have their families.—It would not be enough if they were working all on the land, but I can put perhaps 10,000 men on an acre sometimes in a factory.

94085. Do you really think you would be able to train this class to be so far self-supporting as to build houses and dwell in them, make tools and use them, breed and tend sheep and cattle, and eat them ; make leather of their skins, and produce their own boots ; spin and weave their own wool ? It is a charming picture of primitive civilisation, but it would want very competent people nowadays to be able to hold their own.—They would be very competent people. It would be a foolish thing to start it all at once, but you would start it with a few, but make provision for doing it all. It would need all doing before we could get rid of the unemployed ; the number would get greater every year.

94086. We will put it into what to my mind seems a more practical shape. Do you think you could run a Labour Colony with 1,000 people on it, financially ?—To a profit, I am afraid not. I should want a sufficient number of people to include within them, all the necessary trades to provide everything that they want, and in such quantities as to do it economically.

94087. You think that if you extended the system and got it on a big scale, it would be profitable, though it would not on a smaller scale ?—I think so. It could be profitable on a smaller scale than I have put down there, but I have dealt with the whole problem. I think no doubt with 10,000 people it would pay well, but not, 2,000.

94088. How would you pay your people ; would you pay them piece work ; would you pay them in kind, or both pay them in kind and give them a certain cash allowance in addition ?—I should pay them like a business man is paid, by crediting them with the value of what they had produced in the books of the firm ; I should need no cash.

94089. Unless the community consumed what they produced, it would fetch a very low price outside ?—I think I have stated that I do not want them to compete with the outside market at all, but just to produce the things they need for themselves, and a man can produce much more than he consumes.

94090. Assuming you pay them in cash, how can you prevent them going outside your colony and buying these things cheaper ?—I would not pay them in cash they would be credited with the full value of their work. The first thing set up would be central stores, and they would be credited in the books of the department with all the work they had done ; there would be issued credit notes to get out of the store such quantities of the things as they had produced as was due to them.

94091. Might not this turn into rather a glorified truck system ?—Yes, but it would be different from that, because in the old truck system a man was paid something which was worth less than what he had earned ; in this system all they produce would be their own to divide

amongst themselves. There would be none of the truck objections to it ; they could not be sweated.

94092. You would credit a man with a certain sum which you say is equivalent to his wages ?—Yes.

94093. If he is forced to exchange that at an excessively high price for commodities, it is practically paying him low wages ?—It would not be at excessively high prices ; he was forced to do that under the truck system, but he would buy everything at prime cost here.

94094. But assuming your prime cost was much above market cost ?—I do not know why I should assume that ; a man who could make a handsome profit for an employer would make an equally handsome profit for himself. If a man can produce, as I know he can, £4 worth of wealth a week, and he only consumes £2 a week, he would have £2 extra to his credit.

94095. (Mr. Bentham.) You would have to have some system of getting at the value of the commodities produced, because you would have to get at the relative value of the things. How would you get at it ?—A competent man can do that. If you put an uneducated clerk to do this for them, they would be gammoned like anything, but a farm bailiff knows about how much work a man should do with a plough and he knows how much a man should reap in a day. In my own department, I should have no hesitation in knowing what a man should do at a vice, or lathe or machine.

94096. (Chairman.) You have given a good deal of State thought to these questions. You have written a book ?—That is so.

94097. Will you send us your book ?—I shall be very glad to do that.

94098. Your book is entitled, "How it can be done" is it not ?—Yes.

94099. (Mr. Lansbury.) That deals rather with education, does it not ?—I wrote that book in the midst of a period of great trade depression fifteen years ago, when I tried to find out for myself what was the cause of all this, and the best way out. I think the scheme in that book is the best way out of it.

94100. (Chairman.) That relates to what you told us about education ?—Yes, I think if we did anything like this and dealt with the adult unemployed now, and also started dealing with the young as well, that within about five years they would meet each other and form parts of one great whole.

94101. Do you think you could carry on a thing such as you suggest, I will not say on such a big scale, but on a moderate scale, without power of detention ?—Certainly, I would make it worth their while to stay. I think anything in the way of force with regard to attending at such works would be fatal to its success.

94102. You mentioned 500,000. Does that include women and children ?—No.

94103. Then there would be more ?—Yes.

94104. (Sir Samuel Provis.) You would have a certain number of people who would not stay, would you not ?—Certainly.

94105. What would you do with them ?—I should let them starve, and the sooner the better.

94106. Do you think public opinion would quite stand that ?—I think public opinion would, when there is a place where a man can earn all a man needs and get as good a living as anyone else can ; if he will not do it that man ought to starve. Public opinion will not stand it as long as a man cannot get a job.

94107. A man need not starve if he goes to a workhouse, but there is considerable public opinion if he starves because he does not go there ?—I think if we provided work for everyone that we could soon do without the workhouse.

94108. You suggest the school age should be raised to twenty-one, contemplating that during a certain period the scholars would earn their own living, or more than and earn their own living ?—Yes.

94109. Do you think they would be willing to work if they did not receive that amount for themselves ?—I do not think there would be any difficulty in that. If we

send a boy now to a technical institution he stays there until twenty-one sometimes, and his father pays for him. He is doing the work, and the boy does not run away; he is getting good training; I do not see why a boy should run away from a good thing.

94110. Would he not find he was earning a wage that was not paid to him?—Not if he thought, "Up to a certain age I am receiving from the State and have contributed nothing, from a certain age I am earning perhaps half my living, now it is only honourable for me to stay till I am twenty-four or twenty-five years of age, until it has been shown quite clearly that I have earned enough to pay the expense on my education."

94111. You think he would feel that he should recoup the State for what was spent on him in the earlier years?—Yes.

94112. Do you think your experience shows that he would repay it?—Yes.

94113. (Mr. Chandler.) In your reply to Question No. 4, you confirm a reply that has been repeatedly expressed here, that the Employers' Liability Act has had the effect of driving aged men out of the labour market?—I think it has.

94114. Do you not find that the employers, since the passing of that Act have been compelled to insure themselves against this liability?—In nearly every case they have insured.

94115. Then it could not be such a factor in the discharge of these men, could it?—Yes, it is, because the employer knows if he has many accidents his premium is going to be raised. The insurance companies have to be carried on at a profit.

94116. I was trying to think whether the explanation was not more; what is said in one of the other paragraphs in answer to Question 8, where you say that no employer would employ a man except a profit can be got out of his labour, and when, by reason of age, his labour ceases to be profitable, then the employer gets rid of him?—There is less consideration for workmen now than there used to be. Going back a few years, when employers knew their employees more, they did keep on the old men out of consideration; the next stage was not so much consideration as convenience; an old man was kept on at a reduced wage; they dropped him 2s. a week this year, and 2s. a week the next year, so, instead of giving him 45s. a week as they once did, they got him at £1 a week.

94117. That was when an employer knew every one of his men and lived amongst them?—Yes; now the idea of that has gone.

94118. With regard to your experience as Chairman of the Borstal Committee, you say that there has been some remarkable results of the useful work the prisoners are doing?—That is so.

94119. You say it has transformed them into quite different and better characters?—That is so. I do not say in every case, but a large number of cases.

94120. You are quite satisfied that the work of that committee is proceeding in the direction of reforming the character?—That is so; we have now about forty-five, and, within the next year, we shall double our number, because the Department is so satisfied with the usefulness of the work we are doing at Lincoln. We make good carpenters and smiths, not very skilled, but still useful men, and good gardeners.

94121. (Mr. Phelps.) I quite understand the value of your system and the effect of it on the rising generation. I quite see if we adopt your line we might do a good deal for the next generation, or the next generation but one, but how do you propose to deal with the present moment? We have an immense number of adults who comprise the unemployed. How do you propose to deal with that mass of people?—I say I should require at least 250,000 acres of land at once. I would start afforestation, I would start cultivating it, I would set the men to grow some food for themselves, to tend cattle and so forth.

94122. That is all skilled labour?—That would absorb some skilled labour.

94123. That is all skilled labour?—Yes.

94124. A number of these people are quite incompetent to do forest work or raise their own food?—*Mr. John Richardson.* There are plenty of men out of employment who are able to do that. 24 Feb., 1908.

94125. A large number would require a period of training, would they not?—I know plenty of men who are working hard all day long as engineers or carpenters or builders, who take the greatest delight in growing their own food in their spare time.

94126. Why is it, do you think, these people have flocked so much to the towns and given up the country?—I think in consequence of the dulness of the country population, and the low wages principally. That is what the farmers tell us.

94127. Have you any remedy to suggest under those two heads?—Yes, I think so, if they reform the land question.

94128. You think that is a cure for it afterwards?—Yes, too much goes in the rent, and too little in the labour which produces the rent.

94129. Do you think on the whole the agricultural labourer is worth more than he is paid in labour?—I think a great deal more.

94130. In the result of his labour?—Yes. He is the only indispensable person in the world.

94131. Would you be glad to see more done in the way of technical training for agricultural labourers?—Yes.

94132. How do you think it could be managed?—I Schools for think it could be managed by establishing such schools agricultural as I have suggested in my scheme, which I shall be glad to place before you, and these would be centres of intelligence and centres of interest to them; and would make village life have more life and interest in it.

94133. What authority would you put them under, who would you rely on to carry out these works?—The head of the establishments, the masters of the schools.

94134. Do you think the county would be a large enough area for a scheme of that sort?—Yes.

94135. Have you ever sat on the county council in Lincolnshire?—No, not at all.

94136. Do you know at all how far their work at present really fills up their time, how much they have for any other work?—I think to put it under the county council would be a great mistake.

94137. Where would you put it?—I would start with the small schools and make real good schools in every village in a county; and there I should have a school board (we have no better name for it than that) and then we should have a smaller number of secondary schools; the committees of those schools should elect the members of the secondary ones, and the secondary schools should again elect their committee to work the industrial centres, and they should all work from below; they should know what they are doing, and do it as part of their business.

94138. People interested in education who have really studied the question?—Yes, who are fitted for it.

94139. When would you pass on a boy from an elementary school to a secondary school?—About fourteen; a good deal depends on the boy, from twelve to fourteen. Many could go at twelve.

94140. And the higher training school?—In my scheme I put it at sixteen; then his parents and the schoolmaster together must decide how he is to be specialised, then he is to go into the special one.

94141. Would you be prepared to let him work at the time he is at the special school?—Yes, about four hours a day.

94142. Do you think that plan would work in the country? Knowing what agricultural labour is, do you think that would be possible?—I think it would be sure to work.

94143. You think a man who could only work four hours a day could really find employment in the country?—The man who would be working for four hours would be working within the establishment; he would have his lessons for four hours, and his work for four hours all within the walls of the establishment, like a big college.

Mr. John Richardson.
24 Feb., 1908.
Schools for agricultural labourers.

94144. You do not mean he should do his work for a farmer outside for four hours?—No, the work should be part of his instruction.

94145. Would he earn any wages?—He would not be getting wages, he would be living in the establishment and getting board and lodging, and the account would be credited with the value of the work he did and debited with the amount spent on him.

94146. You know under ordinary conditions in the country children who are earning make a considerable addition to the family income?—I do.

94147. You would stop all that?—Yes, but I should take away also all the expense of the children.

94148. You think on the whole that is greater than the amount which they bring in?—Yes.

Housing of poor in rural districts.

94149. Have you paid much attention to the housing of the poor in the country?—No, I have not. Generally I have considered it.

94150. How far that is responsible for the efficiency of the agricultural labourer you have not examined very much?—Except that I know that in many places there are no houses for them, so that a man shall not get a settlement, and come on the rates.

Effects of machinery on employment.

94151. (Mr. Benthams.) I notice that you lay very strong emphasis on the fact that labour-saving machinery does not tend to increase employment; you say it rather decreases it?—I state it clearly that labour-saving machinery in the first instance does tend to cheapen the production and therefore increases employment very considerably, but eventually the production overtakes the demand, and then it decreases it, and that we have more than reached the point in our development where that takes place.

94152. Therefore if we wish to return to a stable state of affairs, we should give up inventing machinery?—No, I want to invent it. I have invented a great deal myself and it is a delight to do it.

94153. If it creates an evil?—It does not create an evil. It is society that creates the evil. The invention of machinery to create wealth is a great good, but when that is employed in such a way that a great many are brought to misery, then I say society does that, not the invention of machinery.

94154. It is a question of distribution really?—Yes, of equitable distribution.

94155. To take the first point first, that is as to whether it really does tend to increase employment ultimately, can you point to any single industry where there have been great strides in production, where there are fewer people employed to-day than there were prior to those inventions of labour-saving appliances?—I am not sure that I can, but I can see the time coming when that will be so. I can point to Laing's in Sunderland which is shut up, and many ironworks and establishments that have ceased to be and become bankrupt, and that sort of thing. I can just now see the turning point.

94156. It is more or less a question of locality, is it not, whether the coal, iron and various other things that enter into the production are as good as they are in other districts; the sum total in the iron trade, and in almost every other trade in the country, is higher now than it ever was before?

94157. (Mr. Chandler.) May I suggest there is a much less number employed in the spinning trade in Lancashire now than there was before this wholesale introduction of machinery. I mean spinners only, not weavers or any other department of the textile trade.

94158. (Chairman.) The aggregate in the cotton trade has increased has it not?

94159. (Mr. Chandler.) Granted, but in this particular department owing to the introduction of machinery the number of spinners has considerably decreased.

94160. (Mr. Lansbury.) Your argument is based on the fact that the output is so much greater?—The output of some things, but not of everything. Take such a thing as that which I am perfectly familiar with, the output of threshing machines. There was a time when people could not get threshing machines fast enough. Now there are so many people making them all over the world that there is a machine for every farmer. There are only

so many people in the world, and you cannot go on increasing your output of threshing machines long before you overtake the demand.

94161. (Mr. Benthams.) There are a number of people employed now in consequence of the introduction of machine reaping and threshing machines, that is, in making machines and in reaping, which would have to be taken together in order to ascertain whether the sum total of employment in those two industries is reduced?—Yes.

94162. If there are more people employed in making machines and fewer people in reaping and threshing corn by hand, there may be more corn grown by the use of these machines than there was formerly?—But nobody will ever grow more corn than we require to eat. It would be no use to us; there must be a limit, when we have grown enough to eat we do not want more.

94163. It has extended in many ways the use of the commodity, the use of the commodity for other purposes than eating?—True, but there is a limit.

94164. There is scarcely any limit to human wants and the produce of that could have been used in many ways to satisfy human wants which we never dreamed of before?—True.

94165. I think that the cotton industry which was taken as an example ought to be taken in its entirety and not one branch of it, just as even corn should be taken in its entirety, because certain machinery might facilitate production which would increase enormously the consumption and the manufacture of cotton goods; one process might be lessened, but the other process might be considerably increased?—Yes.

94166. I thought you might have some data, but it is an impression you have that it has reduced employment rather than increased it after a certain period has elapsed?—Yes, but it is an impression based upon careful observation during forty years.

94167. (Chairman.) Employment in Lincolnshire has increased now?—Yes, within the last forty years very much indeed, but not in the last few years; it is decreasing. Unemployment in Lincolnshire.

94168. The last three or four years?—The last year especially. There are more skilled men out of work now. One in ten in all the skilled trade unions in Lincolnshire is out now.

94169. That is largely in the manufacture of agricultural machines?—Yes, and the building trade is very poor.

94170. (Mr. Benthams.) Take the introduction of the steam engine, no one will deny that the facilities for increased production were almost undreamt of prior to that?—That is so.

94171. The sum total of employment has been increased enormously in consequence?—That is so.

94172. It introduced also our railway system which has made it possible to produce things, because they can be carried to where they are wanted?—True.

94173. We say, therefore, the sum total of the number of people employed is enormously increased, and is made possible by the introduction of these labour-saving devices?—True, and a great many people are employed now doing work that does not need to be done, but not more people in proportion are being properly fed and clothed now.

94174. You say there are people employed now doing work that need not be done?—Yes. Wastefulness of competitive system.

94175. What kind of work do you mean?—I not infrequently see on parallel lines of railway a truck of coal going one way, and a truck of coal going the other way, which is a waste of labour. In my own works I know that I have men sometimes who will spend a day in getting machinery ready to do a piece of work by machinery which can better be done by machinery than by hand. They will spend a whole day in setting a machine to do it, and they will do their work perhaps in a couple of hours when it is done, and then they have to spend a day in altering it for something else; that is because they are doing a small part of what the country needs. Very often in some small works they are wasting three parts of their time in altering the machines to do the work; and in the firm next door they are doing the same thing, wasting their time; it is the same thing in the next town, they are

wasting their time. A great deal of work is being done that does not need to be done at all, because we are all competing with each other.

94176. Various employers, in order to meet the demand and to satisfy their customers, are taking the shortest possible cut in the production; they know otherwise that they would be very soon superseded and other people would take it on. Taking it on that ground, there cannot be a great amount of waste.—There is. If you have, as we have in Lincoln, which is a typical case, three very large firms doing practically the same thing, each firm must have special machinery for doing part of their work, and there must be three sets, whereas one set could do it for all three. They must each have a complete set of moulding boxes and patterns, and three sets of draughtsmen, where one could do for them all. That is what I mean by a waste of labour.

94177. The same appliances could be more fully employed?—Yes, in doing the work, instead of spending the time altering it and getting it ready for the next job.

94178. That points to a wider organisation of all industry?—Yes.

94179. I do not think we need go into that, because it is not the point at issue?—No, but it was in answer to your question.

94180. In the scheme which you outline, you suggest that £25,000,000 should be raised on credit?—Yes.

94181. You say not cash?—Yes.

94182. I suppose that £25,000,000 will have to be issued somehow. How are you going to issue that £25,000,000? How could you do it entirely upon credit?—I do not say entirely without cash at the beginning, to buy the land we might require whatever the sum is—£10,000,000 for land. Government stock could be issued to pay for that.

94183. If it is paid by Government stock, it would mean that interest would have to be paid for it?—Yes.

94184. Then you would be really borrowing £25,000,000, that is what it means?—Borrowing from ourselves.

94185. There is one set of persons going to be put to work in various ways by the use of this £25,000,000?—Yes.

94186. And you go so far as to say it shall be in the way of agriculture and cattle-raising, and then you would require all the subsidiary industries which follow, even to coal and iron mining?—Yes.

94187. If you are going to raise money to provide coal and iron mines and such industries as those, would you not reduce the amount of coal and iron mining that is already going on? Would it not be a simpler process to buy up some of those coal and iron mines?—No, I do not think so; we want to provide employment. We are dealing with the unemployed question. To merely go and spend £10,000,000 in buying up a lot of things does not employ anyone. I want to employ these 500,000 usefully. To dig a mine and find some iron is to find some useful employment for them.

94188. If, as you state here, you find work for one man, and he displaces another man, which you say in one of your other paragraphs, if you set up a coal and iron mine in one district, you stop a coal and iron mine somewhere else?—No, because I am going to produce more wealth; these men go insufficiently clad and fed; I am going to put them to make more clothes for themselves; they are improperly housed, I will set them to work to build houses for themselves. I do not want to interfere with anyone else's trade, they would not compete in the open market at all, they would provide for their own wants. We, through the open market, have to pay through the rates and taxes for them.

94189. In order to try a scheme of this kind you would be prepared to suggest that, with this amount of land and this £25,000,000, you would take so many persons, for which you have stipulated here, 500,000, and you would say all those would be able to earn their living?—Some of them would starve, and I would let them, but some of them would earn a great deal more.

94190. You think you would be able so to organise their labour, and so produce things that they would all have a sufficiency, and be able to work for it and live in comfort?—Certainly; not only that, but everybody will live in comfort because of the labour they do.

94191. There is one thing you will have done, you will have taken £25,000,000 of money from other people who are already employed by this money, and those will be brought into your hands; they are already waiting to be absorbed in consequence.—I would not take £25,000,000; I want a credit of £25,000,000, that is all; I should have to pay interest on it for a few years; bye-and-bye, within a few years, I would be able to pay it back.

94192. It is often said that these people are now being provided for and they are now consuming less, I grant than possibly you think they ought to consume, but yet they are consuming?—Yes.

94193. Therefore you would withdraw the whole of this demand from the outside market, from the other people who are now providing them with things?—Yes.

94194. And you would also be taking more from them in the way of taxation, which is assisting the people to employ others; therefore you would be increasing the number of people who wanted to be dealt with under your system.—Again I am not going to deal with all at once. By the time we have got it all done we shall have relieved the nation of at least £30,000,000 a year in other ways. It is no extra burden on them; we spend it on the criminals and paupers now, but then on ordinary industries.

94195. How will you save that?—By eliminating them. A great many of them would die off in twenty years, and we should not make any more. Those who drift to the workhouses now would come into our workshops instead.

94196. You do not suggest you would take all the people out of the workhouses?—No, you would let them die.

94197. You would not take all those out?—No, but I would not put any more in.

94198. Your scheme would tend to stop the supply?—Yes.

94199. To stop the wreckages and failures of society?—Yes.

94200. Would it stop the man who takes to drink and disposes of all he has. Would it stop the man who has premature illness brought on by his own evil habits of life? All that kind of thing would still go on, would it not?—Not all of it; it would stop a great deal of that. A good deal of that depends on ample opportunities of doing wrong and no opportunity of doing right.

94201. Your scheme would not regenerate society, it would only deal with the surplus which now exists. I do not see how you would reach these people and so influence their lives as to prevent them becoming wreckages of society.—I am thinking of a great many men I know personally who would be only too glad to come in and work their way; and as good men as those, in the present state of society, have no chance of work.

94202. I want to take a wider view, it affects the whole nation. Sometimes we can see on a small scale what appears to be feasible, but applying it to all the nation it would alter the whole problem.—I do not quite understand your question.

94203. It is easy to see how possibly you can deal with two or three people who are round you; but when it comes to dealing with all the people who would need to be dealt with in this way it becomes rather a serious problem, its dimensions are altered immensely?—I have found in my experience of life that nearly everybody has a great deal more good than evil in them, they at most would rather do right than wrong if they had an equal chance. Even as to criminals, sitting on the Bench I have often been asked: Will you give me a job? or: Can you tell me where I can get a job? But you cannot do it now.

94204. I take it we all want to make it easier to do right and harder to do wrong. We want people to recognise that they have obligations to society as well as some rights?—Certainly.

94205. In bringing that to their notice would you suggest to them now, when you have no work to do, that the nation will provide you always with a ready job or full maintenance, as you suggest here?—Yes, I would.

Mr. John Richardson.
24 Feb., 1908.
Question of money to provide large scheme of employment?

Scheme of State employment.

Mr. John
Richardson.
24 Feb., 1908.
The right to
work.

94206. Then there would be really no inducement for people to rely upon their own exertions, that is, provide against the exigencies of life which come to all, if at all times they could fall back on the State and be provided for?—Fall back on themselves. Here is a man who can earn £3 or £4 a week; how many want an opportunity of doing it? A private individual cannot provide it, the State has a right to do it then. The provision of work by private individuals has signally failed. It has broken down from day to day; but the man relies on himself; he says: I want a chance of working for myself. We have taken his land from him, we have taken his workshop from him. What are you to do? You must give them to him again.

94207. You think it would not prevent the man from so husbanding his resources as to be able to tide over any period of distress from whatever cause it may be; or on the other hand you do not want him to tide over it?—I do not want him to have the period of distress to tide over; I do not see why he should, because each man can earn so much more than he consumes; it is a foolish thing to let a man who can earn more than he consumes fail to do it.

94208. It all depends on this: You think things can be so organised that there will always be sufficient work for every man; then there are the women and children to come in somewhere?—To maintain wife and family.

94209. Sufficient work for every person who needs to work under proper conditions?—Yes.

94210. Then comes another question, as to the payment for work. All men are not equal in their producing power?—No.

94211. It may be mentally or it may be physically?—True.

94212. And all men have not equal liabilities, that is they have not equal responsibility?—True.

94213. They have not equal families; a single man might very well be able to earn what will maintain him even though he may be inefficient; he may produce more than he consumes; but when you come to a man who may be more or less efficient he has these other liabilities or responsibilities attached to him. He cannot provide for all those unless you actually pay him far more than he earns?—Are you dealing with a man now physically or mentally weak? He must be either mentally or physically weak. If he is a cripple and cannot work we pity him, and maintain him out of our funds; if he is mentally weak, we maintain him now out of our national funds; there is a similar provision now.

94214. As an employer, have you known men who are below the standard at which you would care to employ men regularly for some reason or other; it appears he is in dolent, you do not know why, it may be from some physical defect, and if you have no knowledge of any physical defect, at any rate, there is an inefficient worker of his class, I suppose we always shall have those, and I suppose under your system that that man is going to be paid and maintained on exactly the same level as the man who is more alert and industrious?—I do not say so.

94215. It comes to this then, that if you are going to discriminate between the two you are going to pay on the basis of what each man earns, not what he needs. Which do you propose to pay on, the man's producing capacity or upon his needs?—I would pay, first, everyone according to their needs, but some men's needs are smaller than others, and sometimes their capacities are greater. At present I should give the man who earned the most the chance of having the most. I would give to every man all he earned for himself, just less the cost of administration. It would be to their interests then to earn as much as they could.

94216. You would have to give some men more than they earned?—I do not think so, unless the man is really an idiot or a cripple, and we have to deal with them now, we put them into an institution for incurables.

94217. He suffers to a certain extent in this way, it may be for his own misdeeds, but at any rate he has not the same easy time of it as a man who has a better facility of production and better reward for his labour. You must face this fact, you have to pay the men according to their needs or the value of the work done. If you

pay according to the value of the work done, that means Basis of that a single man would be getting twice as much in pay- remuneration as a married man who needed it more and could not to work- earn it. Unless you pay according to their wants you are not going to remedy all the evils you think you are. under public ownership system. If you pay according to needs, what inducement is there for the single man to work hard and make up, as he would have to, for the inefficiency of the others. What inducement would there be to him if he does not get the reward of his labour?—I would give him the reward of his labour. I would not give to anyone the reward of someone else's labour, if he can earn it himself. If he cannot earn it himself, he must be a burden upon society as he is now.

94218. That class would be a burden on your community if they enter it?—They are now, they would be then, but we should have fewer of them.

94219. In spite of that, you think you could make your community practically self-supporting, because it would get a fair sprinkling of all classes?—Yes.

94220. It would carry its own sick and own wreckages and provide for all emergencies?—I do not suppose that more than 10,000,000 men do any work now, and they carry the whole burden of all society, they carry the burden of all those who do not work now. We should not have any millionaires to keep then. With regard to the credit, may I be allowed to say I know a firm quite well, a very large firm, which has for many years paid in dividends over £60,000 a year. That was started almost without any capital. A rich man said: If you will give me one-third of your earnings, I will guarantee you at the bank; I will open a credit for £25,000. For many years time that man drew out an average of £20,000 a year, and about £500,000 in capital at the end of the partnerships. That was all done by working men's earnings.

94221. Do you think you could find a man at £2,000 a year who would manage your establishment?—Yes.

94222. When he could get £20,000 a year by a private venture?—You do not get people who do the work getting £20,000 a year, it is those who do not do the work who get it.

94223. It is the person who organises it?—The persons who organise do not get £2,000 a year. The best filled offices in the country are filled for under £2,000 a year.

94224. Who gets it?—This man who merely guaranteed two clever young men. He merely guaranteed them £25,000, and he got all that. I am speaking of a wealthy capitalist who was convinced of the skill of two young engineers and guaranteed them at the bank for £25,000. He did not put down a penny. In about ten years he drew about £20,000 a year out of it. The real manager of those works never got over £1,000 a year—the man who really did it. That man did not do anything certainly to it, but he drew £500,000 in twenty-five years' time.

94225. He was able to discern the skill.—He did not do anything, he did not earn a penny.

94226. (Chairman.) He put the money in?—He did not, he said to the bank: I will be responsible for this money and pay if they do not. He was convinced these young men, i.e., the factory, would pay it. He looked into their books and he insisted on their paying a competent clerk out of his own office to see that they kept their accounts right.

94227. (Mr. Bentham.) That was exactly the same as finding the money?—No, I was showing what can be done with credit, without money. I want to emphasise the fact that the men who earned the money never got more than £1,000 a year for managing the works.

94228. (Mr. Lansbury.) You have had a good deal of experience, have you not?—I have. Practical experience of witness.

94229. You are not a professional political economist?—No, I am merely a practical man.

94230. Your paper is the result of the experience of forty years' work amongst skilled and unskilled workers?—That is so.

94231. You were one of a very large firm of engineers in the country?—That is so.

94232. You have been able to see the results of inventions and machinery in the conditions under which men employed labour?—I have.

94233. The things you tell us in the first part of your Statement are things which have come within your own knowledge and are not theoretical at all, but practical?—They are things which came within my own knowledge.

94234. On that point about production overtaking the demand, is not your contention this, that our means of producing commodities to-day are so great that individual production and distribution does not absorb them as rapidly as our means to produce come along?—That is so. As an illustration, a few weeks ago I visited a boot factory, one of the large boot factories in Leicester, and I counted up the processes to calculate the time, and taking the time of the processes they went through I found that a man there can make a pair of boots in a quarter of an hour. You cannot consume them at that rate.

94235. Although it is true that there is an increased demand at the moment, yet, even if we take it for granted that what a particular machine that is invented at a particular time will produce can be got rid of under ordinary circumstances, is it not the fact that invention keeps on at a more rapid rate, so that what is a new machine to-day becomes an antiquated machine, practically speaking, to-morrow?—That is so.

94236. Supposing it could be said that in one case they were absorbed, or would be absorbed, another machine comes along and really displaces the older machine?—That is so.

94237. With regard to skilled work, is it not also the fact that more and more, in your trade particularly, skilled work is really not required with the people who are employed—skilled work in the old sense?—In the old sense there is not. There must always be a few skilled men, but there are fewer of them needed, and unskilled men can do now a good deal more skilled work than a skilled man could do a few years ago.

94238. Does that allow for the fact that women and boys are very much more largely employed in some engineering shops than formerly?—That is so. Personally, I think the women are employed because they are cheaper and more tractable than men; you get more out of them.

94239. (*Mr. Bentham.*) Would you say there were fewer skilled mechanics to-day than there were?—I do not say there are fewer skilled mechanics, but I say the proportion of skilled mechanics to the number of men employed is fewer than it was.

94240. (*Mr. Lansbury.*) And the need for them is not so great in proportion to the output?—That is so.

94241. Of course, the women are employed because besides being more tractable they are cheaper, are they not?—Yes, they are cheaper.

94242. And in all industry, so far as you have had to do with it, the trend is to cheapen production?—Decidedly.

94243. That results in two things happening; first of all you displace the men, or a number of men, and then they have no demand; they are not competent to demand anything. They have got to go without things?—That is so.

94244. Therefore, you very often have as in Leicester, if you have been investigating there, the curious position, that the power to produce boots is so great that people are going without boots there who used to be bootmakers?—That is so.

94245. Did you investigate the unemployment amongst the shoemakers in Leicester at all?—Thoroughly, no. I do not know so much about it that my evidence on that subject would be worth a great deal.

94246. We are continually told that we ought to give boys a better training, so that when they are men they will have more skill, and all the rest of it?—True.

94247. Do you think under present conditions we are in need of more skilled men?—I do not think a man can have too much skill. The fault I find with the present man is that he does not know enough, they do not think about it enough. I would like to have as much skill as

possible, and as much invention as possible, and as much production as possible, but then I want those who produce it to enjoy it.

94248. I am not thinking of a condition of things which would be Socialism, but I am thinking of the present condition of things. This Commission will have to report on some practical means for dealing with the unemployed to-morrow as it were. What I want to get from you is this: If in your judgment all the unemployed people to-day were skilled mechanics, had been trained as you say you want the boys and girls to be trained to industries, would there, under the present circumstances, be a demand for their labour?—There would not.

94249. You speak as one who represents a very large firm of engineers; what I want to get is that in your definite opinion, leaving the present industrial arrangements as they are, it is not merely more training that is required to bring employment within the reach of men, it is opportunities for using the knowledge and skill they have, and those opportunities at present private enterprise does not supply, does it?—That is so. It supplies it very largely, but it does not supply sufficient. I think it is likely to supply less.

94250. That is a point I was coming to. You have said once or twice that you thought most distinctly that there were less and less men needed, or less and less help needed now than there were a few years ago. Do you think the tendency is to squeeze out men more and more?—Yes.

94251. Does that to some extent account also for the fact that labour of all kinds apparently is becoming more and more casual in its nature?—That largely accounts for it.

94252. Could you tell us whether it happened in Lincoln, or whether it is happening in Lincoln, and in places that you know of, that employers instead of taking men on, and keeping them year after year, are simply taking them on for a job now, and knocking them off, and that sort of thing?—I would hardly say that. Lincoln has been exceptionally favoured in that respect. The rule is for a man to be employed for many years, but of late years the practice has been to discharge them at a much earlier age and take on fresh lads as apprentices, and train up a younger generation of men.

94253. That is, I suppose, because competition is very much keener?—Yes, competition is keener; it has been stated, but I do not know it of my own knowledge, that more than 700 skilled men have been discharged within the last six months in Lincoln. I had it from the principal of one of the works, but he does not know that of his own knowledge again,

94254. On this question of employment, you say that private enterprise has failed in the provision of work for a large number of our people?—Yes.

94255. You are aware that the Poor Law has attempted to deal with the problem, are you not?—Yes.

94256. In your judgment, I suppose, that has failed?—That has failed, and failed miserably.

94257. Have you had experience of the Unemployed Workmen Act that was passed three years ago?—No.

94258. You could not give any opinion as to that?—No. I retired from my position as managing director of my firm four years ago; and that has come into operation since.

94259. You have been asked a good many questions about the waster? Of course, as we are not living under an ideal system we have got those men and women, and they have to be dealt with. You admit that, do you not?—Yes.

94260. Your contention is that they should have a chance, before any penal measures are tried with them, of working under reasonable conditions?—That is so.

94261. Failing that, you are not particular what measures are taken with them?—Not at all.

94262. Your claim is that a man or woman should first of all have a chance to develop the best that is in them?—I think so; but I do honestly think that a great many more of them than we now imagine, would develop

Mr. John Richardson.

24 Feb., 1908.

Skilled training no remedy for unemployment.

Ration of production to demand.

Proportional increase of skilled men in industry.

Failure of private enterprise and of the Poor Law to provide sufficient work.

Skilled training no remedy for unemployment.

Mr. John Richardson. the good that is in them; and I base that upon my prison experience, that there is a great deal more than I thought there was.

24 Feb., 1908.

Questions
of the
inefficient
unemployed.

94263. You have had a good deal of experience. How long have you been a visiting justice?—About four years.

94264. Have you taken a good deal of interest in this?—I have.

94265. You come in contact with the prisoners?—Yes; we have a charity also in connection with it, and we personally interview the prisoners before they are discharged, or a large number of them.

94266. In your opinion there is not such a large number of people who will not respond if they are given a chance?—Not so many. We do try to find work for them now when they go out. I do not know a case of an adult prisoner (we only take the best cases) where we have found a reasonable job for him, who has not done well.

94267. Seeing that the unemployed are not, in the main of the criminal class, you think it is much more hopeful to deal with them in the same way; by finding work, than by any other means?—I think I do.

94268. (*Mr. Bentham.*) There is rather a difference between being in prison under discipline and being a free man?—Yes.

94269. (*Mr. Lansbury.*) I understand this is after they are discharged?—Yes.

94270. (*Mr. Bentham.*) Have you any system of following them up, and getting the results of their after life?—Our chaplain keeps in touch with them for some years. We have very interesting accounts from those who have done well. Of course, those are principally those of twenty-one years of age, juvenile adults, 40 or 50 per cent. of those do very well.

Necessity of
reform of
present
condition
of society

94271. (*Mr. Lansbury.*) You have been asked a good many things as to what might happen under your scheme. It is only fair to point out that a good deal of misery and destitution and wrong-doing is going on under the present method of carrying on society?—That is so.

94272. It is not an ideal state we are living in just now?—If it were, we should not be sitting here, I presume.

94273. You do not profess to have solved all the evils of mankind?—I do not.

Necessity
reform of
present
condition
of society

94274. You are putting this forward merely because the Poor Law, and all the other arrangements by which people for a hundred years have been trying to deal with the problem, have broken down?—That is so.

94275. You think they might as well try some other way instead of going on with the old condition of things?—Yes. When I say some other way, it is a way that we well know. I say that wealth is produced by labour; now give them an opportunity of producing wealth by their labour.

94276. And to have the user of it?—To have the user of it.

94277. Your contention all the time is that it is not that England is too poor, or that our means to produce things are not big enough, but it is a question of distribution and organisation all the time?—Yes, I put it down in my paper here, because I do not want to exaggerate, at £3 a week, but the average of production is nearer £5.

94278. You mean by that, that that is really what the man earns? It is not what he gets?—No; he gets about one-third of it, as a rule.

94279. (*Mr. Bentham.*) With regard to the instance you mentioned of the two young men, did I understand you to say those two young men never got more than £600 a year each?—No; those young men soon developed into country gentlemen, High Sheriffs, and so forth. They made their few thousands, and then they appointed the most competent man they could find and gave him £500 a year, increasing it to £1000 a year, for managing the business, continuing to receive the large profits for themselves.

94280. They organized the business?—Yes; so long as they were working.

94281. You did not say how much they got then?—They took out of the business, as long as they worked in it, £300 a year each, and did their own work; then when they got very rich they paid £600 to another man to do it for them.

ONE HUNDRED AND FORTY-EIGHTH DAY.

Tuesday, 25th February, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

Mr. George Newman,
M.D.

25 Feb. 1908.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.J.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. T. HANCOCK NUNN.

The Rev. L. R. PHELPS.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.
The Right Rev. The LORD BISHOP OF ROSS.

Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. GEORGE NEWMAN, called; and Examined.

94283. (*Chairman.*) You are a Doctor of Medicine, F.R.S. (Edinburgh), and D.P.H. (Cambridge)?—I am.

94284. You are Chief Medical Officer of the Board of Education; late Medical Officer of Health of the Metropolitan Borough of Finsbury; Director of Public

Health Studies and Lecturer on Public Health and Sanitary Law and Administration in St. Bartholomew's Hospital (University of London)?—Yes.

94285. You were also Consulting Medical Officer to the County Council of Bedfordshire; Examiner of the Sanitary

Inspectors' Examination Board; and Member of the Board of Hygiene Studies of the University of London? —I was.

94286. You are the author of "Infant Mortality," and joint author of "Hygiene and Public Health"? —Yes.

94287. You have been kind enough to send us a very interesting and full Statement in connection with certain very important questions relating to the health of the people: and if you will kindly hand that in we will treat it as your Evidence-in-chief?—Certainly. (*The Witness handed in the following Statement.*)

THE RELATION OF POVERTY TO DISEASE.

1. To show the relation which obtains between poverty and mortality I submit some returns for Finsbury on the following points:—

- (a) The number of deaths in institutions compared with the total deaths.
- (b) The number of deaths taking place amongst the very poorest of the community who live in one room tenements compared with the deaths occurring in the

population living under better and, therefore, less poor circumstances. *Mr. George Newman, M.D.*
25 Feb. 1908.
Relation of poverty to disease.

(c) The number of deaths from phthisis, which is particularly a disease of poverty and exposure combined with poor nutrition, and also the number of those consumptive deaths which occur in institutions under the Poor Law.

(d) The distribution of mortality in relation to poverty from a topographical point of view, that is to say, the mortality in very poor areas of Finsbury compared with less poor areas.

(e) Some points in regard to infant mortality which indicate an indirect relation which obtains between it and poverty. [See under (d) above, and under "Infant Mortality" below.]

(f) The incidence of mortality upon certain occupations of the casual and poorer classes.

2. *Institutional Deaths.*—In Finsbury in 1906 one in every two deaths occurred in institutions and not in the homes of the persons dying; one in every four deaths occurred in workhouses or workhouse infirmaries; and one in every five in hospitals. *Percentage of Deaths in institutions in Finsbury.*

3.—THE FOLLOWING TABLE SHOWS THE FIGURES RELATING TO DEATHS OCCURRING IN INSTITUTIONS, &c., FOR THE LAST SIX YEARS.

Year.	Total Deaths.	Deaths in Public Institutions, &c., outside District belonging to Finsbury.	Deaths in Institutions inside District.	Percentage of all Deaths in Public Institutions on Total Deaths.
1901	2,161	876	33	42·0
1902	2,283	908	40	41·5
1903	1,993	870	43	45·8
1904	2,084	965	59	49·1
1905	1,855	886	38	49·8
1906	2,020	1,020	37	52·3

4.—THE FOLLOWING TABLE OF COMPARATIVE RETURNS SETS OUT THE PERCENTAGE MORTALITY OF LONDON AND FINSBURY DEATHS IN INSTITUTIONS, 1903–1906 (*Outside District only*).

Institutions in which Deaths took place.	1903.		1904.		1905.		1906.
	London.	Finsbury.	London.	Finsbury.	London.	Finsbury.	Finsbury.
1. Workhouses and Workhouse Infirmaries.	18·9	25·2	18·7	26·8	20·1	29·1	27·8
2. Fever Hospitals (Metropolitan Asylums Board).	1·6	1·6	1·4	1·5	1·5	1·5	1·6
3. Other Hospitals - - -	15·9	16·9	15·9	17·9	17·2	17·1	20·6

5. *Deaths in relation to Tenements.*—In 1906 we classified the deaths in relation to the number of rooms occupied by the persons who died. The causes of death have been divided into (a) all causes, (b) zymotic disease (including the notifiable diseases, influenza, and zymotic enteritis), (c) phthisis, and (d) respiratory diseases other than phthisis. The results appear to show that the smaller the tenement the higher is the death rate of all causes and of the diseases named. This is an instructive result when it is considered that each of the four years (1903–06), tells the same story, and that as

many as 4,000 deaths are tabulated on a population of approximately 100,000 persons. It is necessary, however, to recognise that the figures are of relative value only, for it must not be assumed that a man dying of phthisis in a one-roomed tenement in 1906 has lived all his life in that tenement. He may only have been living there a few months or years, his disease having been contracted elsewhere. But even as a relative return the figures are striking, and illustrate in a marked manner the broad fact of the evil effects of living under "overcrowded" conditions.

7. Deaths from Phthisis.—The following table sets out the number of phthisis deaths which have occurred in Finsbury in institutions (1901-06) as follows :—

—	Total Number of Phthisis Deaths.	Phthisis Deaths in Holborn Union Infirmary.	In other Institutions.	Total in Institutions.	Percentage of Deaths in Institutions.
1901	216	82	39	121	56·0
1902	240	88	20	108	45·0
1903	223	97	20	117	52·5
1904	251	113	27	140	55·7
1905	215	97	31	128	59·5
1906	232	85	58	143	61·6

From this table it will be seen that more than half the deaths from this disease in Finsbury occur in institutions, and, with few exceptions, poor law institutions. This means, in the first place, that more than half the deaths are of the very poor, and, secondly, it means that more than half of the advanced and dying cases of this disease are isolated from the community, and in this way a large body of infection is removed from the district, which is a matter of the greatest importance as a means of prevention of the spread of the disease. But our chief need at the present time in dealing with phthisis in Finsbury is earlier and more frequent isolation of the patient, both for his own sake and the protection of the community.

8. Further, I must add here that the evidence of the relation of phthisis to poverty is even more intimate than appears from the above table. We have found in Finsbury, as a result of our visitation of all cases of this disease notified to us, amounting to upwards of a thousand since the system began, that phthisis is one of the commonest of the causes of personal and family poverty. Repeatedly

* Institutions include Common Lodging Houses, Houseless Poor Asylum, House of Retreat, and other similar Institutions (excluding, of course, Hospitals, Infirmarys, &c.). The population is stated approximately only.
† These are deaths (not death rates) returned as belonging to Finsbury, in which no address was furnished or the deaths were not traceable at the addresses furnished, or for special reasons the deaths were not visited.
‡ For the purposes of this Table it has been necessary to use the Census Population (1901), for all four of the years included in the Table. It should not, however, be forgotten that the population is declining, and the death rates for each year in this Table are, therefore, approximate only.

Percentage of phthisis deaths occurring in institutions.

Need of segregation of phthisis patients

Relation of phthisis to poverty and family poverty and illustrations thereof

Mr. George Newman,
M.D.

25 Feb. 1908.

Mortality in Finsbury.

we have found that the begin ing of the decline of a family in social status and condition has been due to this disease in the bread-winner. Indeed it has been rare to find cases of phthisis among the poor which have not greatly jeopardised the fortunes of the family. Finsbury was the first borough in London to introduce a system of voluntary notification of phthisis which during the last six years yielded an average of 193 notifications, which is about the same percentage of the population as at Sheffield under a compulsory system of notification.

9. The following half-dozen illustrations, in no way exceptional, may be quoted :—

(a) J. L., 26, Roscoe Street, printer's labourer. Wages, 30s. per week. Notified October 21st, 1902, died March 12th, 1903. Lived in a two-roomed tenement from time of incapacity to work; his wife worked to support him and two children; her earnings were very small, so that husband had to go to Highgate Infirmary, and until his death the family were on the verge of starvation. The wife and children then moved to a single-roomed tenement.

(b) G. E., 22b, Roscoe Street, french polisher. Wages, 30s. to 35s. per week. Notified, March 16th, 1903; died December 27th, 1904. Lived in a three-roomed tenement: previous to incapacitation in comfortable circumstances, but after lost his regular work, did odd jobs of any kind, wife went out to work to help support him and four children. This was supplemented by help from neighbours and friends, otherwise they would have become destitute.

(c) A. B., 1, Lamb's Buildings, carman (originally a hardwood turner). Notified January 16th, 1903; died March 3rd, 1903. Wages, about 25s. to 30s. per week. Previous to incapacitation lived in fairly comfortable circumstances, but owing to ill health fell out of regular work; did a few odd jobs from time to time; wife went out to work at office cleaning, but was unable to earn sufficient for the maintenance of family of four, so that they drifted to semi-starvation until death of husband. A son of above died early in this year and the mother attributes his early development of phthisis to being ill-clad and under-fed; family now living in two small rooms.

(d) T. P., 39 M., 12a, Dufferin Street, potman. Wages, 10s. and food. Notified May 10th, 1904. Has done little or no work since notification and from his appearance does not look capable of doing anything. Wife goes out to work to support him and family of two.

(e) C. E., 26 M., 7e, Errol Street, engineer's labourer. Wages, 30s. Notified March 7th, 1906; died April 12th, 1906. Lived in two-roomed tenement. After incapacitation, wife had to go out to work at office cleaning to support him. This man was ill a long time previous to notification and removed to live in a single-roomed tenement.

(f) — Timmans, a drain layer and plumber for eighteen years. Wages, 35s. weekly; lived in Guinness Buildings, Lever Street; wife and seven children. Worked for some weeks in a cold-air stores, and contracted severe chills, which weakened his health. About eighteen months later he laid a drain under a workshop under very damp conditions and thereafter his health broke down completely. He was laid up with phthisis for about four months in the winter of 1905; then worked on and off during the summer of 1906, and went into hospital 1906-07 (winter.) Discharged as hopeless. Mrs. Timmans went out charing to earn money but poisoned her right hand at work, and has since had right thumb amputated. Since the father's illness commenced the youngest child has died. The eldest (a boy) is now fourteen, and is earning 5s. a week. Four children are attending school and one is below school age. The school children are given dinners at the Alexandra Trust by their teachers, and neighbours give the family food, etc. The only income of the family is the boy's 5s. weekly with small sums collected by Timmans' workfellows. The rent is 5s. 6d. a week.

10. Deaths in relation to Enumeration Areas in Finsbury. —In 1906 we distributed the births and deaths in the seventy enumeration areas used in the census. Such distribution should always be made, but hitherto it has not been practicable to undertake the increased labour necessitated. The results of this distribution are of great interest, because by its means we are able, so to speak, to localise our general death rate and infant mortality rate and discover more exactly where the chief incidence of mortality really falls.

(a) Distribution of the General Death Rate.—The death rate for the whole borough is 20·7 per 1,000. By distribution in areas we find that there are fourteen areas in which the death rate is above 25 per 1,000 :—

Amwell	2.	29·2	City Road	3.	26·6
	5.	36·2		4.	30·1
	14.	30·8		11.	25·1
	15.	27·2		12.	39·0*
St. James	7.	29·6		16.	26·4
City Road	1.	26·3		19.	25·7
	2.	31·4	Finsbury	10.	26·3

When we come to examine the general characteristics of these high mortality areas we shall find that there are some which are common to them all. First, there is a high density of houses per acre. Take, for instance, Amwell 14 and City Road 16, and compare them with such an area as Amwell 11 (see Table below). The former areas are covered densely with dwelling-house property, with narrow streets and small back yards and without open spaces; the latter is characterised by the reverse conditions. Secondly, the high mortality areas have a high percentage of poor-class tenement houses, which have in the main degenerated from better days and are now the home of much domestic insanitation of every description. These houses built for one family and now inhabited by six or eight families are most inconvenient and unsatisfactory, and though perhaps not overcrowded according to the bye-laws, are in fact overcrowded from the point of view of personal and public hygiene. Thirdly, these areas have a high percentage of poverty. The persons living in them are engaged in casual occupations, carmen, labourers, etc., and their average wages are from 15s. to 25s. per week. Rents average about 2s. 6d. to 3s. per room. Lastly, it must be said that in these areas rather more than elsewhere, and perhaps largely because of the above-named conditions, there is a low standard of social life. Many of the inhabitants of these areas are "birds of passage," drifting from one poor district to another, above the average in age but below it in health, in nourishment and in stamina, and below it often in social responsibility and in social habit and custom. And thus it comes about that they are the most susceptible to disease and the least able to throw it off. A high percentage of them die in institutions.

Eleven areas yield a death rate below 15 per 1,000, and may thus be classed as exceptionally healthy. In such areas there is less density, fewer tenement houses, better wages, and a higher standard of social life.

(b) Distribution of Infant Mortality Rate.—The average infant mortality rate for the whole borough is 157·3 per 1,000 births. There are nineteen enumeration areas with a rate which is over 200, four of these are over 250 and four are over 300. The following are the eight areas over 250 :—

Amwell	-	-	2	-	-	-	337·7
"	-	-	5	-	-	-	260·0
Charterhouse	-	-	22	-	-	-	256·4
City Road	-	-	1	-	-	-	275·8
Finsbury	-	-	1	-	-	-	333·3
"	-	-	5	-	-	-	307·7
"	-	-	6	-	-	-	250·0
"	-	-	7	-	-	-	375·0

From such a return we are able to localise the infant mortality of the borough. Elsewhere in the present statement will be found particulars as to the conditions which produce a high infant mortality, and to understand the meaning of the above returns it is necessary to consider such conditions in relation to these areas. Briefly, however, it may be said that these eight areas are characterised (a) by poor tenement houses, poverty, and a low standard of social life; or (b) by the predominance of block dwellings, or by both. Indeed, it is the combination of these conditions which appears to lead to the higher mortality among infants and children. It is unnecessary to burden this statement with many figures and therefore

* This death rate appears unduly high owing to the very small population in this area.

Mr. George Newman, M.D. particulars are furnished of one registration district only, as follows :—

Incidence of occupation on death rate. 11. *Occupational Mortality.*—We have distributed the deaths in Finsbury (1902–1906) according to occupations. The matter is exceptionally difficult to measure as it is open to many fallacies and would require a lengthy statement for its elucidation. For the present purpose it will be sufficient to say that the lowest paid occupations are those which necessitate a maximum amount of exposure and result in increased mortality. For instance, if we take labourers, carmen, and outdoor porters, between the ages of twenty-five and fifty-five, and compare their mortality rates with persons of the same age occupied in other ways, we shall find the percentage of mortality is higher for the former, even though they furnish less than 10 per cent. of the occupied males. The following table illustrates this point in relation to three groups of disease, namely, respiratory disease, tuberculosis, and circulatory diseases :—

Year.	Less than 10 per cent. of Occupied Males.	More than 90 per cent. of Occupied Males.
	Mortality per cent. of Casual Labourers dying between 25–55 from Respiratory Diseases, Phthisis and Circulatory Diseases.	Mortality per cent. of other Occupied Persons dying of the same Ages and from the same Causes.
1902	40.4	59.6
1903	37.9	62.1
1904	49.7	50.3
1905	40.1	59.9
1906	46.3	53.7

That is to say that though casual labourers (aged twenty-five to fifty-five) furnish less than 10 per cent. of the occupied males they contributed in 1906 46 per cent. of the total mortality (at same ages).

THE MEDICAL ASSISTANCE OF THE POOR.

12. The medical assistance of the poor in Finsbury divides itself naturally under three groups of operations :—

(a) Under the Poor Law.

(b) Under the sanitary authority.

(c) Under voluntary agencies such as general and special hospitals, charities, dispensaries, and a considerable variety of philanthropic agencies for feeding, clothing, convalescent homes, surgical instruments, etc.

The last named are of course not rate-aided and, therefore will only be referred to briefly. Some notes, however, may be added under the other two heads.

MEDICAL ASSISTANCE FOR THE POOR UNDER THE POOR LAW.

13. *Indoor and outdoor medical relief under the Holborn Union.*—In 1906 the average daily number of indoor paupers, adults and children, relieved was 3,523, and outdoor more than 1,700 per week on the average. In addition to this there was an average daily number of persons relieved in the casual wards of sixty-eight.

14. The indoor poor are maintained in the under-mentioned institutions :—

Workhouse, City Road, E.C. For chronic, aged, and infirm. Average daily number (1906), 1,526. Nursing staff expenses, £593 per annum.

Workhouse, Mitcham, Surrey. For ordinary able-bodied persons. Average daily number (1906), 1,045.

Infirmary, Archway Road, N. For acute sick cases. Average daily number (1906), 545.

Schools, Mitcham, Surrey. For children aged three to sixteen years. Average daily number (1906), 143.

15. The guardians consider, on their merits, claims for assistance through the Infant Milk Dep't and medical relief in cases of child-birth where midwives consider it necessary.

16. There are seven outdoor medical officers (salaries for part time service, £105–£135) a midwife for outdoor poor (6s. per case), and six indoor medical officers. Drugs, medicines, and medical appliances used in in-maintenance (1906) amounted to £1,284 4s. 11½d., excluding salaries of medical staff ; for out-relief the similar expenditure amounted to £270 15s. 2d. These amounts do not include vaccination expenses.

17. *Vaccination.*—In 1905, the latest year for which figures are complete, there were in Finsbury 3,380 births, of which 2,316 were successfully vaccinated. Five were insusceptible, twenty-one escaped on account of "conscientious objection" and 331 died before vaccination. The remaining 712 are excluded from the figures because of exemption, removals, etc.

18. *Hospital Isolation.*—Practically all the hospital isolation for infectious diseases in Finsbury is carried out by the Metropolitan Asylums Board. Since 1901 as much as 72.5 per cent. (1904) to 85.5 per cent. (1901) of all the cases of notified infectious disease have been removed to hospital. The remainder of the cases have been treated at home, and have paid for their own medical treatment, nursing, etc. It thus comes about that a Poor Law Body (the M.A.B.) isolates and treats free of expense to the patient not less than 70 per cent. of all the notified infectious disease in the borough. In 1906 only sixteen cases out of 588 cases isolated were treated in other institutions (not under the Poor Law).

19. *Phthisis Treatment.*—As I have already pointed out, more than half of the phthisis deaths occur in institutions (see par. 7). This figure, however, by no means

Treatment
of phthisis
by Poor Law

represents the service of the Poor Law infirmary in isolating and treating this disease: for it is frequently the case for consumptive patients in these infirmaries to come out before death, sometimes because they wish to die at home, sometimes because they hope to struggle on and regain health outside. At present in a district like Finsbury, without available means of isolation or treatment of phthisis in sanatoria, the poor law infirmaries are the only means we have of isolating advanced cases of the disease.

20. *Miscellaneous.*—Under the Public Health (London) Act, 1891, Sec. 3., every relieving officer is required to bring to the attention of the sanitary authority any general or special nuisances with which he may meet, and in this way the Poor Law is acting in some measure as a sanitary authority for the assistance of the poor. Under Sec. 89 (2) of the same Act the relieving officer shall, under stated circumstances, bury the dead. The Board of Guardians shall pay all expenses, recovering them if possible.

21. Much might be done by the Poor Law medical officers in notifying cases of epidemic diarrhoea, phthisis, pneumonia, etc., to the sanitary authority. In some districts a mutual arrangement is made to this effect.

MEDICAL ASSISTANCE OF THE POOR FROM THE SANITARY AUTHORITY.

22. During the greater portion of the nineteenth century sanitation was confined to improvement of the environment and external circumstances of life. Even now much of the public health legislation in force is concerned with similar problems. But in recent years there has been a remarkable change, both in the objects and means of public health work, which is now becoming more personal in its application. Land drainage, refuse removal, segregation of the infectious sick, housing and building regulations and so on, though still of course necessary and highly important, are giving place to more personal matters. Further, this change has involved an extension of the preventive measures of the public health service into the realms of therapeutics, as disease itself is coming more and more to be looked upon as a "nuisance" to be remedied by the sanitary authority. There can be little doubt that this change, in principle and practice, is, as yet, only in its infancy.

23. I now propose to name some illustrations of free medical assistance received by the poor through the present administration of public health:—

(a) Hospital isolation and treatment under the Public Health Act, 1875. In London this isolation is provided for by the Metropolitan Asylums Board (under Poor Law), (see Public Health (London) Act, 1891, Sec. 80).

(b) The Cleansing of Persons Act, 1897, gives power to the sanitary authority to cleanse persons infected with vermin free of charge.

In St. Pancras and St. Marylebone large numbers of persons have been cleansed. In Finsbury, 1906, only thirty-five persons were so cleansed, free of charge, at a cost to the borough council of £9 18s. 4d.

(c) Under the Public Health (London) Act, 1891, Sec. 77, any sanitary authority in London, may, with the sanction of the Local Government Board, provide a temporary supply of medicine and medical assistance for the poorer inhabitants of their districts. This corresponds to the Public Health Act, 1875, Sec. 133. We have not, up to the present, exercised this power in Finsbury.

(d) In the means used for prevention of the spread of infectious disease there are several illustrations of the medical assistance now under consideration.

(i) Provision of reception houses for "contacts," free accommodation, etc., during disinfection, and in times of small-pox epidemic for a quarantine period. Sec. 60 (4).

(ii) Disinfection itself, which, under the 1875 Act, is cast upon the occupier, is in London done

by the sanitary authority free of all charge. Mr. George Newman, M.D.

(iii) The medical officer of health becomes, in times of epidemic, a district medical officer visiting the cases of sickness for purposes of diagnosis (including free bacteriological examination in cases of typhoid, diphtheria, and tuberculosis), isolation, and indirectly, of medical advice of a somewhat extensive and always extending character. (Sanitary Officers (London) Order, 1891, Secs. 1 to 7.)

(iv) The free distribution of antitoxin in cases of diphtheria, both as a therapeutic and prophylactic agent.

All the above are part of the regular practice in Finsbury.

(e) *Burial.*—The sanitary authority is empowered to bury the dead under special bye-laws (Public Health (London) Act, 1891, Sec. 88, 89).

(f) *Educational Work* by means of leaflets, posters, etc., may be carried out by the sanitary authority, the expenses being placed on the rates. In Finsbury we have issued many thousands of such leaflets on the prevention and early treatment of phthisis, measles, and small-pox, the care of children, etc. Posters on the evil results of excessive drinking of alcohol have also been issued.

(g) *Health Visitation Work.*—There are six district sanitary inspectors in Finsbury and two lady inspectors—all of these officers, and particularly the lady inspectors, are continually advising the poor on points of health and disease, and the medical officer of health does a good deal of similar work as opportunity offers, particularly in relation to the following matters:—

(i) Notifiable infectious diseases, including puerperal fever.

(ii) Phthisis.

(iii) Non-notifiable diseases (measles, mumps, whooping cough, parasitic diseases).

(iv) Births.

(v) Diseases of infancy, and infant deaths. In the Metropolis the London County Council is the education authority, so that school children come under its medical officer.

In 1906 the lady inspectors in Finsbury paid 5,483 visits which included a greater or less degree of personal advice as to care of children and so forth.

(h) *Infant Milk Depot.*—Since March 1906, the Finsbury Borough Council have carried on a milk depot previously established in the district by voluntary agency. Since its commencement 334 infants of the poor who could not be breast-fed have been fed at the depot at a total (capital and current) charge on the rates of about £170 (to end of 1906.) The parents or guardians have in all cases paid something towards this milk provision but not sufficient to meet the cost (see par. 25 (iii.) (E & F)). The depot has involved a large amount of nursing visitation, by the nurse attached to it, in the homes of the children, with the express purpose of giving advice.

24. A note may be added mentioning some of the more important Finsbury charities. There are in the borough of Finsbury a number of charities of varying character, some being wholly connected with churches. Among those not so connected or which have a physical side thereof are:—

(a) The Flower Girls' Mission conducted by Mr. J. A. Groom, is carried on in Sekforde Street, in connection with which there are eight houses where 130 crippled or blind girls are housed and fed. There are in addition about eighty to ninety girls who are employed and who, although they get their dinner and tea on the premises, reside with their parents or friends.

(b) There is a mission carried on in Whitecross Street by Mr. May in premises constructed for use

Mr. George
Newman,
M.D.

25 Feb. 1908

Local chari-
ties in
Finsbury and
illustrations
thereof.

as a warehouse, and consisting of four floors and basement. The Sunday schools are attended by 400-500 persons. In the winter time (six or seven months) there are about 2,000 persons (casuals, vagrants, and wanderers) fed daily, except on Sunday, when the number would be about 1,000 to 1,500. In the summer (about five months) the numbers are considerably reduced, being anything up to about 100 per day. The meals are free and the total cost is £1,000 to £1,200 per year.

(c) The medical mission held at the Friends' Meeting House, Roscoe Street, Bunhill Row. During the year 1903-04, 6,027 patients were seen. This number has been reduced, and would probably be 4,000 at the present time. Patients are charged 1d. for medicine, but those coming from a distance have to pay 1s. for medicine.

(d) The Church Army, Banner Street, have premises which can accommodate 140 men, but the average numbers are 110-120. The men, who are employed at wood-chopping, bundling, etc., are of the homeless class. They are housed and fed whilst there, and in addition earn some money. The amount of their earnings depends on the class of work they are engaged upon, and whether piecework or not.

(e) The Leysian Medical Mission is carried on at the Leysian Buildings in City Road. The patients number about 6,000 yearly. They are charged one penny for registration, which lasts eight weeks, they are also charged one farthing at each visit for advice, and medicine. There are several visiting sisters attached, but they are not trained nurses.

(f) The Finsbury Dispensary is situated in Brewer Street North. During 1906 there were 27,861 attendances of patients at the dispensary, of which number 9,326 were new cases; 2,693 visits were made to patients' homes in cases where they were too ill to attend at the dispensary. This institution has been in existence 126 years.

(g) The Claremont Hall Medical Dispensary treats some thirty cases weekly. These persons are of a very poor class. They pay 2d. per week. At this mission there is also a children's *crèche* (twenty-four children), and various forms of relief (twenty persons weekly). During three months of the year 600 school children are supplied with free meals.

(h) There are five *crèches* in the borough, at which there is an average daily attendance of 124.

(i) In the several ecclesiastical parishes of Clerkenwell (western division of the borough) there are eighteen charities consisting of gifts of bread, coal, clothing and money. The total number of persons who received assistance from these sources during the year ended June, 1905, was 1,328 and the total amount expended for all purposes in connection therewith was about £800.

(j) The charities existing in St. Luke's (eastern division of the borough) appear to be of a different character, comprising, as they do, provisions for giving assistance in apprenticeship, exhibitions, educational, almshouses, pensions, etc. During the year 1906 seventy-six persons were provided with outfits of clothing, value 30s. each, and in addition two persons had clothing value 50s. each; twenty-three persons were appointed to take up their residences in the almshouses; seventeen persons were granted a yearly pension of £25, and twenty-six persons £18 each; nine boys and girls were granted scholarships of the yearly value of £5; eighteen girls scholarships value £7 16s.; and fifteen boys scholarships value £13. The total expenditure in connection with above appears to be £6,472 13s. 3d.

(k) The Claremont Hall Mission Medical Dispensary in Pentonville Road has, I understand, about 100 patients per week, many of whom are visited at home by the "sisters," who also provide relief (food, clothes, coal, money, etc.). They visited also "sweated home workers," and carry on a *crèche* (twenty-four children). The Claremont Mission has also provided free dinners for school children (from Christmas to Easter, 600 weekly).

(l) A note should be added respecting the Social Workers Association established in 1904 by the

Lady Mary Forbes-Trefusis and the Hon. Violet Douglas Pennant (Hon. Secretaries). It was felt that the result of the efforts to relieve the poverty and distress in Finsbury was not in proportion with the great amount of devoted work done on all sides, and that this want of definite result was largely due to a lack of co-operation in such matters as the public health, the promotion of thrift, and in those directions to which we must look for permanent amelioration of the condition of the poorer classes of the community. It is the aim of the association to include:—

A.—Workers belonging to all churches and religious denominations within the borough, irrespective of creed.

B.—Men and women engaged in temperance and rescue work, or in the organisation of sick clubs and benefit societies, and any institutions which have for their object the raising of the tone of their members.

C.—Members of charitable societies and their officials.

D.—Officers and members of the board of guardians and of the borough council.

E.—School teachers and managers of schools.

F.—All others who are able to give time and attention to problems affecting the poor, such as housing, sanitation, health, thrift.

It established an Infant Milk Depôt and School for Mothers in 1904; appointed a whole-time health visitor, who was a fully qualified sanitary inspector, in 1906; arranged health and thrift lectures, home visitation, etc. The duties of the health visitor (Miss Irene Cox) comprised lectures on health and cookery to mothers' meetings, girls' clubs and factory dinner hours (seventy-nine lectures in 1907), home visiting of young mothers (1,345 visits in 1907), and the carrying on of a "School" for Mothers separate from the Depôt "School" in conjunction with the lady sanitary inspectors (300 mothers passed through these classes).

INFANT MORTALITY.

25. I propose to refer to infant mortality only in so far as it bears upon questions of poverty and public health administration, and the matter can most briefly be stated perhaps in a number of short propositions:—

(a) Infant mortality (*i.e.*, the death rate of children under twelve months of age per 1,000 births), is practically stationary in England, although the death rates from all causes and from most of the special causes shows marked decline. During the last year or two there has been a slight improvement in infant mortality.

(b) The mortality is most marked in the first few weeks of life. One-third of all the infant mortality occurs in the first four weeks of life.

(c) The death rate is much higher among illegitimate than among legitimate children, higher in towns than country, and higher in manufacturing districts, where mothers are employed away from home, than in agricultural districts.

(d) Three chief diseases are responsible for 70 per cent. of the total infant mortality, *viz.*: prematurity and immaturity, epidemic diarrhoea, and lung disease. The first named set of conditions appear to be the cause of an increasing amount of infant mortality, particularly of course in the first few weeks of life. Diarrhoea and lung disease claim their victims in the later months of the first year.

(e) Each of these three diseases is directly brought about by physical unfitness of the mother, or by mismanagement of infancy by the mother. Prematurity and immaturity are in great measure due to maternal physical inefficiency; diarrhoea is due to bad feeding, particularly at the weaning period; and lung disease is due to exposure to cold, commencing at birth, when the child's environment drops 30 or 40 degrees of Fahrenheit, and continuing in many ways of exposure subsequently.

(f) It is obvious that this condition of things must be due, in large measure, to the physical condition of the mother.

Pre-natal
and other
causes of
infant mor-
tality in
Finsbury.

(i.) We have made an inquiry in Finsbury into the conditions of motherhood of 715 dead infants (1905-06), paying special regard (a) to the physique and health of the mother; (b) to her past history in respect of miscarriage, abortion, and premature birth; (c) to her general social environment, poverty, and feeding; and (d) to hard work during pregnancy. The 715 dead infants were sub-divided into three groups, viz.:—A.—Those dying from all causes within twelve months of birth (715); B.—332 out of those 715 who died within the first three months; and C.—178 out of the 715 which were deaths due to immaturity. The results stated in percentages have been as follows :

	A. 715 infant deaths.	B. 332 infant deaths in first trimester.	C. 178 infant deaths from im- maturity.
Mothers with poor physique or more or less ill-health*	38	45	54
Mothers with his- tory of miscar- riage, etc. -	34	46	76
Mothers underfed and very poor -	7	10	10
Mothers doing hard work dur- ing pregnancy -	11	18	22

(ii) Confining ourselves to Column C., which concerns death from immaturity, as an example, the return means this:—That more than half the mothers of infants dead of immaturity suffered from marked ill health and poor physique; that 76 per cent. of them had previously had misfortune in respect to child-birth; that 10 per cent. of them were underfed; and that 22 per cent. of them were compelled, by circumstances, to do hard work during pregnancy. After a study of these findings it seems impossible to resist the conclusion that in spite of the tendency of nature on behalf of the new-born child, poor physique and ill-nutrition of the mother exerts, in a considerable percentage of cases, an injurious effect upon the infant.†

(iii) Ten per cent. of the mothers of these dead children in Finsbury in 1906 suffered from very bad health; 25-28 per cent. more from indifferent health, and 65 per cent. had good health. It is interesting to compare these returns with similar enquiries made into 1,906 living children. For example, the condition of the home in the case of living children yielded a satisfactory result in 68 per cent. (as against 60 per cent. in the enquiries respecting dead infants) and 71 per cent. of the mothers had no outside employment as compared with 67 per cent. so situated in respect of the dead infants. On the whole, the conditions as to home and mothers' occupation are much the same in both dead and living infants.

Disastrous
effect of
artificial
feeding of
infants.

(iv.) But when we come to enquire into feeding there is a very different result. Of the mothers of the living children, 80 per cent. breast-fed their infants. Of the mothers of the dead infants only 35 per cent. breast-fed their children. That is a marked and decisive point of difference. It should not be forgotten, however, that the majority of the investigations into deaths took place, as a rule, at a later period in the twelve months than similar investigations into births. As many as 125 of the dead infants were fed only on cows' milk, and were not suckled at all; forty-six were fed on "condensed" milks and other artificial "foods" only. On the whole, therefore, it may be said that the

broad difference between the treatment which the living infants and the dead infants have received in Finsbury is a difference of feeding. But we must go a step further back than that to explain the deaths from prematurity, marasmus and atrophy. Most of these deaths would appear to depend not wholly upon feeding, for the infants only lived a few days, but upon the physical conditions of the mother. From whichever point of view we judge the matter, whether it be as to bad feeding, leading to diarrhoeal diseases, or as to exposure, leading to lung diseases, or as to mere physical unfitness to live, leading to premature death, the problem of infant mortality is mainly a question of motherhood.

Disastrous
effect of
artificial
feeding of
infants.

* In an enquiry made as to 1,906 living children in 1906 it was found that 16·8 per cent. of the mothers had poor physique or ill-health.
† Though the matter cannot be considered in detail in such a report as the present it should be added that part of the death roll due, directly or indirectly, to immaturity, may possibly be brought about by artificial interference with child-bearing. At an inquest, held in August, on a Clerkenwell woman, aged thirty, who died from blood poisoning as a result of taking pills, medical evidence was given which seemed to indicate that there is a practice, more or less widely prevalent, of such artificial interference. Several death certificates have been received this year which point in the same direction. It has recently been stated, on medical authority, that this custom is spreading in certain districts of England and is assuming serious proportions. If these things are so it may account also for some of the infant deaths attributed to immaturity.

(v) And in these respects the findings of 1906 do but confirm those of 1904 and 1905. Taking the three years together we have the results of inquiry into 1,127 dead infants in Finsbury. What do we find? We find that:—The mothers lived at home in 77 per cent. of the cases, and in 88 per cent. the homes were either well kept or fairly well kept. It is idle, therefore, to urge, as many people do, that death is due in these cases to absence of the mother at work, or to the fact that the home is a dirty hovel in a slum. It cannot be doubted on the whole that 986 of these dead infants lived their short span of life under fairly good external conditions. But—and here is the point of importance—only 30

Mr. George Newman, M.D.
25 Feb. 1908.
Disastrous effect of artificial feeding of infants.

The relation of poverty to infant mortality.

per cent. of the total number *were breast-fed*. Nor must we forget that many of these were premature deaths in which feeding played little or no part as a cause of death. If we take away the immaturity deaths and the exposure deaths, and consider only epidemic diarrhoea, we find that only 14 per cent. were wholly breast-fed.

(vi) The conclusions to which all these facts lead are indisputable. Broadly, there are three main diseases which cause 70 per cent. of the deaths of infants in Finsbury, and they are due to three main evils connected with infancy :—(1) Immaturity due to low standard of physical motherhood ; (2) Epidemic Diarrhoea, due to improper feeding ; (3) Lung Disease, due to mismanagement and exposure.

(g) Infant mortality also bears a direct relation to poverty. This may be measured by poverty of mother, leading to underfeeding, etc. (see paragraph above), by distribution of infant mortality in poor districts as compared with rich districts (the death rate 1901-05 was ninety-five in Hampstead but 173 in Shoreditch), by the condition of the home, and by mother's occupation :—

(i) We have been able in Finsbury in 1906 to gain something of a bird's-eye view by drawing up infant mortality rates for the various "enumeration areas" of the borough. By this means it has been possible, so to speak, to *localize* the infant death rates. As a result we find that out of seventy small districts of which the borough is composed (and of which the average infant mortality is 157 per 1,000 births), nineteen have an infant mortality of upwards of 200 per 1,000 births (eleven between 200-250, four between 250-300, and four above 300). Generally, it must be said that the areas having the highest rates are characterised, (a) by poverty and a low standard of social life, and (b) by block dwellings.

(ii) *Conditions of Home*.—Most of the homes, indeed as many as 71 per cent., consisted of only two rooms or less, but this is not remarkable in a district so largely composed of such tenement dwellings. What is more noticeable is that 60 per cent. of the homes in which the infant deaths occurred were clean and well kept, only 40 per cent. being open to any reasonable criticism at all. The percentage of unclean homes was somewhat higher in the cases of death from epidemic diarrhoea than from all causes.

THE FOLLOWING TABLE SHOWS THE INFANT MORTALITY RATES FROM ALL AND CERTAIN CAUSES IN HOUSES OR TENEMENTS OF SEVERAL SIZES :—

Size of Tenement.	Census Population, 1901.	Infant Mortality per 1,000 Births.					
		All causes.		Diarrhoea, and other Zymotic Diseases.		Prematurity. Immaturity.	
		1905.	1906.	1905.	1906.	1905.	1906.
One-room tenement - - - - -	14,516	219	211	53	67	30	69
Two-room tenement - - - - -	31,482	157	178	42	56	26	48
Three-room tenement - - - - -	21,280	141	188	34	43	44	55
Four-room tenement and upwards of four rooms.	33,185	99	121	19	26	19	52
Institutions and Deaths and Births not traced	1,000	39	19	—	4	—	6
The Borough - - - - -	101,463	148	157	37	45	27	48

(iii) *Occupation of the Mother*.—In 1905-06 we find a comparatively small fraction (12·3 per cent.) of the mothers are absent from homes where infant deaths have occurred. The majority (67 per cent.) of the mothers of these dead infants had no work of any kind except to attend to their family duties, and as many as 88 per cent. of them were able to devote their whole time to the tendance of infancy.

(h) *Administrative Measures against Infant Mortality*.—These should be threefold :—

- (i) Anything and everything which improves the physical efficiency of the mother.
- (ii) Improvement in infant management
- (iii) The organisation of infant feeding.

(i) Under the first heading there are a number of means and agencies which should be organised. For example, the feeding of suckling mothers, as is carried out in Paris, Ghent, etc., the relief of the working

woman from labour immediately before and after childbirth (needed amendment of Sec. 61, Factory and Workshop Act, 1901).

(ii) The improvement of infant management and the care of infancy generally is urgently needed. This is particularly the problem which could be met by suitable health visitation and by reform in the method of granting medical and other relief under the Poor Law. At present we are failing to touch either under the sanitary authority or under the Poor Law the great mass of ignorant mismanagement of infancy. We are not operating sufficiently upon the personal factor or upon the home. Our administrative measures are too diffuse and distributed, which is largely owing to dual and treble control. In connection with the Infant Milk Depot (see below) an attempt has been made in Finsbury since 1904 to teach some of the elementary lessons respecting management both of artificially-fed and naturally-fed infants. At first this work was undertaken by Miss Helen Frith (cert. Central

Suggested reforms as to rearing and nourishing infants.

Suggested reforms as to rearing a nourishing infants

Midwives Board and a qualified hospital nurse) and subsequently by the lady sanitary inspectors (Mrs. Greenwood and Miss Mildred Jones, both certified under the Central Midwives Board and qualified sanitary inspectors) in conjunction with the health visitor (Miss Cox). I cannot speak too highly of all this work. Though it has been done unostentatiously it has not only been great in volume, but of a skilled nature and wholly to the point. In 1907 nearly 300 mothers passed through this "School," many of whom were nursing their first child. The infants have been weighed, advice has been offered, woollen vests have been knitted, and "talks" have been given on all the chief topics of infant management and nursing

(iii.) The same applies to feeding. Mothers' milk is of course by far the best food for infants. About 80 per cent. of women can and do nourish their infants by the breast. *It is the remaining 20 per cent. who supply almost the whole of the infant mortality.* The only way to meet this section of the community is something in the way of milk dispensaries, milk depôts, and infancy consultations, under medical control. We have had such an institution in Finsbury:—

A.—The depot was established in November, 1904, by the Social Workers' Association. It was taken over by the Borough Council in March, 1906. During the whole period to March, 1907, 334 infants have been fed at the depôt. With one or two exceptions these were infants of the poorest classes and all were unable to obtain breast milk.

B.—The principles upon which the depôt has been worked have been:—(1) Absolute control of the milk, which has been supplied by Mr. Carson from his model dairy farm in Essex. The milk has been cooled, modified, and bottled at the farm. Sterilisation of stale milk has been wholly avoided, the fresh milk having only been sterilised during the hot weeks of the summer; (2) Medical supervision of the depôt and of every child fed; (3) A discriminating and careful distribution of the milk only to infants which could not possibly be breast-fed; (4) A systematic study of the effect of the milk on each infant and regular weighing and medical and nursing supervision of each child; (5) The sale of the milk at ordinary market prices.

C.—*Improvement in Condition of Children.*—Eighty-two per cent. of all the infants on the depôt for more than one month have gained on an average 16½ ozs. per month, which is the standard increase for healthy children. The general physical and constitutional improvement of the depôt fed children has been very marked. There has been no evidence of scurvy or rickets as a result of using the milk.

D.—*Mortality Rates.*—There were twenty-seven cases of death out of 334 children, which yields an infant mortality rate of 80·8 per 1,000 children on the depôt. But five of these children were brought in a dying condition and succumbed within a few days of admittance, and, if these be excluded, the infant mortality rate is 65·8 per 1,000. As many as sixteen of the twenty-seven deaths occurred in the first fourteen days after admittance. The average infant mortality rate for the borough of Finsbury in 1906 *for the infants which were not depôt fed*, was 160 per 1,000 births. In eight enumeration areas of the borough it was over 250 and in four it was over 300. In 1907, 253 children used the milk (making a total of 543 since the commencement of the depôt), of whom nine died. This yields an infant mortality rate of 35·5 per 1,000

births. The rate in the borough as a whole in 1907 was 111 per 1,000—the lowest figure ever recorded in the district. *Mr. George Newman, M.D.*

E.—*Expenses.*—The annual expenditure to March 31st, 1907, has amounted to £689 13s. 2d., and the receipts from mothers' fees to £216 2s. 1d., leaving a balance chargeable to the rates of £473 11s. 1d. This sum may be reduced by a small amount owing to some payments which are outstanding. Substantially, however, the charge on the rates for the year's working is £470. It must, however, be remembered that this is the total charge both of capital and current account and includes expense of plant, apparatus, etc.

F.—The comparative expenditure of the four depôts now established in the Metropolis may be stated as follows:—

—	Capital Expenditure.	Annual Charge on Rates.	No. on Depôt.
	£	£	
Battersea	600	509	210
Lambeth	880	200	60-70
Woolwich	656	(Only just opened)	—
Finsbury	—	470*	70-80

G.—*Administration.*—Each child, before being taken on to the depôt, has been medically examined and weighed. Once a fortnight it has been again examined and its modification of milk changed if necessary. Each home has been carefully visited and kept under supervision. The milk has been sold at market price (from 1s. 6d. to 2s. weekly). Most of the children were ill when taken on to the depôt. All the children belonged to Finsbury or lived just on the boundary. I am quite satisfied as to the great value of a properly controlled milk dispensary in the reduction of that portion of the infant mortality which is due to bad artificial feeding. Good feeding also builds up a good constitution, and there is substantial gain in that way also.

H.—*Summary.*—The object of the enterprise was intended to be educational as well as preventive or ameliorative; it sought to meet a pressing local need, and it was expressly stipulated that it should be so managed as not to encourage artificial feeding where natural feeding could be secured. Moreover, it combined for the first time in England an improved and suitable infant milk supply with the teaching of the mother. It is evident that these were not principles to carry out easily, and many difficulties were encountered. On the whole, however, the work of the depôt from its inception in November, 1904, met with marked success, and in March, 1906, it had so far justified itself that it was taken over by the borough council, who recognised their responsibilities in this matter. The same principles were acted upon as formerly, and, indeed, have been adopted by other milk depôts in this country. Particulars as to methods of milking have been fully dealt with in former reports, where also will be found a study of results.

Since its commencement 543 children have used the milk, including those already on the depôt. Number of infants benefited by milk depôts.

* Capital and current expenses are included in this amount.

benefited by
milk depôts.

the depôt at the beginning of the past year and those on at the end of December. Two hundred and fifty-three children have used the milk in 1907. The reasons for which the mothers and guardians of the 253 children sought the depôt were as follows :—

Mothers who had no breast milk or an insufficiency of milk	-	-	-	74.9
Death or illness of mother	-	-	-	13.1
The breast milk not agreeing with the infant	-	-	-	7.0
Infants unable to suckle, or similarly defective	-	-	-	2.0
The mother at work	-	-	-	3.0
				100.0

It may be said that 32.2 per cent. of the children on the depot were introduced by the lady sanitary inspectors of the borough council, 26.8 per cent. were introduced by medical practitioners in the borough, 13.0 per cent. of the cases were sent to the depot by St. Bartholomew's Hospital, and the remainder from neighbours' recommendations (28.0 per cent.).

The children belonged, with very few exceptions, to the poorer classes. Twenty-two per cent. of the children came from homes of one room only, and another 61 per cent. from two-roomed homes. So that not less than 84 per cent. lived in homes of two rooms or less, and very few indeed lived in homes of four rooms or more. It may be taken, therefore, that the children came, as a rule, from poor homes.

Another point of importance is that 70.5 per cent. of the children admitted were either in poor health or absolutely ill at the time of admission, and some of them were practically dying. The remainder (29.5 per cent.) were in good health. Almost without exception the children were being wholly fed by artificial means before they came on to the depot.

Turning to some of the results of this milk feeding, it may be desirable to deal with two matters, namely, the general improvement, and the increase in weight of the depot-fed infants, and the saving in life which has been achieved.

First, as to increase in weight. The importance of the weight of an infant as a criterion of its health and progress is well-known. Indeed, the weight is often the only criterion as to whether the infant is improving in health or not. At birth the average weight is about 7 lbs.; at three months it may be about 9 to 11 lbs.; at six months about 13 to 15 lbs.; at nine months about 16 to 17 lbs.; and at twelve months 19 to 20 lbs. Dufour's standard has been used in the Finsbury Depot, as in French depôts. It is well-known that the standard rise in weight in the early months of life is greater than subsequently, but roughly it may be said that throughout the twelve months of infancy the average increase ought to be about 1 lb. a month (12 lbs., plus 7 lbs. at birth—19 lbs.). We have taken that as a standard, with the following result (1907):—*Out of the 253 infants 198 (or 78 per cent.) have each an average of 4 oz. per week (i.e., approximately 1 lb. per month).*

Secondly, as to the saving of life. There were nine cases of death out of the 253 infants (four from epidemic diarrhoea). This yields an infant mortality of 35.5 per 1,000 births. The infant mortality rate for the borough during 1907 was 111 per 1,000

births. Comparison is impossible between these figures, as they are affected by very different circumstances. In 1906, the depot infant mortality worked out at 65.5 per 1,000 births (the borough rate being 157.3). Without making any close comparison between these figures, some things may at least be said:—(1) That the death-rate among the depot-fed children in 1907 was extraordinarily low, one-quarter less than among other children in the borough, even though the depot children were more frail and ill than the others. The broad fact is that here were 253 artificially fed infants (70 per cent. of them ill or ailing), of whom only nine died. Yet it is from this identical class of the community that Finsbury has, in past years, experienced an excessive infant mortality.

(2) That much of this substantial saving of life has been due to careful infant management in addition to suitable milk. The two things go together. The true milk depot, properly controlled, is also a school for mothers, as the French workers pointed out years ago. It is idle to credit an improved milk supply alone as being the one and only panacea for preventing infant mortality. Anyone who studies the causes of infant mortality knows that other conditions besides the food factor effect the question. There are, it is true, the alimentary diseases which indicate the influence of the food factor, and these are of the greatest importance. But there are also the deaths of infants due to lung disease (owing to exposure) and to immaturity (owing to poor physical motherhood), and these cannot be met wholly, or only, by dealing with the food factor. They must be met, as they have been in part met in Finsbury, by improved infant management.

(3) That during the two years that the borough has had the advantage of an Infant Milk depot, the total infant mortality in the district has shown a marked and substantial decline.

(4) And that, apart from the actual saving of infant life the children on the depot have, with few exceptions, steadily improved in health and physique, some of them in quite a remarkable degree. Thus there can be little doubt that the depot has served not only as an instrument of preventive science, but that it has exerted also a positive effect in helping to lay the foundations of a good constitution in most of the children who have used the milk.

Not the least difficult part of the working of an Infant Milk Depot is its financial control. This, indeed, has been our chief difficulty in Finsbury. On the one hand, it is important to charge as little as possible for the milk in order to bring it within the reach of those most needing its aid; on the other, the efficiency of such a depot involves an outlay beyond the mere price of the milk, due to the production under exceptional conditions and to the expenses of distribution. In Finsbury, the principle has been adopted of charging the ordinary market price of milk (4d. per quart) to the mothers attending the depot, meeting the expenses of distribution otherwise.

The heaviest item of expenditure is, of course, the milk, but an unduly heavy item is carriage from the farm to the depot, and this transit is also partly responsible for the large amount expended on bottles break-

ages being somewhat more than was anticipated. On the whole, however, and compared with other English milk depots, the expenditure has not been excessive nor does it exceed the twelvemonths estimate of £530. Still there falls a charge upon the rates for 1907 of £438 10s. 3d. (compared with £470 in 1903), and that is, of course, a serious item. Nor is it practicable to suggest, *for the same scheme*, a much smaller loss. It might be possible to work some other scheme at a less cost, but even so, there is the difficulty of income, the payments of the mothers being insufficient and too irregular to ensure a settled and satisfactory income. It is much to be regretted that an enterprise of this kind cannot, seemingly, be made self-supporting. Of its medical benefit, and of its far-reaching value, both in the saving of life and in securing and maintaining a better standard of infant management—after all a thing of national importance—there can be no doubt.

ENVIRONMENT AND THE PERSONAL FACTOR IN RELATION TO DISEASE.

26. Under this sub-heading, I propose to add a brief note as to the operating causes in the production of disease by way of furnishing an answer to the two-fold question:—Is the illness of the poor due mainly to environment or mainly to personal factors, and if the latter, how far is it practicable to meet it by means of suitable health visitation? Now I am strongly of opinion that the chief factor in disease production is personal rather than external. No doubt bad housing conditions and injurious circumstances in relation to employment are exerting an influence, but it is in my view mainly through the effect upon the habits, customs, and excesses of the individual than direct. I have had occasion to make a particular study of the effect of insanitary housing upon health in the thirteen insanitary areas which have been dealt with in Finsbury since 1901, and from which some thousands of persons have been displaced. It is of course true that the houses on these areas have been insanitary and unfit for habitation and some of the disease and death taking place has been directly due to external conditions, dampness, bad drains, defective roofs, and so on. But a careful examination of the causes of death will reveal the fact that much more has been due to such things as exposure at work, poverty, alcoholic and other excesses, absence of ventilation, "domestic insanitation," and uncleanness and ignorance generally. A degree of external sanitary defect so great as directly to cause fatal disease is rare. And it must be remembered that though housing and external conditions have enormously improved in recent years the preventable deaths remain. Take measles, for example, which killed 115 persons in Finsbury in 1906 (or 5 per cent. of the total mortality). The vast majority of mortality from this disease is directly due to personal mismanagement and ignorance. It is not due to environment directly, though overcrowding facilitates its spread. Or take pneumonia and bronchitis, which killed 392 persons (19 per cent. of total mortality). Nearly the whole of this mortality was also due to personal factors. Much the same applies to epidemic diarrhoea, which carried off 144 persons. Then there is alcoholism, syphilis, overlying in bed, accidents and suicide which are responsible for 158 deaths; and nearly all the deaths of infants (numbering 474) are also due to the personal factor in large measure. I do not say wholly, but in large measure. It is a difficult thing to find many deaths or diseases directly due to housing, unhealthy trades, insanitary workplaces, excessive hours, etc., though no doubt almost all disease and mortality has "an ancestry of causes" in which evil external conditions play some part.

27. That being my opinion, it follows that I look to a betterment of the personal factor as likely at the present time (now that environment has reached a high standard of excellence) to be most effectual in the betterment of physical life. I would, if I could, bring to bear upon the

homes of the people of Finsbury more suitable health visitation, by which we should gain:—

- (a) Information as to the occurrence of illness.
- (b) Information as to insanitary conditions.
- (c) Advice on domestic hygiene, dietaries, cleanliness, etc.
- (d) Direction and advice on the whole question of care of infancy and children.
- (e) Counsel in the carrying out of medical treatment.
- (f) Special health work in the direction of phthisis prevention, physically defective children, invalid children, and so on.

28. Such Health Visitation would act as a deterrent to Functions of malingering and unsupportable complaints of which we health now receive a large number. They might also assist in visitors. providingsome check on school non-attendance, employers' certificates in relation to infectious disease, etc. I am satisfied that much illness is prolonged quite unnecessarily and that there is a lamentable and disastrous amount of failure to deal with the *beginnings of disease*. Neglect of such things leads to mortality more than many other factors. At present public health and Poor Law administration only operates in cases of destitution and grave infectious disease. This is not sufficient and is brought to bear too late to be effectual.

29. The qualification and suitability of the health Need of visitor is a matter of great importance and upon it would qualified and depend the success or failure of any extension of this paid health kind of work. I do not think a system of voluntary visitors. health visitation would be found to work well for long periods. Voluntary work of this kind tends to be irregular and unqualified. But I have been favourably impressed with the remarkable success of the Bradford City Guild of Help and I think something of this kind, carefully organised and paid for, would be of immense value to the State. Such a system, co-ordinated with a more effectual hospital service and worked under the Public Health authority, would, I am convinced, materially alter the whole aspect of disease and mortality among the poor. At present, however, such work does not come within the regulation of the sanitary officer's Orders, and the provision of hospital accommodation is wholly inadequate. The result of the former disability is thatsanitaryinspectors are still required to devote themselves wholly to environment and the result of the latter is that such diseases as measles and phthisis are wholly unprovided for. I must add also that under present circumstances private medical practice among the poor is often extremely ineffectual and unsatisfactory—the rapid cure of the patient and the prevention of disease being results not often achieved. There is a lamentable lack of science about the whole thing.

30. I have no doubt at all that one of the necessary Transference reforms in relation to the whole problem is *unification of the of medical public medical services*. All infectious and infective disease aid to should be looked upon as a "nuisance" to be prevented or sanitary removed, quite irrespective of poverty and destitution. authority. What we need is an organisation of the existing authorities and powers under one authority. It cannot, it is evident, be under the Poor Law, for that is not sufficiently inclusive of the community. It would appear, therefore, that it should be under the public health authority, which should be the direct teacher and aider of the poor, long before destitution, in all matters of physical concern rather than as at present being confined in its operations so largely to external conditions. I should therefore view with satisfaction any provision for placing the outdoor Poor Law medical officers under the public health department of the local authority. But that is only one of the readjustments which would be necessary.

CONCLUSIONS

31. The main conclusions stated briefly, which it is Incidence of suggested may be drawn from the foregoing Statement, poverty on disease. are four, viz.:—

- (1) *That Poverty bears an intimate relation to disease, a relation which presents, on the whole, the most serious*

Mr. George
Newman,
M.D.

25 Feb. 1908.

Mr. George Newman, M.D. difficulty in the path of preventive medicine and physical improvement.

25 Feb. 1908. The evidence shows that disease and poverty act and react upon each other. Disease produces poverty—the patient, say an adult man, loses work and consequently wages, and therefore has less accommodation (bad housing) less nutriment, less clothing. In the result he is admitted to an institution where he dies or recovers, or he is deterred and remaining at home infects the home, ultimately dying there, the ill conditions of his environments accentuating his disease and hastening the end. Even if he recovers temporarily or is only partially disabled the tendency is for him to fall into the ranks of the casual labourer or unemployed, and then sooner or later to come on the State as a physical wreck. Thus we get (a) High percentage of institutional deaths; (b) high death rates in poorest homes; (c) the localisation of high mortality in particular areas; and (d) consequent poverty, unfitness, and disease of widow and children, due to premature or preventable death of bread winner.

All this is common knowledge. But these facts, simple and common though they are, furnish the chief daily problems of preventive medicine, which are in a considerable though varying degree not being met at the present time owing to ineffectual administration.

Need of co-ordination of medical assistance. (2) *That the Medical Assistance of the Poor in Finsbury though various, is not so co-ordinated as to yield the results desired.*

The evidence shows that under the Poor Law, the public health service, and voluntary charities much is attempted. Yet the fact remains in my belief that in Finsbury the ameliorative net work is such that a large amount of sickness is absolutely without medical assistance either wholly or at the critical juncture when it is most needed and likely to be most serviceable. This is due, in my opinion, partly to the mesh of the net not being sufficiently fine and partly to lack of co-ordination in administration. As a result, the cases needing medical aid slip through our fingers. It has been my duty from 1900–1907 to consider this failure, and we have been able in the public health department to improve our methods in various ways (much more thorough investigation of disease, notification of phthisis, lady sanitary inspectors, an infant milk depot, and school for mothers, visiting of births, an active administration of the Factory Act; rapid isolation and improved disinfection of infectious diseases; reform of the food supply and of housing accommodation, etc.) Much remains to be done, but I hope good has been accomplished. Certainly death rates have fallen and life has been prolonged.

Disadvantages of outdoor poor law medical service. But I must admit that I have been unable to secure an intimate co-operation with the Poor Law medical service. Without complaining of any persons in particular, for the simple reason that I have no such complaint to make, my experience of the system has impressed me, from the public health point of view, with the fact that the outdoor Poor Law medical service in Finsbury has the following disadvantages:—

- (a) It does not investigate or follow up disease.
- (b) It does not systematically provide proficient medical treatment and practically no preventive treatment.
- (c) The pivot of the medical service is a non-medical relieving officer.
- (d) It is not sufficiently inclusive of the poor who really need medical advice (probably because of deterrents).
- (e) It provides no statistics which would guide it and us to disease incidence, which is an absolutely necessary matter. In other words, it does not use its material for preventive ends.
- (f) It fails to touch the medical needs of children, only glaring cases of disease are submitted and then only after delay. I have repeatedly found children in poor tenements in Finsbury suffering from incipient disease wholly untouched by the Poor Law medical service though the family are under observation. I am satisfied that we have in the past made the fatal error of neglecting far too much, to treat incipient disease in childhood.

The voluntary agencies though excellent in many ways, and though in some measure dealing with physical needs appear to have in a greater or less degree ulterior motives and objects. They also lack co-ordination, and thus not only waste money and energy but prove ineffectual to meet the needs. They also suffer from lack of continuity, from lack of funds, and from a failure on the whole to adopt preventive principles.

(3) *That the question of infant mortality well illustrates the personal character of present public health problems as contrasted with the former problems of unsatisfactory external environment.* Need of co-operation between law and sanitary authority.

The evidence shows the age incidence and chief diseases of infant mortality and suggests the main causes—which concern motherhood. The conditions which give rise to a high infant mortality: (a) Bring about a dead loss to the State of about 120,000 lives per annum; (b) Maim the survivors; and (c) indicate a social problem of a personal nature, namely, unfit or inefficient motherhood. The means of prevention to be effectual call for co-operation between the Poor Law and public health medical services, to bring to bear sufficiently strong measures both upon the environment and upon the individual. The advance of the science of preventive medicine has shifted the centre of gravity from the influence of the environment, particularly in infant mortality, to that of the personal factor.

(4) *That owing to the issues arising out of this evidence it is necessary, in the opinion of the Witness, to secure: (a) Better co-ordination between, and if possible unification of, the public medical services; and (b) appropriate health visitation, medical and other.* Need of direct contact of medical officer of health with poor.

To take the second point first, the evidence of Paragraphs 26, 27 and 29 goes to show my view as to the importance of a development of the principle and practice of health visitation, medical and other. In the first place, this is personal service directed to meet the personal factor in the production of disease. Administration must be so reorganised as to bring the medical officer of health and his assistant and any other agent in the public medical service into direct contact with the poor. For this purpose, there will be necessary, amongst other things: (a) A revised Sanitary Officers' Order enlarging the duties of sanitary inspectors, as the orders now in existence discourage personal work; or (b) it will be necessary to make health visitors statutory officers of the sanitary authority in the same sense as sanitary inspectors are at present; or (c) the work of the Poor Law medical officer must be co-ordinated with the public health service or in some other way brought to bear on the foci of disease and in a personal way.

I am not prepared to be dogmatic as to the best method, I can only speak from experience in regard to (a) and (b). At the same time it cannot be doubted that immense gains would be obtained by securing medical visitation, and because the required medical visitation has not been forthcoming from the Poor Law service it has been necessary in many districts either to appoint an assistant medical officer to the medical officer of health for this purpose, or for the medical officer of health himself to undertake such work. Since 1900, I have had abundant opportunities of observing the work of sanitary inspectors and health visitors, both in London and the country, and I am satisfied that, with suitable training and equipment (now obtainable at the Royal Sanitary Institute, Bedford College, King's College, the National Health Society, and other bodies, whose work is in part standardised by the Sanitary Inspectors Examination Board) extremely valuable and necessary work could be accomplished by this kind of officer. Such work would amongst other things tend to co-ordinate and link up domiciliary and institutional treatment. Its general character is set out in the evidence above dealing with health visitation (Paragraphs 26–28) and so-called "schools for mothers." Experience has certainly proved the great value of this sort of work not only on its more directly ameliorative side, but also (a) its service educationally, and (b) as increasing rather than decreasing a sense of obligation and responsibility in the persons visited. Need of training a equipment of health visitors.

reference
of law
sanitary
nity.

On the subject of the exact form or system of co-ordination of the public medical services which would be most useful, I do not feel that it is my province to deal, or at all events to express any final opinion. My experience, however, convinces me that from a medical point of view further co-ordination is imperatively necessary, not only between Poor Law unions but between public medical services, and if practicable a unification under one authority. Preferably this authority should be a local authority and not a central one, though central control should be provided for. Personally, I am disposed to think that the medical part of the Poor Law service might suitably be organised, partly or wholly, in conjunction with the health authorities and the relief part as a separate organisation under the local authorities, who now deal with public health and education. There are, of course, difficulties and disadvantages, but they cannot well be greater than the present evils, and by some such unification the medical service would be more economical as well as more efficient and effectual. On the whole, also, such a development appears to be in line with the general evolution of local government.

population
and
topography
of Finsbury.

94288. (Chairman.) How long were you Health Officer of Finsbury?—From 1900 to 1907.

94289. We have a map which shows the boundaries of Finsbury. What are the Parliamentary divisions that are included in Finsbury?—Central Finsbury and East Finsbury. Approximately, from a line down the middle, East Finsbury is one side and Central Finsbury the other, Holborn lies to the west, and St. Pancras to the north.

94290. What is about the population?—Approximately, 100,000; at the last Census it was 101,463.

94291. I suppose this is one of the poorest districts in the Metropolis?—It is a very poor district.

94292. It is surrounded by well-to-do districts on most sides?—Yes; on the west and south you have a very much better class district than you have in Finsbury, but Finsbury itself is not wholly to be described as a poor district on account of the invasion of the City northwards; all the southern part is very similar indeed to the City of London, and the population has been driven out. All the lower part of the borough is composed of offices and warehouses, and so on, in an exactly similar way to the City of London.

94293. The Law Courts, the Temple and Lincoln's Inn lie to the west?—Yes.

94294. The encroachment of the City and the well-to-do parts on Finsbury for offices, and so on, has packed the population up rather closer?—Exactly; it has also very greatly reduced the population. Two or three census periods ago the population of Finsbury was about 120,000; it is steadily declining on account of the invasion of commercial premises.

social status
of Finsbury
elements.

94295. Would you say your evidence would relate to what may be called an abnormally poor district as regards London?—I reply with a little hesitancy, because Finsbury is now passing through a transitional period. It is not easy to define it exactly in one term like one would speak of Bethnal Green or of Shoreditch. The invasion in Bethnal Green and Shoreditch has been a different kind of invasion to that which is taking place in Finsbury; so that in Finsbury you have part which is very similar to the City, and part which is an old residential neighbourhood, and then the mass of the poor.

94296. I suppose that the dwellings of the poor are mostly old houses?—Yes; old houses which were formerly built as self-contained houses for private families, and have now been let out in a very large degree indeed as tenement property.

94297. What conclusion do you draw from the increased number of deaths in institutions? It would not be that the treatment in institutions was worse?—No, on the contrary, the treatment on the whole would be better in institutions; but it means, I think, that the people of Finsbury have fallen in social status in some degree. The old Finsbury of twenty or thirty

years ago would not have provided the same class of people for institutional treatment that the present Finsbury does.

Mr. George
Newman,
M.D.

25 Feb. 1908

94298. Should you say there was an increased tendency now on the part of the very poor, when they are seriously ill, to go to the infirmary, or to be sent to the infirmary by their friends, in order that they may die there, or is there rather a reluctance to die in the workhouse?—There is a definite reluctance; I am unable to compare it with past years for the simple reason that I have not the data with which to do that. All I can say is that during the seven years I was in Finsbury, although there was a great reluctance on the part of the poor to go to Poor Law institutions, still the fact remains that a very large proportion of the deaths in Finsbury, larger than in most London boroughs, took place in institutions.

Reluctance
of sick poor
to enter
poor law
institutions.

94299. As might be expected, I think you show that the mortality per 1,000 is a good deal higher in the one-room tenement than it is in the two-room or three-room tenements?—That is so.

94300. That necessarily would be so, one assumes, because not only the condition of lodging would be worse, but the other vital conditions would be worse in the one-room tenement?—That is so; and the people have arrived at that condition in their outward circumstances which does not allow them to provide more than a one-room tenement. I think, if I may say so, that a table of this kind has to be taken with a certain amount of reserve, for the reason which I have stated in Paragraph 5.

94301. I quite understand that one must not apply these figures, because they relate to one-room tenements, as cause and effect necessarily?—That is the position.

94302. Coming to phthisis, you give in Paragraph 11 Relation of figures showing that phthisis as regards casual labourers is on the increase. The conclusion there is that the casual labourers, though they furnish less than 10 per cent. of the occupied males, contributed in 1906 46 per cent. of the total mortality of the same ages?—That is so.

94303. Would the mortality include diseases other than lung and phthisical diseases?—Those three diseases only: respiratory, tubercular, and circulatory; mainly the diseases of exposure.

94304. What would those casual labourers include; would they include carmen?—Carmen, out-door porters, and such persons, of whom there is a considerable number in Finsbury owing to the fact that the large carrying firms stable their horses and vans in Finsbury.

94305. I assume the occupation itself rather tends towards contracting these chest and respiratory diseases?—That is so.

94306. That, of course, would be to a certain extent aggravated by the casual nature of the employment; the man's weekly earnings and his proper sustenance would not be probably on a level?—That is so. That would affect the matter very materially. There is exposure, not only to the germs of tuberculosis, for example, but there is also exposure to climatic influences; and thirdly, there is the influence of a certain amount of under-nourishment.

94307. Amongst the wage-earning classes, between, say, the ages of sixteen and fifty, phthisis and respiratory diseases constitute a very considerable proportion of the mortality?—A very considerable proportion.

Effect of
preventive
measures on
mortality
from phthisis.

94308. Do you know at all what it is? It is a large percentage, is it not?—Yes, a large percentage. I am afraid I could not tax myself with the exact figures.

94309. I suppose it is a much larger percentage than is the case in the classes above them?—Yes; it comprises the majority of the cases of death of that class of persons.

94310. Should you say that this class of disease is on the increase in Finsbury?—No, I should not say that tuberculosis is on the increase, nor do I think there is any substantial evidence that lung diseases are.

94311. If there is not an increase, to what do you attribute that; to better medical attendance or to more

Mr. George Newman, M.D. precautions?—More precautions in the case of tuberculosis.

25 Feb. 1908. 94312. It is not from improvement in the conditions of employment?—Partly so, but not so much I think as other circumstances.

Medical assistance by sanitary authority. 94313. We come now to the practical part of your Statement. You point out that the medical assistance of the poor is under three groups: the Poor Law, the sanitary authority, and voluntary agencies?—Yes.

94314. The health authority has of recent years considerably expanded the area of its operations?—Yes.

94315. Has that been attended by much increased expenditure in Finsbury, say?—Substantially, I think not. Of course, there has been of necessity an increase in the payment of salaries and establishment charges for a staff of twenty in comparison with a staff of five persons ten years ago; but apart from that, and that expense has not been proportionately great, there has not been much additional expense; but there has, I think, been a considerable improvement in the condition of things resulting.

94316. London is rather peculiar, because the health authority, the borough, has not to bear specially the cost of removal of persons suffering from infectious diseases?—That is so.

94317. So that your expense really would be limited largely to the increase of your administrative staff?—Probably.

94318. And to certain removals of unhealthy buildings?—That is so.

Clearance of areas.

94319. In those cases where buildings are condemned and pulled down, who bears the expense of pulling them down?—As far as possible in Finsbury, where we have had some very extensive housing schemes and displacements, we have endeavoured to throw the responsibility and onus upon the owners, and I may say that that has been rather exceptionally successful. We started on the plan of casting the responsibility upon the owners and getting them to remove insanitary and dilapidated property rather than leave it for the local authority to do. The consequence is that probably, considering the displacements which have taken place in Finsbury under the Housing Act, the local authority has escaped many of the expenses which it would have been involved in if it had proceeded upon other lines.

94320. Has the fact of putting the charge on the owners, or trying to recover from them, at all retarded the work?—To a certain extent, but not so markedly as in other districts of London.

94321. I suppose it has had the effect upon the local authority that they would be more disposed to sanction things if they knew the cost would not fall on them, but would be recovered from the owners?—Decidedly.

94322. I suppose one rather balances the other?—To a certain extent that is so.

94323. You have done a certain amount of preventive work and you have appointed a certain number of sanitary inspectors?—Yes.

94324. Are all your inspectors paid?—Yes.

94325. Have you any voluntary health visitors?—No, we have not had any voluntary health visitors except for occasional short periods.

94326. What are the relations between your sanitary inspectors and those they visit; are they satisfactory?—Yes, very happy and satisfactory on the whole. A sanitary inspector is never exactly welcome, but I think at Finsbury we have been on the whole rather exceptionally fortunate. I should say so, judging from my experience elsewhere.

94327. Is the advice they give at all appreciated by the poorer classes of the community?—I think so, but you are probably aware that they are not entitled under the Sanitary Officers (London) Order of 1901 to give very much advice, and it is on that account that we have

found it necessary in Finsbury to pay our two lady inspectors an additional sum. I think I can make myself clear if I refer to a correspondence between the London County Council and the Finsbury Borough Council dated December 11th, 1906, where the County Council write explaining to the Finsbury Borough Council that the work of their two lady inspectors has been of a character which appears to be such as is usually assigned to health visitors, and on that account they considered that it did not fall to their duty to pay half the salary as formerly. In reply to that the borough council wrote on January 18th, stating that it was so; that the lady sanitary inspectors had performed duties which were not within the Sanitary Officers (London) Order, and, therefore, they suggested that they, the borough council of Finsbury, should allocate the sum of £10 per annum of the salary paid to each of their two lady sanitary inspectors as remuneration for carrying out such of their duties as would be regarded as being outside the duties of the Order mentioned. That arrangement was agreed to by the London County Council in a subsequent letter and now obtains. The lady sanitary inspectors get £150 a-piece, the borough council only receive back £70; the salary will be considered to be £140, half of which will be repayable out of county funds and the other £10 is given to the lady sanitary inspectors under the responsibility of the borough council only, and comes out of the borough council exchequer only. In that way I have had some liberty in using my lady sanitary inspectors in what I felt to be a more serviceable direction.

94328. Adhering rather to the medical side of the charity work, there is a medical mission at the Friends' Meeting House, Roscoe Street. I suppose this institution is not self-supporting, because I see the patients pay 1d., and those coming from a distance have to pay a shilling?—It is supported by subscriptions given by friends of the mission.

Need of domiciliary visiting medical charities.

94329. Do they make domiciliary visits there?—A few domiciliary visits. Most of their work is as an outdoor dispensary.

94330. The Leysian Medical Mission is carried on on very much the same plan?—Very much the same applies to that mission, and also to Claremont Hall.

94331. I suppose you attach great importance, do you not, to domiciliary visits?—I do.

94332. Out-patient treatment, merely prescribing for individuals without inspection of the premises, or seeing that the prescriptions or conditions are complied with, is not, in many cases, of much use?—It is not at all as adequate as it might well be.

94333. Coming to infantile mortality, you give the reasons why the mortality is so high. I suppose a good deal of this is due to ignorance and carelessness on the part of the mothers; they do not take care of the children?—That is so.

Causes of infant mortality.

94334. Is there much female employment among these women?—Comparatively little in Finsbury. That is dealt with in the table at the end of Paragraph 25 (f) (iii).

94335. At the milk dépôt is the milk given gratuitously?—No, they pay the market price for it.

Administration of milk depot in Finsbury.

94336. You say there was a certain charge on the rates of about £470?—That is so, in 1906.

94337. Is that still going on?—Yes.

94338. Were those children of persons in receipt of out-relief or poor relief?—No, with half a dozen exceptions.

94339. How did they get their milk free; was there any examination, or orders given?—They did not get it free; they paid the market price for it with the exception of those that were on out-relief, and with the exception of those half-dozen or dozen for which the Holborn Union paid.

94340. The cost of the milk was paid for, but the establishment expenses and the nursing connected with it cost £470?—That is so.

94341. Was there much objection by the milk vendors in the neighbourhood to this milk dépôt?—Yes, there

Attitude of poor to sanitary inspectors.

Functions and payment of health visitors.

was a good deal of paper warfare, but I think that they found out as a matter of fact this depôt being worked as a school for mothers, as well as a depôt, rather taught the poor to see the value of milk, and I am quite satisfied myself the depôt has improved the milk trade of Finsbury rather than otherwise; it has increased it.

94342. That seeing the advantage of a milk diet, there is a greater demand for milk?—I feel sure that is so, although I must admit that probably the trade, if they were present, would not admit that.

94343. The result I gather in comparing children who were fed on this milk with those who were not, was very satisfactory?—Very satisfactory indeed.

94344. Coming to infant mortality, the main cause seems to be the immaturity and poor physique of the mother?—That is one of the three main causes. It is a very difficult thing exactly to allocate to the poor physique of the mother the number of deaths of infants which are really due to that cause; it is a most difficult thing to do because the poor physique of a mother will act indirectly very frequently, and you get illnesses of the children which on the death certificates you could not very directly attribute to the poor physique of the mother. The grouping in Sub-paragraph (d) of Paragraph 25 I think is substantially correct. I am quite convinced of that. It is those three conditions which are mainly the cause of infant mortality, not only in Finsbury, but all over the country.

94345. In Finsbury are there a large number of persons who are children of Londoners, London bred?—Yes.

94346. Have you, as Health Officer, been able to note any difference in the physique of those whose families have been long in London and those who have come in more recently?—Yes, I have often noticed that. I should say that the physique of those who had come in more recently was better than those who had been in for some generations.

94347. I suppose there is a deterioration of physical strength generation by generation of the town bred?—I am afraid so.

94348. They get smaller and less muscular?—I should not like to commit myself exactly to an anthropometrical datum of that kind, but that the physique on the whole is poorer I have no doubt at all.

94349. The country mother would be, as a rule, a stronger and healthier mother than a London mother?—As a rule.

94350. Should you say the tendency to breast-feed the children is on the decrease, or the inability of the mother to feed the child is on the increase?—It is a very difficult thing to say, because we had so few data a few years ago. I should think 80 per cent. of the infants under three months of age in Finsbury are breast-fed, and there is a good deal of public misapprehension with regard to that circumstance. There is much more breast-feeding than one would be led to suppose from what one hears publicly.

94351. (*Bishop of Ross.*) Do you mean that 80 per cent. of all the children are breast-fed: of the total number of infants born?—80 per cent. of the total number of infants born under three months. Directly one passes over the three months period then the figures fall.

94352. It struck me that would not quite fit in with Paragraph 25, Sub-section (iv), 80 per cent. of the living children were breast-fed, whereas only 35 per cent. of the dead children were?—My previous answer was as to infants generally, not to infants who contribute towards the infant mortality. Of the dead infants it is much nearer 30 and 40 per cent. breast-fed than of the living.

94353. 70 per cent. of the dead children have been bottle-fed?—Yes.

94354. (*Chairman.*) You find, speaking broadly, that poverty bears an intimate relation to disease, and you therefore come to the conclusion that any combination of medical assistance should be made as effective as possible inasmuch as by combating disease it directly tends to reduce poverty?—That is my view.

94355. That being so, you are not satisfied at present with the system, as administered, of the medical poor relief, the work of the health authority and private medical practitioners, and you would like as regards the two public services to link them up, or secure better co-ordination between the two?—I should, from a medical point of view.

94356. One difficulty which no doubt has occurred to you in combining medical curative treatment of individuals with the health authority is that all the work of the health authority is gratuitous?—I recognise that difficulty.

94357. It has come before the Commission that the cost of making all curative treatment gratuitous would be enormous, and practically it would raise such obstacles that in the opinion of many, putting all other considerations on one side, it is almost impossible to attempt it; but admitting that, I suppose you would still say that a great deal could be done to link up the two branches?—Yes; I feel strongly that much might be done in the direction of co-ordination. The arrangements both in the country and in London which were provided for (I am speaking now purely from memory, in the country, if I remember aright, under some Order or Circular of the Local Government Board of about 1879 or 1880), encouraging Poor Law authorities to co-ordinate with the sanitary authorities, and the same principle applies in London under the Public Health (London) Act (Sec. 3) have not I think, been used anything like as much as they might have been used; and short of any radical reform, such as unification, which I think is the ideal from the medical point of view, although I fully recognise the financial and administrative difficulties, I should like to see some sort of increased co-ordination between the medical services as such.

94358. What is your opinion; we have had a great Deterrence of deal of evidence, and the witnesses are not unanimous, poor law but I think there is rather a general impression of medical relief. men outside the Poor Law that the fact that the Poor Law medical treatment is associated with Poor Law is to certain classes of the respectable poor deterrent?—Undoubtedly.

94359. In your own mind you have no doubt of that?—I am quite certain of it.

94360. It would be advisable, assuming that you Co-operation could bring the health service and Poor Law medical of medical relief in closer co-operation, if you could at the same agencies. time do something to secure the co-operation of private practitioners and of hospitals?—Yes.

94361. Have you any large hospital in your district of Finsbury?—No large general hospital. We have a lying-in institution.

94362. Do you think the poor attach very much im- Deterrence of portance to being able to select their own medical attend- poor law ant?—Not a great deal. medical relief.

94363. It is sometimes suggested that the fact that there is only one Poor Law medical officer deters people?—I think in Finsbury I should be fairly secure in saying that my experience of the Poor Law would not lead me to that conclusion. It is the Poor Law medical officer qua Poor Law medical officer that acts as a deterrent. I do not think they greatly consider the personality of the gentleman in question.

94364. One of the alleged defects of the present system is that application for assistance in many cases has to be made to the relieving officer?—Exactly.

94365. And that his business is rather to look at the material financial position of the applicants than the state of their health?—That is what I feel from the medical point of view, as I have stated in my note.

94366. You would like some system whereby, assuming payment was to be enforced, you would treat first and enforce payment afterwards?—I would, from a medical point of view.

94367. Is there co-operation now between the medical Poor Law officers and the health authority in Finsbury?—Nothing that one can speak of. There is a perfectly authority.

Mr. George Newman, M.D.

25 Feb. 1908.

Need of co-ordination of poor law and sanitary authority.

Deterrence of poor law medical relief.

Need and advantages of co-operation between poor law and sanitary authority.

Mr. George Newman, M.D. friendly feeling, but there is not what I should call businesslike or even scientific co-operation.

25 Feb. 1908.

Need and advantages of co-operation between poor law and sanitary authority.

94368. If you could link the two together, each could statistically afford the other great assistance?—Very great advantages would accrue. A large number of vital statistics are lost which would be of practical value; I am not thinking now of archives, and the academical value of such statistics, but I am thinking of the actual practical good which would arise with regard to the incidence of disease, thus pointing us to the particular spots where good could be done. If, for example, a map of the character which I have here could be drawn up as to the conditions of disease among the poor *qua* poor under the Poor Law authority in Finsbury instead of mortal statistics under the public health authority, we should obtain an extremely interesting and useful survey of disease. One of the great difficulties is that we are not brought into actual intimate personal touch with the real centres of disease.

94369. I assume they could give you valuable information at times so that you could deal with an epidemic?—Undoubtedly, because epidemics are spread, not by the known cases, but the unknown cases, and particularly by the unknown cases in the vagrant and poor classes. I have seen that over and over again, not only in Finsbury, but in various parts of the country, particularly in Bedfordshire, where the small-pox outbreaks of 1901, 1902, 1903 and 1904 demonstrated beyond all possible doubt that small-pox was conveyed over this country, to the great dislocation of trade in many districts, by the vagrant classes, of whom it is so difficult to get any actual statistics of disease into the hands of the local authority that is empowered to deal with that disease.

94370. If the services were put in co-operation there is no doubt it ought not to be difficult to organise a much more effective system of domiciliary visits than is now the practice?—I think it would be possible to organise a much better system.

94371. I suppose from experience of your health visits you attach very great importance to those domiciliary visits?—I do.

94372. Not merely in curing individual cases, but in giving advice and effecting a sort of general improvement in hygienic conditions?—Undoubtedly, if properly done. The difficulty is to get the right persons. If it is properly done they have the greatest educational value quite apart from the actual curing of disease.

94373. You make some practical suggestions as to the course of action that would be necessary. You want a revised Sanitary Officers' Order enlarging the duties of sanitary inspectors?—I think that would be a substantial gain.

94374. Because the Order now in existence discourages social work?—Exactly, it has to be specially paid for. Although it is a very small sum when one thinks of the £10 I quoted before, it is a sum which irritates a local authority, and they argue and debate about the whole question whereas really there is not very much need for debate. They are not against the principle; they are against the idea of having to pay for it out of their own local rates.

94375. Your next suggestion is to make health visitors statutory officers of the sanitary authority? Are they not now statutory officers?—No; health visitors must be paid for entirely by the local authority. Supposing we in Finsbury employed a lady health visitor at £150, that sum would have to come out of the borough exchequer only.

94376. Has your sanitary inspector an authority which the health visitor has not?—Yes, he is a statutory officer, and he has the right of entry, and various other rights of that character.

94377. Would it require an amendment of the Act of Parliament to put health visitors on that footing, or could it be done by a local order?—I almost think it would require an Act of Parliament, but I do not think it is absolutely necessary with regard to the actual work of health visitors, because I think a health visitor who

has to force her way into a house under an Act of Parliament is not likely to prove a very satisfactory health visitor.

94378. In (c.) you say the work of the Poor Law Medical officer must be co-ordinated with the public health service, or in some other way brought to bear on the foci of disease, and in a personal way. How would you co-ordinate the two?—What I should like to see would be (although I understand I am about to suggest something which you think may be impracticable from other reasons) from a medical point of view the out-door medical officers in Finsbury brought into intimate conjunction with the medical officer of health, whoever he be, of the borough council in order that—I do not say they should be exactly in the position of assistants, but as colleagues—they may assist each other in not only following up disease, but also in bringing the treatment which is now brought under the Poor Law to bear upon the actual points where the disease is most critical from a public health and preventive point of view. For example, a woman has called in the Poor Law medical officer for herself, but in point of fact, very often one or two of her children are in a condition showing some signs of incipient disease, which information would be of value to the public health department of the borough; and the children themselves are in need of some special treatment, and the mother of some special advice with regard to those very children. Over and over again I have found that actually to be so, and thus by the exigencies of the Poor Law one member of the family is being treated, the difficulties of deterrence have been got over for that one member, but the rest of the family, although in need of medical advice and assistance, are being largely ignored, not from any personal wish of the medical officer of the Poor Law, but because of the circumstances of the case.

94379. Do you think the want of co-ordination or co-operation now existing is at all due to the fact that the health officer is under one authority and the medical officer of the Poor Law is under another authority?—I do think so.

94380. Assuming both were under the same authority possibly that mere fact would secure much greater co-ordination?—I think so, if that authority were not the Poor Law authority.

94381. There are certain medical missions which, I suppose, are kinds of dispensaries?—Yes. Extent of usefulness of medical missions

94382. Do the medical officers there at all co-operate with you?—Yes, they co-operate with us more than the Poor Law medical officers do.

94383. You get information from them?—Yes; they are there to be useful, and perhaps they have some sort of religious motive which moves them to be more sacrificing and useful. Whatever it may be, they unquestionably do take a more, what I should call, scientific interest in their cases than I was able to observe in the Poor Law medical officers.

94384. I will put this suppositious case: Assuming all the functions now discharged by the guardians were transferred to the borough council?—All the medical functions? Transfer of poor law relief to borough council.

94385. All the functions now discharged by the Poor Law guardians?—Relief?

94386. Everything, was transferred to the borough council; assuming that you would only have one authority, that would prepare the ground, I suppose, for these two branches of the medical service coming much closer together?—Yes, I think it would.

94387. Assuming such a thing were possible, it would be desirable, I assume, in your opinion, to try and bring in all dispensaries and hospitals in some way to work with this public medical service?—Undoubtedly, all public medical work.

94388. I think you rather contemplated, looking at it from a medical point of view, you would like to make everything free?—That is a difficult question to answer at all briefly. I think that free medical service is the Question of having a free medical service.

Status of health visitors.

ideal from a medical point of view, and from the point of view of the poor.

94389. It is a very difficult subject; there is the expense, and also the difficulty of confining the free medical service to the poor?—I recognise those difficulties; they are unquestionable.

94390. Your object is to a certain extent to be attained if both the medical Poor Law work and the work of the health authority were put under the same local authority, and if a serious effort were made to try and get the voluntary medical service in some way connected, or working in co-operation, with this public medical service?—Yes; I should be prepared to go slowly, a step at a time.

94391. At the end of your Statement you say you would be ready to give us some information as regards an Order that has just been issued by the Education Department. It is just on the line of our reference?—I am in your hands entirely. I am not instructed by the Board of Education, but I am prepared to give evidence if desired.

94392. The local authority I understand, are to make provisions for the medical inspection of all school children?—The local education authority.

94393. Is any machinery given them for that purpose? What machinery are they to utilise?—It will be necessary for them to provide some medical machinery of their own in connection with the medical machinery of the local authority of which they are a Committee.

94394. A serious feature of the Order seems to be this, that if you insist on medical inspection, and this is paid for by the State, the results of the inspection, that is to say the treatment, or the apparatus in the case of cripple children, or sick children will have to be provided by the State if the parent cannot provide it?—There are three different ways in which treatment may be provided under this Education Administrative Provisions Act of 1907. In the first place, there is the parent upon whom it may be thrown in the first instance, as far as practicable, and as far as circumstances will allow, such, for example, as cleansing. In the second place, there are voluntary agencies of various kinds upon which also a good deal can be thrown, and with a little reasonable co-operation; because at the present time there are societies all over the country, many of them not co-operating and co-ordinated together, but a very little would bring many of them into co-operation and co-ordination in order that they might provide certain other things, for example, spectacles. There are voluntary societies for the provision of spectacles for needy children at present. Then, in the third place, there is the local education authority itself, and the form of treatment which would arise under that local education authority is three-fold. In the first place, a great deal can be done, a great deal will be done, and has been done since 1890 and 1893, when medical inspection was first introduced in London and Bradford, by the mere fact of medical inspection. If I may say so, without being misunderstood, I think there is a fallacy underlying the statement that "mere medical inspection is of no value apart from treatment." Medical inspection itself is of the highest educational value to the mother, to the teacher, and to the local education authority. That, I think, is proved up to the hilt by the experience of school medical officers during the ten, twelve or fifteen years in England. It works out in various ways, but it does produce very marked results, and results which it would not be wise for us to ignore. For example, a mother receives a notification that her child is to be inspected at school on such-and-such a day in March, we will say—I met with this difficulty in discussing the point with a county council in the north of England the other day—and she sends her child to school in a better condition than formerly. That is not anything which should disappoint us. It is a direct and immediate effect of medical inspection. It may be said, quite fairly, that she will not maintain that degree of cleanliness and health in which you find the child on the first occasion. That may be so; I do not deny that, but we have something gained: we have the responsibility of the child's cleanliness and health thrown upon the mother. The mother recognises

it, and it results in her sending the child to school in a better state than formerly. I admit that it is only the thin edge of the wedge, and it is a small point, but it is there and I am satisfied it is substantial. Secondly, if we go a step further and the child is found when she comes to school to be myopic, to be suffering from some degree of short-sight, the work of amelioration of the condition of such a child is not necessarily to obtain spectacles; indeed, before that is contemplated, it should be considered whether it is not possible to place the child in a more favourable position in the school, of nearness to the blackboard, of better light and a better position generally which shall not create the strain that the former position which the child occupied did. Over and over again it has been proved that these conditions of eyesight in children have been produced not by heredity and not by any vicious conditions at home, but they have been produced by an over-strain of the children at school. Where, in infant departments all sorts of near-distance work has been required in past years, there has unquestionably been sown the seeds of the bad eyesight of the child as it has grown up. Those are two points both of which mean treatment in a sense—I rather prefer the word amelioration—and amelioration of a perfectly substantial kind which will cost nothing to the State. Then in the third place, I admit that there will come a financial burden on the local education authority for the carrying out of certain forms of treatment for which there is no accommodation, or no circumstances favourable to at home, for which there is no dispensary, for which there is no hospital, for which there is no voluntary charity. I admit that in the last instance some of such expense will come upon the local education authority, but they will be expenses of the very highest economical order, because they will fit the children in such a way, or they ought to fit the children in such a way, as to prepare the children not only for a more productive and educated life, but also to keep the children off the State in future years more than has been the case in the past.

94395. I do not dispute the indirect advantages at all, but I was rather looking at it from a practical point of view. The State or the local authority probably would be compelled in a good many cases to meet the recommendations or suggestions of the officer inspecting the children, out of their funds, I take it?—Yes, if those recommendations cannot be otherwise met, but I am satisfied that with more care and circumspection many of these conditions can be met, as they have been met in the past. You will remember that we are building upon a basis of experience of many years on the Continent of Europe, and of fifteen years in England as to the advantages which will arise from medical inspection; and the clause in the new Act is rather a further evolution of what has been proved before than actually a new departure.

94396. I want to look at it rather practically, because one must not go too fast. Have you any idea what the cost of this will be when in full operation?—The question of cost of medical inspection was considered by a Departmental Committee in 1905 (Lord Londonderry's Committee), and it was considered it would work out at one-tenth of a penny on the rates.

94397. That is on the rates of England?—The rates of the education authorities who were then carrying out the work.

94398. I should have thought that was rather a sanguine estimate. You do not think the Order that has been recently issued has gone beyond what that Committee contemplated?—No. By the Order I understand you to mean the Memorandum of the Board following the Act?

94399. Yes. Have you been in personal communication with the authorities who have had to carry this out?—Yes.

94400. How have they received the Order?—At the present moment there are twenty-four counties in England and Wales who have completed their arrangements for medical inspection in all their schools; there are forty-one towns, county boroughs and municipal boroughs

Mr. George Newman,
M.D.

25 Feb. 1908.

Cost and practicality of medical inspection of school children.

Mr. George
Newman,
M.D.

25 Feb. 1908.

which are autonomous areas for education purposes which have also completed their arrangements. There are, in addition to that, thirty-two towns who are considering their arrangements which are nearing completion, and there are eleven further counties which are nearing completion of their arrangements, that is to say there are thirty-five counties in England and Wales who have nearly or wholly completed their arrangements for medical inspection under the new Act.

94401. So that a considerable portion of the local authorities have shown their readiness to accept this?—That is so; more than readiness, they have all but completed their arrangements; some have appointed officers.

94402. This matter is on the border line of our reference, but I thought I should put these questions to you?—I quite recognise that that is so.

Deterrence of
poor law
relief.

94403. (*Bishop of Ross.*) You told the Chairman that you had no doubt that the poor objected to receiving medical relief under the Poor Law?—Yes.

94404. There is a sort of taint of pauperism about it, I presume, that deters them?—Yes.

94405. If the medical relief were given through the public health authority, do you think it would be free from that objection?—Not wholly.

94406. Do you think that in the course of time there would be any danger that the same frame of mind would grow up against the medical relief under the public health authority as there is now against the Poor Law?—I think, on the whole, not.

94407. Is not the objection under the Poor Law the fact that a person receives what he is unable to pay for, and there is always a certain taint if a man is unable to pay for what he requires?—That is partly so.

94408. At first I quite see you would not have that, but gradually as time goes on, is there not the likelihood that the same feeling would grow up; it would always be in human nature that a man who has to receive something he cannot pay for is not so independent, respectable, upright and honourable as the other?—There is a possibility of that, but I cannot help feeling that a good deal of the difficulty (it is a very difficult thing to analyse what this deterrent is) has arisen from the *practice* of the Poor Law in the past, a practice from which we should escape in a large measure if it were under the public health authority.

94409. So that there has been an old bad tradition, and you think if you break the tradition you would escape to a large extent?—Yes, I think there is something in that.

Lack of data
as to infec-
tion from
advanced
phthisis.

94410. I think you point out in the course of your Statement that a number of people in Finsbury who went into the hospital suffering from phthisis came out in order to die?—Yes.

94411. Is it not a very bad thing that they should do that?—A very bad thing.

94412. Is there not much more danger of spreading infection at that stage of the disease than at any other stage?—That is a very difficult question to answer. I know the ordinary medical answer would be "Yes," but I am not sure that we have all the data. It is an extraordinary thing how in a very advanced condition of tuberculosis, both in man and in animals, you do not find bacteriologically the agent of disease at all as frequently; and it is found the germs are not so virulent as when the disease is what I should call at its height, so that, although the first answer that occurs to one's mind is "Yes, certainly," as a matter of fact I should want to answer with some reserve.

94413. The other answer is commonly made. Does not the coughing and the expectoration increase in the latter stage of the disease?—The coughing will increase, but I submit that it is not proved that the expectoration will always be equally virulent.

94414. Therefore, you do not think there is any more danger at that latter stage than there is in the earlier stages?—In the very acute stage there is most danger, both from the expectoration and the cough spray.

94415. At a stage before the final stage is arrived at?—Yes, the stage before the final exhaustion is arrived at.

94416. Do you think the visiting and the information given by the health visitors, explaining to the patients themselves and to their families the advantages of remaining in hospital up to death, would be sufficient to correct this action on the part of the patients?—I think not.

94417. Could you suggest any way in which it could be done? Would you go so far as to detain them compulsorily?—No, I am not sure that I should; it is a very difficult matter, because it involves all sorts of motives in the mind of the patient and his friends why he should wish to die at home which one would wish to respect, and one would have to think very carefully about committing oneself to compulsory measures.

94418. I presume there is no doubt the infection passes from the infected patient?—No doubt at all, by means of the channels that I have referred to. Tuberculosis is not a purely infectious disease, as it is so often called; it is a sub-infectious disease, which is a very different thing. It is not infectious in the same sense that measles or scarlet fever are infectious.

94419. You explain that poverty and overcrowding and dirt have a great deal to do with it?—Yes.

94420. In dealing with the mortality of children, I think you attach a great deal of importance to wrong feeding?—I do.

94421. Am I right in thinking that you regard wrong feeding as the most-important cause of the mortality?—No, I should not be prepared to say that, but it is one of the three most important ones.

94422. You say that epidemic diarrhoea comes entirely from wrong feeding?—I think so.

94423. That is a very large cause of death amongst children, is it not?—Yes.

94424. The wider spread of information, I presume, will help to correct this matter?—Yes, it will tend in the right direction.

94425. Will you entrust that point to your health visitors also?—Yes, as far as possible.

94426. Do they do anything in that way at present?—Yes, I have no doubt at all that some of the very marked reduction in infant mortality which has taken place in Finsbury is due to that work.

94427. To the instruction given by the health visitors?—Yes, and the school for mothers, as it is called.

94428. Does the health visitor, when she hears that a baby is born into a family, go and give instruction as a matter of course?—Not as a matter of course; from the birth lists are selected those that are most likely to require instruction.

94429. Do you find the effect has already been very good?—The effect, I am quite satisfied, has been excellent.

94430. (*Mr. Bentham.*) You say the advance of science of preventive medicine has shifted the centre of gravity paid off from the influence of the environment, particularly in infant mortality, to that of the personal factor. With regard to this personal factor, if the end which you have in mind is to be achieved, it would mean a very large influence being brought to bear upon people to realise the very serious nature of having illness of any kind in the house without it being reported in some way or other to the authorities?—That is so.

94431. In order to influence the personal element, it would mean that either there would have to be a house-to-house visitation to ascertain where disease exists, or there would have to be an exceptionally good feeling between the people and the medical staff which had this duty in hand, would there not?—Yes.

94432. What was running in my mind was this, that the one may possibly kill the other, that is, an over-zeal

var ge of to find out where disease exists might, on the other hand, prevent people who have sickness in the house letting it be known to anyone?—Yes.

94433. So that disease might exist unknown, and the excessive zeal might prevent the very thing which you desire?—Yes, excessive zeal always brings many disadvantages and difficulties.

94434. If you had a paid staff for this purpose, of course, excessive zeal is a merit in a paid officer, is it not; at least zealous prosecution of their duty is a merit in all public officers?—Yes, some zeal is a merit.

94435. Does not this point to the advantage of voluntary workers rather than paid officers for this work?—The difficulty about voluntary workers is, in the first place, that they are not as a rule so proficient; I am afraid it must be said, though it sounds rather an ungenerous thing to say; and, in the second place, they are not continuous at their labours. Circumstances are such and human nature is such that it is difficult to get these things, although I have had rather an exceptionally wide experience of voluntary workers in my own corner of the world. I am quite satisfied that you do not get from voluntary health visitors the same sort of work and the same sort of continuance in it that you get from the paid officials.

94436. In Finsbury, I notice there is a Social Workers Union, and they have, if I read this aright, a whole-time health visitor?—A fully qualified, whole-time, paid visitor.

94437. And this officer is evidently doing very good work?—Yes, excellent work.

94438. What you feel is that there could be a very wide extension of such work to cover the whole field. Officers of this kind are all right, are they not?—Yes, in my opinion.

94439. Do you feel that it is impossible to get a sufficient number of them everywhere to cover the whole field, as you would like to see it covered?—Not at all impossible: they are forthcoming and will be forthcoming.

94440. This is a voluntary association, is it not?—It is a voluntary association, but it is not what is generally considered to be a voluntary work; the work of this particular lady is paid, professional work.

94441. The Borough of Finsbury does not pay this officer?—No, it does not come out of public funds.

94442. That is my meaning of the word "voluntary." I do not know whether I made myself quite clear?—I quite follow you.

94443. Do you think that it is possible to get an extension of that kind of work on voluntary lines?—That is to say, on lines not paid by the State?

94444. Yes; would that be equally acceptable to you; it is not so much a question that you want the State to provide these things as that you want them provided?—Yes, mainly I want them to be provided.

94445. You make a suggestion on that point in your statement with regard to domiciliary visitation, in Paragraph 29. It starts; "The qualification and suitability of the health visitor is a matter of great importance." Then you go on to say, "I think something of this kind carefully organised and paid for would be of immense value to the State." What did you mean by "paid for"?—I should like to see public health authorities using public funds, having power to adopt much more of the principle which is represented in the City Guild of Help, and of much more of the principle which is represented in this lady's work, to which you have just been referring.

94446. That is to give these organisations a recognised status?—Yes.

94447. Supported financially to ensure their success that is about as far as you go?—In Finsbury I would have liked the borough council to be able to take that particular officer over and use her through the ordinary channels of the borough council work; but either way is better than not at all, so long as the actual result is obtained.

94448. Have you no paid health visitors in the borough of Finsbury?—No.

94449. Although you have power to employ them, I suppose?—We have power to employ them, but we have to pay their whole salary, and they have no statutory position, which are two grave disadvantages.

94450. That applies to every town, does it not?—Yes.

94451. Yet some of the towns have health visitors?—Yes, Birmingham, Nottingham, Warwick County, and Council, so on.

94452. Was it only a matter of cost that influenced the borough of Finsbury not to appoint them?—I think it is both matters, that they have to pay their whole salary and they have no statutory position.

94453. You mean the officer has no statutory position?—Yes.

94454. That would not affect the borough of Finsbury, that is a personal concern of the officer?—The officer has not the same advantage in doing his work.

94455. He does not go with that authority or warrant?—It is not only a question of carrying a warrant, it is a question of authority.

94456. (Mr. Nunn.) If a health visitor is paid entirely by the locality, and is also invested with sanitary powers, does he not have statutory authority?—Yes.

94457. Why is not that done in Finsbury?—It is not done probably because they do not want to pay the whole of the cost.

94458. Then that was the point?—Yes, I think it was the financial point mainly. The need would be met, if I might add this word, if the sanitary inspectors had an enlarged sphere of duty.

94459. (Sir Samuel Provis.) Was there not some legal difficulty that there is no express provision authorising the appointment of a health visitor?—There is no express provision, it is authorised only by the auditor of the accounts.

94460. The only question was whether exception would be taken to the matter at the audit?—That is the position exactly.

94461. (Mr. Bentham.) Arising out of this comes the further question: Supposing the powers were given which you suggest for all this work to be done, that the local authorities would not put them in operation; here they have power to appoint health visitors, and they do not appoint them?—If I may interrupt, they have not an express instruction to appoint them; they have power in the limited sense that they may appoint them if the auditor of the Local Government Board will pass their accounts. They have not an express statutory instruction like they have for the appointment of medical officers and sanitary inspectors.

94462. Sanitary authorities have power to appoint health visitors who have also certificates as sanitary inspectors?—They have power, with the qualification that has been made.

94463. We find that in a good many sanitary areas a sufficient number of inspectors are not appointed?—A sufficient number of sanitary inspectors?

94464. Yes. If that be so, it would mean to carry out your ideas to a larger extent than they are carried out now, that the central authority, some higher authority, should insist on this work being done, and not the local sanitary authority, is that not so?—Yes, that would be an incentive to the local authority providing such officials.

94465. But as the sanitary authority are supposed to know best exactly the requirements of their district, they would ask in some cases for officers to be appointed and in other cases they would not, for financial reasons, so that that would not be a desirable state of things?—No, so that the central authority, in addition to having

Mr. George Newman, M.D.

25 Feb. 1908.

Need of health visitors to be statutory officers of Borough Council.

Powers of Sanitary Authorities re appointing health visitors.

Need of Central Authority with compulsory powers regarding health visitors

Mr. George Newman, M.D. an incentive action, would also have to have a controlling action.

25 Feb. 1908. 94466. And also compulsory powers, would it not require that?—Until it was compulsory there would be many local authorities who would not do the work.

Need of Central Authority with compulsory powers regarding health visitors.

94467. That means that many of your suggestions for the further extension of personal visitation to discover seats of disease would mean compulsory action on the part of the central body, because local authorities could not be relied upon to do it?—No, except that they are doing it at this present time in many instances, so that the proposition cannot be made a universal one, because they are at present doing it. I fully follow the point that if there were a central authority there would be both incentive and control, and if it were made compulsory it would be carried out.

94468. They are doing it to a limited extent in the borough of Finsbury, but you would say that one inspector doing the work of health visitor is not sufficient?—Quite.

94469. Yet the borough of Finsbury has not even one on its own account?—No, with the qualification that both its lady inspectors are doing health work which does not come under the Sanitary Officers (London) Order, and for which a special sum is being paid. The two ladies are at work partly in that direction; in addition to that there is a lady health visitor efficiently and properly qualified, and adequately paid, who is at work in the same area for a voluntary society.

94470. (*Mr. Lansbury.*) Are the two ladies you first mentioned paid by the borough council out of the rates?—Yes, with the reservation which I made formerly, that £10 of their salary is now paid out of the borough purse only for the health work they are doing.

94471. But they are still the servants of the borough council?—Undoubtedly, wholly so.

94472. (*Mr. Bentham.*) It would still mean that the incentive would have to have some life in it; that would mean there would have to be some central grant in order to ensure that these officers would really be appointed?—Sanitary inspectors at present are appointed without a central grant; there is no grant for sanitary inspectors.

94473. I think you were acknowledging just now that there is not a sufficient number, and that an increased number would be a cost on the local authorities, and that would be putting a limitation on their appointment. To induce local authorities to appoint these would mean that a large amount would have to be granted by the Exchequer?—I am afraid that is a question I must not answer.

Danger of zeal outrunning discretion in sanitary inspectors.

94474. I thought you might express an opinion on the likelihood of the local authorities appointing the necessary number of officers in your opinion without any such grant. I am not taking London only, but a wider view for the whole of the country. It is a national question. There is another aspect of searching out disease which might cause a great amount of opposition on the part of the medical men themselves. For instance, I noticed in a newspaper a little while ago that a deputation was sent to the sanitary committee of the Manchester Corporation to complain of the action of the inspectors under the health committee, and Dr. Taylor, who was one of the members of the deputation, said: "That the deputation felt that they were engaged in a somewhat odious task in having to make complaints, but the inquisitorial methods adopted by the officials were alienating both the people and medical men. In Manchester to-day every imaginable method was adopted by the people, owing to their dread of the visits of the inspectors, to conceal especially two forms of infectious disease—puerperal fever and scarlatina—so much so that little reliance could be placed on the statistics of the medical officer of health. There were far more cases of these two diseases than the health authorities dreamt of. We want to help you in your good work; we think we can help you; we even think that you cannot well do without us. But I tell you quite plainly that the action of your officials is only calculated to arouse resentment, and, with human

nature as it is, resentment will not tend to helping. We ask you, then, to give strict orders to your inspectors on no account to enter the bedrooms of patients under medical care. The medical attendant will be quite willing to convey any necessary information from the sick room. Secondly, no inspector should be allowed to pass any opinion on either diagnosis or treatment; that is entirely the business of the doctor, who will not submit to any interference from unqualified persons. Lastly, no inspector should be allowed to examine any person in an infected house, or to express his opinion that they are suffering or not suffering from infectious disease, as long as a medical man is attending at the house. That is the business of a qualified man, not of an unqualified inspector." He concluded by saying, "It might be, after all, that the sanitary inspectors had only erred in allowing their zeal to outrun their discretion, but the fact still remained that if the co-operation of the people and the medical profession were desired at all, their personal feelings would have to be more consulted in the future than in the past." It seems to me that the action of the officers, unless they are very very carefully trained in their duties and possess a large amount of discretion and human feeling, will create this resentment everywhere, and would drive disease out of sight. I wondered whether that aspect of the question was a serious one?—Of course, that is an aspect of the question which I have very often considered, and no doubt the difficulty in Manchester, with which I am familiar, has arisen very largely through the excessive zeal and also through a lack of common-sense and tactfulness on the part of certain sanitary inspectors. That kind of thing of course exists, and has to be guarded against. I quite agree with what has been said about the characteristics which are eminently desirable in a sanitary officer. I think, if I may say so, the case you have described is exceptional; I do not think it is very common. Of course there are little difficulties arising in various localities. But I think it is the exception, not the rule.

94475. Would you not think that an inspector of this kind—I will not call him an inspector, but at any health rate a health visitor under a voluntary society which was recognised, would go about the work with less officiousness than a wholly paid officer of the community itself?—Yes.

94476. And that possibly an acknowledgment of those kinds of society for this purpose might gain all that you require, at least it would go a long way to gain what you require?—Yes, but it would lack permanence, and it would, unless very carefully controlled from a central authority, lack efficiency.

94477. Supposing it was recognised in this way: That providing a scheme was drawn up and submitted to the Local Government Board which was considered suitable and accepted by them, the whole of the management expenses of such a society should be paid out of public funds?—I am afraid that is a question I cannot answer.

94478. I thought you probably meant something of that sort when you said "Carefully organised and paid for." That is the City Guild of Help work?—I was there talking of work under the public authority.

94479. That is public funds?—Yes.

94480. That is what I mean?—I thought you were speaking of *grants* from the Government.

94481. Out of public rates, if necessary?—Yes.

94482. I do not distinguish which?—I thought you meant grants from the Government.

94483. No, I meant out of the public purse. At any rate that might go a long way towards the ideal?—It would go some way.

94884. With regard to the notification of phthisis, I am not quite sure that you believe in compulsory notification?—Not at present. We have had a system of voluntary notification in Finsbury since 1901, which has given us, according to the percentage of the entire population, as good results as they have secured in Sheffield by a compulsory system, without all its disadvantages.

ties of phthisis. I think at present the country is not ready for a compulsory system of notification of phthisis, and indeed it is a very difficult disease to put into the compulsory category for medical reasons as well as social and economic reasons, and also from administrative reasons. We have no places for isolation; we have no institutional treatment for cases which would require institutional treatment; there would be dislocation of the social life of families, which would be a very serious item to meet, and there is the medical difficulty of not knowing when to notify. Phthisis is not a disease which is manifested in the same way that the rotifiable diseases are manifested. It is a disease of many degrees. Probably the majority of people suffer from some degree of tuberculosis during their lives. Post-mortem examinations have shown that persons who die of quite different diseases have in their bodies the remains of tuberculous infection, so that the whole question of compulsory notification of phthisis is a very wide one, and would want the most careful consideration, and the most careful control. In the meantime we are obtaining a good deal of valuable information from voluntary notification.

94485. Would you say there is nothing to be learned from the operation of the compulsory powers in Sheffield. Has it had any effect which you know of detrimental to the treatment of the disease?—They have not the means for the treatment of the disease in proportion to their notifications. Their proportion of notifications is not much greater than it is in Brighton and Finsbury, and other places where voluntary notification was first introduced, and where we have had the longest experience. I am not familiar enough with the exact difficulties in Sheffield to give detailed evidence.

94486. I thought probably you had heard there were serious disadvantages?—I have heard that, but cannot speak from personal experience of them.

94487. There is one question with regard to the suggestion made to the Commission by the Witnesses on behalf of the British Medical Association I wish to ask you: There is a scheme in a special supplement to the British Medical Journal of February 23rd, 1907, for a public medical service. Have you considered that at all?—I read it at the time, but I am afraid I am not now very familiar with it.

94488. Briefly, they suggest, as one of their schemes, the establishment of provident dispensaries, and it has been suggested that the Poor Law out-door medical work at any rate might be linked up with provident dispensaries in some way. Have you considered that question at all?—I have only considered it in Finsbury from a local point of view. I have not considered it from a general point of view.

94489. (Mr. Lansbury.) In the answer you gave just now, I understood you to say that even supposing the proposal was carried out to unify medical relief or medical attendance, it might become deterrent, because the persons would be getting something they were not able to pay for. Does not the fact that you have public free elementary education, and everybody sends their children to school without any kind of feeling about being pauperised, rather get rid of the idea that that feeling will grow up, because it is universal?—I should not like to commit myself to the view that disease and education were at all analagous things. Every child coming into the State, of every social status, would be in need of some education, but disease is more personal and peculiar to individuals. I think they are not parallel cases. I think you might have willingness on the part of the community to be educated free without deterrence, but you would have deterrence when it came to a question of such close intimacy and personality as disease is.

94490. There are so many other public services that come right home to the individual; you protect him from the influence of bad drains by publicly providing for good drains to be put in and sewers and all the rest of it.—The drains of a man's house are not so personal to him as is disease.

94491. The drains are to protect him from disease surely?—Yes, they may be.

94492. I am only putting it to you because, as I understand it, you are asking for a public medical service to be organised in some sort of way either locally or centrally—locally as I understand you and controlled centrally. I suggest to you that is a similar kind of public service rendered to the community as many other public services are rendered?—Yes. I am not sure that I feel the force of the parallel between the other public services and the public medical service.

94493. So that you think even if it were given to the public health and taken away from the Poor Law, it is just possible people might be deterred from coming?—They might, but it would not be at all in the same degree as under the Poor Law.

94494. I suppose you are aware there are some people who think that the great improvements in even Poor Law infirmaries has rather broken that down already?—Yes.

94495. And that people are more willing to-day to go into a Poor Law infirmary than they previously were?—Undoubtedly, and Poor Law institutions generally, such as the Metropolitan Asylums Board Hospitals for infectious diseases.

94496. Exactly, so that after all is it not rather the question of how we do it, and the spirit in which we do it, which will determine it?—I quite accept that.

94497. The thing is that it should carry no public stigma, such as depriving a man of his vote or any of the rights which other people get?—That is so.

94498. Surely that point is at the bottom of it. I also understood you to say in answer to Mr. Bentham, though I am not sure that it was as clear, that you do not think that voluntary agencies could carry out the work of public health visiting so well as a big service organised by the public or by municipalities?—No. On the whole, I do not think it would be as efficient as the public service.

94499. If we are to give a grant to voluntary agencies and control the voluntary agencies, there is not very much difference between putting our own service in action without the voluntary organisation. As I understand the Guild of Health which Mr Bentham was talking of, he said that you might give them a grant towards the expense of doing their work?—Yes.

94500. I suggest if we do that we might as well do the work ourselves?—I did not quite understand, as I said at the time, what Mr. Bentham's proposed grants were, and, therefore, I had to reserve myself and decline to answer. I do not think grants from Government are the same thing as public funds.

94501. I mean grants from the local authorities, for instance. For instance, if in Finsbury it had been legal to give that organisation that is set up, the social service organisation, a grant equivalent to the salary of, say two or three public health visitors, what I want to ask you is whether that would be, in your judgment, as efficient a mode of doing it as if the borough council organised the work itself?—No, I think it would not be so efficient.

94502. Would you kindly explain the map you have produced?—It is a map of the registration areas, and it is a method of reducing the general death rate of Finsbury to the actual localities where mortality is taking place. When I say the death rate of Finsbury is twenty per 1,000 it does not really touch the point from an administrative point of view so well as when I can say as medical officer that the twenty is thirty in one area and ten in another area; then I know on what areas I have to concentrate my work. That is roughly what it means.

94503. So that one part of your district might be extremely healthy and the other very unhealthy?—That is so, and dragging the whole district down. The dark pins are where the death rate of that locality is above

Mr. George Newman,

25 Feb. 1908.

the average of the whole borough, and the yellow pins are where the death rate is below the average of the whole borough, so that one can see at a glance that where the dark pins are there are the places where one is failing to bring to bear the benefits of public health administration, whatever they are.

94504. You could not tell us, I suppose, whether the districts where you have the highest death rates are the pauper districts as well?—Yes, they are on the whole. May I refer you to Paragraph 10, where you have the text dealing with the map. There is the list of one registration sub-district with the actual figures.

94505. It does not give the pauperism there?—No, but in Paragraph 10, Sub-section 2, there are in the text some comments as to the pauperism.

Need of
further
development
of Cleansing
of Persons
Act, 1897.

94506. (Mr. Nunn.) Looking at Paragraphs 22 and 23 of your Statement, and the illustration of free medical assistance received by the poor through the present administration of Public Health, have you any further suggested developments in the same direction that you have in your mind besides the treatment of school children in the schools?—No, not in that direction, I think, beyond the development of these points; for example, I should like to see sub-clause (b) enormously developed.

94507. In what direction?—In facilitating cleansing.

94508. At present you cannot compel a person, it has to be on their own voluntary motion?—Usually. The Act is an Adoptive Act. I should like to see it compulsory throughout England.

94509. Compulsory to be adopted by the locality with compulsory power to enforce it?—Not to enforce it; compulsory on the authority, not compulsory on the person.

94510. You do not want more compulsory powers to enforce the Act on the person?—I might wish for them but I think it would be undesirable.

94511. What powers do you ask for in dealing with verminous persons, or persons who are a nuisance to their neighbours?—I think if it could be shewn by a medical certificate that the person was a nuisance or injurious to his neighbours, that then there should be compulsion under that Act.

94512. Compulsion to do what?—Cleanse.

94513. Cleanse the person or the habitation?—Cleanse the person and the clothes; we can cleanse the habitation now.

94514. By the certificate of two medical men?—Yes; we cannot cleanse the person. As a matter of fact that certificate is very rarely used in practice; but if that same sort of legal position could also be given with regard to persons as well as to houses, I think good would be done.

94515. A good many of such cases are old people who are so helpless that they cannot practically look after themselves; in that respect something further than that would be required in their case, would it not?—I think those cases are somewhat exceptional; of course we all know that with people in that class of life, when nearing death, verminous conditions frequently supervene, unhappily.

94516. They would take up a great deal of the time of the officers concerned?—That is so; but it is difficult to legislate for them.

94517. They would take up a disproportionate time of the officer who has to deal with them from the relief point of view?—Quite so.

Non-deterrence of
infectious
hospitals.

94518. Are you in favour of compulsory powers to enforce admission into institutions under those circumstances, and detention there?—Like an infectious disease?

94519. Would you call a verminous condition that?—Any condition, I would say broadly, which was injurious to the health of persons surrounding them, apart from the individual; but as a matter of fact in infectious disease it is working out fairly well in practice. I have only

had difficulty in removing to hospital perhaps, half-a-dozen cases in Finsbury in seven years over many hundreds and thousands of cases. There have been difficulties, also, in Bedfordshire, I think there are greater difficulties in the country than in London, which are partly due to local prejudice, partly due to the fact that the hospitals are nothing like so well-managed as the hospitals of the Metropolitan Asylums Board in London. We have very little difficulty in removing our cases in Finsbury; we remove probably 80 or 90 per cent. of them without any exertion or exercise of the powers of compulsion which, of course, means a Justices' order.

94520. Glancing over the work of the health visitors, a good deal of the work of a health visitor, I suppose, would lie in attacking the moral sources of disease?—The social sources.

Extent to
which he
visitors co
deal with
immorality.

94521. Supposing there were moral sources?—Yes, I think they ought to deal with those too, if possible.

94522. Do you think that would be a proper function for the paid health visitor of the borough council?—Yes, if I understand rightly what "moral" means.

94523. For instance, supposing a man was sacrificing his wife's health who was about to bear a baby to his own desire for drink, would the health visitor deal with the husband or only with the wife?—She would have no compulsory powers I am afraid.

94524. I was not speaking of compulsory powers, she would have to exercise whatever powers lay in her, I suppose?—She would offer advice within her duty but it would come to very little in such a situation.

94525. She would not be able to deal with the whole of the case, would she?—No, she would not.

94526. How would you propose to deal with the whole of the case supposing the unhealthy conditions are the direct result of moral failure, do you propose to call in any other body or attempt any kind of co-operation at all, or are you going to leave it entirely in the hands of the Borough Council Health Department?—I think I can only consider it from the point of view of sanitary laws and as a matter of administration.

94527. There is another point of view, you must look at it from the point of view of the community?—Yes.

94528. A man may be saved from drunken habits and that may save his next child being cursed for life?—Unquestionably.

94529. In what way would you draw in the co-operation of these people who are desirous of looking at the case from its moral point of view. Have you any suggestions in that direction?—I am afraid not.

94530. It might lead to the multiplication of visitors and not only to the multiplication of visitors, but the adoption of different kinds of policy in the same case, which might be equally injurious to both visitors; the visitor approaching the case from the moral point of view, and the visitor looking at it merely from the health point of view?—Yes.

94531. For instance, our sanitary inspector in Hampstead complains of the district visitor as making all sorts of suggestions with regard to patent medicines, on the other hand, you might have a sanitary inspector or a health visitor who would be making all sort of suggestions which undermine the moral power of dealing with disease?—We do not want to over-inspect; we do not want to turn various kinds of inspectors on to a case.

94532. One wants to unify the work as far as possible, Co-operation does not one?—I am afraid I do not see any light on the of Charity, idea of the sanitary officials acting under an Act of Parlia- and Sanita- ment exercising any moral consideration in their duties, Authority. except quite indirectly.

94533. That is what I wanted to understand. That leads to this question, for instance, in London you have wealthy charities with an enormous amount of pecuniary power, running to some £6,000,000 or £7,000,000 a year, and they have a force of thousands of voluntary agents; those people may help or very largely undermine the

Co-operation of Charity, Sanitary Authority.

influence of the health authority, and from both those points of view my question is, is it not desirable to draw them into some kind of co-operation by which their good influence shall be improved and their bad influence as far as possible prevented?—Yes, it is eminently desirable.

94534. Have you any suggestion as to the possible method of co-operation?—I am afraid I have no very practical suggestions.

94535. You think it cannot be left alone altogether?—I entirely appreciate the position you put; I see the difficulty; I see it every day. I do not know, under the sanitary law and sanitary administration, which is what I have to consider, that I see very much daylight. Whatever co-operation there could be between district nursing visitors of the Charity Organisation Society and other agencies of that kind in a district no doubt is extremely beneficial; whatever co-operation there could be between the central authority as represented by its medical officer of health and its sanitary officers and those other voluntary officers, I think should be encouraged in every possible way by all kinds of meetings and opportunities for discussing their experience and comparing notes and so on, but it does not seem to me to enter into sanitary administration.

Co-option of Sanitary Authority.

94536. Take the case of a public health committee, it does not enter into the consideration of those at present, does it?—No, very little.

94537. It hardly ever deals with a case unless it is a very exceptional one?—That is so.

94538. But supposing you were co-operating with, as I think you have suggested in your statement, and possibly co-ordinating the work of the district medical officer under the Poor Law authority, whatever it may be the question of consideration of cases would come prominently forward?—I think it would, and I think that is an advantage.

94539. If you were considering cases, would it not be equally desirable to draw on to such a committee as considered the case the persons who dealt with the case from the different points of view, from the moral point of view, for instance?—I am afraid that is the point where I do not see very much light; you mean co-opt moral and social workers on to the public health committee.

94540. Supposing for instance co-ordination was attempted between the Public Health Department and the Medical Department of the local authority, would it not be desirable to have representatives of those other bodies who were already acting in the same direction and dealing with the same cases of that body, and give to the whole body statutory power to deal with the cases, otherwise you might have a great deal of relief given which was injurious, or a great deal of moral suasion given in the wrong direction and so operate against the efforts which the public health authority is making. That is happening every day with reference to persons in London, as you know?—I am quite sure if the various duties of the local authorities under these new Acts and these new powers are given to various committees under each local authority, the committee for education, the committee for public health, the committee for finance, the committee for relief, and so on, I think entire co-operation between those committees would be essential to thoroughly satisfactory work. I see more light there than I do in co-opting moral workers to public health committees. I am merely suggesting that; I know you do not suggest it, but I am suggesting that to illustrate the argument that merely co-opting outside persons on to public health committees at the present time, in order that all sides of the case may be considered, does not seem to me to be practical from the point of view of administration. Immense difficulties would arise. The difficulties of a sanitary committee that is alive and active at the present time are very great, and I am quite sure those difficulties would be increased by any such method as that.

94541. Under the present conditions take the case of phthisis, supposing you had a committee which was made up of the following members, the medical officer of health himself, or his health visitor, the district medical officer

and representatives of the various charities that were attempting to deal with phthisis cases partly by means of provision for disinfection or advice as to the disposal of sputum, or by the actual provision through charitable funds of sanatorium treatment, supposing a committee of that kind had statutory authority, would it not be in a position to deal satisfactorily with that class of case?—Yes, I am not quite clear what statutory authority such a committee could have, but I am satisfied if it could be worked, that would be extremely desirable. It would fill up many of the lacunae at present existing in our administration with regard to phthisis.

94542. It would prevent wrong advice being given and promote proper treatment of the patients and it would prevent any possible clashing of the authorities already dealing with the subject?—Yes. I may add as a point of practical experience, that I proposed to my own authority to do something of that kind with regard to phthisis, but after consideration it was very definitely opposed.

94543. We have that actually in force at Hampstead: we have all those elements sitting together on one committee?—But it is not a statutory committee.

94544. But it works perfectly well, and the result has been that phthisis has gone down very considerably in Hampstead at quite a different ratio to what phthisis has gone down in the contiguous boroughs where the same system is not adopted. ?—I am sure it would operate in that way if it were properly done.

94545. If the same thing could be satisfactorily devised and made uniform throughout the country, you would have a very great diminution in the death rate from phthisis all over the country?—Yes, you might.

94546. Supposing that you had your authority, whatever it is to be in the future, and supposing that it included the health authority and the medical relieving authority, would there be any difficulty in the appointment of a sub-committee to deal with special circumstances of that kind?—None whatever, if it were a statutory instruction that it should be done: there would not be the smallest difficulty. I think there would be considerable difficulty along the line you hinted at with regard to the personnel owing to the social conditions of certain boroughs. You in Hampstead are very fortunately placed, whereas we in Finsbury are unfortunately placed, all our better class people who are interested in this sort of question have left Finsbury practically.

94547. Is that not the great problem of London really to draw whatever power there is in the West End of London to the relief of the East End of London?—Yes, I agree with that.

94548. So that if it were simply a matter of drawing the people from one part of London to another, by the mere fact that one had a reasonable scheme by which people could organically assist the poorer classes, you would probably draw from the West End a sufficient number to carry out reform like that?—Yes.

94549. If you had a sufficiently attractive system so that they knew they would be doing good instead of harm?—Yes.

94550. I will pursue one point further, that is with regard to the provident dispensaries and the friendly societies. Of course they are doing at present, you will admit, a very large amount of good in the prevention of disease and in the cure of disease?—Yes.

94551. That ought not to be neglected in any scheme that we may have in hand for the prevention and cure of disease in the future?—No.

94552. The provident dispensaries take up the question of providing medical assistance only?—Yes.

94553. You would draw them under the influence of the public medical officer of health?—I would if I could.

94554. They would have the same relation to him as the district medical officer, that is to say they would have to report cases of sanitary defects, and whenever a case of infectious disease came under their notice, they would

Mr. George Newman, M.D.

Co-operation
of providence
and
Sanitary
Authority.

act under his order?—Yes, I think that would involve appointing the medical officers of such institutions under the authority, whatever it was. It would be impossible, at least I think it would be impracticable at the present time, to, so to speak, hitch on the dispensaries to the public health service of the district, because they would find it would be necessary to give to the authority who had the control of these various committees the same absolute power that they have with regard to the appointment of their own officers, because you have rather a different class of men at work there.

94555. Precisely, but you recognise that the outpatient department of the hospitals and the dispensaries which are free, are already doing a great amount of harm, firstly, in preventing the advance of medical science and, secondly, by pauperising a large proportion of the population?—Yes.

94556. So that in any reform which takes place it would be desirable that the authority, whatever it is to be, should have a controlling power with regard to free dispensaries and some controlling power with regard to the work done by outside departments of hospitals?—Yes, I think so.

94557. It would be essential working through medical officers of health?—Yes, I think so.

94558. In that case they would have a certain control of the appointments of the officers; that is what you would desire?—Yes.

94559. That would approximate, of course, to a public service in each locality?—Yes.

94560. That also you would desire?—Yes.

94561. Supposing the provident dispensaries and the great friendly societies, some of the later of which already have their medical officers doing the work of the dispensaries, were to combine and the dispensaries were to become the rallying point, as it were, for working-class medical assistance, your future local authority having the control over the dispensaries and drawing its voluntary assistants from the members of the dispensary and the officers of the friendly societies, would practically have the medical assistance of the poorer classes under its control?—Yes, I think it would, at all events of those who desired free medical advice.

Practical
difficulties of
effectual
co-operation
of various
agencies.

94562. Are you assuming that the provident dispensaries are giving free medical advice?—I am assuming that under your scheme they would.

94563. I am not assuming that myself.—They would be part of the public service.

94564. I was not assuming that, I was assuming that the authority of the future, the local authority of the future, whatever it is, taking into account the work that might be done by free dispensaries, and the good that might be done in provident dispensaries and friendly societies, would take some sort of control, at any rate, of their personnel into its hands, and effect co-operation between them and the public department?—I am bound to say I see that many practical difficulties in Statecraft, or whatever you like to call it, would be involved in that scheme. It seems to me that there must be Government control, because, it must involve financial control of the public funds.

94565. Government control of the schools does not prevent managers exercising very much influence over the teachers, the scholars, and the parents?—Is that a parallel case, do you think?

94566. I think it is just a parallel case. You have the buildings in the absolute control of the local authority, which is the county council, and all the really important matters; the tone of the school, the development of the children, the encouragement of the teachers, and the visitation of the homes, is placed in the hands of the managers; they are a small body, but if they were increased in numbers they would become a very important body in the education of the children, would they not?—Yes.

94567. Is it not true to a small extent with regard to the health visitors and the medical officer of health that

they have rendered valuable help in the past, though it may not have been with the efficiency of paid officers?—Yes.

Difficulty of
co-operation
of voluntary
workers and
paid officials.

94568. They have introduced fresh methods, and inspired things?—Quite so.

94569. That is of immense value in a department?—Immense value.

94570. On the whole I gather you think it is worth while to provide for some kind of co-operation between the voluntary worker and the official?—I am quite clear about that; but what I am not clear about, and I hesitate in some degree about it, is that I do not see clearly how you propose to bring all these various agencies, especially the moral ones, under the statutory control of the local authority; it is the statutory position that seems to me to be the difficult one. Co-operation such as you suggest for a phthisis committee seems to me most desirable and practicable, it could be done to-morrow.

94571. It has been done?—It has been done, and is being done. I was simply unfortunate in my district that it was not done there; but further the proposal seems to me to be of a different nature.

94572. You are so willing to look at the matter from a point of view which is outside the medical profession that I should like to put this suggestion to you: Supposing that every charitable body that undertook work in the homes of the poor was obliged to be registered, and all registered societies had a voice in the appointment of a local council of charities; and if the local council of charities had a considerable number upon the local statutory authority of the future?—A considerable number, do you say?

94573. Yes.—So that the sanitary authority would not be an elected body?

94574. I am not talking of the sanitary authority, but our future local authority, which I gather will to a very large extent combine the sanitary with the Poor Law functions?—You would have that an elected body?

94575. Not necessarily.—An elected body with some co-opted members.

94576. Perhaps this is getting rather into a purely constitutional difficulty, so I will leave the matter there?—Very well.

94576a. Can you describe any legislative and administrative steps by which borough and county borough medical officers of health may assume, or have assumed, duties in regard to personal hygiene, as differentiated from sanitary environment?—Yes. Perhaps you will allow me to send you a short Memorandum on the subject. *(The Witness subsequently sent the following Memorandum.)*

Duties
Sanitary
Author
regardi
persona
hygiene

"The recent tendency of sanitary legislation and administration has been towards personal hygiene both in letter and spirit, and in several general Acts there are clauses indirectly affecting personal hygiene (Isolation Hospital Act, and Public Health Act, and Factory and Workshop Act, 1901, Poisoning). This general tendency is also illustrated in the following.

I.—Legislation giving powers and duties in respect to personal hygiene:—

(a) Certain Education Acts:—

Elementary Education (Blind and Deaf Children) Act, 1893. Compulsory obligation on parents, and duty on Local Education Authority to provide.

Elementary Education (Defective and Epileptic Children) Act, 1899. Adoptive, Local Education authority may inspect and may provide.

Education (Provision of Meals) Act, 1906. Local Education Authority may take steps for providing meals for children in public elementary schools.

Education (Administrative Provisions) Act, 1907, Sec. 13 (Recreation and Medical Inspection and Treatment).

(b) Other Acts dealing with hygiene of children:—
Infant Life Protection Act, 1897.

Employment of Children Act, 1903.

Prevention of Cruelty to Children Act, 1904.

Notification of Births Act, 1907 (Adoptive).

(c) Acts affecting adults and children :—

Cleansing of Persons Act, 1897 (Adoptive).

Factory and Workshop Act, 1901, Sec. 61.

Midwives Act, 1902.

II.—Many sanitary authorities have assumed additional duties in the way of *health visitation* :—

(a) By instructing sanitary inspector to do personal work (as at Finsbury).

(b) By employing health visitors (as in Birmingham, Nottingham, Warwick, Tottenham).

(c) By employing municipal nurses (Brighton) and school nurses (Liverpool).

(d) By employing lady doctors (Huddersfield and Croydon).

III.—*Infant Milk Depots*.—Liverpool, Battersea, Finsbury, Woolwich, Lambeth, Leicester, St. Helens.

IV.—*Literature and Lectures*.—Literature, most advanced sanitary authorities (examples for Finsbury). Lectures on health subjects (Edinburgh).

V.—*City Guilds of Help* (on Elberfeld Model).—Bradford, Sheffield, Halifax, etc.

VI.—*Tendency of Medical Officer of Health* to make their work more personal, and to press home the element of personal hygiene on their councils, and in the communities they serve."

94577. (*Mr. Phelps*.) I want to take you through your proposals with regard to the arrangements under your system. Have you been long in Finsbury?—Seven years.

94578. Previous to that were you in Bedfordshire?—I have been in Bedfordshire at the same time as consulting medical officer, which was not a statutory appointment.

94579. Are you familiar with county arrangements in medical matters?—Yes.

94580. Supposing that we had, as you suggest, an authority which controlled both the preventive and the curative side of medicine, and they were both departments under the same authority, I want to take you through the procedure and see what would happen. Supposing, for instance, under ordinary circumstances a person now falls ill, he or she sends for the relieving officer, gets an order, and the medical officer calls. Would you modify that procedure?—Yes; I should prefer to see the medical work originated through a medical man rather than through a non-medical man.

94581. That is to say they should call in the medical man directly?—Yes.

94582. Would the medical man have any discretion as to whether he would attend or not?—If he is part of a service I should wish him to have no discretion.

94583. That is to say you would allow the rich and the poor indiscriminately to call in the public officer as they would a practitioner at the present time?—Yes.

94584. What would be his next step? Would he report the case to his committee?—He would have to report the case eventually.

94585. The case then is reported to the Board, what action would they take?—The case probably may have been met by the advice and counsel which he has given; if the case was one of infectious disease obviously there would be further steps to take. You quite understand my proposition with regard to the matter? I should like to make it quite clear; I am from a medical point of view absolutely convinced that by more co-ordination and co-operation between the two medical services we should obtain better medical results. It is not my province, I think, to enter upon the large question of whether or not the whole business of free medical service should

be undertaken by this local authority. That is not a matter upon which I can form an opinion useful to the commission.

94586. Therefore you would rather not go into that question?—I think, in my position, I must not.

94587. From the point of view of medicine, you think there is no doubt such a provision as you recommend would raise the level of health generally?—I think without that co-ordination our mesh is too wide, and by our lack of co-ordination we are failing to do a great deal of the work which really falls to a preventive medicine section of the State.

94588. Have you studied the large general question at all of the comparative effects of physical benefits and moral deterioration?—It is an enormous question. I have thought about it many times in my life.

94589. I will put it in another way. Do you think your proposal would increase the sense of responsibility, or weaken it, on the part of parents, for instance?—I am quite clear that satisfactory health visitation is going to increase responsibility, and not decrease it. I am quite clear about that. I do not at all believe that a properly worked Infant Milk Depot, for instance, decreases the responsibility of the mothers. My experience has been the contrary; that if the milk depot is properly worked—I admit that some milk depots are not properly worked—but if properly worked, the mothers' sense of responsibility and duty is increased rather than diminished. That has certainly been my experience.

94590. Do you think that depends at all on requiring payment for the milk?—No; that may be a factor, but it depends much more on the opportunities which are opened to her as to the control of her child's life.

94591. Is that the principle of the medical missions in Finsbury that you are familiar with?—I cannot say; I am only familiar with those in the same sense that I am familiar with the other charitable associations.

94592. You do not know the lines on which they work?—Not intimately.

94593. Have you in Finsbury much of the sixpenny doctor, as he is vulgarly called?—A good deal.

94594. Do you think that is a danger to public health?—I do not know that it has impressed me so much as a danger as an extremely inadequate system; it does not attempt preventive medicine, it does not even attempt curative medicine, it is merely a temporary palliation.

94595. It is a bad effect of the competitive system?—Yes, I think so.

94596. (*Mr. Gardiner*.) It has been suggested to us by one of the witnesses that in the interests of infantile mortality lying-in institutions for mothers in such districts as you have to deal with ought to be encouraged. Have you any recommendation on that point? You have a small lying-in institution?—Yes, St. Luke's.

94597. Would you like to see it used more for married mothers to be confined in such places?—Yes, I would; but the difficulties again are enormous. The lying-in mother who is in most need of the institution is in the most social difficulty with regard to accepting the advantages which the institution would offer. She has to work up to the last minute that she can work, and she has to return to her work directly she can. No Factory Act controls her at all. Section 61 of the Factory and Workshops Act, 1901, does not affect the situation of thousands of these women; they are merely doing casual labour of some kind to keep the home going. If you say to her: You must comply with the rules of the institution, and come in on such and such a date before your expected confinement, and you must remain away from work for so long; I think you would find those conditions, simple and beneficial though they are, would be deterrent.

94598. You would make it as easy as you could, would you?—I would.

Mr. George Newman, M.D. 94599. On the ground of public health?—Undoubtedly; both for the child and the mother.

25 Feb. 1908. 94600. Would you like to see the public sources of help developed rather in taking the child off her hands in the case of a widow such as you described, or the wife of a man permanently disabled?—I do not want to see them taken off her hands very much.

94601. For the time, say for five or six weeks?—Yes.

94602. That would be right, would it not?—For a few weeks.

94603. And the practice which has hitherto obtained in many unions for mothers to get a lying-in order you would rather like to alter, would you not?—Yes, I have thought about it for years; I think I should, on the whole; but there is an enormous difficulty about it.

94604. After a close study on the spot of the difficulties which everyone knows who has lived in a poor district you would say on the whole you would rather make it easier than more difficult?—Quite so.

94605. You know how many influences there are restraining mothers from taking advantage of such a provision?—Yes.

94606. (*Miss Hill.*) With regard to your milk depôt, is it open to anyone to purchase there, or are they only recommended cases that are allowed to purchase?—They are only recommended cases, and only cases of mothers who cannot naturally feed their children; and they are only Finsbury mothers.

94607. There is no idea of extending it generally to the supply of milk in the borough?—No.

94608. Would not sufficient powers of inspection secure the same end? If the milk could be well inspected that was sold in the borough would not that meet the need as well as the special depôt?—No, because the market milk is not prepared by prescription; the milk of the depôt is not crude milk but modified milk.

94609. This does not bear particularly on the general supply of milk in the borough?—It only affects the milk supply from an educational point of view.

94610. What chance is there of it becoming self-supporting, any do you think?—I am afraid none. Expenses are very considerable and quite beyond the 4d. a quart market price.

Clearance of areas in Finsbury. 94611. I want to know with regard to the housing in Finsbury, how were the houses reconstructed?—In many cases the houses were reconstructed by the owners. I have gone to an owner and said: "Now I do not want to bring your area before the Council; I do not want to go all through the courts with you unless you press me to; it is insanitary, it has such-and-such a death rate, the responsibility is yours; are you prepared to meet it in any way?" I have been to a dozen or twenty, perhaps forty or fifty owners in that way; here a house and there an area during the last seven years, and we have had very considerable clearances of dilapidated property made in that way without taking them to the courts.

94612. Has the borough council built any houses for the poor at all?—No, the borough council has not, the county council has.

94613. Have you found in Finsbury a diminution of demand. The population you said was diminishing. I suppose a good many of the working people are going to the suburbs, are they not?—That is so; that is largely owing to the improved communications.

94614. Has there been a diminution of rent, do you know, in consequence of the demand decreasing?—No, I should say not.

94615. That would naturally follow I should think; it has in other boroughs?—Yes, but here you are being

met with the difficulty that the price of property is going up because of the invasion of the commercial element.

94616. I see from several of your answers you are quite aware there are many other sides to these questions than the medical one, and you have guarded yourself in many questions by saying you speak only from the medical point of view?—That is so. Need of any reform on medical assistance to be gradual.

94617. Some of us realise that we have on the one side the Poor Law which has been deterrent, which has tried to throw back the responsibility on to the parents, which has therefore limited its supply of medical comforts, that is to say limited them as far as it can to the people whose circumstances justify the supply by the public of such medical comforts, and which has a staff for making enquiries as to circumstances, a staff and an organisation; if, as some people have suggested, the medical treatment of the people was thrown on the public health authority that has no such staff and no such organisation; and it has, so far as it has dealt with cases dealt with them without any charge or enquiry?—Yes, I follow.

94618. Some of us feel that we would rather see the parents responsibility and general education relied on, and use the provident dispensaries and the charities as much as possible, and that it would be a very dangerous thing to throw open the flood gates of free medical relief and what must follow, medical comforts, to the whole body of the population?—Yes,

94619. As between those two sides I do not quite realise which you would lean to; the improvement of the medical side of the Poor Law, of course, we should all be agreed about?—I feel the force of that difficulty, and have felt it for years past. That is why in answer to the Chairman I ventured to say that I should be anxious in these matters of administration to go very slowly and go step by step. Any sudden change of course is quite outside the question, in my humble judgment.

94620. Setting aside the financial question?—Setting aside the financial question. Need of unification of medical services.

94621. Which is a very important one?—Quite so, but that is not my province. Speaking purely as a medical officer, I should say it was extremely important to have a very gradual change, if change there is to be, and that change should go in the direction of uniting the two medical services, as such, and their staffs.

94622. You would look for good results from education of the people and co-operation of the authorities?—Quite so, in addition to co-ordination.

94623. And from throwing more spirit into the Poor Law and getting more sense of responsibility, especially with regard to the out-paupers, on the part of the guardians?—Yes.

94624. Those in receipt of out-relief are not very adequately thought over or dealt with by the guardians at present?—I am afraid not.

94625. (*Sir Samuel Provis.*) There is a provision, as you are aware, in the Public Health (London) Act, which contemplates that a relieving officer shall give notice to the sanitary authority of insanitary houses. Is that practically acted upon?—Almost never. You mean Section 3? Extent to which Public Health Act is used.

94626. Yes?—It is almost never acted upon because of the saving clause "In accordance with the Regulations of the authority having control over him."

94627. They do not make regulations?—They do not. We do receive, of course, from them a certain number of complaints, perhaps two or three score a year out of thousands from other sources.

94628. Do you find reluctance on the part of the relieving officers to do work of that kind on the ground that they would be looked on with suspicion by the poor when they visited there if they did that?—No, simply on the ground of the burden of work.

ONE HUNDRED AND FIFTIETH DAY.

Tuesday, 3rd March, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. C. S. LOCH.
Mr. J. PATTEN-MacDOUGALL, C.B.

The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
The Right Rev. The LORD BISHOP of ROSS.
Mr. R. H. A. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. JOHN CLARKE and Mr. F. BARNES, called; and Examined.

95324. (*Chairman*.) You have sent us answers to some written questions, which we will take as your Evidence-in-chief, and supplement by a few questions. Will you kindly hand them in?—(*Mr. Clarke*.) Certainly. (*The Witness handed in the following Statement*).

Question 1.—The class of men assisted and their physical condition on arrival?

Answer 1.—At the opening of the branch workhouse the inmates comprised the best able-bodied men from Poplar Workhouse. Then followed men from Poplar Workhouse of various mental and physical abilities. Later, the bulk of these men were supplanted by the unemployed. Finally for the last twenty months the places of the unemployed have been filled by the inmates from the workhouse. The physical condition of the unemployed on arrival was fairly good.

Question 2.—The kind of work on which the men are employed, and the quality of the work performed by them?

Answer 2.—A reservoir was first made and buildings and land was drained. Then attention was taken to the repairing of the buildings. Since then the bulk of the men have been employed in cultivating the land, which I would point out was in a very derelict state when taken over. The quality of the work performed by the better class of men was good. Other work carried on is mat-making, sack-making and the general domestic work of the workhouse. A few of the men have been employed at their own particular trades such as shoe-making, carpentering, etc.

Question 3.—Particulars or any industrial training or technical instruction which may be given to the men?

Answer 3.—Gangers are employed to instruct the men in digging and other branches of land cultivation and technical instruction is given by a practical man in mat-making.

Question 4.—Particulars of the rules as to discipline, recreation and leave of absence?

Answer 4.—Discipline is carried out according to the consolidated orders of the Local Government Board. The men have been provided voluntarily with a piano, football and cricket outfits and indoor games of various kinds. The men are allowed to leave the workhouse after work hours, but must return by 9 p.m. in the winter months and 10 p.m. in the summer months. The unemployed, whilst relieved here were allowed two days leave each month.

Question 5.—The mental, moral and physical effect of the colony upon the men?

Answer 5.—The mental and moral effect of the men appears to remain normal. The physical effect is wonderfully improved.

Question 6.—The respective merits of the colony and the workhouse as a means of assisting the class of men dealt with?

Answer 6.—We are strongly of opinion that the colony is an improvement on the workhouse, because better discipline can be maintained, the men more regularly kept at work, and at work which is more remunerative and less detrimental to the men themselves.

We may add that from our experience that this can be much improved upon by a system of classification combined with strict and ample supervision. We find that the men who have spent some time in the workhouse previous to coming here generally have a strong feeling to return there.

Question 7.—Method of dealing with the wives and families of married colonists?

Answer 7.—This matter does not come under my jurisdiction, but the unemployed are dealt with under the modified test order.

Question 8.—Method of disposing of the produce of the colony?

Answer 8.—The produce is chiefly consumed at the institutions under the guardians, the remainder being sold by tender or sent to the public markets.

Question 9.—A copy of the dietary table might be enclosed.

Answer 9.—Copy of the dietary table enclosed (*see Appendix No. XII*).

95325. (*Chairman*.) Mr. Clarke, you are the master of the Laindon workhouse?—(*Mr. Clarke*.) I am.

95326. How long have you been there?—Four years.

95327. And previous to that?—About twelve years at Poplar, and eighteen months at Stoke-on-Trent workhouse.

95328. What is your position, Mr. Barnes?—(*Mr. Barnes*.) I am overseer.

95329. You have been associated with this branch workhouse from the outset, I understand?—(*Mr. Clarke*.) Yes.

95330. How many men have you got there now?—One hundred.

95331. Has the number varied much during the last four years?—It has varied from about 130, or 140, to eighty. Taking the last twelve months it has averaged about 130.

95332. Does the expense per head vary much according to the numbers? Would the expenses be less if you had 130 than if you had 100?—The expense is absolutely the same except for the dietary. The administration expenses are absolutely the same.

95333. And the charge per head is the same?—Just so.

95334. The men who were sent in the first instance came from the workhouse, and then subsequently they were supplemented, I understand, by those who had registered themselves as unemployed?—Yes.

Difference
between
paupers and
unemployed.

Remunera-
tion.

Conduct.

95335. Do you see much difference between the two ?
—Yes, there is a big difference between the two. The habitual pauper has got one pace, and nothing in the world will move him from that pace ; as to the unemployed, (I am speaking of the majority, there are exceptions to the rule), they have got better pace for work.

95336. By better pace you mean they do more ?—
Yes.

95337. The men in the workhouse I suppose do their job and no more ?—They do what they are forced to and no more.

95338. Is there any remuneration attached to their work ?—None whatever.

95339. And the unemployed ?—The wives and families under the Consolidated Orders have got so much a week for the wife, and so much for each child.

95340. Do they get paid according to task work ?—
We have no task.

95341. Are you fairly well satisfied with those who came from the unemployed ?—Not taking them altogether, as there are exceptions.

95342. How would you qualify that ?—At that time we averaged about eighty unemployed, we will take about ten out of those—the majority are decent men—but we will take about ten out of those, which put me in mind of a lot of sheep. If you get some of them that get the scab, they simply contaminate the whole lot, and that is where our difficulty comes in.

95343. You cannot hold the spread of the scab ?—
Yes ; we can see it before they start to work and check it.

95344. What do you do ; do you get rid of the men ?
—We put on officers and gangers to watch, because we must have a thoroughly good complaint before we can send them off. You cannot send them away for an idea, you must have facts.

95345. The others are very much inclined to follow these people, are they ?—Yes.

95346. That shows they are not persons of much will or character ?—I can hardly say that of the majority of them. For instance, you get three or four, what you may call bullies, strong able-bodied and muscular men ; the other men seem to be afraid of them unless there is an officer there. They seem to dominate the majority of them unless there is an officer there to supervise them. If he is away the men practically seem afraid of them, that is our experience.

95347. What sort of games do they play ? Do they shirk their work or what do they do ? Do they set an example of insubordination ?—Without supervision, when you get a body of men together, they (the bullies) will try to shirk work and induce the others to do so. For instance, they will say they have a button off, or they want their braces mended, or they want to go to the w.c. ; we endeavoured to stop that by having the w.c. in the field.

95348. Have you had difficulty generally in maintaining discipline and the regulations ?—I have not.

95349. These men who were leaders I gather, were, as a rule, men of good physique ?—That is generally so.

95350. They owe their influence a good deal to that ?
Yes !—Usually they are very lazy men, and the physique is practically of the best.

95351. Taking the rest, what should you say of them, are they well behaved ? I think you said about 10 per cent. were different ?—Are we speaking now of the unemployed, or the genuine pauper ?

95352. The unemployed ?—The rest of the men are fairly good men, and some of them very good men, exceptionally good men, but they must be under proper supervision, otherwise when they are under the Poor Law, their idea is this : Look what we are doing ; we are doing so much here ; the guardians are getting so much out of us, we should not do this. Of course, they get the union idea in their heads and think they should be paid the union rate of wages.

95353. The difference is quite marked between the two sets of men, those who have been in the workhouse, and those who came from the unemployed ?—Quite, the pauper in the workhouse intends to be there ; he is

either going to be there or in some other institution all the days of his life. My experience is that the average have been in from ten to twelve years, and some of them nineteen years, and they are young men now. When we were sending some of them to Canada last year, there was one who was forty-one, and he had been in the workhouse for nineteen years—in the Poplar Workhouse alone.

95354. Was he a strong man ?—Yes, absolutely.

95355. Some of these men that you are speaking of as leaders, who did harm by their example, did they come from the workhouses ?—Yes, the man I mentioned not long ago has done a month at Chelmsford, and two months at Poplar, and he is one of the finest men that I ever saw stripped. That man does not intend to work.

95356. (Mr. Lansbury.) Is he there now ?—He is at Forest Gate School.

95357. (Chairman.) For a man of that stamp you want a stricter disciplinary régime than you have in force at Laindon ?—You want to classify them, and take him away from the other men altogether, so that he does not contaminate the other men ; you should take him away altogether.

95358. Is a man of that kind, putting his physique on one side, because you say he was exceptionally strong a rare case to deal with, or is there a considerable number ?
—They are an exception to the rule.

95359. You had not many of those cases from the unemployed ?—No, we had not those cases from the unemployed. This is a pauper I am speaking of now.

95360. From that I gather that the workhouse people at the colony give you more trouble than the unemployed ?
—With the unemployed we were not troubled with the work ; principally, it was the drink ; in some few cases, they got drunk when they got money from their wives.

95361. Coming back to the man you spoke of with the great physique, it is clear that a workhouse is no deterrent to him ?—The workhouse is no deterrent to any man. The workhouse simply harbours them, and as long as the workhouses exist, these men will exist.

95362. That is your experience, not only from Poplar, but from elsewhere ?—That is my experience of fourteen years, not only in Poplar, but in the provinces, in large provincial towns.

95363. Do you think the lot of these able-bodied men at Laindon was less comfortable than in the workhouse ?
—I do in a sense, from the point of view of the pauper. For instance, they detest being on the land. The greatest difficulty we had was to keep them on the land, they took their discharge and endeavoured to get back to the workhouse.

95364. I assume your experience is that a form of labour colony with strict regulations would be a real deterrent to this class ?—It would, there is no doubt of it.

95365. Would you say from your experience that that is one of the defects of the present system of Poor Law administration that the workhouse is not a deterrent ?—It is not. I say my experience is that it does not matter whether trade is good or bad, it is immaterial. When trade was good and there was the Boer War and the Coronation, we had the same class of men in the Poplar Workhouse ; it makes no difference whether trade was good or bad, they were still there. It is simply a kind of thing that grows and gets into the bones, and it will take years to get it out ; it wants a moral and mental instructor. It is like taking a child by the hand and teaching it to walk, to get those men to work properly and be independent.

95366. Would a strong man like you mention use physical violence on the other men if they did not do what he wanted ?—He has done so. As a matter of fact, my old watchman would not go near him ; I had to go and deal with him directly myself.

95367. I gather that this branch workhouse has not done much good to the majority of the persons who came from the workhouses ?—Yes, we have sent something like fifty habitual paupers to Canada ; we have sent 100 practically to Canada ; we sent the one who was in the workhouse nineteen years over to Canada.

Difference
between
paupers and
unemployed.

95368. It was only the exceptional cases you were mentioning which this colony did not favourably affect?—It has affected all the habitual paupers in this sense, that of those that were originally in the workhouse, there are very few in the colony now, most have gone to Canada, others have gone and simply joined the ranks of the casuals, because when they took their discharge, they would not take them into the workhouses. I have seen them up and down the road as tramps. We have had 1,000 men there in four years, a thousand different men.

95369. Have you traced at all what has happened to those 1,000 different men?—It is impossible.

95370. You cannot tell what portion of them, in consequence of this training they went through, got work?—I can only trace three that I got work for myself. They have been at work for eighteen months. I know where those three are at the present moment. They are all three round Laindon.

95371. That is independent of the men you emigrated?—Yes. I have got others work, but they have returned again.

95372. How many men did you emigrate?—About 100.

95373. (*Mr. Lansbury.*) I suggest we should have the actual figure; you can get the real figure?—Yes.

*The witness subsequently added the following note:—*The total number of men emigrated from the opening of this branch workhouse to the present time is 99.

95374. (*Chairman.*) Taking the unemployed, how long were they at this branch workhouse, was it sixteen weeks?—Some of them were there six months.

95375. I suppose the improvement in their physical condition was great?—Wonderful.

95376. Do you find that an improvement of physical condition is generally accompanied by an improvement in their moral condition?—(*Mr. Barnes.*) The improvement in the physical condition is rather conspicuous. We found as to these men who came as unemployed that probably many of them became unemployed because they fell into a very weak state of health, owing to their impoverished condition, and they came down to the colony and were much improved. I think many of these men go back to work and stick to work in consequence of the improvement. It has practically been a convalescent home to them.

95377. They were so down in physique generally that they were hardly capable and had great reluctance to work?—That is so.

95378. Do you find as they physically get better their behaviour is better? Do they morally improve, should you say, as they physically improve?—It is quite possible that is so.

95379. Whilst you think that the colony is an improvement on the workhouse, you think there could be a considerable improvement in the organisation of the colony if you had classification?—That is so. Undoubtedly the colony is a great improvement on the workhouse, because the men are better occupied and occupied under better conditions.

95380. If that is so, a large scheme or a combined scheme of labour colonies would be a still greater improvement, because you would be able to classify. (*Mr. Clarke.*) I would say so, on consideration that you took land where you could put the men to work on gravel pits or sand pits or quarries in the winter time. With the clay and in a place like Essex, which is all clay, it is absolutely impossible to find work for them to do in the winter time.

95381. It is heavy clay land?—Yes.

95382. Have you any figures to show what the cost at Laindon is, as compared with the maintenance of the men in the workhouse?—I have not got the figures with me, but I believe the cost of the Laindon branch workhouse is about 1s. a head less than it is at the Poplar Workhouse.

95383. That is the cost of maintenance?

95384. (*Mr. Gardiner.*) Might we have put in the exact cost as compared with the cost of maintenance in the Poplar Workhouse?—I do not think I could give you that exactly.

95385. (*Chairman.*) Do you have anything to do with the arrangements made for dealing with the wives and families?—I do not.

95386. It is all done in London?—That is done in the chief office.

95387. Were you able to judge to a certain extent what was the effect of this; what do you think of the method, do you think it is a good method?—That is rather a hard question.

95388. It is asking you to criticise your superiors?—It is criticising my own board practically speaking.

95389. I will put it in another way: Do you think you could improve the present method of dealing with the wives and families?—I certainly do.

95390. In what way?—In the first place, I should see the wives and families were thoroughly well fed and clothed, and I should certainly not give them the coin to do it.

95391. You would do it in kind?—Yes.

95392. Why would you give it in kind?—At the present time I have got 100 unemployed sent to me; last year the same thing occurred, and unfortunately it has come to my notice, because I have had to open the letters, I suppose that it is natural to do it, it is humane and you cannot wonder at it, but the wives will send the men money; if a man gets money and there is a public house about, if he is not a teetotaler, he will get beer. That is the difficulty.

95393. That is to say, the wife, when she gets the money, instead of spending it all on her children and herself, sends some of it down to the man?—Certainly.

95394. You think that is a tolerably common practice?—I do; I am sorry to say it. I am only speaking the fact. We have only opened a few letters, and we find the postal orders there.

95395. Do you confirm that, Mr. Barnes?—(*Mr. Barnes.*) Yes.

95396. Would that be general?—(*Mr. Clarke.*) General.

95397. What sort of sum would it be, 6d. or 1s.?—One shilling generally, or 6d. That is what we have seen. They send it down for a bit of tobacco; they are not allowed tobacco or anything like that, it is simply humane, I daresay my wife would do the same for me.

95398. Do you think it is money that was given them by the Poor Law, or do you think it is money they got by earning it?—I could not say that: some of the females go out to work, and some work at home doing tailoring at home and that sort of thing. I should not like to say it was the guardians money or that it was their own.

95399. If they worked and got payment in that way, your suggestion of maintaining them by goods and in kind would not prevent them sending the money?—No, that is so. The man who has got a wife and family, if he is down there, I think ought not to take the money of his wife and family.

95400. That is another matter. I do not know how you could quite stop it?—It is very difficult; we cannot.

95401. I understand one of your difficulties was in finding employment in winter. Have you much difficulty in disposing of the produce?—No, the great part of it goes to the institutions.

95402. That is paid for, I suppose, at a certain fixed price?—That is paid for at the contract price; I take as the figure whatever the contract price is and charge the institution the same.

95403. Coming to the question of dietary, it has been suggested by various witnesses that the dietary at Laindon was very good, I gather from your evidence that the persons who came from workhouses would, notwithstanding the dietary, prefer to be back in the workhouse?—The dietary when we first went there was not exactly the same as it is now. The scale they have now was started on 6th October.

95404. Is that a more liberal or less liberal dietary?—Less.

95405. Has there been any grumbling?—Yes, there is continued grumbling.

95406. I gather really the purport of the evidence of both you gentlemen is that you think an institution such as this affords a better method of dealing with the

Mr. John Clarke and Mr. F. Barnes.

Barnes.

able-bodied, but if there was some combined system with a larger classification it would be a considerable improvement?—Yes, because even if men only turn a rod over they are getting something. Our profit on the farm account this year is £454 13s. 6d. If the men had been in the workhouse breaking stones you would not have got that much profit.

95407. They get no money, do they?—They do not get a farthing, absolutely.

95408. In certain of the Labour Colonies abroad a certain sum is put by, according as the man works, so that he shall have something when he comes out. What do you think of that?—I think it is a splendid idea. That is in a sense classification. Then that helps the man that wants to help himself, and under the present system it does not matter how good you get the men. You get half a dozen men together, you know some of that are very good men, you would do anything for them yourself, but there is another man there who will not turn over six spits unless he is absolutely forced, while the other man will turn over a rod, yet they are both served the same.

95409. It would give the man who comes out breathing time to find employment?—That is so. Of course, when a man goes out someone wants to take him by the arm and lead him. As soon as he gets outside he loses himself. He has not confidence; he wants leading along first of all. With some of these men there could be some good done if you could take them individually, but not collectively. As soon as they get out if they get work they get drunk and lose the work, and then come back again; that is so with some of the best of them.

95410. Should you say one of the defects of the workhouse system is that there is no inducement to a man to exert himself?—There is none whatever.

95411. We have had that in evidence from other centres, the people do not hurry themselves?—No, if a man goes into a workhouse, it is very seldom you ever see the gates close upon him to go out for good. As soon as I see a man come inside the workhouse with his furniture, I say that man's life is done for: you never see him go out again. I have studied this matter for fourteen years, and I can say that conscientiously. I have sold the furniture at Poplar: they are still there in Poplar, the furniture is sold, but they are still there chargeable with the wife and family: they have not gone out again.

95412. Do you think it would be a difficult system to work, putting by a certain sum for the men as they work and giving it to them as they went out?—That will not cover everything. You want more confidence between master and men. It must be done outside the institutions. The confidence between the master and men is lost, that is part of the cause of the present state of pauperism; a man seems to want to get all he can and does not seem to want to give anything in return.

95413. You say these periods of very short engagements tend to casual work?—That is shown to be so; as long as a man can go and work two days at the dock and come direct into the workhouse, he is simply taking the bread from a man's mouth who has a family and is trying to keep them. If you allow a man to go out of the workhouse and work two or three days at the dock and come direct back again, how can a man outside compete with a man like that whose home is in the workhouse.

95414. Do you think there is any considerable number of men like that?—It has been done by a considerable number of men. (Mr. Barnes.) It is a very large number from the very fact that the Poplar Union is in the dock district. (Mr. Clarke.) You must stop them before they get inside the workhouse.

95415. (Mr. Lansbury.) The guardians have dealt pretty severely with the men that you have reported, have they not? The men you have reported as men who are really worthless the guardians have dealt with pretty severely?—Sometimes, but sometimes the officer has got a good jacketing for it. We must speak fair sometimes. The officer gets a good jacketing whether he has come out right or wrong; you very often take a man's word against the officer's.

95416. There are a number of men whom you have reported who have been stopped admission to any of the guardians' institutions?—That is so.

95417. Have you any idea how many there are?—About twenty, I should say.

95418. That was quite illegal on the part of the guardians, was it not?—Yes, quite illegal.

95419. And they took that step on your advice?—That is so.

95420. Do your remarks about the worthlessness of Conduct these men, taking the workhouse men, apply to the majority of the men?—If you recollect my statement, I said not the majority.

95421. I want to make that clear?—I said at the first not the majority. I said an exceptional case, I did not say the majority.

95422. These strong able-bodied well built vigorous men are only a tiny fraction of the men you deal with, are they not?—Those are the class of men we find the worst to deal with; they intimidate the other men.

95423. I want to know how many there are?—I have said one in this class.

95424. You have given us one that is at present at Forest Gate. I understand you had a thousand men through, individual men?—That is so.

95425. The minority of those would be from the workhouse, would they not? You are taking all, that covers the unemployed that you had through?—The majority of them are from the workhouse.

95426. You think they are?—(Mr. Barnes.) Yes, that is so.

95427. Would the majority of these men be well set up physically strong men?—(Mr. Clarke.) No, no. Properly physically able-bodied.

95428. What I want to get at is, what percentage of them are really able-bodied?—It would not be above really 20 per cent.

95429. Of the men who come from the workhouse?—Yes, of the men who come from the workhouse, it would not be 20 per cent.

95430. They would not be able-bodied in the ordinary sense?—That is so.

95431. Out of that 20 per cent. how many would be the worthless character of man you instance as now being at Forest Gate?—Of the 20 per cent., I cite this one individual as being in that condition, that was absolutely worthless, lazy, strong and able-bodied.

95432. And the man who would tyrannise over other people?—Yes.

95433. How many of these, during the four years you have been running Laidon, have you ever run up against, or have run up against you?—Of those I have run up against of the same class as that man, I have run up against three.

95434. (Mrs. Webb.) Three out of the 1,000?—Yes.

95435. (Mr. Lansbury.) One of those men is now chargeable; are the other two chargeable?—No, only one is chargeable.

95436. W. is one of the men you have in your mind?—He is one.

95437. The guardians took very drastic measures with him, whenever you definitely reported?—I locked him up. Treatment of lazy able-bodied.

95438. No one interfered with your discretion?—No.

95439. The guardians have never interfered with your discretion in taking a man to prison for not doing his work or misbehaving himself?—No.

95440. You have had a free hand with regard to that?—Yes.

95441. So far as the law permitted, all the law that was on your side you have been able to invoke in aid of discipline?—Yes.

95442. Whatever disagreement there may have been with you and the guardians on certain matters, have you ever been censured for taking a man up?—No, so far as the law is concerned a man can walk on that red line on the foolscap paper as long as he likes, but he is not going to step on one side, you can only lock him up under certain conditions.

Remuneration.

After care of inmates.

No inducement to work in workhouse system.

Short engagements lead to casual work.

Effect of leave of absence.

95443. So far as the present law allows, you were at liberty to set that law into operation without consulting anyone?—That is so.

95444. When you did do it, you have not been censured by the guardians for doing so?—No; I do not think I have stated that I have.

95445. You have had a good deal of experience; you do not think it is reasonable to expect that men will work and do their best when there is nothing at the end of their best?—I do not, but then that cannot interfere with my duty.

95446. I am not querying your duty at all. You are up here to give evidence; we all take it for granted you have done your duty, that you have got to do your duty is a thing that nobody questions, but what we want to know is your opinion of the best method for dealing with this class of men?—As I said, by classification.

95447. What I want to get at is, do you think it is reasonable to expect that you can get the best out of any man, or any woman either for that matter, if at the end of their best there is not a reward of some kind?—Certainly not, I think I have impressed that before, time upon time.

95448. I want you to impress it here. About that point of view, the first year you were getting the men ready for emigration, and there was a hope that a certain number were to be emigrated; did you find that when there was even that hope held out to them it made the men do better than they otherwise would have done?—Certainly it did.

95449. Do you remember too that at that time we gave 6d. a week from a voluntary fund?—I do.

95450. Do you consider that that was good or bad?—I consider it was very good.

95451. The fact that you had that 6d. which you could withhold, it was at your discretion whether they received it or not, although it was such a small sum, did have a good effect upon the men?—It did, I got a lot more rods dug than I should otherwise have got.

95452. That is only what happens to all of us in life, is it not?

95453. Do you think it is wise to expect more virtue from people who are right down than you expect from the ordinary workman when he goes to work? It seems that the poorer the person, the more virtue we want to get out of them. I suggest it is the other way on, and that it ought not to be so. Is it reasonable to expect that these people whom you have been dealing with, who are admittedly right at the bottom of the social ladder, should have the virtue of doing something for nothing, when you do not expect it from an ordinary worker?—I do not look at it like that with the unemployed, because I consider the unemployed are paid.

95454. I am thinking of the ordinary pauper.—To begin with, in some cases, I do not think the ordinary pauper ought to be in the workhouse.

95455. But he is there?—That is so; when he is there I think he should endeavour, as far as he can, not to forget that he is a man, and try to do as well as he can under the circumstances.

95456. You do say that there is no inducement for him to do his best?—I certainly say that, I have repeated it here.

95457. Therefore we must devise some scheme which will offer an inducement to him to do his best?—That is so; that is why I say classification.

95458. Classification by wages you think, or putting money on one side for him?—Putting aside money for the man, so that he can look after himself; I say, as soon as he gets work, he should not be allowed to come back again.

95459. Now, about the men you have got there now. They have been sent there and their wives and children are being relieved under the Modified Workhouse Test Order?—That is so.

95460. You have only had them ten days?—That is so.

95461. How many letters have you opened which have had money in?—I have opened two. I do not know how many Mr. Barnes has opened. (*Mr. Barnes.*) There have been five opened altogether.

95462. How many men have you there now?—(*Mr. Clarke.*) Eighty-nine.

95463. Have you seen the other letters that the men have had?—No, I should not have seen those except that they were addressed to me.

95464. Have you any evidence actually of how many have had money sent?—(*Mr. Barnes.*) That is the only five I can vouch for. I might say the reason these letters were opened was that by accident two men of the same name had their letters addressed as "Mr." only. I opened the letters before the men, because there was no Christian names put on. That was how we found out; the letters would not have been opened otherwise, although we have the power to do so. They were different men of the same name, and only "Mr." was put on, there was no Christian name, therefore we were compelled to open them to get the proper owners for them. In every instance, that was five instances, there was stamps or postal orders.

95465. To the value of 1s.?—There were three 1s. and two 6d.

95466. The men are getting no tobacco now, are they?—Nothing whatever.

95467. You cannot say how many men have had money?—No.

95468. I suppose everyone has had a letter?—Practically everyone.

95469. Do you know whether there is a rule that men receiving money from their wives are to be dismissed?—(*Mr. Clarke.*) No. (*Mr. Barnes.*) I might say in connection with this that the moment the letters were opened and the men knew the officials knew there was money in the letters they certainly said it did not come from their wives, it came from some friends other than their wives.

95470. Still, I daresay we can get evidence about that otherwise. You are going to put in the number of men that have been emigrated, are you not?—(*Mr. Clarke.*) Yes, we can soon get the figures for that. (*See answer to Q. 95373.*)

95471. With regard to other work there you have been rather handicapped, have you not, the last twelve months owing to the fact that it was doubtful whether the colony was going on?—Yes, we have been under that difficulty for two years. At the present time what with the weather we do not know which way to turn with them.

95472. (*Mrs. Webb.*) How do the men spend their Sunday Sundays?—Some of them go for a walk, and some simply sit in the building. The unemployed generally all go out. The pauper is a different class; he does not seem to have the energy to go out, he simply sits there and plays at dominoes and reads. Most of the unemployed go for a good walk.

95473. Do any of them go to any kind of religious service?—We have a chaplain who comes.

95474. How many attend?—Sometimes six, sometimes five or four. We have got it up to a dozen. When we give them a little tobacco (as now and again the chaplain and myself do) we get the place full. The other institutions round about, the mission halls and all those, give them tobacco; and as soon as they give them tobacco they all go there.

95475. Do not you think it would be possible to exercise a little discipline over the leisure of the men on Sundays, not necessarily to expect them to go to a religious service, but could not you give them an alternative to a religious service by some kind of Sunday school?—That is what I maintain would be best; instead of the service there should be a kind of Sunday school. That is why I say a mental and moral instructor is as much essential as a taskmaster, because these men have got to be taught. They are only like children. You have got to teach them. I say again a mental and moral instructor is essential as much as the taskmaster.

95476. You might get in your element both of improvement and of deterrence?—Yes, making the men better; it would take time, but I believe it would do good.

Mr. John Clarke, and Mr. F. Barnes.

3 Mar. 1908.

Money sent to unemployed by wives.

Emigration.

Religious services.

Mr. John
Clarke
and
Mr. F.
Barnes.

5477. Sunday is a great difficulty, because you have that long day of complete leisure?—We have got the long day. We have got the chaplain coming on Sunday afternoon, though he has not been lately. They do not attempt to come to church.

3 Mar. 1908.

95478. You cannot compel a man to attend church because of religious prejudice?—That is so.

95479. But you could compel him to go to a Sunday school or some secular education?—Yes, but as soon as you brought compulsion into force the man objects because it is against his creed.

95480. It would be a possible way out of the religious difficulty to have a secular school which was an alternative to the religious service?—Yes; lectures, or something of that kind, something interesting. I am sure our chaplain has endeavoured to do everything that human man can do. I must say that he has improved the place, and he comes a wonderful lot. With the unemployed I dare say he would have a better time.

Behaviour of
unemployed
and paupers.

95481. I was told at Hadleigh that the unemployed were far worse behaved than the workhouse man?—The unemployed has got a different spirit, it is the spirit of a man. The workhouse man does not seem to have any spirit, the spirit is down in his boots, except he is a very bad man. The unemployed man is not used to these places, and it is the way he has; but, personally, I prefer the unemployed to the pauper.

95482. Their language is worse, is it not?—If you allow it, but you must use your moral influence over them. The language is very bad, I admit, but we endeavour as far as we can to stop it. We use our moral influence, we never use bad language ourselves. If they know that you are of a moral character they will not let you hear them.

95483. Do you hear of any kind of desire on the part of the workhouse men not to associate with the unemployed, and a desire on the part of the unemployed not to associate with the workhouse men?—We find that the workhouse men do not care to associate with the unemployed.

95484. That is exactly what I was told at Hadleigh?—That is what we find.

95485. The unemployed are rather a rougher lot?—I can hardly say that; he has a different spirit; he has more spirit than the pauper. (Mr. Barnes.) The unemployed man thinks himself much better than the pauper, and the pauper seems to feel some inferiority with the unemployed that he will not associate with them.

95486. I was told that the workhouse man thought he was better behaved than the unemployed and had a superior sanctity?—(Mr. Clarke.) The workhouse men are more used to discipline than the unemployed.

95487. (Chairman.) I understand you to say that the unemployed consider themselves superior to the workhouse men?—(Mr. Barnes.) That is so.

95488. And that caused a little feeling?—Yes.

95489. Is that generally the case?—It has been in my experience.

Class of men
at Laindon.

95490. Socially the condition and the class of work in which they have been engaged, if they have been at work, is very much the same?—The unemployed we have had at Laindon have been employed really more than the workhouse men; they have not been in the workhouse and have been more generally employed. The great majority of the unemployed we have had have never been in the workhouse.

Unemploy-
able.

95491. I suppose they are almost exclusively unskilled labourers?—(Mr. Clarke) Yes, practically that is so. There are a few in the lot that I have at the present time (though I congratulate myself on the lot that I have as a whole) that I consider unemployable.

95492. Are they as a rule the skilled or unskilled men who have fallen down to be unemployable?—There are three of them that I have picked out of these; I do not know that they have ever done anything practically, so far as I can gather from their career.

95493. (Mr. Bentham.) What is the proportion of men you have of the two classes, those you call unemployed and those who are regular workhouse cases?—We have only unemployed at the present time. We have not any paupers at all except six.

95494. How many unemployed?—Eighty odd unemployed. Number colony.

95495. Since what date was that?—About a week to-day the unemployed came.

95496. Were the regular paupers sent back to the workhouse in order to make room for these?—They were sent to the branch workhouse at Forest Gate.

95497. Is there employment for them there too on the land?—Ordinary workhouse employment.

95498. (Mr. Lansbury.) And some work on the land?—Yes, there is about two or three acres of land.

95499. (Mr. Bentham.) Do you say that none of these eighty unemployed who are now at Laindon have had relief before from the guardians?—They have had out-relief before.

95500. They are really outdoor relief cases, are they not?—That is so. Out-relief cases under Modified Workhouse Test Order.

95501. That is relief under the Modified Workhouse Test Order?—That is so.

95502. Have any of them to your knowledge worked under the Central Body?—I believe some have been to Hollesley Bay (I do not know whether that is under the Central Body or not) and other different institutions.

95503. Those who have been at Hollesley Bay would be better experienced men on the land, would they not, so it would be very easy to tell?—I have not tested them on the land yet; I cannot get on to it, it is too wet.

95504. What do you find them to do in weather like this?—I have got them bag-making at the present time in bad and twenty or thirty men are wheeling some loose mould weather out of a place where I am going to put another reservoir. Occupied in bad weather.

95505. How are they employed at bag-making; are they put to a task of work, so many bags a day?—No task.

95506. How do they compare on their output with ordinary bag-makers?—I could not say; I have had no experience in bag-making.

95507. What do you do with the bags?—We supply the Forest Gate School and ourselves for potatoes. We produce grow something like 100 tons of potatoes, and it takes a lot of bags for those. Disposed of.

95508. You will soon overtake that demand, will you not?—Yes, it is only done when it is wet.

95509. What do you do with the mats which are made; are any sold?—We have only supplied the institution with them up to the present.

95510. You have not made more than you required?—We could make a lot more than the institution requires if we had a market for them, but then you would come into competition with outdoor labour.

95511. Then you really limit your output to the demand that there is in your institution for it?—We only put the cripples to mat-making that cannot do anything else.

95512. Have you any other kind of indoor employment?—We have this winter been breaking stones; not task, but simply breaking them to put on the roads.

95513. With regard to the money payment, you rather advocate that something ought to be given to these men by way of encouragement. I suppose that does not apply to the men you have now?—That is so; their families are getting paid.

95514. Do you think it would be any hardship to those men to say that no money should be allowed them whatever; that all letters should be opened that have money in them?—I think if a man smokes he should have a little bit of tobacco, and his wife may supply it; it is the drink I object to. Money not to unemployed wives.

95515. You could supply that on the premises, could you not?—Yes.

95516. Do you think it advisable to let them out with money in their pockets?—Not when they are in institutions; I do when they are at home.

95517. You would say it would be better that leave of absence should have been prohibited altogether?—No, I think it is a very good thing; I have had no trouble with that. Last Saturday or Sunday night you would not have found a man out at nine o'clock. Why I object to leave of absence is if they have money to go to the public-house. For a man to go out and walk I think is healthy and does him good; he is more a man for it. Leave absent.

95518. Is not the colony sufficiently large for them to have a good stretch of a walk?—There is only one field and they cannot walk all over the cultivated land.

Effect on discipline of remittance of money to inmates. 95519. If these men are in the habit of getting drunk, and they have money sent to them, if you give leave of absence there are no means of preventing their getting drunk, are there?—There is nothing to prevent them; you could prevent them by opening the letters and taking the money away.

95520. Would you say it would be better for the discipline of the place if money were not allowed to be sent to them at all?—Certainly.

95521. Or that it was taken from them till they took their discharge, and then given to them?—Certainly, that is so.

Discharges from colony. 95522. When the men were returned for insubordination, that is ordinary workhouse inmates, were they discharged from the workhouse?—I have never returned one for insubordination, I have only turned them out on the road; I have broken the law, I admit. I have simply taken their clothes and put them on the road.

95523. You have their ordinary clothes at Laindon, then?—Yes.

95524. So that you can put them in their ordinary clothes, and give them their discharge?—Yes.

95525. (*Mr. Phelps.*) Did any of them apply to the relieving officer of the union they were in?—Yes. After I turned them out they did not get an order, because I sent to the relieving officer that I had turned them out, and the guardians gave orders that the relieving officer should not give them an order.

95526. (*Mr. Lansbury.*) Mr. Phelps means to the officer of the Billericay Union?—No one has applied there.

95527. (*Sir Samuel Provis.*) What do they do then?—They have simply joined the casual class of tramps; some have been out for the last three years. I saw one the other week amongst the casuals. I got seven of them work; they went to Evesham in Worcestershire. We turned those seven out when they came back.

95528. (*Mr. Bentham.*) Do any of the men get back to the workhouse and return again to you?—Yes, scores; but then there was a deliberate order made that they were not to have an Order. Those are the men that went with the intention of getting into the workhouse, in fact they all took their discharge to go to the workhouse.

Suitability of present site. 95529. Do you consider the land there a suitable place for a colony?—No, I do not.

95530. You would get much better results from better land?—The land is good for the results; you would not get better crops anywhere in England, but it is in the winter-time the trouble is. Even when you drain, there is a certain amount of moisture in the clay, and that moisture has to evaporate out of it. It is not like where there is a ballast bottom, so that it can percolate through.

95531. In all places in winter-time there would be less work under certain conditions of weather than in the summer-time?—Yes.

Winter work. 95532. Have you any suggestion to offer for employing them better than you do at Laindon?—Yes, I say if you get where there is either chalk or gravel or sand or rock, you can utilise them in the winter-time for getting that out.

95533. In the winter-time?—Yes, that is the time they work on that. Take where you have some rock, stone or quarry, or gravel or sand, you could always be sifting that and getting it ready for the spring to put upon the roads, and in the following autumn.

Teaching of handicrafts. 95534. Is there any hope in teaching these men a handicraft?—No, I am sorry to say we have tried that. You cannot make a man learn if he will not. You cannot teach him if he will not learn. They do it for the sake of doing it, but they will not take any interest in it. We were handicapped by the youths of from seventeen or eighteen to twenty-one. Those are the youths we are trying to lift out of the mire altogether, and we find we cannot do any thing. We put them to milking the cows, and we put them to mat-making, but they will not learn.

Youths.

95535. What could you do with a man like that?—I do not know what to do; put him in the Army. *Mr. John Clarke and Mr. F. Barnes.*

95536. (*Chairman.*) Are those boys you are speaking of?—He is not a boy, nor a man; they are eighteen, nineteen and twenty. Those are the most difficult class we have to deal with, you cannot deal with them like a man or like a boy. *3 Mar. 1908.*

95537. (*Mr. Gardiner.*) How many of those have you had?—A good percentage of late.

95538. (*Chairman.*) They came from the workhouse?—Those we had.

95539. (*Mr. Lansbury.*) Out of the thousand men do you say you had 20 per cent. between seventeen and twenty?—I did not say what percentage.

95540. What would they be?—(*Mr. Barnes.*) I should think about 10 per cent. (*Mr. Clarke.*) We sent some of them out to Canada, and it is within my knowledge that they have come back again. I thought that was a good start in life for them, but they have got back somehow or other. I have seen them back again.

95541. (*Mr. Bentham.*) If they cannot be trained under the discipline which you give them, in what sort of institution could they possibly be compelled to learn?—The best thing I can say for those is to send them either to the Midlands, or the North, or to Wales, to a farm, and hire them for twelve months, get them away from their associates. That is the best way I can see out of the problem. *Agricultural labour.*

95542. Would a training colony do them any good?—I do not think there is any farm colony in the world would do them any good, except you had them isolated and were to pay a farmer to teach them.

95543. Has that been tried at all?—We sent one or two from Forest Gate, and it has proved a great success. We sent one lad three or four years ago to Wales, he was hired for twelve months, and he proved a smart man. I have seen several letters from him since, and he is doing well. If they do that, they are away from all their associates, and there are hopes for them.

95544. Was he one you considered incapable of training at the colony?—No, he was a very smart lad, I have seen boys not so intelligent as these boys I am speaking of, hired out, and made fairly smart agricultural labourers. As I say, it takes a good man to make an agricultural labourer. People seem to think that an agricultural labourer is not much of a man, but I consider he is an artist if he is a good one.

95545. In answer to Question V you say the mental and moral effect of the men appears to remain normal, the colony. physical effect is wonderfully improved. Has that not been some concern to you, that morally they have not improved on the colony?—It has, more than anyone knows.

95546. Have you taken any steps besides what has been done by the chaplain?—I have tried everything I influence, possibly could, as far as I could myself.

95547. In the way of moral influence?—Yes. We are speaking there of the majority. There are some that are very decent men, very good men indeed.

95548. Do you think a chaplain could do any good with that class of person, or what would you suggest in the way of improvement?—What I suggest is an instructor teaching a kind of Sunday school. I believe a man learns more at a Sunday school than he learns at all the services.

95549. Would a resident chaplain, who would undertake this teaching in addition, be any good?—I do not think he should be resident. When he gets resident there is too much of the officialism about him.

95550. You think really that this moral influence can be done voluntarily as it were by non-officials, better than it can be done by officials?—That is so, by talks to them individually.

95551. Would not a colony that was managed entirely by a voluntary association, which has the whole atmosphere of moral influence round it, produce better results than you can by a colony of this sort?—Certainly; the man is not contaminated with the strain of any discipline at all; you could do more under those conditions because you are free.

- Mr. John Clarke and Mr. F. Barnes. 95552. (*Mrs. Webb.*) Do you know Hadleigh? Have you been to Hadleigh?—Yes, I have been there several times.
95553. May we ask your opinion of Hadleigh?—I have not a large enough experience of Hadleigh to say. At Hadleigh they have far better advantages than we have. If a man cannot do anything there they take them on to the four lanes and say: "You can go which way you like." We cannot do that, so they really get the best of the men, and get the best out of them. There is classification about the diet there, too, there is Class A and Class B; and the man has to earn that diet before he gets it. I think that is a very good system; a man ought to earn his food before he eats it.
95554. (*Mr. Bentham.*) You mean when you say you cannot do that, you are not authorised?—We cannot do it under the Poor Law.
95555. Why not?—Because you must go by the Orders and by the law. It is not an Act of Parliament. To commence with, you have only the one class of diet for able-bodied men.
95556. (*Mr. Phelps.*) When persons are admitted to Laindon to your farm, do you have any records sent with them?—No.
95557. You merely have their names?—Yes.
95558. What do you do, when a man is first admitted, with the new arrival?—We simply take him, change him, bath him, and put him to work.
95559. Do you put him through any examination as to his antecedents?—No, that is not my business.
95560. You do not really know what their past has been?—No, that is not my business. I have to deal with him while he is there; and he is sent to me to deal with.
95561. Do you know if any of the people who come to you have been countrymen originally?—I have only found one. They may have been in the country when they were very young, but I do not get any country men.
95562. You do not find it out by the way they handle their tools?—No, I have found two altogether; that is all I have found.
95563. Do you think, as a general question, that for the townspeople putting them down in the country is a good thing?—Well, he has got to learn something before he can be put down in the country.
95564. I will put it in another way. Do you think that the situation of a colony like yours in the country is the best that could be devised? Do you think it better to put them in the country in a colony than it would be to treat them in the towns?—If their intention is going into the country I think the best thing is to put them into the country to train them.
95565. Do you not think the monotony of country life after the town sends a good many of these people to the public-houses?—I have had no experience of that; I do not say they do spend money in the public-house, because they have got it to spend.
95566. You complain a good deal of the misuse of their walks abroad. Do you think if you could have more continuous occupation for them it would be better for them?—Yes.
95567. Do you think the fact that they are associated in their work is bad for them?—Yes, I think they ought to be separated out.
95568. You think to make the labour effective it should be continuous, and not associated?—That is so.
95569. Are there any improvements in your own colony which you could see that would bring that about?—Yes; having about eight or twelve men to one ganger.
95570. How many have you at present?—Really, only two gangers for the eighty men.
95571. You think the number assigned to each ganger is too large for him to have any real control, in the best sense, over them?—Yes.
95572. Are your gangers familiar with country life and farming?—They are local labourers.
95573. Do you find they do their work to your satisfaction?—Yes.
95574. Do you find they have a good influence on the men?—One has more influence than the other. One man specially has a wonderful lot of influence and the men work wonderfully well with him; he never talks, he only works.
95575. If you got the right type of men over them, you think these men would work better?—They do, but you must pay for the right type and give the men a better wage, so as to get a better type altogether.
95576. Do you think you could get a sufficient supply of that type of men?—Yes, at just a few shillings over the agricultural labourer.
95577. What sort of wages were you thinking of?—Wages of £1 a week. Those men have something to put up with gangers, when working with these men, and we only give them 17s. a week.
95578. (*Chairman.*) Nothing else?—No.
95579. (*Mr. Phelps.*) Do they live on the premises?—No, they are local labourers and live in the country.
95580. They have their cottages at a distance?—Yes.
95581. Do any of the people take to agriculture who come to you to Laindon in that way?—I know of one, that is one of the gangers. He was a ganger first, and then I put him on as the night watchman; he was one of the unemployed.
95582. That is one of the gangers?—One that I took from the unemployed; he has been with me for two years.
95583. He took to the country life. Do you know whether he had any experience of country life before?—None whatever.
95584. That being so, do you, in your evenings, have any system of education?—No.
95585. Do you think it would be a good thing if you had a mental instructor?—I do.
95586. What kind of work would you give to him if you had one?—He would have to feel his way and find out the kind of work for himself. First of all he would have to talk to the men; that is a kind of work you are born in more than anything else. He would have to be a man of wonderful patience, temper, and a kindly disposition, and a man who could talk.
95587. He would talk about the opportunities of industries in England?—Yes, and about the men's moral conduct and behaviour, and talk to them individually like a Sunday School class.
95588. I was thinking rather of mental instruction. Do you think they could be taught reading, writing, and arithmetic, which a good many of them have probably forgotten?—There are not many who cannot read and write.
95589. Could you build on that, do you think, and have lectures on the British Empire and the opportunities for emigration and that sort of thing?—That would not do any good at all; they must talk to them simply about the man himself and the work and the social conditions and everything.
95590. You do not think that mental instruction really would be very much use?—No, moral I think instruction mostly.
95591. You can quite see that out of agriculture and a variety of things, you might talk to people about the crops and that sort of thing?—Yes; when a man has made up his mind and determined to go into the country, then you can instruct him mentally as far as that is concerned. We get very few of those that seem inclined to go into the country.
95592. Have you proposed to any of the people to go back to a different part of England and settle down as agricultural labourers?—I have proposed to them to go to Canada, not to England, because I have nowhere to send them to.
95593. Do they think enough of a country life to think of settling in the country?—They all seem to have an ambition to get to Canada for farming.
95594. When they get there a good many return, did you say?—I was referring to two young boys, of about eighteen or nineteen; they returned. I have letters from several of the men in Canada, I should say twenty, who are doing very well out there, working on the railways and one thing and another. I keep in correspondence with them.

Mr. John
Clarke
and
Mr. F.
Barnes.

3 Mar. 1908

95595. Are they working on farms?—Yes.

95596. When they have gone abroad in that way, do you keep up a correspondence with them?—Yes, I have corresponded with several.

95597. A good proportion of them?—Yes, and not only that; I should like to state that several of them have sent money back to their old friends who they have left behind on the colony. I turned a man away the other day who had had 5s. sent to him from Canada. I discharged him as soon as I knew.

95598. Do not you think it would be useful if you had a record of these men before they came to you, so as to make it continuous during their stay at the colony and afterwards?—I would not like to have a record of them. I do not think it would do good. I have that record in my own mind; one I have specially in mind; it would not be any good, it would set the people against the men as soon as they saw it. You must treat them as they are: if you are going to pick a man up you must not have a record.

95599. (Mr. Gardiner.) Would you not like to have a regular school after work is over, as a kind of discipline?—Yes.

95600. Your idea is that not a single moment of the man's day should be unoccupied?—That is so.

95601. From the time he gets up to the time he goes to bed?—That is so.

95602. There should be a sufficient variation of occupation?—Yes, not tie them down to one thing.

95603. The guardians have no opportunity of putting that into force?—No. I might say that Mr. Lansbury has, on several occasions, mentioned about this instruction.

95604. They have been deterred on the ground of expense?—They would have to be paid for.

95605. It is because of the expense that that system has never been put into force?—That is so.

95606. The same thing applies to the fact that you have such a small number of gangers?—That is so. We have cut down the expenses as low as we possibly can, because the object has been to make a profit as much as anything else.

95607. Why in order to make a profit?—You have to cut your expenses down.

95608. You do not think this idea has been worked as well as it might be worked?—That is so.

95609. Your experience has shown that this method of treating them is not extremely expensive?—Our buildings are rather a deterrent to any man; you want different buildings altogether. It is like an ordinary shed, the day-room is at one end, there is nothing elevating to the men, nothing whatever. We want education in the matter, we want a building that will enlighten the men; I do not mean an elaborate building, but something comfortable.

95610. And constant application?—Yes.

95611. You have no regular reports from Canada?—Only letters.

95612. You told us you had heard from twenty; you sent out 100 I think you said?—Yes.

95613. You only got letters from about twenty?—I think twenty casual labourers, not more, I am sure.

95614. What experience had you before you undertook this work at Laindon?—(Mr. Barnes.) Workhouse experience under the same board, the Poplar Board.

95615. Were you assistant labour master?—Labour master at Poplar previous to going to the colony.

95616. Have you at any time inquired into the systems which are adopted say at Lingfield or in other places of treating the same class of people?—Yes, I have been to Lingfield, and I have been to Hadleigh, but the circumstances under which these other colonies are established is entirely different to ours. They have opportunities of doing things which we have not. One thing was mentioned by Mr. Clarke just now about some classification in dieting these men in order to classify them. That would not be permissible under the Poor Law, but it would be permissible to the authorities at Lingfield or Hadleigh.

95617. Have you visited any prisons where the Borstal system is in operation?—I have not.

95618. You have never come across any of the officers of those prisons?—No.

95619. You have never thought of going there in order to pick up fresh ideas?—I have thought of doing so, but I may say this, that the Colony at Laindon has not been started very long, and we were not sure that it was going to continue; it is only recently that it has been decided. If this were going to be extended to any extent, I had certainly thought to gain experience by visiting other places to see what was done.

95620. After work the men practically do nothing Leisure time but sit about and play dominoes?—Sit about or go off occupation for a walk.

95621. They knock off about five?—Half past four.

95622. They have tea at five?—Yes.

95623. And that is over at half past five?—Yes.

95624. They go to bed at nine?—They go to bed when they like, but they must be in bed by nine. Some of them go to bed immediately after tea.

95625. There is no rule against that?—No, when a man has done his work he is quite at liberty.

95626. Are they dormitories or cubicles?—They have dormitories divided off into eight or ten beds.

95627. Have you any system of petty officership in the dormitories?—Yes. Discipline in dormitories.

95628. Do you overlook them?—Yes, we go through them.

95629. Does your bedroom, or any other official's bedroom overlook them?—No. Some of the officials live close to the building, but in the case of myself I do not live on the place at all. We have a night watchman and some of the day officers can always pay a visit if they choose.

95630. There is no regular system?—(Mr. Clarke.) Yes, there is a regular system of going through the dormitory every night.

95631. At certain intervals?—At nine o'clock at night.

95632. And they get up at six in the morning?—Yes.

95633. (Mrs. Bosanquet.) Why do you not prohibit the men drinking altogether?—That is a difficult task.

95634. Would the guardians back you up, if you did?—A man does not drink on the premises, if he did, I should deal with that myself independent of the guardians. It does not follow because a man drinks that he gets drunk, but you cannot prevent a man going inside a public-house if he has money. If he goes and gets a glass or two of beer he would not necessarily get drunk. Drinking when on leave of absence.

95635. You can make it an offence?—Not if you allow them to go out.

95636. Would not the guardians back you up if you did?—The guardians cannot make it an offence. They have no control over him when he is off their premises.

95637. At Hadleigh it is an offence?—Yes, but they sign an agreement there, and as soon as they drink they send them away; but we cannot, because we are under the Poor Law.

95638. Cannot you impose any penalty?—Not if he is outside. If he did it on the premises we could. When a man is outside we have no control over him there. You give a man leave on the Wednesday say, and they go out with the old people and they bring it in, but you have no control over them when they are outside.

95639. The only way really would be to stop their leave?—Stop the money.

95640. Could you not stop their leave?—The only way would be to stop the money. We have not had a drunken man for a long time; it is only when the unemployed come that they have the money.

95641. Do you make any attempt to separate the young lads from the older men?—We cannot; they all sleep in one dormitory. That is one thing I have pointed out to the guardians; if we had different day-rooms we could have a classification and separate them out. Separation of lads from men.

95642. Do they work in the same gangs?—Yes.

95643. The influence cannot be good?—No; you really want classification for that.

Mr. John
Clarke
and
Mr. F.
Barnes.

95644. (Mr. Lansbury.) With regard to there being only one dormitory, and on the question of building, it is only within the last three months that it has been decided that the guardians should own Laindon?—That is so.

3 Mar. 1908.

95645. That has been the reason why the guardians have not put up a building?—Yes, I am only saying that with our building it has been impossible.

95646. (Mr. Loch.) Would it have been very costly to have put up sufficient partitions to get a little classification in the different parts of those great barns so as to have divided the young men off?—That is what we are going to endeavour to do.

95647. Would it have been costly to the guardians to have done it before?—No, it would not when they first put the building up, but after they had once got the building there it was. They did not seem inclined to alter it after they had once got it up under the system of three years.

Experience
of witness.

95648. What was your position in Poplar Workhouse; were you in the labour yard?—No, first of all I was assistant labour master in Poplar, then lunatic attendant, then receiving ward attendant, then master. I went through them all—not at Poplar, at Well Street, a branch workhouse of Poplar.

95649. You have been master of a workhouse?—Yes.

Discipline.

95650. On the question of the offences and how to control them better. You referred to the Order that gives punishment for misdemeanour on the part of paupers. There is no such misdemeanour as being idle in itself; they have not to use profane language?—They must refuse to work.

95651. They may idle over their work as much as possible?—Yes, as I say they can walk right along the line. If you give the man a task, if he does not perform it, then he comes under it.

95652. Unless you give the man a task you cannot control his idleness?—You can only control it by your own moral influence, nothing else.

No task
work.

95653. Do you do your work at all now by task?—No.

95654. Did you at the branch workhouse?—We have had no task in Poplar for the last ten years.

95655. It follows that the strongest power you have over a man fails you if you have no task?—It did not fail the first year I was there, when they had some kind of recompense with them. For instance, I used to go and dig with them myself; I tested them personally; those men worked splendidly, I must say.

95656. Supposing there was no recompense, then would what I say hold good, that you did not have your strongest power of control if there was no task?—No. You really want a task for a few of them.

Remunera-
tion.

95657. You cannot act on any remunerative plan in employing these men now, can you?—No.

95658. When you had your remuneration, did you not have to link it to some sort of measurement or task?—I simply used to step it out myself. Of course with that you have to use a certain amount of commonsense. You might have twenty men together, one man would be able to dig two rods, but another man would not be able to dig one. You have to go according to your own judgment and knowledge.

95659. You were measuring while you were judging?—Yes.

95660. What you want is measurement plus a remuneration?—That is so.

Regulations
in Order in-
sufficient for
discipline.

95661. Taking these various offences set down in the Order, which you are no doubt quite familiar with, did you find that practically they met your difficulty in the employment of men at all?—They did not, because the men will simply go to the farthest extent before you can deal with them in law. Personally, I do not like the law, I like to deal with them myself, but you must have something in the way of compulsion.

Drinking.

95662. Take this matter of discipline as to drink to which Mrs. Bosanquet has referred, on our present system, the man being outside the premises is a free man?—That is so.

95663. He comes back two hours later, possibly not quite drunk, but possibly having had more than is good for him; when he comes back he is no longer a free man, being on the premises?—Then the punishment comes in.

95664. The punishment comes in if he shows it; he is not punished for going out and doing what is wrong, he is punished for being in a state of intoxication?—That is so.

95665. Do you not think in any revision of the situa- Discipline
tion, we might do what the Salvation Army do in some while on
other way, and effect the same result, namely, that a man leave of
being maintained by the Poor Law should be under absence.
certain subjection, even though he is outside?—That
really has never come into force because there has never
been a colony like this before; there has never been a
place where the able-bodied class have been allowed to
go out.

95666. You are dealing with the question more from the point of view of the colony, which has no laws?—The question comes in there if they were to misbehave like that, the thing would be to stop their leave. I cannot see under the present law how you would deal with them while they were out, if you give them leave.

95667. I want to get to a new point. You say it is good for them to go out and get their walk?—Yes.

95668. What you want is a change of the law which will control them if possible, in spite of their being outside?—Yes.

95669. When you said something about having control, you talked of a labour colony; that labour colony would be practically a penal colony, would it not, and the discipline would be almost like prison discipline?—For the men I referred to of the worst class.

95670. Do you propose that a colony like that should Home Office
be in the hands of another authority like the prison as autho- over per
rity?—Really, I should say it should be under the colony.
Home Office, and those men should not be allowed to
go out unless they improved in their character and
demeanour, and everything.

95671. The ground of that would be not a specific Magistrate's
offence, would it, but the fact that their general behaviour order.
in the place has been so bad that the master thinks some
better control is necessary, and there must be a magis-
terial decision in that case to that effect?—Yes.

95672. Do you think quite as an outsider that the fact that a man has behaved badly all round, not broken any heads, not used any particularly obscene language, but he has been a bad influence in the place through idleness and so on, that in such a case the magistrate would commit?—No, he would not commit on that. I should not like to take a man merely on those conditions. I never have done so.

95673. I meant rather one of the scabby sheep?—No, they would not commit.

95674. Do you think your proposal of a penal colony means much, because after all it must be a magisterial decision, you may have your colony and not be able to use it; for have we not a Vagrancy Law which is very little enforced?—I do not think they should be dealt with by my scheme, but dealt with in the colony wherever it was; in the case you speak about, you could deal with a man like that by simple isolation, and giving bread and milk, and all that.

95675. You want attached to your colony, within Penal dis-
reach, or in the place itself, penal discipline?—That is so. pline with
colony.

95676. Do you not come back to those old Orders of the board, with the penalty of shutting up or reducing rations?—Yes, you must have the Orders.

95677. Supposing you are dealing with these men at Laindon, what means have you of doing one or the other? You can cut down dietary?—Yes, and give them bread and water.

95678. Now as to the shutting up?—We have nowhere Isolation
where we can shut them up.

95679. All the advantages that come from isolation are out of your reach?—There should be isolation, which is not within our reach, that is one of the difficulties we have to contend with.

Wk in wet
we her and
wiler same
as work-
hose.

95680. Taking the work, of course the soil is a very troublesome one for wet weather and in winter-time?—Yes.

95681. But making the very best of that, you are driven at last to sack-making and mat-making?—Yes.

95682. You also put them on to stone-breaking?—Yes.

95683. Are you not, therefore, being driven back to almost workhouse employment, only in a colony?—That is being driven back to workhouse employment—stone-breaking.

95684. So that except that it is in the open air and in the country, relatively, if your numbers were at all increased, would you not have to make what you call institutional work for them as against farm work?—Yes.

95685. Are we not thus working in a vicious circle, unless we are careful to keep the numbers down to what the farm will employ we get a larger number than we can deal with on farm employment?—That brings us back again to the employment of the workhouse; you have to deal with the men as best you can. When you get an overflow of numbers, and have not got the work for them, that brings them back to the workhouse, and they get into the same state.

lower of
dismissal.

95686. Taking that point you mentioned just now, of dismissal, you said quite rightly, I think, that at Hadleigh they could be dismissed; they can turn a man out?—Yes.

95687. Do you see any great reason against the authorities of an institution of a Poor Law type having power to dismiss?—I do not. I think it would be a very good thing. I have never known a man in my life to starve when he was turned out.

95688. I suppose here again it is rather the fear of what might be said that is the whip over us?—You have not a legal right.

95689. Do you see any objection to there being a legal right to cases being reported to the guardians at once and the supervising body dismissing the men?—I think it would be a very good thing indeed; I think it would be a splendid thing.

95690. If we did that there would be a continual sifting of these men in the farm?—Yes. I find it has more influence over a man to turn him out than to send him to prison.

eterrent
fect of
eping men
t of body
work-
house.

95691. You have yourself been in charge of a workhouse; comparing notes with other people who care about this, it seems pretty clear that there is one thing that deters at the outset, and that is keeping the men out of the body of the house; it is systematically done in some places; that is to say, the man when he first comes in is not allowed to go into the body of the house, and very often he will consider the matter and take his discharge. Have you found that that is so?—That is if he does not get into the body of the house. If he once gets through the gates and into the body of the house he does not take his discharge.

fect of
assification.

95692. Supposing you get many of the unemployed instead of saying in every case: Here is the workhouse—which is practically what has been done in effect, you take half-a-dozen different types and you say: This man shall go to the colony, and this man shall go to another place; do you think that that would tend to prevent the creation of the type that we do not want to exist at all?—I do most earnestly.

Water
upply.

95693. Where does your water come from?—Ours is surface water.

95694. Surface water?—Yes, I made a reservoir, we collect it in the winter-time, and store it for the summer.

95695. Is it lasting?—Yes, it has done at present.

95696. Is it good water?—Yes, it was examined last, I think, about three weeks ago; we just found a trifle of ammonia in it, but very little.

Drainage.

95697. Where does your drainage go? How do you manage the drainage of the premises?—I drain into a cesspool for all ours; and the overflow runs out the other side of the reservoir.

95698. That is all used for the farm?—Yes.

Water
upply.

95699. No complaint has been made about the supply of water?—None whatever. There was a complaint made two years ago, a letter was sent by one of the inmates, but there has been no complaint lately.

95700. (*Mr. Gardiner.*) Is your supply of water adequate for baths, and things of that sort?—Yes.

95701. (*Mr. Lock.*) One question with regard to the workhouses; was any effort made to get the people out of the workhouse by going through the cases constantly and seeing what could be done outside of the workhouse?—That you had charge of?—No, not at that time.

Mr. John
Clarke
and
Mr. F.
Barnes.

3 Mar. 1908.

Classification

95702. May I take it that you think that unless this institutional work either at Laindon or elsewhere is combined with the consideration of the individual, the system will not really aid us in getting rid of pauperism?—(*Mr. Barnes.*) Not unless they classify them.

95703. Unless they are classified, and you are doing the right thing for each individual?—(*Mr. Clarke.*) If they are not classified it will all sink into a workhouse.

95704. It seemed to me, unless you made great alterations there, you could not get possibly the elements of classification. At present, I understand, you are dealing solely with the unemployed, not with the mixed population you had some time ago?—Yes, that is so.

95705. When you get this boy of seventeen or eighteen, is there any question of his coming before the magistrates?—Not if I could possibly help it. I have never taken a boy like that before the magistrates in my life yet. As soon as you do that he is done for altogether.

Youths.

95706. You propose all kinds of teaching in the place?—Yes.

95707. If you are going to have a teaching staff to have any effect you must keep these men in. I am thinking of these comparatively young people who are in your institution, if you have a teaching arrangement for them and they go in and out at all, your teaching will be valueless because they will not get much of it?—That is so. We find they do not go in and out down at the colony. When they will not allow them to go to the workhouse, they stay at the colony. If they could get inside the workhouse, they would take their discharge.

Instruction.

95708. You would like to keep them at the colony so long as you can help them to be better?—That is so.

Detention in
colony
necessary for
good effect.

95709. Does it not come to this, instead of the possibility of going in and out of the colony, which there now is, if you are to do them any service you must keep them some little time in the colony?—That is what you want, compulsion.

95710. Then it means a different method of admission and a different method of discharge?—Yes. (*Mr. Barnes.*) You must have classification in different colonies, not in one colony.

95711. It is always under the condition that you must hold the man some time, so that you can do some good?—(*Mr. Clarke.*) We say the man should go there for twelve months or six months; the condition of it would be different and the law would be different we presume.

95712. (*Mr. Patten-MacDougall.*) What provision is Medical there at the colony for medical supervision?—We send supervision for Dr. Carter from Billericay, 5 miles away.

95713. Does he come regularly, or is he sent for?—We send a man for him right away if we want him.

95714. (*Sir Samuel Provis.*) Does he only come when you send for him?—We always make a rule to send for him every day and twice a day, if we want him. We do not want him to come every day, otherwise, because whenever he comes we always get a certain call to see him. We endeavour to try and kill that kind of thing.

95715. The police complained about you at one time, did they not?—That is so.

Local feeling
against
colony.

95716. Has that ceased?—Yes, there was a lot of feeling attached to that. I think that was proved. (*Mr. Barnes.*) The people living in the neighbourhood rather objected to the existence of the colony.

95717. They rather wanted to get rid of the colony?—That is so. They had an idea that in these quiet country places they did not like these men walking around.

95718. All that is over now?—Yes, we get very little of it now, they are getting used to it.

95719. There were complaints which you referred to, about their going to public-houses, is that still a trouble?—(*Mr. Clarke.*) That is what we have been talking of now. That has not been so up to the present, but we have the

Mr. John
Clarke
and
Mr. F.
Barnes.

unemployed down there now, and we have to test these new men. They have been down a week and I have to test them. I say if they get money no doubt we shall have the difficulty then.

3 Mar. 1908.

95720. You thought it desirable they should have a little money, did you not, by way of reward for good work?—Yes, and good conduct.

Drinking.

95721. Why is that not open to the same objection that they might want to spend it in drink?—It is so small an amount.

95722. At one time you gave them 6d. a week from a voluntary fund?—I did.

95723. Did you find that went in drink?—They had more money than that, too; it was the unemployed principally.

95724. The 6d. was not enough?—No, it only found them in tobacco. A man would not do much with 6d., if he had to find himself in tobacco. They smoke a good deal of tobacco in the open air.

95725. It was not enough?—No.

Discipline.

95726. Gradually have you been able to stiffen up your discipline?—I have never had any difficulty with the discipline except at that time with the drink of the unemployed.

Administra-
on.

95727. I rather meant there by discipline, the arrangements generally. Have you been able to be more strict in your administration?—Yes, we have had more officers since then. At that time there was only myself and one officer besides.

95728. Have the gangers had trouble in the field in looking after the men?—No, except in a few cases that we have turned away.

Dietary.

95729. In the matter of dietary you are much more stringent than you were?—Yes.

95730. It was suggested that when the men first came to you they required a somewhat generous diet in order to put them into a somewhat fair condition. How do you get over that difficulty now?—Some of them have not such large corporations as they had. We have noticed the difference in the corporations in different classes of men. We had some exceptionally large men here. This started on the 6th October, and, of course, they all refused to work on that morning, and I had to deal with them.

Mr. J. BUTEUX SKEGGS, called; and Examined.

Mr. J.
Buteux
Skeggs.

95745. (Chairman.) You are Deputy Town Clerk and Clerk to the Valuation and Rating Department of the Borough of Poplar?—I am.

3 Mar. 1908.

Experience.

95746. You have been kind enough to answer some questions which were sent to you by this Commission, and also to prepare a Statement, if you will kindly hand those in we will treat them as your evidence-in-chief?—Certainly. (Witness handed in the following Document)

Effect of
abolition of
compounding

1. The question of the extra charge upon local rates consequent upon the allowance to owners under the Poor Rate Assessment and Collection Act, 1869, cannot be dealt with fairly without at the same time considering the other causes of increased local rates, such as empty properties, bankruptcies, absconding of the direct payers, and the various other items included in the term "irrecoverable."

2. It is obvious that if the compounding be abolished this item must increase, as the whole of the loss through these causes in the case of compounded properties would be transferred to the column "Irrecoverable."

3. Attached is a Table showing the losses on the collection of rates in the Metropolitan boroughs. (Appendix No. XIII. (A)).

4. It will be seen at once that in boroughs where there is little compounding the percentage of irrecoverable is much higher.

5. In the borough of Lewisham, where there is no compounding at all, the percentage of irrecoverable is 9.33 as against 2.93 in Poplar.

6. I am strongly of opinion that all precept authorities should bear their proportion of the loss of rate.

95731. All that difficulty is over?—Yes. (Mr. Barnes.) We have got to prove yet the unemployed that we have down now. It is a fact that when the diet was reduced we had all pauper labourers down there, and they did not work at the same pressure as the men had worked previously under better dieting. As to whether the unemployed that we have now will be able to work on the diet we have now, as to whether it is sufficiently good for them, has to be proved.

95732. At the time of the reduction had you only paupers?—Only workhouse men.

95733. When you take in what you call the unemployed, do they come to you straight or from the workhouse?—(Mr. Clarke.) They come straight to us.

95734. On an order from the relieving officer?—Yes.

95735. So that they never go into the Poplar Workhouse itself?—There are some of them who have been in the Poplar Workhouse. There are some that I know have been there.

95736. They did not come direct?—No.

95737. They may have been in previously, you mean?—Yes.

95738. (Mr. Gardiner.) You used the work "unemployable" to describe some of the people you took. Will you tell me what you mean by that exactly?—I mean a man that if you find him work he would not work.

95739. Is that due to moral or mental failure?—Both.

95740. Do you think he is not quite all there?—You would not call him unemployable if he was mentally unfit; he must be morally and mentally unfit before you can call him that.

95741. How many of these men you have had down are unemployable?—A few; they are only physically fit for work.

95742. Their being unemployable is the result of moral failure?—Of their own character.

95743. And not mental?—(Mr. Barnes.) Physically, morally and mentally, too.

95744. Some of them are not quite sane, are they?—No, they are not.

7. The rate required for the central authorities (London County Council for county and education purposes, Metropolitan Asylums Board, Metropolitan Police, and the Central Unemployed Body) for the year 1906-7 on the rateable value of London was 5-1-478 in the £.

8. To obtain this rate the Borough Councils had to levy rates varying from 5-0-68 in Paddington, to 5-10-02 in part of Stepney, and 5-11-23 in the Bromley parish of Poplar (Poplar's average being 5-10-30), the difference, of course, being caused by the fluctuation in the losses in the various boroughs.

9. Had these central authorities borne their proportion of the loss on the collection of the rates levied for these purposes, an equal rate would have been levied of 5-5-53, an increase of 485 in Paddington, and a decrease of 570 in the Bromley Parish of Poplar.

10. In this suggestion I am only dealing with the central rates, which surely should be the same in all London, and not with rates raised for local purposes, which might be open to argument as to the local needs or local policy of the governing bodies.

11. With regard to the Poor Rate Assessment and Collection Act, I think an amendment of that Act very desirable.

12. I believe the rating authority should, at all events in a borough like Poplar, have the power as at present to compulsorily rate the owners of small properties, instead of the occupiers, as provided by Section 4 of the Act, but that the allowance to the owner of 15 per cent. merely for acting as the agent is far too much. I think 5 per cent. for this purpose would be ample, and a further allowance of not exceeding

Percentage

pounding.

Effect of
equalisation
of loss in
collection of
equalisation
of central
rates.

Compulsory
ag
and re-
duction
allowance

Compulsory 15 per cent. made as now on the owner agreeing to pay the rates whether the hereditament be occupied or not.

13. In many cases now the owner refuses to agree to pay full or empty, finding it more profitable to deduct the proportion of empties from the gross rate, and then have the allowance of 15 per cent. for paying instead of the tenant.

14. A notable example is the London County Council, who declined to pay "full or empty" in respect of their tenements, with the following result:—

15. The gross rate on these tenements for the current year amounts to - £2,051 17 0
The allowance had the compounding agreement been in force would have been 25 per cent. - 512 19 3

Amount payable - - £1,538 17 9

16. The L.C.C. deducted from the gross rate of £2,051 17s. the proportion in respect of empty tenements, and received the 15 per cent. allowance on the rate payable, with the result that the amount actually paid was £1,316 13s. 11d. Had the allowance been only 5 per cent. the amount payable would have been £1,528 9s. 11d., in which case there would have been no great inducement to the L.C.C. to refuse to compound.

17. I am also of opinion that the maximum rateable value under the Act is too high. I do not think it was ever intended that a house let at 16s. per week should come within the Act.

18. Briefly, then, I would suggest that the law should be amended—

(a) To make the central spending authorities bear the loss on the collection of their portion of the rate.

(b) To reduce the maximum rateable value under Section 3 of the Poor Rate Assessment and Collection Act, 1869, to £15, and the compulsory allowance to the owner under Section 4, Sub-section 1 of the same Act to 5 per cent.

(See Appendix No. XIII. (B).)

Question I.—Is composition by owners for the payment of rates the rule in your district?

Answer I.—Yes. Section 4 of the Poor Rate and Collection Act, 1869, is in force in this borough, whereby the owners of all houses rated at and under £20 are liable for payment of the rates instead of the occupiers.

Question II.—Is the direct payment by occupiers (a) possible, (b) advisable. If in your opinion it is impossible, would you kindly say on what ground?

Answer II.—In my opinion in a borough such as Poplar the direct payment by the occupier of the small weekly let hereditament is practically impossible.

There were at the last Quinquennial Valuation of the borough in 1905, 24,667 assessments classified as follows:—

Direct payment by occupiers practically impossible where large number of small weekly lettings.

There are at the present time 19,283 separate assessments the subject of compounding agreements, and of these 1,230 represent the artisan or block dwellings, and 18,053 in respect of ordinary dwelling houses, the vast majority of which are occupied by more than one family.

These, too, consist of two classes:—

(a) Those let by the landlord to two or more families, the rents being paid by each direct to the landlord or his agent.

(b) Those let by the landlord directly to one tenant who sublets a portion to lodgers.

The following table gives the number:—

Assessment.	Weekly Rental.	Number of Houses.
Not exceeding £5.	4s. and under.	247
£6 and up to £10.	4s. 6d. to 8s.	4,268
£11 and up to £15	8s. 6d. to 12s.	2,460
£16.	12s. 6d.	1,051
£17.	13s. 0d.	1,755
£18.	13s. 6d.	618
£19.	14s. and 14s. 6d.	1,166
£20.	15s. and 15s. 6d.	718
		19,283

Mr. J. Butcher Skeggs.
3 Mar. 1908.

There are 3,124 compounding agreements with the landlords or agents in respect of these hereditaments.

Dealing with the compounded houses, other than artisans' dwellings, I believe if the rates had to be collected direct from the occupier the number of assessments, now 18,053, would at least be double, and the collection of the rate from 36,100 or more ratepayers, either quarterly or weekly, would be quite impossible.

Question III.—Do variations in the rates affect rents where composition is the rule?

Effect of variations in rates on rent.

Answer III.—To an extent, yes; but speaking generally, I believe the rents depend largely upon the demand for houses. At the present time with the rates increasing, rents are showing a downward tendency. There have been 487 appeals against assessments of this class of hereditament solely on account of reduction of rents during the past twelve months.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—My experience goes to show that to a very large extent the interest taken in local government depends upon the work of the various associations (political, trade union, and ratepayers) interested in the question.

Interest in local government not affected by direct payment of rates.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

Answer V.—I have had no experience of a weekly collection of rates from occupiers, and having regard to the number of the hereditaments of this class, and of the migratory character of the occupiers, I am quite certain such a system would be impracticable if not impossible.

Weekly collection of rates impracticable.

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

Answer VI.—The cost of collecting would, of course, be infinitely greater than now, and, in addition, there would be the loss on empties, bad debts, runs, and a probably permanent increase in the item of recoverable arrears; so that the probability is that the percentage of loss would be as great or greater than under the compounding system if amended, as I will suggest in a Memorandum accompanying these answers. (See Appendix No. XIII. (A).)

Proportion of loss on weekly collection.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

Answer VII.—Certainly not. The Valuation Metropolitan Act, 1869, is very clear in its definition of gross and rateable value, viz.:

Compounding has no effect on value for rating purposes.

"The term 'gross value' means the annual rent which a tenant might reasonably be expected, taking one year with another, to pay for an here-

Mr. J.
Buteux
Skeggs.

3 Mar. 1908.

Compound-
ing has no
effect on
value for
rating
purposes.

ditament, if the tenant undertook to pay all usual tenant's rates and taxes, and tithe commutation rent charge, if any, and if the landlord undertook to bear the cost of repairs and insurance, and the other expenses, if any, necessary to maintain the hereditament in a state to command that rent."

"The term 'rateable value' means the gross value after deducting therefrom the probable annual average cost of the repairs, insurance, and other expenses as aforesaid."

In arriving at the yearly rental in this class of property the Court of Quarter Sessions decided (in a Poplar case) that the sum which would have been paid yearly for a 10s. weekly let house was not fifty-two times 10s., but something less than that, and the late Mr. McConnell determined the amount of difference between the amount actually receivable and the amount which would have been received had the house been let yearly as 7 per cent., and upon this assumption the gross and rateable value of the 10s. house in Poplar at the time of this appeal was determined as follows:—

	£	s.	d.
Weekly rent at 10s. - - - -	26	0	0
Less 7 per cent. for converting this weekly rent into a hypothetical yearly tenancy	1	16	6
Yearly rental - - - -	24	3	6
Less Parochial Rates at 12s. in the £ on £12 - - - -	£	s.	d.
	7	4	0
Water Rate - - - -	12	0	
	7	16	0
Gross value - - - -	16	7	6
Statutory deduction $\frac{1}{4}$ - - - -	4	1	10
Rateable value - - - -	12	5	8

The Assessment therefore being determined at £16 Gross, £12 Rateable.

No allowance
for payment
in advance.

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

Answer VIII.—I think not.

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

Demand in
advance.

Answer IX.—Rates are not now collected considerably in advance. In this borough the rates are made and collected quarterly, and it is half way through the quarter before the rate actually begins to be paid. It is not till the second week of the third month of the quarter that pressure is brought to bear in the shape of summonses.

The present direct payer of rates has practically a set time each quarter when he pays. Some of the big firms and companies invariably pay early in the quarter, but whether early or late, the direct payer knows he has to pay rates four times in the year and arranges accordingly.

Direct pay-
ment by
small weekly
occupiers.

95747. (Chairman.) I will take you through certain of your answers because you may wish to amplify them. I see from your answer to Question 2, your opinion is that the direct payment by occupiers of small weekly hereditaments is practically impossible, and you show what a very large proportion of them there are rated at or under £20. Were you looking at this rather from the official point of view as to the collection of rates through the rate collectors?—Yes, to a great extent.

95748. I can quite understand the objections there would be to an attempt to collect the rates weekly through the existing organisation of rate collectors, but might it not be possible to collect the rates weekly if they were associated with the payment of rent?—I do not think so.

Utilising rent
collectors.

95749. Utilising the rent collectors for the purpose of collecting the rates also?—Then for this class you would have 3,000 rate collectors in a borough like Poplar.

95750. The majority of those who are employed by the landlords are responsible persons?—Yes.

95751. Would it not be possible to utilise them?—Yes, but you would have to pay them for collecting, and you would have to have your collectors for direct payers.

95752. If it was only tacked on to the collection of rent the commission would be a very small one?—You would have the other point, that what you gain by the reduction of the present commission you would lose on empties and so on.

95753. Taking first the question of machinery it would be in your judgment, I assume, impossible to collect through the existing machinery?—Supposing you paid 5 per cent., then your commission would practically be one-fifth of what it is now.

95754. Shall we take the machinery first, then we will come to the commission. It would be impossible, without an enormous increase in the existing rate collectors for the borough, to collect?—That is so.

95755. What are the difficulties of collecting through the landlords whose rents are paid weekly?—I take it in the bulk of cases the agent who collects weekly only accounts to his principal quarterly; that is one difficulty, we want money from time to time during the quarter; we could not wait a quarter. That might be got over. Then the agent who now collects the rent at 5 per cent. collects the rent, probably, at 5 per cent. because he is also a builder and repairer, and he is making money in the repairs to the houses.

95756. Are those largely the class of persons who are employed as agents?—I think every agent is a builder, and what he does not make in the collection of rent he makes by his profit on repairs.

95757. A difficulty that occurs to one is that if the collection of public money was entrusted to an individual, he would have to give some guarantee?—Yes.

95758. That is a difficulty which could be got over probably?—Yes, but what could not be got over is that you would have 3,000 accounts in your office. You are bound to have at least 3,000 accounts with these men who are collecting money for you. Therefore, you are going to infinitely add to your clerical work.

95759. You have 19,000 houses rated at under £20?—Yes.

95760. You would have a separate account for each one of them?—I do not mean in that way, I am dealing with the rent collector now who collects in account with his employer; you would give him so much to collect, and he would have to account for that, and you would open in your ledger account, 3,000 accounts with these collectors.

95761. Should you say that the number of houses rated at and below £20 in Poplar is abnormally large, or is it about the normal number there would be in an East End constituency?—I do not think there is any borough in the County of London with the same proportion, or anything like it.

95762. Having dealt with machinery, we will now come to the allowance. What is it at present?—At present we are under Section 4 giving a commission of 15 per cent., and 10 per cent. on agreeing to pay full or empty, that is 25 per cent.

95763. The majority of the landowners accept that; they pay full or empty, and get 25 per cent.?—Yes.

95764. You think that the loss, if the rates were directly collected weekly from the occupiers, would be as much as the 25 per cent.?—I think so.

95765. You have a considerable number of empties in Poplar?—Yes; it is not only in empties that we should lose.

95766. How else would you lose; the occupier might move?—Not only that, he might not pay you, and have nothing there that you could take.

95767. And the legal process by which you distrain is cumbersome?—Yes, it takes us three weeks.

95768. The landlord can do it immediately?—Yes.

95769. As regards interest, you do not think the direct collection would increase the interest of the occupier?—I think not. I do not see much interest unless the interest is made by somebody else.

95770. You think the interest largely depends on the action of the various associations?—Yes.

95771. Of course, every now and then there may be a question?—Yes, it may get acute.

95772. What is your experience? If a local question is at all acute, is it fought on its merits, or is it generally taken up by the different political associations?—My own opinion is you would have difficulty in getting men to stand for these positions but for your local associations, political or otherwise.

95773. Beyond that there is no machinery behind to help the man to stand?—No.

95774. There is a certain expense, and the certainty of a great deal of physical effort required?—Yes.

95775. In Paragraph 5 of your Memorandum you say where there is no compounding the percentage of irrecoverables is much higher?—Yes.

95776. You put the percentage of irrecoverable against the commission of 25 per cent. I suppose?—Yes, I take the total loss. In Appendix A. you will see that Lewisham's loss is only in one column, 9.33. You get the total loss in each other borough from irrecoverable and owners. It is obvious if you have no allowance to owners then that class of property has to bear its proportion of empties.

95777. There are only two whose total loss is in excess of that of Lewisham. One is Poplar and the other is Wandsworth?—And Bethnal Green; there are three.

95778. I suppose "irrecoverable" means empties?—Everything; empties, bankruptcy and so on.

95779. The great mass will be empties?—Yes, the bulk would be empties.

95780. What is the first column "owners"?—That is the allowance to owners either under Section 3 or Section 4.

95781. The allowance to owners in Poplar and Bethnal Green is very high?—They are both under the same section of the Act, with the same allowance of fifteen and ten, making together 25 per cent.

95782. Take Stepney, how do you account for Stepney? It would be under the same Act, would it not?—Stepney is under Section 3; and they fix their minimum rateable value at £15, and allow not exceeding 20 per cent. on it. Then in Stepney you do not get the same number of small houses occupied as in Poplar or Bethnal Green.

95783. You think that the present method is the most economical method, or the method by which the least loss on the total collection can be made?—I think so absolutely.

95784. (Mr. Loch.) Has the rateable value or assessable value of Poplar risen or fallen of late years?—It has increased a little. I have it here from 1875.

95785. Would you take a figure at the beginning, the middle and the end?—In 1885 it was £714,834; in 1895, £707,872 (it went down a little); in 1905, £818,944.

95786. It has gone pretty steadily?—Yes.

95787. Have the rents gone up steadily?—Not to an alarming extent. I have taken out three streets, one in each parish, as typical streets. In Hind Street in Poplar I found houses let there at 10s. 6d. in 1890 are now 12s. and 12s. 6d. In Monier Road at Bow I find a house that was 7s. 6d. in 1885, 7s. 6d. in 1895; 8s. 6d. in 1900 is 9s. 6d. in 1905. There is a 2s. increase there. Then we come to Brabazon Street in Bromley. A house there which was 9s. in 1885 is now 10s. (See Appendix No. XIII. (C).)

95788. That is fairly typical?—Of this class of property.

95789. The Bromley property does not tend to rise so much as the other?—No.

95790. Have there been complaints made of the rise in rents?—Yes.

95791. Are there many empties in the place?—Yes, a tremendous number.

95792. On the empties no rates are paid?—Yes, because they are compounded; we get no loss on those; we do not know of the empties through the rate-book.

95793. You say that practically there is no interest taken in the rating by the people?—No interest taken in the local elections except such interest as is brought about by the action of the different societies.

95794. Individually there are few complaints of assessments, or anything of that kind?—We get plenty of complaints of assessments.

95795. That is from the owners?—From the owners to an extent, and from the direct payers.

95796. Do those complaints increase?—No, they are pretty steady. Rents are going down to-day, there is no doubt about that, there is not the demand for the houses, there are so many empty.

95797. The number of empties is now expressing itself in figures?—Yes.

95798. So there is what might lead to a lower assessable value?—That is so.

95799. Is the lower assessable value shown at all?—Assessable Yes, a house let at 10s. in 1885 was assessed at £15; to-day it is assessed at £13 or £12.

95800. (Miss Hill.) That is because the rate is high?—Yes, the rate governs it, of course.

95801. (Mr. Loch.) And the rates tend to rise?—Yes, the rates are rising again now; they came down considerably.

95802. Therefore the position of Poplar is less satisfactory in the sense that the property has been depreciated while the rates are rising?—To an extent it may be, but there is not the demand probably for houses to-day, there is not the work there nor the necessity for the people to live there.

95803. That is an explanation of it?—Yes.

95804. What is your method of collection, is it very economical?—Yes, I think so.

95805. You do most of your work through the owners?—Of this class of property. The rateable value of this property is only £230,000 out of £830,000.

95806. With regard to the rest of the property, do you have much trouble?—Very little.

95807. Might I say that all your trouble almost is in this lower class?—We have no trouble at all in collecting the rates, I think you will find as far as recoverable arrears are concerned we are practically the lowest borough in London in each year.

95808. Have you found in any exaggerated way, so that you can trace it as cause and effect, that rents have risen as the rates have risen?—I do not think they have. I think this statement shows it.

95809. That is to say both have risen, but not equally?—Not equally. The landlord of a 10s. house in 1885 was paying £3 rates, to-day he is paying £5, although he has got the lesser assessment.

95810. That is to say, simultaneously with the decrease in demand?—That is so.

95811. So that he could not draw his rate from the occupier?—No.

95812. Is there any exception taken to the largeness of the Poor Rate? They do not know of the Poor Rate as a Poor Rate, do they?—In Poplar they get the one rate.

95813. If they did know the Poor Rate, would it make any difference?—To the direct payer probably, but the occupier would not know anything about it.

95814. Does the occupier know anything about the rates now?—Not the occupier of compounded property.

95815. Yet he is the person who is most chargeable to the rates?—Yes.

95816. Have you ever thought of it educationally as a possibility that if they pay direct, even out of small wages, it would make a difference to them?—I do not think so.

95817. Why do you not think so, if they found that they themselves were paying for themselves, and it was a distinct tax on them, you think it would make no difference as to whether a rate was increased or not? I take it this way, that the poor look after the poor, and if the man next door is getting relief out of it and his neighbour thinks he is justified, I do not think it would make much difference to him, he would pay his share and grin and bear it, even if he paid directly. I do not think you would affect them in that way. They might all be on the list for relief themselves at some time or other.

95818. If they had the rates before them they would see a great deal was going other than what their neighbour

got ?—They might ; I am not going to criticise the policy.

95819. No, but we want suggestions. At any rate, except those who are owners of larger property above this level, there is no basis of criticism in the hands of those who pay the rates ?—No.

95820. Or on whose behalf they are paid ?—No, they know nothing about the rates directly.

95821. Therefore, to that extent, they are not citizens ?—No.

95822. A great deal has been talked about the duties of citizenship. I suppose you have societies for improving things. Has this question ever been discussed in that relation ?—I do not know. I do not go to the meetings of those societies. You had better ask Mr. Lansbury.

95823. You have a society in Poplar for looking after the rates and so on, some sort of association ?—We have two or three ; do you mean the Municipal Alliance ?

95824. Yes.—They give lectures, but their audience is of the shopkeeper class and those who belong to them.

95825. That is to say, the opposition is from the small shopkeepers far above this level ?—The man who feels it most is the small shopkeeper.

95826. Is he represented on the board largely ?—No, not to any great extent.

95827. Is he represented on the council largely ?—There are one or two, but not to any great extent.

95828. Those who are feeling it most are not represented ?—Not to any extent.

95829. And those on whose behalf it is incurred do not know anything about it ?—No, not officially.

95830. It is paid in rent, I understand, and they do not concern themselves ?—That is so, they know nothing about it ; they never see a demand note.

95831. Do you think that is a condition under which local government can be well conducted financially ?—It would be perhaps advantageous to let them know, if you can suggest a means of doing it. I have heard of all sorts of suggestions : the rent card and the division of rent into actual rent and rates.

95832. How is it that the shopkeeper class is so little represented ?—To an extent, I suppose they cannot give the time, some of them, but they are in a minority, and they would not get much chance unless they belonged to one or other of the associations.

95833. The associations represent some other classes ; they do not represent the recipients of relief, I believe ?—No.

95834. Nor do they represent the shopkeeper class ?—No.

95835. Whom do they represent ?—You get your different trade unions, and you get your political associations which take an interest.

95836. The only people represented are trade unions and political associations ?—And the new body, the Municipal Alliance, which is supposed to represent neither.

95837. Is the Municipal Alliance largely represented now ?—Yes.

95838. To what extent ?—On the borough council they are in the majority.

95839. And on the guardians ?—Only about one-third, I think.

95840. In fact, the representation of the place depends upon, shall we call it, the warring associations within the place ?—That is so, absolutely.

95841. Are these people who are brought on paid for. Do they have their expenses paid ?—Not to my knowledge.

95842. Their election expenses ?—Yes, they have a common fund for election expenses.

95843. Practically, it is those who are financed who get on ?—So far as the cost of election is concerned.

95844. Are there any that get on whose election expenses are not paid ?—I daresay ; independent men have got on.

95845. Here and there one ?—Yes.

95846. Do you think that is a good condition of things ?—I do not know how you are going to alter it. They are looked upon as sort of dress rehearsals for other bigger elections.

95847. Can you say that Poplar itself is represented where the representation is in the hands of associations solely ?—You get all classes of men on the borough council at all events.

95848. You do not have tradesmen apparently ?—You have tradesmen.

95849. Are there many ; I understood you to say there are few ?—Few in proportion, but you have them. You have a shipowner and a large manufacturer, tradesmen, school masters and labouring men. Everybody is represented on the borough council.

95850. But on condition mainly that they are not in a position to pay for their election expenses ?—I do not say that ; plenty of them could pay for their own, but if they run in groups of an association, I think their expenses are pooled. I think some of them pay more than their share.

95851. It is done co-operatively ?—Exactly.

95852. (Miss Hill.) Are you well acquainted with any districts where there is direct payment of rates by the smaller occupiers ?—I do not think there is one in London.

95853. Then you are not in a position to say what amount of interest might be created if it were possible to collect direct from the small occupiers ?—No.

95854. You would expect that there would be a good deal of interest, would you not ?—I do not think so.

95855. Not if their rates went up or down ?—I do not think so. I have seen rates go up and down for the past thirty years, and the ordinary intelligent man has taken no practical interest all through that period, and having that in mind I do not think the others would.

95856. Really ?—That is so.

95857. Of course, a small rise in rates or a small fall in rates matters less to a man the larger owner he is, but, of course, 1d. in the £ means a good deal to the smaller owners ?—Yes.

95858. But you really do not know any district where there are any small occupiers who pay direct ?—I do not think you will find that in London.

95859. I know one or two where they are, and the interest is very great. I was asking if you knew. You say it would be impossible to have a collection by the local authority with the rent. That means, I suppose, you think it would be essential for it to be successful that it should be done fortnightly ?—Fortnightly or weekly you would have to make it.

95860. Do you know what amount is paid by owners for collecting rents ?—I have known as low as 2½ per cent. paid.

95861. But it is more often 5 per cent., is it not ?—Generally 5 per cent.

95862. And the allowance made to owners for direct payment is 15 per cent. ?—Yes, merely as commission.

95863. Leaving out of account whether they are paying, whether full or empty ?—That is so.

95864. That is three times the amount which is paid for collecting rents ?—Yes, that is absolutely wrong.

95865. Is it not very much a question of how many collectors the local authority would think it worth while to put on ?—Yes.

95866. Because three times the amount would certainly pay for the expense of direct collection ?—I agree, but you must not lose sight of the other fact of the empties coming in which do not come in now.

95867. At the same time you have 15 per cent. to go on with ?—For this purpose, I quite agree.

95868. You would get a very large quantity of property all contiguous so that it would pay a collector to go there although the sums were small ?—You would want a large number of collectors, would you not ?

95869. You would ; but then you would get a large amount of money. 15 per cent. on these 19,000 houses would come to a good deal, would it not ?—Yes, the 25 per cent. came to, when we were 12s. in the £, roughly, £36,000.

95870. If you have a large number of empties in Poplar at present, that will complicate the question, but at the same time three times the amount would go a long way in meeting the loss?—I am quite with you on that.

95871. I should think you would get the rates collected at 5 per cent, would you not?—I think so.

95872. Then you would have 10 per cent. towards the empties and loss?—I agree, and the 10 per cent. plus your present 10 per cent. for empties and loss would not, in my opinion, make up for the empties and loss. It is not merely empties.

95873. At the same time the losses would be much smaller, because they were collected fortnightly, would they not. It looks as if it paid the landlord, therefore I do not see why it should not pay the local authority?—It might pay the local authority but not when you take the other point in.

95874. (*Mr. Lock.*) If empties were charged it would?—But empties are not charged.

95875. (*Miss Hill.*) It is complicated very much, especially at this moment when the empties in London are so very considerable. They are considerable in many parts of London as well as Poplar?—Yes.

95876. (*Mr. Gardiner.*) You have no first hand experience of this municipal alliance system, have you?—No, I have seen their rent cards.

95877. So you could not tell us of what value it is?—No, I could only tell you that nobody adopts them in Poplar. None of their own members, except, I think, the dock company. Practically none of their own members adopt them.

95878. (*Mr. Lock.*) Those who are owners of property?—Yes, the dock company do use them; they come to me every quarter to fix their sliding scale of rents.

95879. You are sure of that?—Practically; there may be one or two, but they never come to me, to alter their rate for their card, although the dock company do each quarter.

95880. (*Mr. Gardiner.*) Do you know how long this card system has been introduced?—I saw it two years ago.

95881. It has the approval of the alliance, as an organisation, behind it?—Yes, they issued it.

95882. Therefore, you imagine if people thought well of it who are members of the association, they would make use of it?—I should think so. It has its advantages. I approve of the card in some respects.

95883. It is not introduced by many people even who are members of the alliance?—That is so.

95884. (*Mr. Phelps.*) How often are the assessments in London revised?—Every five years.

95885. By whom?—By the rating authority.

95886. What is their method of procedure?—You get a return from the occupier of each hereditament and from that return with the knowledge of the way you work the assessment, the assessment is fixed.

95887. Is the assessment authority composed of people familiar with the locality?—Yes, it is the borough council; in London the borough councils are the overseers.

95888. In Poplar have you many large owners of houses of the class of which we are talking—owners of a large number?—Yes.

95889. What is the largest number of houses of that kind that a single owner would have?—I could not say.

95890. Roughly?—We have a single agent, but for more than one owner, who pays us £1,200 a year.

95891. In rates?—Yes.

95892. That is one rate collector or agent?—One agent.

95893. Do you know how many properties he represents?—No; I could tell you.

95894. Would it make a great difference in that way if it were collected from the occupier instead of from the owner?—There are 3,124 agents paying their rates, whether for 1, 50, or 200 houses. That is the number of agents to-day paying their rates for this class of property.

95895. You think that the movements in the rates are almost all to be explained by the increase or falling off in the demand for houses?—Not always, because to-day rates are going up, and the rents are coming down.

95896. I was not quite sure which was cause and which was effect to your mind?—I think it is the demand for houses. If houses are empty, landlords will take what they can get without studying rates.

95897. The rents having gone down, the rate in the £ has to go up?—Not necessarily, because your assessment will come down.

95898. Would that not be the same thing?—No.

95899. If you want to raise the same sum and the assessment goes down, and the rent goes down, you must raise the amount in the £?—Yes.

95900. Which do you think is cause and effect; you think the rise in the rates is really largely due to the fall in rents?—Yes, that may affect it.

95901. Do you think that it works the other way also, that the rise in the rates has increased the number of empties?—To an extent, but not to any great extent.

95902. You think it is much more due to the want of demand for houses?—Take a typical instance such as I have given you, there is only a difference of 2s. in the rent between then and to-day.

95903. Supposing for the sake of argument the rates went up for a single year 50 per cent., how long would that be before it affected the rents?—I should think that would affect them at once.

95904. What kind of tenure are your small houses let on?—Weekly.

95905. You think they would move at once?—Yes.

95906. What rise in rates would affect the rents?—We went up more than 2s. in one year, and that had not much effect, but I have got a year in my mind where there was every probability of the rates keeping on the increase, two years after a quinquennial, when I found 3,000 of these houses increased in rent.

95907. You attribute that largely to the increase in the rates?—Yes, at that time, and it looked as though the rates were permanently going up.

95908. It would take some time before an ordinary rise in rates reacted on rents?—Yes.

95909. So far you think the occupier is independent of the rise in the rates?—Yes.

95910. You could not give us any idea when his interest would begin to be stirred in the administration of the borough?—No, I should not like to hazard a guess.

95911. Are many of these agents you speak of represented on the borough council?—No.

95912. Or the board of guardians?—No, not to any extent.

95913. Not at all?—Not to any extent.

95914. Or the owners of the house property?—There are some owners, but very few.

95915. They are not a large class in local government?—No.

95916. (*Mr. Bentham.*) I suppose the people who are dissatisfied with their rateable value will appeal to the appeals assessment committee of the borough council?—Yes.

95917. Then the assessment may be rectified?—Yes.

95918. Including the current rate?—Not for the present rate—for the coming rate. I contend that an alteration in rent is a structural alteration within the meaning of the Valuation (Metropolis) Act. We do not alter the rate itself in London, we do it by provisional lists.

95919. On what date is the first rate in the year made?—The rates are made quarterly in Poplar, for instance, therefore we make a provisional list each quarter. We make that provisional list as late as the day before the making of the rate, so that every hereditament included in the provisional list affects the next rate.

95920. Affects the next quarter?—Yes, the coming quarter.

Mr. J. Buteux Skeggs.

3 Mar. 1908.

Relation between fluctuations in rates and in demand for houses.

Relation between fluctuations in rent and in rates.

Representation of owners and agents on borough council.

Mr. J.
Buteux
Skeggs.

3 Mar. 1908.

95921. So that with an increase of rates it would be possible to get down the assessment of property in three quarters of the year, but not in the first quarter?—That is so.

95922. So that the whole of the increase of rates would not fall upon the owner of the property; in consequence of the rates going up and the expenses being higher, he is entitled to a lower assessment?—Certainly.

Incidence of increase in rate. 95923. So that part of it is shifted from the owner of the property, because he gets his rateable value reduced?—That is so.

95924. Therefore the whole increase in the rate does not fall on the owner?—No.

95925. It is spread over the whole of the ratepayers of the borough?—Yes.

95926. You do not know by what proportion the rateable value is lowered when there is an increase of 1s. in the rates?—No.

Effect of increase of rates on rateable value.

95927. Would it affect the owner one-half the increase or decrease, as the case may be?—That would want thinking about. I do not altogether follow you. Notwithstanding the reductions, the rateable value of the borough goes up practically year by year, because you get other classes of property which increase.

95928. What goes up?—The rateable value of the whole borough, so that that point would not apply.

95929. It would not apply in this sense, that it would require an additional rate in order to raise the same sum, because the rateable value is going up with the new and added property?—Yes.

95930. A particular owner of property is relieved to the extent practically of one-half of the increase?—Would it be a half; I should doubt it.

95931. He is affected to the extent of half of either the increase or decrease?—Yes, he is to an extent.

Compound-
ing.

95932. (*Miss Hill.*) You have no power to compel the owner to pay full or empty?—No.

95933. And the number of empty houses is increasing?—Yes.

95934. It is quite possible that owners may be giving notice to determine?—They are doing so.

95935. Then the two questions of the collection of the rate and the allowance for full and empty will be separated?—Yes.

Difficulties
in direct
collection.

95936. In that case, do you see any difficulty in the net collection of rates?—Only the difficulty that I express of the class of people you have to collect from, and the trouble at the end of the quarter to get it within the quarter. You will always have a lot of recoverable arrears. I do not think you can point to a landlord in Poplar who has not arrears.

95937. You have 15 per cent. for collection and arrears?—Yes.

Assessment
appeals.

95938. (*Mr. Bentham.*) How many appeals against assessment would be heard in the course of a year?—There were 497 last year out of the 19,000.

Recovery of
rent more
summary
than
recovery of
rates.

95939. (*Sir Samuel Provis.*) Comparing the recovery of rates and the recovery of rent, is the process for the recovery of rent more summary and more easy than the recovery of rates?—Yes, the landlord simply takes a broker with him and puts him in.

95940. (*Miss Hill.*) Many of the people have not anything to take; so it is much the same thing?—That is my trouble.

Procedure in
recovery of
rates.

95941. (*Sir Samuel Provis.*) Will you tell the Commission what is the process for the recovery of rates?—You make your demand, then your second demand at the end of a month, we will say, the following week you would issue summonses, those are returnable in a week, they are heard, and seven days is given by the justices. At the end of that seven days you get a warrant executed and you hand that over to your broker.

95942. Supposing you want to recover a rate from a man who had only got a weekly tenancy, that system would break down, would it not?—Absolutely, the man would be gone.

95943. How quickly do you think in a case of that kind you could recover a rate; you are not obliged to wait till the end of the month?—You can summon the day after a rate is made.

95944. But you must give notice?—Certainly.

95945. How long do you think therefore after you have made your demand for your rate and have not got it, you could recover?—You could not recover within a month.

Length of
time required
for recovery
of rate

95946. According to your present plan, but could not that be more speedy?—Only by an alteration of the law. If you are going to collect weekly you would want the same power as a landlord.

95947. We want to bring that out. We have not quite got to that yet. You are not obliged to give a month?—It takes a month from the time you start. You are bound to serve him with a notice, you give him a week. Then you serve him with a summons, that is returnable in seven days, then the justices will give him another seven days, so you have got the three weeks before you hand it over to the broker.

95948. It is in the discretion of the justices whether they will give seven days?—They can make an immediate order, but they never do.

Summary
order of
justice

95949. Do you think they would make an immediate order if you showed cause?—If you thought the man was off they would do it.

95950. The justices will give you that?—Yes, and then you would go and find nothing there.

95951. Is that one of your fears in enforcing a system such as has been suggested of recovering the rates practically with the rent?—Yes, and also the other fact that a vast number of the occupiers of this class of tenement would have nothing to take when you got there.

95952. But that is the same with the rent; you would not be worse off than the landlord then, would you?—No, but a man who would try and pay his rent would try and dodge out of the rates if he could.

95953. You think he would prefer to pay his rent rather than his rates?—Yes, he wants to have a roof over his head.

95954. You say you would require a large number of collectors if you collected weekly?—Yes.

Increase
in collectors
and office
work for
weekly
collection

95955. Apart from the salary to be paid to the collector, have you considered what would be the amount of office work that would be involved?—Yes, it would increase everything, as I said just now. Supposing you made all their agents your rate collectors, you have got to open a ledger account with each.

95956. Can you give any estimate of what would be the cost of that? Have you formed any estimate of it in your own mind?—No, I should like to work it for a quarter to see. I should not like to suggest. You have so many difficulties. You have to give a receipt for rates whether they are paid quarterly or monthly. You could not enter it in a book.

95957. You must have a receipt check book?—Yes.

95958. Are those checked in the town clerk's department?—In my department.

95959. You would require additional persons to check those?—Yes.

95960. You would want an additional staff?—Yes.

95961. There again have you formed any notion in your own mind what that would involve?—You have to check now the allowance for empties for the direct payer. I have three clerks to check that. You can imagine what it would be if you have to check the allowances for empties for another 36,000 assessments, and probably more.

95962. It would involve a considerable increase in your own staff?—Yes, and books, and everything.

95963. Are you familiar with the system which prevails outside London under the Public Health Act?—No.

System
rating
outside
London.

95964. Under that Act it is optional with the local authority, not as it is in London, where, if you make an Order at all it applies to everybody who comes within the section: they may select particular people. Would you think that system advantageous in London?—No, I think I prefer my own system in London, in a borough like Poplar, to compulsorily rate your owner.

Selective
compounding

95965. The local authority can compulsorily rate outside, but they are not compelled because they do it as regards one owner to do it as regards another. Do

you think that advantageous?—No, I think I would rather have the owner in all cases of this sort.

95966. Will you tell us why?—I think you are safer with the owner than with the occupier.

95967. There are, are there not, certain classes of occupiers who occupy small tenement properties that you are really safe with?—Yes.

95968. In those cases you need not compound under the system I was mentioning?—I do not know; I think you will have to.

95969. You would in London, but you would not outside. Would it not be an advantage to you, say in the case of the Peabody houses, not to compound at all?—Yes.

95970. And yet to be able to compound in cases where otherwise you would lose your rates?—I agree.

95971. Do you see any difficulty with regard to that?—No, I think that is feasible.

95972. How far do you find practically that the owners are willing to compound with you for payment whether the house is empty or not?—They are bound to do it under Section 4 if you start it.

95973. They are not bound to pay whether the house is empty or not?—They cannot make a choice; a man who has only ten houses could not pick out three or four; he is bound to pay full or empty for the lot.

95974. You tell us in the case of the London County Council they are not willing to pay whether empty or not?—No.

95975. Do you find that is the case with other owners of property?—They are just now beginning to get alive to that. I do not think they knew of it before.

95976. (*Mr. Loch.*) Suppose the collector from the point of view of rates had the same power as a landlord to realise his rent, would not then all this long procedure which you refer to be got rid of with advantage?—Yes.

95977. Why should not that be. Why should not rates be considered so?—I agree that is a question for the Legislature. Then you would have your conscience, if I may say so, as to whether you would like to put a man on the street and so on.

95978. It is the conscience which the landlord has now to consider?—I do not think a landlord has a conscience.

95979. That is a question which would differ in various cases. Some people would say that a local authority have no conscience?—I think they have more conscience than a landlord.

95980. However that may be, in both cases the same law might affect it?—Yes.

95981. If that were so, your difficulty would disappear?—To an extent, but the difficulty as to what you are going to lose would not disappear.

95982. But the difficulty as to getting your occupier to pay would disappear?—I do not think so.

95983. The whole of this procedure which lasts for five weeks would not be continued?—The difficulty is not merely in the occupier paying at all. You have to study what is going to be your loss from a different standpoint altogether under the new system. It is not merely the empties, is it?

95984. Admitted, but I understood your difficulty was that you could not punish the individual?—That is one of the difficulties, but my difficulty is that the borough is going to lose by it, not only through empties but the other losses.

95985. Even although you could bring the law quickly into operation?—Yes.

95986. That is a matter of the balance of interest?—Quite so, and it is only my opinion.

95987. (*Chairman.*) With regard to this summary power for rates, that would conflict with the prior right of a landlord might have?—You would give us the same power as the landlords now have.

95988. You would have a general power?—Yes, that would help you to a big extent.

95989. (*Miss Hill.*) Is it not the fact that you would be rather in a different position than the landlord in that you can distrain or summons immediately the rate is made?—You can as soon as you have demanded it.

95990. Directly it is demanded you can get it?—Yes.

95991. Therefore, practically you can go in in advance of the landlord, cannot you?—You can get your rate.

95992. (*Mr. Patten-MacDougall.*) The justices have discretion as to the seven days before the summons is returnable?—Yes. Discretion of justices as to summary order not exercised.

95993. You say they exercise that discretion?—They invariably give the man summoned seven days.

95994. Why, because in ninety-nine cases out of 100 there cannot be any defence. Is that to enable the ratepayer to make his defence or what is the object of it?—To give him a little time to raise the money.

95995. It is not that he may make a defence?—No. I mean on the day they appear they give them seven days before they issue a distress warrant.

95996. To enable them to raise the money?—Yes, no matter what their defence is, the invariable custom is to give seven days.

95997. He has had notice before?—He has had three notices.

95998. (*Mr. Lansbury.*) If a law was passed that you could demand the rate forthwith?—You can now.

95999. And if all the obstacles to taking proceedings were swept away do you think the bulk of the people you have in your mind could pay the quarter's rate or the month's rate down on the nail?—I am absolutely sure they could not. Inutility of summary distraint for rates.

96000. That is the point of it, that we are airily discussing powers to compel people to do something which in your judgment they have not the means of doing?—That is so.

96001. (*Miss Hill.*) Do they not do it to the landlord at present?—They do it weekly.

96002. We were talking about a fortnightly collection or a weekly collection?—That is suggested in the question which was put to me.

96003. (*Mr. Lansbury.*) It is not the question of the total rate you are going to sell the man up for; it is for one-thirteenth part of the quarter's rate. You never could do it?—You cannot make a weekly rate.

96004. (*Miss Hill.*) As long as he pays weekly or fortnightly you would not distrain, would you. Would it not be in the discretion of whoever is carrying it on?—It is all discretion.

96005. (*Mr. Lansbury.*) The man might move before that discretion was exercised?—I think he would.

96006. (*Miss Hill.*) There is 15 per cent. to go on with.—There is a great difference because you make a quarter's rate; if at the end of the third week of the quarter you are going to broker him, you are going to broker him for the balance of the quarter's rate; you could not do that if you are a landlord. Difference between collection of rate and collection of rent.

96007. (*Sir Samuel Provis.*) It would be for the three weeks?—Then you would put the brokers in three or four times in the course of the same quarter; there would be an increase of the expense there.

Mr. Henry
Hamilton
Watts.

Mr. HENRY HAMILTON WATTS, called ; and Examined.

3 Mar. 1908.

Experience
of witness.

96008. (Chairman.) You are assistant manager and staff inspector of the London and India Docks Company ?—I am.

96009. Some replies have been prepared by Mr. Hardy, the manager of that Company, to some questions submitted to him ?—That is so.

96010. I believe you practically agree with the answers that he has given ?—I do.

96011. If you will kindly hand those in we will treat them as your evidence-in-chief ?—Certainly. (The Witness handed in the following Statement.)

Question I.—Is the lading and unlading of your port conducted by employing stevedores, or by the shipping companies, or by anything of the nature of a Harbour Board?

System of
loading and
unloading
ships in Port
of London.

Answer I.—The labourers who load and discharge ships in the Port of London are employed by the shipping companies, in some cases direct, and in others by stevedores and master porters. The work of loading and unloading ships is done only to a very small extent by the dock companies. The dock companies however employ a large amount of labour in the warehousing and working of goods.

Question II.—What is the system of taking on labour, and for what periods are men engaged?

System of
taking on
labour and
period of
engagement.

Answer II.—In the year 1906, 72 per cent. of the labour employed by the London and India Docks Company was done by men on regularly weekly wages. The balance of 28 per cent. was performed by preference and casual labourers taken on from day to day at an hourly rate of pay. The minimum period for which men are engaged is four hours, or a payment of 2s.

Question III.—What are the ordinary and the overtime wages? At what hour does overtime commence? When are they paid?

Wages.

Answer III.—Ordinary and overtime wages are 6d. and 8d. per hour respectively. Overtime commences at 6 p.m. The men are paid as follows:—Permanent and registered—weekly preference and casual—daily at the close of work.

Question IIIa.—Is there anything peculiar in the trade of your port that makes overtime inevitable?

Overtime.

Answer IIIa.—There is nothing peculiar in the trade of the Port of London as distinct from other ports to make overtime inevitable.

Question IV.—Is there much specialisation of labour?

Specialisation
of labour.

Answer IV.—The specialisation of labour consists principally in respect to stevedores and the handling of coal, timber, and grain.

Question V.—Is the trade seasonal?

Seasonality
of trade.

Answer V.—The trade is fairly distributed throughout the year, but as a rule it is slack in the autumn and busy in the early winter.

Question VI.—Is the dock labour of the usual "casual" and irregular nature?

Casual
labour.

Answer VI.—The labour as a whole employed at the docks (saving the answer to Question 2) is, to a considerable extent casual and irregular.

Question VII.—Are there alternative employments open to the men when not engaged at the docks?

Alternative
employment.

Answer VII.—The opportunities for dock labourers to obtain alternative employment are few.

Question VIII.—Is there ordinarily a surplus of labour seeking employment?

Supply of
labour.

Answer VIII.—There are usually more labourers available than are needed.

Question IX.—Can you give any account of labour-saving appliances at the docks, and any estimate of how they have affected the total demand for labour there?

Labour
saving
appliances
and effect on
demand for
labour.

Answer IX.—Cranes, lifts, and grain and coal elevators are the principal appliances in use at the docks, but no estimate can be furnished of the extent to which they affect the total amount of the demand for labour.

Question X.—Has there been any indication that the men would prefer constant, steady work to being taken on by the job?

Answer X.—The men employed by the London and India Docks Company on regular weekly wages value their employment, and vacancies are readily filled.

Regula-
work
vined
by men

Question XI.—Has any attempt been made to "de-casualise" the dock labour—e.g., are there any permanent staffs—or is there any system of "preference men," as in the London and India Docks Company?

Answer XI.—The labourers are graded as permanent, registered, preference, and casual men. For some years past special efforts have been made by the London and India Docks Company to diminish the number of casual labourers employed.

Deca-
sation
of
dock
labour

Question XII.—Would it be possible, in your opinion, to make the labour more regular?

Answer XII.—Constant attention is being given by the London and India Docks Company to make the employment regular, and the result is as indicated in the answer to Question 2. The fluctuations of the business are however such as to make it impossible to avoid an amount of casual employment.

Regula-
labour.

Question XIII.—Is there any trade union among the dock labourers? If so, how would it view any attempt at "decasualisation"?

Answer XIII.—There are several dock labourers' trade unions, but it cannot be said what their view is in respect to decasualisation.

Dock
labourers'
Trade
Unions

Question XIV.—What is the general personal character of the dockers?

Answer XIV.—The personal character of dock labourers in regular employment is good.

Persona-
character
of
dockers

96012. (Chairman.) What is included in the term "The London and India Docks Company" ?—The Dock Company owns the docks at Tilbury, the Royal Albert and Victoria Docks, the East and West India and the South-west India Docks, and the London and St. Katherine's Docks. Then they have warehouses in the city; the tea and general warehouses in Cutler Street, New Street and Commercial Road, and Crutched Friars, a cold-air store at West Smithfield and the railway depôt at East Smithfield.

Extent
property
of
London
and
India
Docks
Company.

96013. With regard to docks proper, this company has control over the great mass of the dock accommodation in London ?—Yes; all the docks with the exception of the Surrey and Commercial Docks, the Millwall Docks, and the small Regent's Canal Dock.

96014. There is a mass of labour employed by wharfingers, warehousemen and others which is very much the same kind of labour as that which finds employment at the London and India Docks ?—That is so.

Labour
employed
by
others
than
Dock
Company

96015. So if we want to get at all at the figures of the amount of casual labour or permanent labour connected with the Port of London, you have got to take those into consideration as well ?—Yes, certainly; ours is a small proportion of the labour in the docks.

Dock
Company
employment
small
proportion
of
the
labour
in
the
Docks

96016. You say in the year 1906, 72 per cent. of the labour employed in the London and India Docks was paid for by regular weekly wages ?—Yes.

Classification
of
labour
employed
by
Dock
Company

96017. 28 per cent. was performed by preference and casual labourers ?—That is so.

96018. What is the total number of men employed by the London and India Docks Company ?—We have on our books about 4,200 men.

96019. Would the 72 per cent. be 72 per cent. on the 4,200 ?—Yes, practically.

96020. Roughly, we may take it that ?—Yes.

96021. Have you any idea what the amount of the other casual labour connected with wharves and loading and unloading ships in London is ?—I am afraid not.

96022. Have you any sort of idea what proportion it would bear to this 4,000 odd ?—Very few of the master porters and stevedores have a regular weekly staff; that is, engage their men weekly.

96023. But they would employ casual labour?—It is nearly all casual labour; but, of course, a proportion of it gets pretty regular employment.

96024. Would the mass of labour outside your docks be much greater than the mass of labour you employ?—As far as casual labour is concerned very much larger.

96025. I assume in regard to the great mass of the labour employed outside the London and India Docks Company the same conditions prevail as did before 1896, inasmuch as the great mass of it is casual, and is not weekly paid?—Yes; I should say so.

96026. So that the changes or reforms, if you like to call them so, which were made by the London and India Docks in 1906 only affect a certain proportion of the casual labour in connection with loading and unloading ships?—That is so.

96027. I believe you gave evidence at some length before the Charity Organisation Committee?—I did.

96028. I will put one or two questions in connection with that which will make clear what was done. What wages do the men get who are in regular employment?—24s. Perhaps I had better hand in the "Conditions of employment," because it gives the conditions of each class of labour. With regard to permanent labourers the engagement is terminable on either side, for any cause, at seven days' notice from any pay day. Regular employment only during good behaviour. Wages 24s. a week of six days of eight working hours between 6 a.m. and 6 p.m.; overtime pay at current rates. Leave. Three days annually in addition to general holidays. Pension. Without deduction from wages, according to scale, to any permanent labourer if incapacitated for work by circumstances beyond his own control, after at least fifteen years' service. Dismissal.—A permanent labourer is liable to dismissal for any misconduct, indolence, or absence from work without leave. Qualifications.—Permanent labourers must have served for at least twelve months as registered labourers, and have been between twenty-three and thirty years of age on appointment to List 'A.' They must be physically sound and strong (to be certified by company's medical officer), and of good character. They must be ready to perform any work which they may reasonably be called upon to perform. This is the engagement form (*Produced*). (See Appendix No. XIV.)

96029. 72 per cent. of the men who have regular weekly wages would consist of those whose engagement you have just read out. Then they are supplemented, are they not, by another set of men whose wages vary a little in winter?—That is so.

96030. You take those both as permanent?—They are practically permanent; but the registered men, the List A men, do not have all the advantages of the others.

96031. Now will you tell us about the registered men?—Their engagement is terminable on either side, for any cause, at seven days' notice from any pay day. Regular employment only during good behaviour. Wages, 24s. per week of forty-eight hours in summer, and 21s. per week of forty-two working hours in winter (that is where the difference comes in) overtime at current rates. Leave, three days annually after twelve months' service on this list. Dismissal, registered labourers are liable to dismissal for any misconduct, and so on. They do not have a pension.

96032. If they are moved up to the first scale does the time they have passed on this list count towards the pension?—Yes, it is allowed to count half their time.

96033. When were pensions instituted?—For a number of years we have had pensions. I think the conditions were varied a little some twelve or fourteen years ago, but pensions have been in operation for a long time. Then we have the preference labourers, the B list, those men have tickets issued to them; they are not weekly men, they are taken on day by day as required. They have these tickets (*Produced*)* which are issued every quarter. Fresh tickets are issued of different colour every quarter. They are taken on in the strict order in which they appear in the list. The authorised numbers of B men are fixed for each department according to the amount of work actually undertaken, and on the basis of about 40 to 45 per cent. of the number of men generally at work. If a department on an average employed

100 labourers per day, it would have appropriated to it 40 to 45 preference men in addition to the men on weekly wages.

96034. What does the department mean?—The department means the separate control within the docks; the unit of control. There are forty-five departments in the whole establishment.

96035. Then each set of preference labourers are divided?—Yes.

96036. Have they separate what you may call stands at each dock where they are engaged, not necessarily at each department; several departments will take on their men at one place.

96037. Are they taken on at the same time generally each day?—The time varies, six, seven, or eight o'clock in the morning; and if it is found necessary they are taken on after that during the morning.

96038. At the sea-port towns they tell us that these persons know what vessels are coming in or going out, so that they come then. It would be difficult, I suppose, in London, to make the same observations. These men have to wait all the day outside?—That is one of the merits, if I may say so, of the system we have, because they are all taken on strictly according to their number on the list; and we publish the requirements the afternoon before. That is post them up at the docks; and the men can gauge fairly well whether they will be required, therefore if work is slack the men at the bottom of the list do not show up; they know there is no work for them. In that respect it is different from years ago, when all the men came down, and the man at the tail end of the list, if there was a list, had as much chance as the man at the top. We take the men on as follows: Supposing we require only fifty from the top of the list to-day we take the first fifty. To-morrow if we want fifty, we do not take the second fifty, we take the first fifty again; so the work is kept amongst the smallest number of men in order that at the end of the week a few men may get a full week's work rather than a large number of men get a day or a day-and-a-half's work.

96039. Your object is permanence and regularity of work?—Yes.

96040. Is there anything after the B. men?—Then there are the casuals; but under our arrangements they do not have very much chance.

96041. Do they attend in any numbers on the chance?—There are not nearly so many attend as there used to be. They know we work this system in a very strict manner, and unless there is a very great influx of work, an unexpected rush of work, there is not very much chance for them.

96042. Looked at simply from the fact of the condition of your employees under this system, the men are in a much better condition altogether than they were under the system where you had nothing but casual employment?—I think so. The men who get our work get more regular work, and they are better able to do the work that is given to them.

96043. Have you heard any account as to whether their domestic arrangements, and all that, are better, that they give regular allowances to their wives, and so on, under this arrangement?—I cannot say I have any positive knowledge.

96044. You do not know whether they have improved in that direction?—No; I think it is very likely they do benefit that way, that the benefit reaches the home as well as the individual.

96045. (*Mr. Lansbury.*) Do you come in contact with the men at all?—I do not at the present time.

96046. Do you see them?—I have been thirty-five years in the service; I have been in charge of one of the controls in Tilbury; I was in charge of the wool warehouse, the largest labour control in the London Docks.

96047. Did you see any improvement in the behaviour of the men, and in the dress of the men?—Generally, I should say "yes."

* Not reproduced.

- Mr. Henry Hamilton Watts.*
- 3 Mar. 1908. Selection of "preference" men and revision of lists.
- Effect on casual labour.
- Numbers employed by Company have diminished only through giving up certain classes of work.
- Reduction not due to machinery.
- Preference of good men for regular employment.
- Total labour employed in Port of London not decreased.
- Quality of work.
- Overtime.
- Improve-ment in condition of men and quality of work.
96048. I suppose that it is a process rather of physical selection that the men most permanently employed are the strongest and the best?—We pick out the best men to put on these lists; but every three months the list with the preference men at each department is gone over very carefully. We keep a book showing their attendance, and if we find that any have been slack in not applying for work when they ought to have been there they are dropped down in their order, and the better men are put up; so it is all worked with the view of the better-class men getting the most work. A man who does not attend at all regularly eventually finds himself at the bottom of the list, and he gets the least chance of any, and drops out altogether.
96049. While this must have improved the condition of those in permanent employ, I suppose it has left the condition of the casual labourer worse than it was before?—I suppose that is so except in this way; that I do believe there are fewer casual men come round for the work now. I daresay there are as many casual men about, but they do not flock up and hang round the gate to the extent they used to before on the off-chance of work.
96050. There is not the number of people lingering and loafing about?—Not as a rule.
96051. That being the system, what effect has it had on the number employed by your Company?—Has the number diminished say in the last ten years?—It has diminished, but not entirely for that reason. We have been giving up work. Shipowners take on their own men within the docks, and we permit them to do so when they wish it. So the total number of men employed by the dock company has decreased during the last ten years.
96052. Will you put that in figures? According to this statement it seems that the average number of men employed has decreased from 5,076 in the year 1894, to 3,054 in the year 1904; there has been a considerable reduction?—Yes.
96053. I suppose that is really due to machinery taking their place?—I do not think that has affected it very much. It has to some extent.
96054. Are these men that you employ keen to get these regular jobs, or do you see any disposition on their part to prefer the other system?—I do not think they prefer the other system, not men that are worth anything. Men that are at all worth considering value the regular employment.
96055. Should you say the total number of persons employed in this work in the Port of London has decreased during the last ten years?—I should not think so. There is as much work in the port now as ever, more I should think; the Board of Trade has got that information.
96056. Should you say the work is better done?—So far as the docks are concerned I should.
96057. Has this checked overtime much?—I do not think it has had much effect upon overtime because the overtime is necessary by the requirements of shipowners and merchants.
96058. There is unlimited overtime at certain docks and the same man works right on, and then takes a day or two off. How do you manage here?—We do not allow that. We have very strict instructions, which our directors are very keen on being carried out, that no man is allowed to work more than sixteen hours, and he must not come on again under twelve hours after that.
96059. Are the men who are employed after a certain time of the day entitled to higher pay?—From 6 o'clock at night to 6 the next morning it is 8d. an hour instead of 6d.
96060. Is there much dodging to get the higher rate of pay?—I do not think so.
96061. That works fairly well, does it?—Yes; men appreciate a certain amount of overtime to increase their earnings; but I do not think there is any inclination to spin the work out, or anything of that kind, in order to get it.
96062. You have been many years in the service of the Company; and would you say there was an improvement both as regards the condition of the men and the quality of the work done?—Yes.
96063. Can it be pushed much further?—I do not think it can. Directly we get over 75 per cent. of work performed by weekly men we find that occasionally we have weekly men on hand unemployed. We do occasionally now. The work necessarily is intermittent; and although we turn our weekly men about from dock to dock, we find sometimes that we have more men on hand than we have work for for a day; and that is money out of pocket.
96064. You pay them the same?—Yes, the permanent and registered men.
96065. Is there any union amongst the men or any insurance? They come under the Compensation Act, I suppose?—Yes.
96066. There is no insurance against unemployment, or anything of that kind?—Not that I know of.
96067. There is a Dockers' Union, is there not?—Yes, but we do not have much to do with it. I think the men seem fairly contented just now.
96068. Are the men on piecework?—Yes, 83 per cent. of our work is done on piecework.
96069. They get a bonus, do they not, under certain conditions?—Yes. We grant the men regulation pay as a first charge on the job. A number of the men are employed on discharging a ship, and a certain rate is fixed per ton; out of that money the regulation pay is paid to each man according to the number of hours that he has worked; the difference between that amount and the amount that has been agreed upon to be paid is the bonus. That is to be divided into one-tenths of a penny, and the total number of hours worked on the job by the number of men is divided into that, and they are paid each man according to the number of hours he has worked.
96070. In old days, as I understand it, there was a difference between the price paid by the company for the labour they took on and the price charged to the shipowner. What do you do now if a ship comes in. Do you contract with the shipowner to unload it?—Yes. We have tariff rates, and the shipowner puts his ship in and the tariff rate applies. There is a difference between that rate and what we pay the men, necessarily, because the dock company must have some profit.
96071. Do the shipowners grumble at all at the tariff rate; is it higher under this system than it used to be?—The tariff is not higher, but sometimes they grumble, they think that they should get the work done for less.
96072. Do they at all say that you have run up the expenditure and the consequent tariff by employing people by the week?—No, we have not.
96073. That is not the allegation?—No, I do not think that our labour costs us more now than it did formerly. The men individually get more now than they did; through the piecework, I should say on the average the men get 1½d. an hour more, taken throughout the year; their 6d., putting it in that way, becomes about 7½d.
96074. I suppose you are in communication with all the different docks from the centre?—Yes.
96075. Is that ever useful in enabling you to distribute the labour?—Yes. Our system is complete under which, every afternoon, the question of distributing labour is gone into by each superintendent of the different sets of docks. We have five sets of docks and five superintendents, and the labour is regulated every afternoon. If there are surplus weekly men at the West India Dock, the London Dock is informed and a few are sent along. I might mention it is not intended to have any more than is sufficient for each set of docks; the organisation is on the basis of the number of men required for each dock. We do not have more at one set of docks than we believe are necessary for the work of those docks, but when it happens that the work is very slack, and we have not full employment for some of the weekly men, the surplus is transferred to one of the docks, temporarily, where there is more work.
96076. It has been suggested to us in certain quarters, with regard to this casual unemployed labour generally, that the establishment of a regular system of labour exchanges in connection one with another would enable this labour to become more mobile and be better dis-

tributed. I gather rather from the system you have in force at the docks now it is rather a system of labour exchanges?—It is, it follows on those lines.

96077. What should you say from your experience; would you think a system like that would be beneficial if applied generally to other branches of casual work?—I think it would; although I see greater difficulty, as a matter of fact, than we experience, because our labour exchange is, of course, under the direct control of the managers and directors, and no officer at any of the docks can make any demur or raise any objection to the arrangement being carried out, whereas if you got a number of employers in a district, you would find one man willing to fall in with a system and another man, for one reason or another, not so willing, and another man objecting altogether. You have no power at the present time to compel them to fall into line.

96078. You not only have established a labour exchange, but you lay down there very precisely the terms and conditions of employment. I do not assume that a labour exchange would attempt to do that, except in a very general way?—No, but we find sometimes at the London Dock we may have some weekly men to send from the West India Dock; the officers of the London Dock may say: I wish you would not send me these men, I would sooner have my own preference men that are here and take on some of the extra men I know, rather than take on your weekly men; I wish you would not send them up; but we send them up and say: You must have them. The same objection would apply if you had various wharves; you would have one man say: I will take men not employed; but at another wharf another wharfinger would say: I will get my own men, I do not want men sent to me, I can meet my own requirements in my own way.

96079. Your point is that a labour exchange, if it had unlimited powers of selection with regard to the persons a particular employer was to take, very probably might come into collision with that employer?—Yes.

96080. I think that is clear, but the idea that was behind the scheme in the minds of those who promoted it was that it would give information to the most unskilled and least mobile class of labour, and might in certain cases, and probably would in a good many cases, put them in communication with employers?—Quite so. From that point of view it would be very useful, but ours goes a good deal further.

96081. But taking purely an exchange?—It would be useful.

96082. Then you say it would be a benefit?—Yes, certainly I do.

96083. I suppose in the old days a strong docker could earn more than his 24s. a week?—Yes, and they do now, because our weekly men's wages average, I should say, 31s. or 32s. a week all the year round, with the bonuses and the little overtime they get.

96084. Your overtime is limited to sixteen hours? What is the actual day's work?—Eight hours, according to the engagement, but that is nominal. If there is no particular reason for continuing work, if it is not necessary to get a ship out within a given time, then we should only work the eight hours. We work from eight till half-past four; the half hour is dinner time. But if dispatch is required for a ship the men may work longer than the eight hours.

96085. Would a man be able to claim overtime after eight hours?—Yes. We pay 6d. an hour up to six o'clock, and then if he works till eight, he would be paid two hours at 8d. an hour.

96086. How was the system of pensions worked in the old days when you had almost only casual labour?—It did not apply to the casual labour. There were some permanent labourers, but I might mention that the dock company is very good to even the casual labourers, they give them compassionate allowances of 5s. a week or something like that, when they have proved they have been following the Dock Company's work and getting most of their livelihood at that dock for a number of years, twenty or twenty-five years, and they cannot do any more work.

96087. Now as to boys. Do you take boys on?—Yes.

96088. What class do they come on first?—As messenger boys. We have some that are boy labourers. They are the messenger boys that do not pass the examination for the minor staff. They have an opportunity, when they have been messengers for a few years, to pass an examination which will enable them to become assistants and junior foremen; if they do not pass those examinations we put them into the boy labour class.

96089. You find employment for all your boys who qualify for it?—Yes.

96090. They pass on?—Yes. The messenger boys who pass the examination become assistants and junior foremen, and ultimately foremen and outdoor clerks. Those who do not pass the examination become boy labourers and then are drafted into the permanent labour staff when they become twenty-three years of age. By this system all the lads who enter the Service are provided for for life, subject to good health and good behaviour; and the Company obtains a staff trained by itself to meet all its varied requirements.

96091. Do you find you get as boys the sons of men working for you?—Yes.

96092. Is it at all a hereditary profession, should you say?—To an extent it is.

96093. I assume the physique of the permanent men is good?—Yes, we take care that it is so.

96094. Should you say that their conduct and discipline has been better since you had this system of regular weekly employment?—Yes. We watch their attendance; we have returns every quarter of the weekly men and we look up the superintendents if we find at any particular date their permanent men or registered men have been absent above the average.

96095. Have you many stevedores in your employment?—Not actually in our employment. We control our labour direct, and we pay our men direct. I might mention that, particularly, it is a feature that we do not allow any middleman to pay our men; we do not contract with any of our men and give them the money to pay the other men. We insist on paying every man.

96096. You have no gang system?—The men work in gangs. We pay our men direct by the company's pay clerk.

96097. They would do the class of work of stevedores, although not called by that name?—Stevedores are principally men who load ships. We load very few ships indeed, only a little Continental work. Our ship work is mostly discharging, and stevedores until just recently did not do it. The last year or two stevedores have done more unloading of ships.

96098. Who does load the ships?—The stevedores load the ships.

96099. In dock?—Yes, but we have nothing to do with that.

96100. It is more skilled work?—Yes, especially with colonial cargoes going long distances.

96101. The stevedores, if they load, bring in their gangs?—Yes.

96102. That would all be over and above the number you have given us?—Yes.

96103. The great proportion of ships that come in with cargo take a cargo out?—Yes.

96104. So there would be a very large addition to the number you have given us?—Yes.

96105. Would those men be all casual, other than the stevedores?—Yes, I think they are. I do not think any master stevedore has actual weekly men, but he has a certain number of men following him that get pretty regular work. I do not think they have permanent engagements in the way that the dock company's men have.

96106. Do your own foremen like your system? Before they had much more power of selection and discharge?—I do not think our foremen quite like it; the selection of men is a great deal taken out of their hands by the system.

3 Mar. 1908.

Bulk of
work in
docks done
by casual
labour.

96107. Naturally they are not such big people as they were before?—They are bound to take on the preference men in the order of the list; they cannot select a relative or a friend, or anything of that kind. They must take them on according to this list; and they do not quite like that restriction.

96108. (Mr. Lansbury.) There is a great amount of work done at the docks that your company is not responsible for, is there not?—Yes.

96109. Would it be the biggest part of the work?—Yes.

96110. And that in the main is casual, is it not?—Yes, casual, subject to my remark about the stevedores.

96111. Subject to one stevedore having a certain following of men?—Yes.

96112. Who are the other people, the big shipping companies?—Some of the large shipping companies employ their own men direct.

96113. Very much in the same way that the dock company used to employ them?—Yes.

96114. Could you give us a figure in any way showing the numbers that are employed by the dock company under your system, and the numbers employed in the various docks by the shipping companies and the stevedores?—I am afraid not.

96115. Would it be possible to get that?—I do not think we could get it. I think in the Board of Trade monthly Returns they obtain it from a certain number of wharves and employers.

96116. But not all, I think?—No, they mention a number, I think. If I remember rightly (I have not seen it just lately) it is about 12,000 to 14,000.

96117. So that your system only applies to a small part of the work of docks and shipping generally?—Yes.

96118. Do you think it is possible for the shipping companies to do as you have done?—I think it would be possible.

96119. It is simply they do not take the trouble to do it?—Yes; there is a great deal of trouble involved in this, but our directors have insisted upon its being carried out. In the first instance there were difficulties, but I think the result is that the policy justifies them not only with regard to the men, but themselves as employers.

96120. So there would not be any great harm done in passing an Act of Parliament setting up a labour exchange, and in compelling the owners to do this?—I do not think so, subject to reasonable arrangements and regulations; that is, I think the labour exchange should be according to groups of employers, certain descriptions of employers. I think, for instance, the regulation, or whatever it is, should apply to employers of similar men.

96121. Take timber, which is a good big lump of your business at the West India and Victoria Docks, you would make it apply to all that?—Yes, but I meant it is not much good sending a painter to take the place of a dock labourer.

96122. It would have to be men competent to do the work?—Quite so.

96123. Subject to that, there would not be much harm in doing it?—No. For instance, taking the Albert Dock, I do not see why the Atlantic Transport men should not interchange with the P. & O. and any other large liners that employ their own labour.

96124. You do not think there is a real objection because of the ships coming in at various times and having to get out so very quickly?—I do not see that that makes any difference at all.

96125. The argument is that a steamship must be got out very much quicker than you formerly got out a sailing ship, for instance?—Yes.

96126. It is more expensive to keep it lying in the dock?—Yes.

96127. Therefore you must have men working night and day on purpose to clear it?—Then they should take the men that the exchange provided for them, rather than go to the men outside.

96128. You might not be able to get regular work, that is what I was getting at. Would not these fluctua-

tions prevent what you have really done, taking on men by the week, say 75 per cent. of them?—Yes, but I was not thinking of it in connection with weekly men, I was thinking of it as providing more regular employment for casual men.

96129. I was rather thinking of getting rid of the casual idea of paying wages daily, which I think you will agree, is a bad sort of way of paying wages. You do not think the payment of wages daily is good, do you?—No, I do not.

96130. I was wondering whether it was possible to frame a scheme by which the mass of the work at the docks could be done by the payment of weekly wages?

96131. (Chairman.) How are the men paid now, daily?—Yes. That is the preference and casual men.

96132. Is any receipt given?—No.

96133. It is just a kind of cash payment, is it?—Yes.

96134. Is there no receipt or stamp given for it?—No, the pay book is run out with the number of hours and the ticket number and the money at the side. Then the man comes to the window and the money is handed out; he takes it, and it is struck off the list.

96135. There is a system adopted abroad somewhere where a stamp is put on every time. There would not be much difficulty in that, would there, if a man handed in his parchment, or whatever it was, a stamp would be put on it?—There would be difficulties at some of our places. Take the wool warehouse; sometimes we have 1,000 men there, just while the sales are on, for a week or ten days; a large number are extra men. Directly the work is over at night they all flock down to the pay window; and there must not be the slightest delay in paying them the money. If they had to give a receipt, or any formality of that kind was gone through, it would hinder the payment, and the men would resent it very much.

96136. (Mr. Lansbury.) Your experience and your opinion is definitely that it is much better to employ men regularly if possible?—Certainly.

96137. It improves their physique, and condition generally, you would say?—Yes.

96138. With regard to the docks, I understand you to say there is as much business done now as ever, probably more?—Yes.

96139. Would it not be true to say you had not only re-organised the employment of your labour in this way, but have you not also rather re-organised your methods, your mechanical methods, for dealing with stuff?—There has not been very much alteration, if it is a question of discharging. Take the wood wharves at the West India Docks. There have always been cranes there for moving the logs into position.

96140. But not electric cranes?—There were hand and steam travellers before the electric cranes which have been used for a number of years.

96141. But you are able to handle a bigger quantity of stuff with less labour now, are you not?—I mentioned the wood department because there is more machinery there than anywhere else. With that exception, I do not think there has been very much change. We should rather like to bring in more machinery, but the character of the work does not permit of it.

96142. As to dealing with the logs, I rather think formerly they were hand cranes?—Yes, they were worked by hand, then electricity was applied to them; but that is a small proportion of our work, comparatively.

96143. (Professor Smart.) What is the character of the ships coming into your docks?—All sorts, from every part of the world, from America, Australia, India, China, and all parts of the Continent.

96144. There are no liners, are there?—Yes, there are lots of liners; the P. & O., the Orient.

96145. The P. & O. come into your dock?—Yes, and the White Star, and the Atlantic Transport.

96146. They make use of your docks entirely?—Yes.

96147. Exclusively?—Yes.

96148. May one gather from that that the trade of your docks is more steady than the trade of other docks?—Yes; the liner business steadies the work.

Effect of
"liner"
business
steadying
work.

96149. So that you have an advantage in this system that other docks would not have?—Which other docks?

96150. Any other docks where you have not this steady liner work?—There is a certain proportion of liner work in the other docks of the port.

96151. Wherever you have the liner work you have an element of steadiness?—Yes.

96152. You draw a sharp line between preference and casual men, I see?—Yes.

96153. What is the result as regards preference men? How many days a week would they generally get?—About three, taking the year throughout.

96154. Not more than three?—No; but I might say that our list of preference men is rather a longer list than we need; we really ought to cut it down; but it is such a great advantage to the men having these tickets that a man, although we cannot give him very much work at a particular date when he has the ticket issued, knows that the ticket will give him preference for the work at any of our docks before a casual man; so we have allowed our numbers to continue rather larger than we think absolutely necessary; that is rather in the interests of the men than the company.

96155. Does your preference man go anywhere else?—To any of our docks.

96156. Beyond that?—He can go anywhere; the fact that he has a ticket does not debar him from getting employment in any other place.

96157. Would it not be rather an advantage to him?—I do not know what use he makes of his ticket outside our employ. It would not be a disadvantage, because to some extent it is a guarantee of character.

96158. If preference men having this great advantage can only earn three days a week, the advantage is not so great, is it?—That is the average taking this long list; but the men at the top of the list of each department get a great deal more work than that.

96159. What year did you make this change? Was it after the dock strike?—Yes, about that time. The change has been gradual rather. Mr. Hubbard was chairman then, and he took a great interest in these matters, and introduced these changes.

96160. What were the reasons for making the changes?—I cannot say exactly what the reasons were, any more than that it was thought to be an improvement; that it was a great improvement to the men, and it would not be disadvantageous to the company; although some people connected with the docks thought the directors were going rather too much on philanthropic lines; still the result, in my opinion, and I have watched it very closely for some years, is that it has been beneficial to the company as well as the men.

96161. I asked for the reason that your dock is the only large dock that has adopted the system at all?—Yes. I do not think there is any dock which carries this out as completely as we do.

96162. It must have been philanthropic notions in the first place that led you to do it?—It was in the thoughts of some of the people connected with the docks at the time, that there was more philanthropy about it than anything else.

96163. I do not see how you gain by it except in that respect?—We get better work; instead of having a lot of casual men spread about amongst our better men, the casual element is kept out, and the work is concentrated upon the weekly and the better preference men; the consequence is we get good work done, the men are more fit, and they are able to do better work.

96164. At the same time you have admitted there is a heavy charge when the men are not employed, when you cannot find work for them?—There is some expense for that; but we consider that the advantages of having a considerable weekly staff out-weigh that. We watch it every year. If we find our work is decreasing, and that we must diminish the number of weekly men we do so, and if we can see our way to increase the weekly men we do so. Just now we are increasing the number of weekly men.

96165. It is quite natural we should ask you that, because we find nobody else has followed the system.

Apparently the other employers say it is impossible. They frequently say they do not know your system, but there must be something to differentiate you from the others?—That may be so.

96166. (*Chairman.*) I understand you rather repudiate that theory, and on the other hand maintain that, balancing both sides of the question, you think your company have gained in having a better class of men, more reliable men?—Yes.

96167. Men on whom you can depend at a pinch better than you could under the old system?—Yes, and the men earn more money than they used to. Their average money was less a few years ago than it is now under this system. It limits the number of men, and the consequence is that fewer men are employed. They are moved about and become more competent, and they earn on the average a better week's wage than they did formerly. That all has its results, and it is a good result for the men and for the company.

96168. (*Miss Hill.*) If the work was more irregular, it might be more difficult to do it; but would not that mean you would have a fewer number of weekly men, and a larger number of preference men?—That would be so.

96169. (*Professor Smart.*) There is another difference, is there not?—You are a Dock Company altogether?—Yes.

96170. You are not shipowners?—No.

96171. Has not the movement for a similar method to yours been tried rather by shipowners than by dock companies, Mr. Booth, for example?—I do not know the cases where they have tried it. I do not mean to suggest it has not been tried.

96172. (*Chairman.*) Here you have the right to unload any vessel that comes in; is that not so?—I do not know that we have exactly the right, but we do a proportion of the work.

96173. Could a shipowner say: I will unload my ship myself?—Yes.

96174. But they do not as a rule?—Yes, they do in many cases.

96175. (*Professor Smart.*) There would be more difficulty in the way of a shipowner adopting this method than a dock company?—Yes; because he has not the opportunity of moving his men about in the way that we have.

96176. You own warehouses as well, do you not?—Yes; we do a large warehousing business.

96177. Your weekly men are engaged in that, too?—Yes.

96178. Can you shift men from the unloading of ships to warehouse work?—Yes.

96179. That gives you practically two trades?—Yes.

96180. That is an advantage you have?—Yes.

96181. You allow perfect liberty to shipowners to use their own stevedores, and do their own unloading?—Yes.

96182. Do they avail themselves of that much?—Yes; to a considerable extent, the last few years.

96183. You speak of casual work; but it seems to me you have no proper casual work; you say the minimum period for which men are engaged is four hours?—Yes.

96184. We usually mean by "casual men," men who are paid by the hour?—They are paid at the hour rate; but they are never taken on for less than four hours.

96185. You say four hours or 2s.?—It is the same thing.

96186. It need not be if it is 8d. an hour. Why did you introduce pensions?—As an additional inducement to the men to value their employment, and continue to be of good conduct.

96187. It is confined to the weekly men?—To the permanent men, not the registered men.

96188. Do you find these preference men stick by you?—Yes.

96189. Do not they stick too well by you rather; they would rather have three days a week with you than

Mr. Henry Hamilton Watts.

3 Mar. 1908.

Advantage of system to employers and employed.

Greater irregularity of work would necessitate smaller number of weekly men.

Dock Company are not shipowners.

Advantage of Dock Company in having large number of docks and variety of trade.

Employment of labour in docks by shipowners and stevedores.

Pensions.

*Mr. Henry
Hamilton
Watts.*

System
based on
mobility of
labour
among the
departments.

try for a fourth or fifth day elsewhere?—Very few leave our employ when once on the list. They obtain employment elsewhere between times about the docks as dock labourers.

96190. And very few try to get work for the other days?—No. A number of them obtain a fair turn of work with other employers of dock labour.

96191. Have you mobility amongst your departments?—Yes, the system is based on that. The preference man can go from one department to another, and from one dock to another if necessary.

96192. Most of your men are union men, I suppose?—I do not know.

96193. Have you heard of any jealousy of your system on the part of the unions?—No, not distinctly stated.

96194. Was not the whole system a logical outcome of the dock strike?—I think it pressed on the organisation that the directors had in mind.

Organisation.

96195. Your docks are very near each other, are they not?—The Albert and Victoria docks are six miles from the London and St. Katherine's dock.

96196. Does not that make it very expensive to shift the men from one place to another?—A great many of our weekly men live between; we simply give them orders at night where they are to turn up next day.

96197. There is every facility for communication?—Yes.

96198. Would you like to express an opinion of your own why your system has not been followed by others?—I should think it is because it was too much trouble and that our circumstances are a little more favourable than they would be in the case of smaller employers.

Average
wages of
regular men.

96199. (*Mr. Bentham.*) Could you tell us what the average wages of your regular men are?—I took the average wages for a week a week or two ago; we take it twice a year just to test it. The average of the permanent men was 31s. 6d., and the registered men 29s. 11d.

Wages in
winter.

96200. (*Professor Smart.*) There is a difference in the winter's wages?—It varies. I notice when it was taken in July, 1906 the average wage of the permanent men was 32s. 7d., and of the registered men 31s. 9d. It fluctuates from about 29s. to 32s.

96201. (*Mr. Bentham.*) Have you the average for a whole year of your regular men?—This is the average of the establishment for a week; we take it twice a year, once in the summer, once in the winter; we have got it for a number of years, and we find it always runs just about that.

96202. You could say that that would be the average earnings of these men for the whole year?—Yes, I think so.

96203. (*Mr. Patten-MacDougall.*) The number in your employ you said decreased considerably up to 1904. I think you gave the figure of 1904 as something over 3,000?—In 1904 it was 4,661.

96204. You gave two years to the Chairman originally; and I think the decrease was a decrease of something like 2,000, was it not?—Going back to 1893 our number of men was 6,034. On January 1st, 1908, it was 4,170.

96205. It has gone up since 1904; it has increased again. In 1904 you said it was 3,000?—I think the explanation is that I was speaking of the weekly men then, but now I am giving you the total with the preference men. The number in 1894 was 6,063; in the year 1904, it was 4,661. The figures I was referring to are the numbers of men on the list.

96206. What is the number for the latest period you can give me as compared with 1904?—I have just given the numbers of men on the lists. The average numbers of men actually employed were in 1904, 3054 and in 1907, 2974.

96207. That is practically a decrease of something like eighty?—Yes, that would be so.

96208. You said, I think, it was not the introduction of machinery that caused that decrease?—No.

96209. What was the cause?—The decrease in the work that is undertaken by the dock company, the transfer of work to shipowners. In some cases the dock company's own work is performed by shipowners at a rate; instead of our mixing our men with the shipowners' men, if we have some work on the same quay we pay them a tonnage rate to do it with their own men.

96210. It was merely a transfer of some of the work which you had previously done to the shipping companies?—Yes.

96211. It did not mean a diminution in the amount of work?—No.

96212. Or in the number of dock labourers employed?—No.

96213. (*Professor Smart.*) But a change in the character of it back to casual labour?—That is so.

96214. (*Mr. Gardiner.*) Do the shipowners save money by not allowing you to do this; is that the reason?—Yes, they think so; It is a mutual advantage.

96215. (*Mr. Patten-MacDougall.*) Did you ever do the loading as well as the unloading?—No, none of the stevedoring.

96216. Never?—We do a little for the continental boats; but the loading of the steamers for the Colonies we never do.

96217. The reduction was not due to anything of that kind?—No.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. LORD GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. C. S. LOCH.

Mr. J. PATTEN-MACDOUGALL, C.B.
Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.
The Rev. PREBENDARY H. RUSSELL WAKEFIELD.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. REGINALD A. BRAY, called; and Examined.

Mr. Reginald
A. Bray.

16 Mar. 1908.

96218. (*Chairman*.) You have been good enough to send us a paper relating to various questions connected with child employment, which, if you will kindly hand it in, we will treat as your Evidence-in-chief?—Certainly. (*The Witness handed in the following Statement.*)

I.

PRESENT CONDITIONS OF CHILD EMPLOYMENT.

1. My experience of London children stretches over a period of more than twelve years. During this time while residing throughout in a poor neighbourhood, I have been on different occasions a member of a board of guardians, a member of the London School Board, and a member of the London County Council. I was recently appointed chairman of a special committee, appointed by the London County Council to consider the question of apprenticeship, and was responsible for the report which was afterwards published.

2. No accurate figures exist which give the occupations followed at present by any large number of London children as they leave school. At the same time there is little doubt or disagreement concerning the main facts of the case. My experience, which is confirmed by the head teachers of a large number of elementary schools, may be summed up briefly in the following assertions:—

(i) The majority of children leave school at the earliest moment allowed. In London this age of exemption is usually fourteen years. But the cleverer children are able to obtain a labour certificate at thirteen. To be eligible to sit for the examination a child must have been six months in Standard VII. In consequence, the number who obtain the labour certificate is not large, but unfortunately includes the cleverest children. The better classification in the schools and the more rapid promotion, which are now becoming more common, are, however, tending to increase the number of those who are eligible to leave school before the age of fourteen is reached.

(ii) The majority of the children who leave school at the earliest possible age, choose and find situations for themselves. The parents have little voice in the matter. The father has no time to find his boy a place, except on the rare occasions when there happens to be a vacancy where he himself is employed. What is true of boys is equally true of girls, though in their case a few parents forbid certain forms of employment, as, for example, work in a factory. Naturally, when the children are left to choose for themselves, immediate earnings, and not opportunities for training or prospects of advancement, decide their choice.

(iii) The majority of the occupations selected by the boys fall into one or other of the following classes of employment:—van-boy, telegraph-boy, district

messenger, shop-boy, errand boy. If they enter a workshop they are, as a rule, set to perform tasks rigidly restricted to boys. I recently visited a factory where two men "set up" the work and fifty boys, fresh from school, minded the machines. They all left after two or three years.

(iv) These various types of employment are distinguished by fairly uniform characteristics:—

(a) The hours, including the journeys to and from work, are long. Apart from the fact that the boys on their return are too tired, they return in many cases too late to attend evening continuation classes. Late hours.

(b) The work affords no training and is altogether of an uneducative character; while the hours are long, the boys are frequently doing nothing for considerable periods, are left much to their own resources, and receive no proper supervision from the master. Uneducative work.

(c) The work supplies no incentive to industry and tends to encourage idleness. For, in the first place, there is little or no prospect of advance, and good and bad conduct alike receive the same ultimate treatment—dismissal at any age varying from sixteen to eighteen. And, secondly, the demand for boy labour is so large that a boy knows that, if he loses one situation through misconduct he can, without trouble, find another. The boys are continually changing their occupation and throwing up their place at the smallest provocation. It is a matter of common experience in boys' clubs and boys' homes that, in the course of a single year, a boy will frequently have obtained and lost three or four different situations. Lack of incentive industry.

(d) The fatigue which results from long standing or running about or from lifting heavy weights, is excessive and militates against any proper all-round physical development. No all-round physical development.

(v) When the boy reaches the age of about eighteen the effects of this kind of work and life are unmistakably stamped on his character. It may be useful to mention a few of the principal consequences. Effects of this work on the boy's character.

(a) The boy at the age of thirteen or fourteen has suddenly become a man with all a man's independence. He naturally turns to a man's pleasures before he has learned their consequences. To this cause must be attributed the increase in boy smoking and boy gambling which has, of late years, attracted much attention.

(b) The effect of the school discipline and school training has worn off. The lad of eighteen has neither the desire nor the ability to

Mr. Reginald
A. Bray.

16 Mar. 1908.

learn. While demanding the wages of a man, he is distinctly inferior in adaptability and intelligence to the boy of fourteen. His sole asset lies in a greater physical strength, accompanied, however, in many cases, if allowance be made for age, by a relatively poorer physique.

(c) He has acquired the fatal habit of continually shifting his occupation and of throwing up a job which in any way causes him dissatisfaction.

(d) But, at the same time, he no longer finds it so easy to discover employment and periods of out-of-work are frequent. In many cases he is fit for nothing but mere brute labour, while his poor physique often renders him unfit for this when demand is made for continuous exertion. He is of little general use to the employer and the boy, with his greater intelligence and his satisfaction with lower wages, becomes for him a dangerous rival

(vi) While it is true that no figures exist to show, in statistical form, the number of lads who drift into unskilled labour, certain facts of common observance clearly indicate the extent of the evil. Attention may be called to two characteristics which are year by year more clearly distinguishing industrial development in London

(a) "The skilled trades," says the report of the committee of the London County Council on apprenticeships, "are, we fear, recruited in the main by immigrants from outside London. In many trades the Londoner is at a discount. Acquainted as he is with but one or two operations of his industry, if he loses his situation it is only with the greatest of difficulty that he can find another. Mr. Charles Booth states that 'With carpenters and joiners, bricklayers, carriage-builders, engineers, smiths and saddlers, the percentages of heads of families born out of London range from 51 to 59.' An enquiry, made by the London County Council Technical Education Board on the building trades, showed that 'forty-one typical firms in various branches of the building trades, having 12,000 employés, had only eighty apprentices and 143 learners, instead of 1,600, which would have been the normal proportion. The London building trades are, in fact, recruited from the country.' The same report mentions that 'among the foremen and operatives who have come before us, not one stated that he was born or trained in London.' In these trades the better positions go inevitably to the country-bred man with his all-round training. In the docks alone does the Londoner hold his own. An enquiry there showed that, among the dock labourers proper, more than 70 per cent. were born in London—a result not calculated to excite any very solid satisfaction. These facts should arouse serious apprehension concerning the future of the London-born citizen. We cannot view with equanimity his relegation to lower positions while the better places are given to better-trained immigrants. We are not prepared to admit that the Londoner is, on the average, inherently inferior either in intelligence or in manual dexterity to his country-born neighbour. His unfortunate situation is, we think, due to lack of opportunity for industrial training and not to any innate infirmity incapable of cure."

(b) Secondly, we find the problem of the unemployed year by year assuming larger dimensions and attracting more serious attention. The increase of "out-relief," in many districts, while offering no adequate remedy, indicates the extent of the evil. Now, whatever other forces may contribute to swell the numbers of the unemployed, there can be no doubt that two causes, already mentioned, are largely responsible. On the one hand there is the growing tendency to substitute boy labour for man labour, and on the other the steady deterioration in the value of this adult labour.

While there is apparently little truth in the often repeated cry of "too old at forty," there is probably good reason to believe that in many cases we might say: "No use at five-and-twenty."

II.

PROPOSED REMEDIES.

3. Any remedies, adequate to the evil, must satisfy at least two conditions. On the one hand, the control of the State over the boy must not cease abruptly at the age of fourteen; and on the other hand, facilities must be given for a continuation of the boy's general education, and, in particular, for industrial training.

4. There is nothing new about such proposals and many precedents exist for action of this character. Under the Industrial Schools Act, 1866, children may be detained in an industrial school until they reach the age of sixteen; while under the Industrial Schools Acts Amendment Act, 1894, a child sent to an industrial school remains, after discharge, up to the age of eighteen, under the supervision of the manager of the school. Mentally and physically defective children are deemed to be children until the age of sixteen, and their attendance, part or whole time, may be enforced. Industrial training has always been made a prominent feature in the schools attended by such children.

5. It is true that these examples of an extended period of control refer only to the mentally, physically, or morally defective. But every argument, used to justify the attempt to render the inefficient citizen efficient, applies with greater force to an endeavour to prevent the efficient child becoming an inefficient man.

6. On the other hand, we have long since reconciled ourselves to the necessity of restricting the working hours of young persons. The various Factory Acts, the Prevention of Cruelty to Children Act, 1894, and the Employment of Children Act, 1903, have all had this end in view.

7. If we go further back in history we find that the State continually recognised its interest and its responsibility in the industrial training of the young. The Statute of Artificers, passed in the reign of Elizabeth, codified existing measures and attempted to enforce a seven years system of apprenticeship. Under the Poor Law Act of Elizabeth it was the duty of the overseers to apprentice any children, whether they were the sons of paupers or not, who in their opinion were not receiving a proper training. Indeed, it is only during the last century that we find the State neglecting to make proper provision for the training of the artisan and the labourer.

8. Further, proposals embodied in Bills of private members have more than once been made in Parliament with the view of establishing a system of compulsory evening classes. It is clear, however, that this suggestion alone cannot meet the necessities of the case. To insist that a lad, after a long day's work, should spend a couple of hours at an evening school would be an inhuman proceeding. It is obvious likewise that, worn out in body, he would not be in a condition likely to profit by instruction. If we add to this proposal rigid restrictions limiting the hours of employment we are at once faced with the practical difficulty of enforcing them. We may indeed limit hours in a factory, but it is impossible to do the same in the many miscellaneous occupations followed by the boys.

9. If we are anxious to provide effective training, and at the same time to limit the hours of employment, we can gain our end only in one way. We must have the boy in school during a portion of the working hours. I suggest, therefore, that we should establish a new system of half-time. The control of the public education authorities over the boy must not be allowed to close abruptly, as at present, at the age of fourteen, but must be extended till the lad reaches the age of eighteen. He must spend, during these four years, either the morning or the afternoon in school, while during only the remaining half of the day would he be free to follow some paid occupation. The aims of the school would be threefold—it would enable the boy to continue his general education; it would provide a course of physical exercise and gymnastics; and it would supply a proper industrial training.

A new
system
half time
I suggest

10. There are various advantages and features in this proposal, of which the following deserve special attention:—

(a) The enforcement of this new half-time system entails no practical difficulties. Attendance would be enforced in the same manner as in the elementary school, and by the same officers. All children would be scheduled and followed up and accounted for until the age of eighteen was reached. We should not have to trouble about restricting hours of employment, it would be enough to ensure that the boy spent either the morning or the afternoon in school.

(b) The medical inspection, which we may hope soon to see made compulsory in the elementary school, would be continued in the half-time school. We should, therefore, watch over the physical well-being of the youths of the community at the most critical period of their career. A proper course of drill and physical exercises, under medical supervision, would do much to remove the evils which in a town make such large inroads on the health of the lads.

(c) We should obtain a better return for the expenditure on elementary education. At the present time this is largely wanted. The boys leave at fourteen, before their characters are formed, and, rejoicing in their newly-won freedom, are impatient of any sort of restraint, and resent any attempt to check their habits. In four years of half-time attendance we should maintain a very salutary control and only by degrees give to them the wider liberty of the man. The gain in intelligence would be no less than the gain in character. The habits of study and the interests acquired in the elementary school would be continued and would not, as too frequently happens under present conditions, disappear in a few months. At the age of eighteen the youth would leave school with his tastes and interests well developed, and consequently with better chances of finding healthy forms of happiness; while the fact that he has received four years additional instruction would ensure the possession of greater intelligence, power of thought, and adaptability. In short, we should be gradually calling into existence a race of intelligent unskilled labourers, whose employment would be at once more regular and better paid, because more valuable to the employers.

(d) The manual and technical teaching, which would play a large part in the half-time schools, would serve two purposes. For those destined to remain unskilled labourers it would supply a certain dexterity in the use of tools which would add greatly to their value in the labour market. For those destined to enter the ranks of skilled labour it would, in conjunction with the experience of the workshop, afford an all-round training and become a real and effective substitute for the old system of apprenticeship which, unsuited as it is to the methods of modern industry, is rapidly becoming obsolete.

(e) Finally, four years of additional schooling would give an opportunity for any special ability on the part of the boys to show itself. It is in every respect a gain for a lad to be able to wait a few years before definitely deciding on his occupation. There can be no doubt that the present system, which practically determines the boy's future career at the age of fourteen, wastes much talent which is of slow development and has not shown its presence at the earlier age.

(f) While making the unskilled labourer more valuable and consequently more desirable, the half-time system would render boy-labour scarcer, more expensive per hour, and, as a result, less sought after by the employer. We should thus be gradually promoting an industrial development which favoured the increased employment of men and discouraged the employment of boys—in short, a development precisely the reverse of the present.

(g) Boys would receive less wages than now, but, since the effective supply of boys would be halved, they would be paid at a higher rate per hour than at present. The receipt of smaller wages would be a positive advantage—boys have too much spending money under existing conditions.

(h) I have here been considering only the training of lads who will become unskilled labourers or fill the lower ranks of skilled labour, as these are the persons who, at the present time swell the army of the unemployed, and tend to appeal for assistance to the Poor Law. For the training of those destined to rise higher, I should like to refer to the report of the London County Council on apprenticeships, or to a volume of my own recently published by Mr. Fisher Unwin, entitled "The Town Child." The problems involved are fully discussed there, but will, I imagine, hardly come within the purview of the Poor Law Commission.

(i) While I have, in the main, been speaking of boys, the application of the half-time system to girls is equally desirable. Girls, as much as boys, require a more prolonged period of training under the supervision of the public education authorities, while the question of their physical health between the ages of fourteen and eighteen is even more important. There are, however, a few additional considerations which in their case merit attention. As a rule, girls need employment for only a few years; they marry and withdraw from their occupations. The half-time system would ensure a greater demand for their services—a very desirable thing—while the greater expense per hour of employing them would give more openings to the women who are compelled to earn their own livelihood. In the half-time schools special attention would be devoted to domestic economy subjects, the management of the home, cookery, infant feeding, and the like. It has often been rightly pointed out that the teaching of domestic economy in the elementary schools fails of very satisfactory results, because the children are not allowed at home to carry into practice the lessons they have learned at school. When the time comes for them to be mothers they have too frequently forgotten all they have learned. Nevertheless, few would deny that the training of the future mother is among the most urgent problems which are now engaging the attention of the social reformer. We can never anticipate any very solid measure of success until we can teach the proper performance of these duties to elder girls. The half-time system affords the only means by which this most desirable end can be encompassed.

(j) There is good reason to believe that the half-time system would be welcomed by many of the best employers, who are acutely conscious of the defects of the present system of training. In certain instances they allow, or even compel, their apprentices to attend trade classes during the day-time. Woolwich Arsenal, the London and South-Western Railway, and the Silversmiths may be quoted as examples; while an enquiry among the wood-work trades of Shoreditch revealed a general desire to welcome some plan which would enable their apprentices to obtain instruction at a technical institute during working hours. The exigencies of competition have forced the industrial development in the direction of employing boy labour, and, without compulsion, it is difficult for those who dislike this course to pursue other methods. But, if all trades were placed on the same level in this respect, we need not fear any very stubborn resistance. Of course, nothing but legal compulsion can touch the case of the van-boy, district messenger, etc.

(k) Nor need we be very apprehensive about the cost of the proposals. The expense would only reach its maximum after several years, while, in London at any rate, there are a large number of technical institutes with accommodation and equipment for trade instruction during the day. The bulk of the training given there takes place during the evening, and some of them are practically empty at other times. The London County Council has recently established a number of trade schools for boys and girls, and their success amply justifies the experiment. These are at present whole-time day classes, but there would be no difficulty in converting them into half-time schools. The accommodation would thus be doubled, and the expense of teaching-staff and equipment per head halved. Further, it would no longer be necessary, as it is now, to make

Mr. Reginald A. Bray.
16 Mar. 1908.

Problem as to those destined to rise.

Desirability of the half-time system for girls.

Importance of teaching domestic economy to the elder girls.

Attitude of employers to the half-time system. Action taken by certain trades

Practicability of the scheme in London

Connection between the problem of the unemployed and the lack of proper training and discipline.

(7) In conclusion, nothing short of this compulsory half-time system can meet the needs of the case. The problem of the unemployed and the growing tendency to resort to the Poor Law, are intimately connected with that lack of proper training and discipline of character, which are among the most familiar and the most disastrous features of modern civilisation. Every argument in favour of compulsory elementary education tells with equal force in favour of compulsory half-time. The effects of the former will be largely wasted until the adoption of the latter enables the State, by prolonging the period of education, to stamp its influence permanently on the lives and characters of its future citizens.

96220. You have had experience, too, of various local institutions, such as boards of guardians, the London School Board and the London County Council?—That is so.

96221. You have been specially looking at this question lately in connection with the subject of apprenticeship?—Yes; I was Chairman of the Special Committee of the London County Council appointed to consider the subject.

96222. The substance of the first part of your evidence is that the majority of the children in London leave school as early as they possibly can?—Yes.

96223. I suppose where the children by having attained a certain standard can shorten the time of school attendance, the tendency is to make use of that?—Certainly.

96224. That is fully utilised ?—That is fully utilised in the poorer schools.

96225. Your experience shows that the parents have little voice in the selection of the boys' or girls' occupations?—Very little.

96226. What should you say did decide the occupation, is it mere chance?—It is a great deal chance, or perhaps in a school one boy will go to the same sort of situation as another boy; they talk it over together and then settle it amongst themselves; that happens also a good deal with girls; the parents in the respectable families are rather more particular where the girls go; but the boys are allowed to choose practically for themselves.

96227. There are little gangs of them, and they talk it over ?—Yes.

96228. Should you say the parent having little voice is due to the authority of the parent being diminished by the school attendance, or do you think it is because they have no information as to what is the best occupation; or is it a combination of both?—It is probably due to both, but there is a great deal of ignorance.

96229. The father, probably, if he was in employment, would not have much time outside his employment for looking about?—No.

96230. Are there any facilities now by which parents can obtain information?—There are a few Skilled Apprenticeship Committees in various parts of London.

96231. I suppose there is no office at which a man can apply and find out details about any particular occupation?—I should not like to speak for all London, but speaking for Camberwell, I should say no. If they wanted to know anything they would probably go to the headmaster; he is consulted to some extent by the parents.

96232. That is the practice, is it, to consult the headmaster?—In certain cases.

96233. Would you say in the poorer districts?—
Yes.

96234. I suppose the occupation which the boy takes is not necessarily in the vicinity of his home?—No, not at all; I suppose a large percentage of the boys go across the river from Camberwell.

96236. I suppose the classification is a wide one?—It is divided into unskilled trades; unskilled trades where a boy says he is going on to a skilled trade; and skilled trades; and, fourthly, those who go to some form of higher education. Those are the four classes of which I have the summary.

96237. The first leads practically to very little?— (1) Bo
Yes, it leads practically to nothing at all; out of enteri
8,756 boys in 2/2 Council schools 58·2 entered unskil
trades, 11·0 unskilled trades with the intention later of trades
entering a skilled trade, 27·1 entered a skilled trade while
3·7 went to some higher form of education.

96238. Do you get at those figures from a large number of schools or from a particular district?—It was intended to be a return for the whole of London; but as I said, the Returns were sent out rather late, so we have only got it for certain schools; this is for 292 schools, including 8,756 boys.

96239. Do you think we might accept that as a generally fair figure to take for the whole of London?—These schools are scattered all over London.

96240. They are not in a particular locality?—No, scattered all over London.

96241. Fifty-eight per cent. go into the unproductive (2) Bo occupations; then taking the next one?—That was a enterir rather uncertain return, I do not know whether it is of unskill very great value; they are boys who went into unskilled trades trades with the intention of going on to skilled trades; tendin; o go those returned under that heading were 11 per cent. on to s led

96242. Then taking the next one?—The skilled: (3) Boys 27·1 per cent.; and going on into some form of higher education, secondary education, or some technical school: skilled 3·7 per cent. Of course, the last column is very low, because all our junior county scholars would be taken before that age.

96243. Is the pay of the lowest class higher as a rule ?
—You mean the “not leading to skilled” ?

96244. Yes.—It is higher, certainly.

96245. That, of course, would be a very great attraction? drawba s.
—Yes.

96246. I suppose, speaking generally, one may say that the boys who are in this class get higher remuneration than those in the two higher classes?—Certainly in the higher class; the second class is probably just the same.

96247. The fact of the boy leaving school and being able to get this wage paid him he is placed out suddenly in a position of *quasi* man's independence?—That is so.

96248. Physically, these occupations do not seem to develop the boy much?—No, I do not think they do at all. Of course they vary a great deal, but in many cases the hours are very long.

96249. Carmen's boys, and so on?—Yes, van boys.

96250. Then when the boy passes on to a greater age, say eighteen, and so on, from your paper he is relatively of less commercial utility?—Very much so, certainly altogether in the way of intelligence; he is stronger physically because he is four years older, but mentally he is distinctly inferior. The boy when he leaves school is exceptionally bright and intelligent as a general rule.

96251. So the boy coming out of school is a serious competitor to this, what I may call, hobbledehoy; and he has not got the strength, I suppose, to be able to do a man's work?—No.

96252. Another factor which I think your attention has been called to is that a considerable amount of the skilled trades in London are recruited from outside?— from outside London

96253. I suppose that would not come under your personal experience, that is a conclusion arrived at from

information?—It was an enquiry held by the Technical Education Board into the building trades in London.

96254. It is not a mere record of previous opinions?—No, it was an enquiry; and there was a report published.

96255. You think that the problem of the unemployed, so far as London is concerned, is assuming larger dimensions?—Yes, I think it is.

96256. You go so far as to say that our present system is such that in a good many cases a man may be of no use at twenty-five?—I think that is so.

96257. The opinions you are giving are not merely your own individual opinions, but, I assume, those of the majority of those with whom you have worked and carried on these investigations?—I think you will find it a general opinion.

96258. Therefore, I suppose, putting it broadly, one may say that a large proportion of the working population of London are gradually being, by various causes, ousted from skilled employments; and their lot is to be connected with badly-paid and a low-grade class of ill-paid unskilled labour?—Yes.

96259. Coming to remedies, you would propose to extend, in some shape or other, the period of the boys' educational training?—Yes, I am anxious to have a new half-time system from fourteen to eighteen.

96260. How would you work your half-time system?—I would insist that the boy should be in some educational institution, either in the morning or in the afternoon.

96261. If you do that you must limit the hours?—You automatically limit the hours during which he is employed.

96262. Any proposal to limit hours, or extend the school period of boys, would meet with a great deal of opposition. Do the parents, do you think, as a rule rely very much on the earnings of these boys, or do the boys spend them pretty much as they like?—The boys have a good deal to spend themselves; but the earnings are relied on in the poorer homes, especially the homes where the parents are often out of work; in the homes of the casual labourers naturally the earnings come in very welcome.

96263. Is there pressure put on the boys by their parents to go out early to work, or do you think it is the boys' wish, rather, to free themselves from the restraint of school life?—It is a good deal that the parent thinks he has kept the boy long enough. In certain cases I have known boys who would have stayed on, but their parents insisted on their going out.

96264. Putting on one side the education objections, and the domestic difficulties which might accrue from an administrative point of view, you see no practical difficulty?—No, we could enforce attendance there just as easily as we enforce attendance now in the elementary schools by getting the roll of the attendance of the boys at the different technical institutes.

96265. Would you have accommodation, or would you have to build fresh schools?—We should have to build fresh schools. I could give you a sort of estimate of the whole cost. I tried to get out for London what would be the annual cost, assuming that we enforced attendance at half-time classes on these boys from fourteen to eighteen.

96266. That would be very interesting, because that would give us some idea to what dimensions a scheme of this kind would attain in London?—I am assuming there are 80,000 children (I am taking it for boys and girls) of the elementary school type who reach the age of fourteen each year.

96267. I suppose that is about the figure?—Yes. The total cost, I estimate, would then be £1,100,000. That would be the gross cost. If I take the Board of Education grants that would reduce it very considerably, because we should be entitled to grants, under the present regulations, of £720,000 for classes of this kind, which would make the net cost about £380,000. That would only be a little over a twopenny rate in London.

96268. What does that £1,000,000 include; the cost of the buildings?—That would include loan charges; I am assuming £10 a head as maintenance and loan charges for each full-time place.

96269. The maintenance would include the cost of *Mr. Reginald A. Bray* teaching?—It would include the cost of the teaching.

96270. The cost would be about £1,000,000, of which you think you would get back £700,000 from the Education Department?—Yes, under their present system of grants. 16 Mar. 1908.

96271. How long would you extend your half-time system to?—From fourteen to eighteen.

96272. Would it be £1,000,000 taking all the children from fourteen to eighteen?—Yes.

96273. Your 80,000 is the number which passes out each year?—Yes

96274. What would be your calculation of the number between eighteen and fourteen?—I have taken 80,000 for each year; I am assuming we should want 160,000 full-time places, that is for the 320,000 half-time students. Estimated number of half-time students.

96275. That is a full estimate?—Yes. I have made certain deductions from the 80,000 if you want me to go a little more into particulars, because from these there would be a number who received scholarships from the London County Council, or were promoted to the higher elementary schools, or whose parents continue their education. There would be altogether something like 10,000 of those, and this deduction would bring the number down to 70,000. Then you would have to make an allowance for irregularity of attendance, because you would not get a perfect attendance. I do not suppose you would get an attendance of much more than 85 per cent.; this would be a very fair attendance in the elementary schools, and you would not get a better attendance after they go out to work. That would be a deduction of another 10,000; so that it would mean you would only have to provide for 60,000 places in average attendance.

96276. What population is this expenditure applicable to, about 4,000,000?—Rather over 4,000,000. I forget the exact figure. Estimated effect of the half-time scheme in the whole country.

96277. I was thinking about the country generally; this half-time system comes to £1,000,000 for 4,000,000 of the inhabitants?—Yes, it is rather over 4,000,000.

96278. Assuming the proportion of children in the elementary schools in each 4,000,000 was about the same number—I suppose it is rather higher in London?—I should not like to say for certain; I do not know the figures.

96279. It is a heavy charge, it would come to something like £8,000,000 for the whole of England?—Yes. Of course the expense would not be so great in country districts; the expense of land, for instance. I do not suppose you would have to allow anything like £10 per head.

96280. What proportion of the £10 do you put in for cost of maintenance and loans?—I put about £7 10s. 0d. for maintenance and £2 10s. 0d. for loans.

96281. That would make a very large reduction in the country districts?—It would make a considerable reduction.

96282. Have you ever worked out at all what the child under the half-time system would earn compared to what he does now?—No, I think that would be very difficult. You would diminish the supply of boy labour by one half, so that undoubtedly his wages would rise, but how far they would rise I could not say. Probable effect of half time system on the boy's wages and on the demand for men.

96283. So the loss would be somewhat less?—He would get more than half what he gets now.

96284. (*Mrs. Webb.*) That would be specially so with messengers, would it not, and work that cannot be done by anybody else?—That is so.

96285. (*Chairman.*) In Paragraph 10 (f) of your statement you point out that the half-time system would render boy labour scarcer and more expensive per hour, and as a result less sought after by the employer; therefore there might be a considerable reduction in the demand for boys, and that you could not estimate in advance?—That you could not estimate exactly; on the other hand if there was a great reduction in the demand for boys, there would be a large increase in the demand for men, so that the boy's father would get employment, although the boy himself might find it more difficult.

Mr. Reginald A. Bray. 16 Mar. 1908. 96286. That rather raises this question: have you ever thought that the work that these boys do could be discharged by adults?—I suppose a great deal of work like the district messengers would be very expensive to do by adults, but I should imagine that a great deal of work done in factories could be done by adults—machine-minding and things of that kind.

96287. (*Mrs. Webb.*) I suppose the old man might replace the youth?—Yes, the old man could certainly do this.

96288. (*Prebendary Russell Wakefield.*) The less efficient kind of man?—Yes.

96289. (*Chairman.*) Where a boy is associated with a man the boy's and man's wages I suppose are now calculated together?—Yes.

96290. It might affect the employment somewhat prejudicially if a boy is taken off, and a higher paid person is put in his place?—Yes.

96291. Are you on the education committee?—Yes.

96292. It has been suggested to us that there is another method by which a good deal of the evil of these boys stepping into these unskilled employments early in life might be mitigated, that is if there was more information given to parents as regards what occupations were open, and what were suitable?—I think that would be a help. We are trying at the present time under the London County Council to carry out a plan of this kind recommended in the Report of the apprenticeship committee.

96293. Is it not at Lisson Grove, or somewhere, that you have such a system?—It may be done there. Certain headmasters have done this.

96294. Do you not think that by an authoritative establishment with information available to the parent, either through the teacher or by some official being attached to the school who could give information, an improvement in that respect could be effected?—I do not see that that would make a great deal of difference; there is a certain amount of demand for boys at the present time; it would not change that demand; you might only sort out the boys a little better, the intelligent boy you might induce to go into a skilled trade, but then you would be turning someone else out instead; information would not affect the demand. A great deal of the information would be of a very unsatisfactory character, merely pointing out openings for van boys and messengers.

96295. The demand is very great?—Yes, boys have no difficulty in getting work, not the slightest.

96296. That was indicated to us by certain witnesses. That has a bad effect on them; they are apt to throw up their employment?—They throw it up at once if anything annoys them, and they can get another situation without any difficulty.

96297. That is your experience?—Certainly.

96298. That is very bad in not promoting habits of discipline or regularity?—Yes, especially when they are about eighteen, because when they throw up a job then they find it hard to get another.

96299. Should you say the demand for boy labour of this kind has increased of late years in London?—I think it has increased in connection with district messengers, and in factories there is a tendency to get machines that a boy can watch. I think the whole trend, in London certainly, is to use boy labour as much as possible.

96300. As the community gets richer it requires more service to be done for it?—That would be so.

96301. And boys would be the instrument in a good many cases which would perform that sort of service?—Yes, the messenger service.

96302. You think there is a tendency in factories in London to employ boys?—Yes, I think there is.

96303. You are speaking educationally rather than from an investigation of the industries?—Yes, there are only one or two factories that I have been into.

96304. I suppose the great occupation of girls is domestic service?—Very largely, and a sort of vague term "dress-making," which covers an immense amount of very different kinds of occupations.

96305. Is the girl labour more valuable in the early stages than it is later on, in the same way as boy labour is?—Of course, the girls only want to work for a few years; so many of them get married; it is difficult to say.

96306. The problem is a different one?—It is an entirely different problem, or at any rate, to a large extent; though of course, you have the same evil of the long hours with the girls, it is probably more prejudicial in many ways to the girls.

96307. That would be in factories?—Yes.

96308. A good many of those factories are seasonal factories, jam-making, for instance?—Yes, jam and sweet-making and mantle-making, there are a lot of them.

96309. Have you ever thought of what the effect in developing the half-time system would be outside London, say with regard to agriculture?—I do not think there would be any difficulty in agriculture; you would have two boys, if you took boys, instead of one. If you wanted a sheep boy you would have two employed, one in the morning and the other in the afternoon.

96310. Then the complaint is that it is difficult to get boys enough even now. I am thinking about the half-time system; have you thought how you could work that at all; would you vary it at all in agricultural districts?—It would make it harder to get boys and it would have the effect which is now taking place, the substitution of men for boys.

96311. Would it be possible, do you think, to make the half-time attendance by the year so that they could attend during the winter?—You could do something in that way.

96312. If the half-time system is to be extended and made generally applicable to the country, it would have to be varied, I suppose you admit that?—Yes, I think it would have to be varied.

96313. It is a very heavy expenditure, but I assume you take a serious view of the present state of things?—I do, most serious. I think we are spoiling all our child labour, and we are now finding the fault of what we have done in the increasing number of the unemployed.

96314. And in the early age of so large a proportion of the unemployed?—Yes.

96315. (*Prebendary Russell Wakefield.*) You say when the children are left to choose for themselves, immediate earnings and not opportunities for training or prospects of advancement decide their choice. Is it not true also that that is very often the case with the parents when they choose for the children?—I think so. I think the parents would take very much the same view.

96316. Do you think very much is done in the schools when the children come to the fifth or sixth standard with regard to advising them as to what their future career should be?—A few headmasters have done it very energetically, not always very wisely.

96317. Sometimes with considerable success?—Sometimes.

96318. And it is a fact, is it not, that it is not only in an isolated school, but in a good many schools the effort is made to try to place boys when they leave?—Yes.

96319. There are certain cases in which practically schools have become rather celebrated for providing of suitable boys, and girls too, for certain commercial pursuits?—That is so. Those are rather the better schools; certain commercial ones, for instance.

96320. Fleet Road?—Yes, that is practically a secondary school.

96321. I did not know whether it kept up its character?—Yes.

96322. Practically everybody going from Fleet Road can get immediate employment of a very satisfactory character?—Fleet Road is practically a secondary school. It is a higher elementary school now, but it is on the same level as the ordinary commercial school.

96323. Has it not rather worked itself into that position by the care and attention of the teachers with reference to the children?—Yes, but it is fed by the contributory system; it draws from perhaps thirty schools around, taking the best children.

Question of giving parents more information as to suitable occupations.

Bad effect of the case with which boys get situated.

Increased tendency to use boy labour.

Tendency to employ boys in factories.

Occupations selected by girls.

Problem connect with girl labour.

Effect of half-time system agriculture.

Possible variation of the system.

Narrow views taken by parents.

Reputation of some of the better schools for providing suitable boys.

96324. Of course, the pay that these boys get varies very much indeed with regard to how far they can live on what they can get, and how far they have pocket money over after they have paid for their living? One knows instances where boys, what with tips, and things of that kind, are actually earning more than a grown man can earn by an ordinary unskilled occupation?—That may be. I do not know of places of that kind.

96325. Would you say that as a rule it is true that boys have too much spending money? Does not nearly all the money go home in a great many cases?—I do not think so; it does in certain cases. In the case of widows no doubt it does, but the boys have a good deal of money to spend.

96326. The only criticism one is inclined to make with regard to what you have sketched out here is this, would not almost more than half-time be required for the physical and mental training which you put down?—If you had four years half-time you could make an enormous difference, there is not the least doubt.

96327. You are strong upon continuing the ordinary education as well as technical education during these four years?—Certainly.

96328. (Mr. Lansbury.) On the question of cost, as I understand it, you are contending that a good deal of the money that we spend now is wasted because the education is not carried on?—Yes.

96329. And therefore we must set against the increased cost the fact that we are going to get value for the money we have previously spent?—Certainly.

96330. And that the one thing dovetails into the other?—Yes.

96331. Have you had any experience of children whose parents are getting outdoor relief attending the schools?—Individual cases certainly.

96332. You have never found any board of guardians that takes any interest as to what becomes of these children?—Very little indeed. I have been on the board of guardians at Camberwell, and very little real interest is taken.

96333. Nobody really bothers about them?—No.

96334. Although the guardians are supposed to stand as parents really?—Very little is done.

96335. The outdoor children are at a disadvantage to those who are trained in the Poor Law institutions, are they not?—So far as training goes.

96336. And getting a start?—Yes. Whether they are quite so fit to face the world if they have been altogether in an institution is rather a question, I think. There is that other side to it.

96337. (Mrs. Webb.) With regard to that last point, that is a matter of evidence, is it not, as to whether they are more fit or not?—Yes.

96338. So far as we have gone, we have had very favourable evidence about the fitness of boys brought up in Poor Law institutions?—Yes.

96339. With regard to No. 4 of your proposed remedies, I see that you point out there are certain classes of children who have already the advantage of training up to sixteen, and the supervision of the State up to eighteen in the industrial schools?—Yes.

96340. Could you tell us what are those classes—the truant?—The truant and the reformatory class.

96341. That is separate?—Yes.

96342. Under the Industrial Schools Act they are truant and children of unsuitable parents, are they not?—Yes.

96343. Is it so under the Home Office Reformatory School Act? Have they the same supervision up to eighteen, do you know?—I am not quite certain of that.

96344. They keep them up to sixteen?—Yes, they keep them up to sixteen certainly; I am not quite sure of the age.

96345. You point out that the mentally defective children are kept up to sixteen?—Yes.

96346. So they have an advantage?—Yes.

96347. And as regards Poor Law children who are brought up in institutions, they are also kept up to sixteen?—Yes.

96348. So that you already have considerable sections of children who have this additional training?—That is so.

96349. And they happen to be rather the children who are less fit *prima facie* than the children of the general population?—That is so.

96350. Then we are giving a premium to unfitness?—Undoubtedly, we are spending an immense amount more on our special schools for the physically and mentally defective in comparison to what we are spending on our ordinary children.

96351. That applies to the truant child and the criminal child?—Yes.

96352. So that it is rather important, from the point of view of encouraging fitness, to extend this additional advantage to the rest of the population?—It certainly is.

96353. Do you as a practical administrator find any disadvantage in all these different sections of children being controlled by different localities and different central authorities?—It is extremely inconvenient. To take even such a thing at the present time as the administration of the Provision of Meals Act it is extremely difficult. A certain number of the parents have help from the guardians, we find, and yet the child is reported as underfed. Further dealing with the mentally defective children at sixteen, if anything more is to be done for them they must go on to the Metropolitan Asylums Board; if they become still worse then they come back to us to our lunatic asylums. It is a perfect chaos.

96354. That applies to your day industrial schools. You have not got children for your day industrial schools, have you; they are empty?—They are comparatively empty.

96355. They could be used for the out-relief children of the Poor Law?—They could be used very well.

96356. Would you be in favour of putting all the children under one authority?—Certainly.

96357. Would the same apply to the central departments that are at present under the Local Government Board, the Home Office, and the Education Department? Do you see any advantage in having one department dealing with children as a whole?—I think certainly it would be a great advantage.

96358. In order to get experience in dealing with the different types of children?—Yes.

96359. To go to the question of boy labour, I see we are in rather a logical difficulty about it; boys have always been employed, have they not?—Yes.

96360. All boys who are not living on private property must be in employment?—Yes.

96361. So that there cannot be an increase in boy labour, in that sense. Boy labour must always have existed to the same amount?—Yes.

96362. What was happening to the boys before, between fourteen and eighteen; they were not in school, they were not living on private property or on the rates, so something must have been happening to them?—I suppose it might have been harder for them to get places. The percentage of those out of employment would be considerably larger in the past.

96363. We have no evidence of that?—There is no evidence.

96364. One would have thought there would have been boy pauperism in that case, from lack of employment?—Would it necessarily have come before any authority if that had been so?

96365. It is very difficult to imagine you would have a large number of boys actually on the streets without some kind of application for relief for them?—Applied for by their parents?

96366. Yes?—Unless it was a more or less normal condition that there might be a certain number out of employment.

96367. That in itself would not be a desirable thing, would it, that they should be out of employment?—No.

96368. So far as statistics go, there is no proof that there are more boys in employment than there ever have been in proportion to the population, so far as I understand?—No. But we must bear in mind that during the last

Mr. Reginald A. Bray.

16 Mar. 1908.

Present chaos in administration.

Uses to which day industrial schools could be put.

Proposed one authority to deal with children.

Question of nature of increase in boy labour.

Mr. Reginald A. Bray. few years the age of compulsory attendance has been raised, and this would lessen the number of boys employed.

16 Mar. 1909. 96369. It seems to me rather not a question of whether they were in employment, but what kind of employment. Apprenticeship was employment, was it not?—Yes.

Present unproductive use of boy labour. 96370. But it carried with it educational training?—Yes.

96371. And moral supervision and lower wages?—Yes and lower wages.

96372. So it is not wise to say there has been an increased use of boy labour; it is better to say there has been an unproductive use of boy labour?—Probably that is a better way of stating it.

96373. Otherwise I think we are in a grave logical difficulty about it?—When one said: "an increased use of boy labour" one thought of it as boy labour not as an assistant, but boy labour as a principal tending a machine.

96374. It rather means the profitable use of boy labour as distinguished from the educational use of boy labour?—Certainly.

96375. The old employer took boys on mainly to educate boys to become men?—Yes.

96376. That is the sense in which the trade unions objected, to some extent, to boy labour?—Yes.

96377. With regard to these proposals, what you are trying to substitute for the present state of things is some of the elements of moral control and educational advantage which you had in the apprenticeship system?—Certainly.

96378. You think it is only by calling in the State that you can bring that about?—I do not think you can do it otherwise under the conditions of modern industry.

96379. Has it been put before you, or have you come across what we were told of in Liverpool, that there is a certain type of boy growing up who for two years after he leaves school does not get employment; that he is the corner boy, or gets only casual employment?—Of course, in the semi-criminal quarters you find a certain number like that. I could not speak from any wide experience of that.

96380. It seemed to be rather prevalent in Liverpool. You have not come across that?—I could not say so to any large extent.

96381. I gather that the statistics rather point to fewer boys being employed in recognised occupations, in which case these corner boys might account for that?—Yes.

96382. It would be even more important to get him into the school than the boy who is working regularly?—Yes, undoubtedly.

96383. Do you see any likelihood, if we had an ascertainment of unemployment right through the country, by labour exchanges, that we could choose the occupations of boys more wisely?—Do you mean choose them when they leave school?

96384. Yes?—I think we could sort them out possibly more wisely.

96385. Do you not think if you could ascertain what was going to be the demand for labour by a complete knowledge of the industrial employment of the last ten years, you could better train the boys for what there was likely to be a demand for?—Yes, I should think you could in the skilled trades.

96386. That would be one indirect use of a labour exchange which ascertained the amount of employment?—Yes.

96387. Have you thought of the subject of the diathesis of the boy, as to whether it would be possible to foresee what kind of work would bring out his latent qualities or would prevent his latent tendency to disease being developed, if we had very careful inspection and consideration of each boy?—I am not certain that I understand your question. Do you mean that we might adapt his employment to his physical condition?

96388. Yes, to choose his employment according to his latent possibilities?—I think we could certainly do that if we had them under our control for a longer period. It is difficult at the age of fourteen: there are so many boys who develop a great deal later; I think you could do an immense amount in that way under a half-time system extending from fourteen to eighteen.

96389. This half time would enable you to watch them?—Yes, much more carefully.

96390. So that you could ward off a boy with a phthisical temperament from being a compositor?—Yes.

96391. (*Mr. Bentham.*) If a system of manual and technical training were adopted on the half-time system which you suggest, you say it would afford an all-round training and become a real and effective substitute for the old system of apprenticeship which, unsuited as it is to the methods of modern industry, is rapidly becoming obsolete. The apprenticeship system was really special was it not? I do not see how an all-round training can be a substitute for a special training, as in the case of an apprentice?—It was special in one sense; for example, the boy who was apprenticed to a carpenter would learn all the branches of a carpenter's trade, but at the present time if he goes to a wood worker's place and calls himself an apprentice, he will only learn to do one single operation. We have had at our technical schools boys who have never made anything but a table leg. When I spoke of an all-round training I meant we should train a carpenter who could do more than make a table leg.

96392. He would get an all-round training up to eighteen which would probably fit him to take up any branch of that trade afterwards?—Yes of that particular trade.

96393. You think it would be easier to specialise after that all-round training than before?—With the half-time you would get the two things going side by side; he might be learning to make table legs very excellently while at the same time he was learning to make the other parts of the table, and becoming acquainted with the different branches of the carpenters' trade. The two would go side by side with this half-time system.

96394. If such a system became compulsory, you have no hesitation in saying that manufacturers would fall in with the system and would employ these half-time scholars up to eighteen. I think you say in Paragraph 10 (j) of your remedies: an inquiry among the woodwork trades of Shoreditch revealed a general desire to welcome some plan which would enable their apprentices to obtain instruction at a technical institution during working hours?—Yes, certainly in Shoreditch there was a feeling in that direction; in other parts of London there is not the same kind of feeling. I have no doubt a good many employers would not welcome it at first, just as they did not welcome factory inspection or the limitation of the hours of child labour.

96395. How did you ascertain that feeling in Shoreditch?—We have in connection with the Shoreditch Technical Institution a committee on which the employers are represented and they helped us to make inquiries there.

96396. If it becomes compulsory the employers would be as likely to employ them half-time as they employ them now full time, if they wanted the labour?—Yes.

96397. I do not quite understand this sentence in Paragraph 10 (j). The exigencies of competition have forced the industrial development in the direction of employing boy labour, and without compulsion, it is difficult for those who dislike this course to pursue other methods. Does that not rather suggest there has been an increase in boy labour?—As I think Mrs Webb put it to me, there has been an increase in using boy labour actually to manufacture goods. For example, you will find boys now who directly they leave school are put to mind a machine; that is they are practically turning out the finished goods; before they were not so much finishing goods as actually learning. I think there is that distinction.

96398. In all trades during the last ten years there has been a gradual diminishing employment of boy labour?—Except in such things as the district messengers, the Post Office and van boys. That is where the immense amount goes, I think.

96399. Are you thinking of London alone?—I am thinking of London mainly, I should not like to speak for anywhere else.

96400. There is a gradual decrease going on in London alone of those who pass for employment between the age of fourteen and sixteen, it is gradually declining year by year?—The number of boys?

To what extent could half-time training be a substitute for apprenticeship?

In Shoreditch, feeling in favour of the scheme, in other parts of London, it might be welcomed.

Increase in use of boy labour in manufacture of goods.

Increase in boy labour as district messengers, in the Post Office and van boys.

An attempt to obtain the moral control and education of the apprenticeship system

Growth of "corner" boys in Liverpool.

Suggested use of labour exchanges to choose occupations for boys on leaving school.

Possibility of adapting the boy's employment to his physical condition.

96401. Yes. I have before me a Board of Trade Return which shows that between thirteen and fourteen there is a decline over the previous year and between fourteen and sixteen taken altogether throughout all the trades of the country, particularly the textile trades, the reduction of those employed under eighteen is most remarkable?—Would not that be a special inquiry embracing only certain trades? It would not include the boy that a little grocer might employ, would it? Those boys would not be classed as belonging to any special factory or industry.

96402. This general return does include those, because they must have a certificate if they are employed?—Between thirteen and fourteen.

96403. Between fourteen and sixteen, as young persons?—They would not have to have a certificate if they were employed by a grocer or as a district messenger. My point is I do not think you can get any return which would actually show the total number of boys employed unless you made a house-to-house inquiry as by the census.

96404. It would depend on whether they came under the Workshops and Factories Act, whether they were certified or not?—Yes. I quite understand that in the workshops and factories there might be fewer boys.

96405. Apart from the workshops and factories, is it likely there would be more employment of boys who would not come under the Workshops Act than formerly?—I am not certain what the Workshops Act would comprise, but it certainly does not include every one who employs messenger boys, every small carter who has a boy sitting on the cart behind—every van boy. There are in any poor part of London an enormous number of small carters who would each have their boy. I do not think they would come under any Factory Act.

96406. What evidence is there that there are more of them now than formerly?—There are no figures, I can only give you a general impression.

96407. With regard to those employed under the Factories and Workshops Act it is self-evident there is a gradual decrease going on year by year all over the country?—I have not the figures, but if this is so, it may be due to the gradual disappearance of half-time and steady lengthening of the age of compulsory attendance.

96408. For instance, take the textile trades as a whole from 1895 to 1904 they have fallen off under eighteen taking males and females together, from 238,000 to 208,000 in round figures, and it is no less remarkable as to the falling off in boys (and as regards girls the same) with regard to half-time under fourteen. Over eighteen there is a gradual increase in the numbers employed, therefore the ratio of persons under eighteen employed this year is greater than it was?—Taking these special trades from which you have your returns.

96409. If there are fewer boys and girls under eighteen now employed in workshops and factories it may mean that there are a larger number employed in less useful occupations than in a better way?—Yes.

96410. And that is the class that you think is on the increase?—Yes.

96411. You mention here that the London County Council has recently established a number of trade schools for boys and girls. How long have those been in existence?—They were established at varying times, from six or seven years ago up till quite recently. There has only been one of the trade schools in existence for any considerable time, that is the Shoreditch one.

96412. Have you any report of the results?—We have no statistical report of the results.

96413. It would be interesting to see how the children who have passed through those schools have been employed in after life?—I could not give it to you in figures. At Shoreditch I believe they have no difficulty in getting good employment. To take the others more recently established, such as the waistcoat making for girls at the Borough Polytechnic the employers visit the class and engage the girls direct from the class: there are no statistics that I have.

96414. (*Mr. Phelps.*) The boy population of London would fall I suppose into various classes according to their parentage?—Very much.

96415. With regard to the children of artisans do you find artisans are careful in bringing up their children to their own calling?—Not a great deal. I was looking through some of the returns that we have had from the schools as to the occupation chosen by the boys. The occupation of the parent is also set out, and what struck me was that it was not at all common to find a boy going into the same occupation as his parent.

96416. Speaking roughly, should you say there was much difference between that class and our own class in that matter?—You mean that in our own class boys would be likely to follow the occupation of their parents?

96417. Do you think as a matter of fact that people in our class of life follow their father's profession in any large proportion of cases?—I should not think any large proportion.

96418. The two very much resemble each other. For what class do you wish to see education technically improved, is it the sons of unskilled labourers?—When I drew up my Memorandum I was thinking mainly of those who would probably never rise very much above the ordinary unskilled workman and generally remain all their lives unskilled workmen. I want to make them intelligent unskilled workmen which at present they are not.

96419. That would leave the class of street arab or Residual gamin?—There must always be a residual class, but I class am anxious to make it as small as possible.

96420. How is that class recruited?—They come from no particular class; you may get them from any class and by various methods.

96421. There is a good deal of mobility in going down the social scale?—You get a great many more of them when you reach the semi-criminal parts: the parts coloured black by Mr. Charles Booth.

96422. That class has certain peculiar characteristics, has it not, mental characteristics such as shrewdness and intelligence in that sense?—Yes, they have a shrewdness.

96423. You have considered many of the means for utilising that class. Have you ever gone into the scheme which General Baden-Powell has associated himself with, the scout scheme?—I have never gone into that.

96424. Of course, you have studied the question which has often been brought before us of compulsory military service for such a class?—Yes.

96425. What do you think the effect on such a class would be?—I think probably any compulsory military service if it was largely out-of-doors would be good for all classes. I should like to see it as part of the general training.

96426. Physically do you think it would be good?—Physically I think an out-of-door training part of the year would be excellent.

96427. With regard to the preparation for employment in life, what do you think its effect would be?—I think if it only came as part of their training for a short time of the year it would not have any effect one way or the other beyond the fact of making them more physically fit.

96428. Supposing it was a year's compulsory service for everybody (to take a low figure) do you think that would militate much against your system of training?—I do not see that it would militate against it; I should have thought you would rather combine the two, and not have a year all at one time. That is what I should prefer, looking at it from the standpoint of physical training.

96429. Do you think, again, with regard to the moral effects of it that they would be good?—I think they certainly would be good.

96430. By creating habits of discipline, and so on?—Having some discipline would be excellent for all classes.

96431. Do you notice much change in the character of family life or in the existence of it? Do you think the family ties are growing weaker?—Speaking from impression, I should say certainly among the poorer classes. One cannot bring statistics to bear upon that, but from experience of twelve years in London, I should say there was a tendency to weakening among the poorer classes.

Mr. Reginald A. Bray.

16 Mar. 1908

How far children of artisans follow the parent's occupation.

Intelligent unskilled workmen wanted.

Characteristics of the semi-criminal class.

Possibility of their being utilised.

Compulsory military training.

Physical and moral advantages of training.

Present tendency to weaken family ties. Its causes.

Mr. Reginald A. Bray. 96432. Do you think that is connected at all with the evils you mention in your statement?—It is partly that, no doubt. It is partly, I think, due to the very great struggle of the parents to keep the home together. I think it goes to pieces under the incessant wear and tear.

Effect of the boy contributing to the family revenue. 96433. Would you say that the contributing to the family revenue was an agent in keeping it together?—To some extent it makes the parent try and keep the boy at home. This may not be an unmixed good. The parent is afraid to exercise any discipline over the boy when he gets to be about sixteen or seventeen, because if he does the boy may leave home; to that limited extent it may be said that the earnings of the boys keeps the family together.

96434. Do you think the fact that he contributes to the family resources appeals to his imagination as a member of the family, and makes the family more real to him?—I should not say that this is generally the case.

96435. Have you had much experience of country life and country boys?—To some extent, yes.

Effect of the proposed system for training boys for agricultural labourers. 96436. What do you think the effect of the kind of training you propose would have upon the country? Take, for instance, the question of depopulation. You know, of course, that any rise in the standard of living tends to move them from the country; they get into railway service, the police, and so forth.—Yes.

96437. Do you think your system would increase that or diminish it?—I think if you made him an intelligent agricultural labourer, so that he could be worth more money, and he might very easily be worth more money (I do a good deal of farming myself on Saturdays and Sundays), you might be able to keep him more in the country.

96438. Have you anything you could say to us with regard to the system by which you would propose to train the boy to be a highly-paid agricultural labourer?—That would be a matter partly of his general education, partly of developing an interest in natural things and partly of special training; a boy might learn a considerable amount about machinery (almost all agriculture depends largely on the use of machinery at present) or he could specialise more in the feeding of animals.

96439. Taking machinery first, a boy who is a mechanic and brought up to go with a steam engine, is hardly an agricultural labourer in that sense, is he?—No.

96440. He would no doubt be resident in the country, but his tastes and aptitude would be for machinery, and he would probably be drafted off in time to employment in the towns?—On the other hand, if a boy goes out with a modern reaper and binder he ought to be skilled in machinery; he is not, and the result is that the reaper and binder lasts but a very short time.

96441. That particular position is not very attractive to a boy with ambitions?—No, because of the low earnings and the poor prospects.

Desirability of more intelligent labourers on the land. 96442. It is very difficult to imagine a state of things in which an attainable amount of knowledge on the part of a boy would guarantee him earnings which would make a country life attractive to him?—To put it the other way, I think we want more intelligent people on the land, and I am sure the farmers could afford to pay for more intelligent people on the land, if they could get them, but they cannot get them at present.

96443. You do not think either that there is a great demand for intelligence?—Yes. You want to create that demand. We have got into a bad way in agriculture, and wages have been kept low.

Training in the feeding and diseases of animals. 96444. Take the second point, more particularly with regard to animals. What kind of training had you in mind there that would be given?—It would be training to a large extent connected with the feeding of animals, which is a special thing, and they could be trained in the simple diseases of animals.

Possible effect of additional efficiency on agricultural labourers' wages. 96445. What rise in an agricultural labourer's wages do you think that kind of additional knowledge would be calculated to bring in?—It would be very difficult to say, but there is certainly a large margin for increased pay for increased efficiency. I have gone over fields sown with grass seed where there was a loss of certainly

10 per cent. of the crop due to bad sowing; 10 per cent on that crop might have been worth 3s. or 4s. an acre. That is a single instance.

96446. To sum it up generally, you would not despair of making a career for an educated labourer in the country sufficiently attractive to keep him there?—No, I think not, if you give him such a chance as he has got now of getting a holding of his own and working his way up from there.

96447. Have you contemplated the kind of machinery that would be necessary to give that training?—The main thing is, I think, the general training, because a boy who leaves school at fourteen falls off in general intelligence. But if you get him interested in country things you would prevent that loss of intelligence, and would also tend to keep him in the country. On the other hand, he would learn to put together and repair such machines as are used on the farm.

96448. Would that be by a system of apprenticeship or a system of teaching?—Not necessarily a formal apprenticeship, but an application of the half-time system.

96449. Your idea would be in the country a system of continuation schools in the winter, in which boys would learn these various things?—I should prefer, if one could arrange it, for the half-time system, but, no doubt, in the country, to some extent, you would have to be satisfied with some compromise.

96450. The difficulty is that that implies, does it not, practically a large staff of itinerant teachers. The same man who taught with regard to economical sowing of grass seed would not teach with regard to the component parts of a steam engine?—No.

96451. Do you see your way to organising any system?—Is there any difficulty in organising itinerant teachers? The county councils in the country do it to some extent now for instruction in woodwork and drill. I do not think there is any special difficulty in that way.

96452. (Mr. Gardiner.) In answer to Mr. Phelps, you spoke about the creation of a residual class of boys. Have you had much experience of the enforcing of the Industrial Schools Act?—Not very much experience myself; not personal experience.

96453. Could you give us any information on the matter?—As to the actual effect?

96454. First of all as to the extent to which the Act of 1866 is enforced?—I am afraid I have not any figures I could give you in connection with that.

96455. Could you put them in?—I could get hold of them, I have no doubt, without much difficulty.

96456. It has been stated here and elsewhere that this growth of the hooligan class, in so far as it is a class, is the result of the non-enforcement of the Industrial Schools Act?—I could get the figures to show how far that has been enforced without much difficulty, but I have not them here. (See App. No. XV.).

96457. Have you yourself much experience of the difficulty of getting convictions?—I have not had much actual experience of the enforcement of the Industrial Schools Act.

96458. Neither in the country nor in London?—No.

96459. You could not tell us about the provision of industrial schools officers in the country?—No.

96460. Why is it your day industrial schools are not full?—I do not quite know why they are not full.

96461. When they were first set up great things were expected. We used to be told they were going to be the solution of all sorts of difficulties?—I cannot say.

96462. So far as numbers go, they are a failure?—Yes in their present condition. But I am hopeful we may use them for other purposes.

96463. Yet we are told on the other hand there is a serious increase in what is sometimes called the "hooligan" class?—Yes.

96464. Those boys ought to be prevented growing into hooligans, ought they not?—Yes.

96465. By the education authority, whatever it is?—Yes.

96466. And yet these day industrial schools are practically empty?—They are not used as they were.

Hopes of keeping educated labourer in the country.

Training necessary for him.

No form of apprenticeship but half-time system.

Organisation of itinerant teachers.

The Industrial School Act. No information.

Apparent failure of industrial schools.

Question
wh becomes
of a group of
boy as
street sellers.

96467. (*Mr. Loch.*) Have you worked out at all in detail any particular group of boys as to their industries, and seen what they become later on; for instance, street sellers?—No, I have not.

96468. Are the street trading regulations in London carried out to any extent?—The recent County Council bye-laws are enforced, I do not know to what extent,

96469. They would touch, would they not, a large class that you are illustrating?—Yes, the street trading class.

96470. Therefore, more or less the measure of their effect, taken as one force, on this class should be taken into account?—Yes.

Possibility
of controlling
new boys,
et and
training their
after career.

96471. Take the Birmingham experience; there they have a newsboys' brigade, and they limit the boys that go in by the bye-laws and control them to some extent?—Yes.

96472. The note that I have here is that out of 400 boys licenced for the two years during which these bye-laws have been in force it was impossible to trace about half, they had left their addresses, and their whereabouts were unknown. Of the rest, a large number, eighty-three boys of fourteen and fifteen, and eleven boys of sixteen, had become shoe hands; seventeen had gone into hosiery factories; and seventeen young boys were described as messenger boys; while only five continued as newsboys over sixteen. If that is an illustration of what can be done apart from any special machinery but by looking after the boys who are brigaded by the bye-laws, does it not seem that these boys, who are more or less outcast in the point of view of street sellers, do turn out better than people generally expect?—It would follow from that that they did; but they were really specially looked after, were they not?

96473. They were looked after in connection with street trading, which is one outlet, I understand, for this class of boy?—Yes.

96474. Therefore, if we in London looked after the street trader just as they have in this instance, without any further complication as to education, might we not expect as good a result?—Yes, I suppose you would expect that.

Act of
educative
em-
ment.

96475. Is there not, therefore, quite another attack on this subject beyond the educational attack which you submit to us?—I do not think that this is really the case, even with this type of boy; you do not continue any sort of education for him; you do not continue any training in intelligence, and certainly, judging from my own experience, when they have been through about four years of ordinary work they are much less intelligent than they were when they were boys; you see the result in the large number of the unemployed.

tent to
which the
s would
benefit from
half-
the scheme.

96476. What evidence have you to show that these boys handled as you propose to handle them, so far as the experiment has been tried in any form, do at the present moment get any better berths?—So far as it has actually been done, do you mean?

96477. As far as it has been done?—I can only say that we have made arrangements with certain employers who do let their boys off on Saturday afternoons, or other half days, to attend certain classes. The silversmiths have done this. For a time we had to pay the boys extra wages, because the masters deducted the wages, but now the silversmiths tell us that the boys are so much improved that they will pay them the full wages, even although they are allowed off time to attend our classes. That would show that certainly in that particular case they get real benefit from it.

96478. That is a better class, is it not?—That is certainly the better class; we have not attempted to tackle the lower classes at all.

obable
ect of
ontrol of a
y for half-
ne for four
ars.

96479. You ask a very large expenditure on behalf of the nation on what is, after all, not even experimental. I understand you to say there is really no evidence that this would turn out as you suggest?—There may be no statistical evidence, but general arguments justify the conclusion. The most critical point of a boy's career is just the time when he leaves school: he has been looked after very carefully up to fourteen by the schoolmaster, then he is suddenly thrown on the world with nobody to look after him: if you believe in any form of education you must believe that if you had control over that boy for half-time for four years you would be able to exercise a beneficial influence on his character.

96480. Admitting the desirability of looking after children at that time of their lives, the proposal you make is one specific proposal of a very expensive nature?—Yes.

96481. There is no experimental evidence of that in the direction that you yourself submitted to us in regard to the class of boy that is most likely to go wrong?—There is no experimental evidence that I know of.

96482. Now let me take you to what I think is experimental evidence; have you followed closely at all the industrial school movement?—I am not very familiar with the industrial school movement.

96483. May I suggest this, that that movement has succeeded, as I think it has personally, largely by reason of the fact that the education has been of a type very different from what is usually supplied in our elementary schools?—Yes.

Question of
types of
education.

96484. If that be so, not only would you ask, as I understand, large help for education, but you would ask large help for education which is very different to what is usually supplied?—Do you mean that I am suggesting a different type of education?

96485. Not only that, but this education which they get is largely institutional?—In the industrial schools?

96486. Yes. You do not propose anything of that "Motor" type in your suggestion?—In my half-time it is certainly largely technical of a kind, or rather what one would usually term now motor education, because an immense number of these boys you would not train in a skilled trade, but you would teach them very much the use of the hand.

96487. The other part of the time you would teach them in their homes?—Yes.

96488. Surely the difference is greater in taking them to an institution where they are altogether institutionalised for the time being?—It would be a different effect.

96489. We have one step further to go, not only is that so, but we have the day industrial schools; they are really not half-time, but practically whole-time, with a home influence?—Yes.

Use proposed
to be made of
day industrial
schools.

96490. Why is it that no one connected with the council who are working out these things, lays any stress on the day industrial school system, and yet it has the very element of the problem in it?—I agree one might do more with the day industrial schools. As a matter of fact the council has decided to use them for children of parents who are away during the day.

96491. Why should not your day industrial schools be your system carried on, if necessary, in later life?—You are still dealing with just the absolute residuum, the lowest type of all?

96492. I am dealing with those about whom there is most talk, van boys, street sellers, and such like?—Van boys, telegraph boys and all those?

96493. Messenger boys and all that sort?—It would be very unfair to class all these with the residual class who would come under the Industrial Schools Act. I have been going through the occupations of the parents of a number of boys in our Return on the occupations of boys as they leave school, and find artisans and all kinds of skilled workers sending their boys as district messengers and van boys.

Question
how to deal
with van
boys, etc.
Day
industrial
schools.
suggested.

96494. Do not let us quarrel about the fact of their being industrial school boys, I am only talking about the sort of education?—If you mean the sort of education given in the day industrial schools, I think to a large extent that is an education which would be given in a good many of what I should call the half-time schools.

96495. The day industrial school education commence earlier than fourteen?—Yes.

96496. Do you not find actually in the schools that at the earlier age than this, thirteen or fourteen, when the children leave, the characteristics of the children show that something is wanting other than the elementary education they are receiving?—I agree altogether. We want much more, in some of the poorer schools certainly, of the semi-industrial training, or rather, as we now call it, motor education; we are trying one or two schools now.

96497. If that is so, does not this difficulty we have to deal with later in life become a difficulty which it is more

Mr. Reginald A. Bray. proper to deal with during the normal school life?—I think you will never really deal with it if you let the boy go out at fourteen.

16 Mar. 1908. 96498. Let us put that question aside; is it not the fact that the boys while in school show at an earlier age the necessity for this type of education?—Certain of them; I agree with that.

96499. That class would be largely the same class of boy that might go wrong in the miscellaneous labour market later on?—He might form part of that class. It is rather the slow developing boy and the unintelligent boy who comes into that class, not the very bright boy; the very sharp boy would not come into that category and yet might very likely go wrong.

Type of industrial education needed at an early age

96500. Admitted. I want to bring the question before you whether it is not that we should try to get an industrial education of a different type at an earlier age?—That I agree with altogether.

96501. When we come to the boys later on, when they leave school, there is a gap between the work of manhood and their leaving school?—Yes.

96502. That I understand you to say?—Yes.

96503. During that period, have we any experience of a kind of education other than that I have mentioned, namely, the industrial type, which should be given them?—I am not quite sure what you mean. What boys are we actually dealing with?

Evil effects of some employments on boys.

96504. Dealing with those of the type you mention, that you want to look after at this period?—My point is that these lads when they get to be eighteen are very much less intelligent than they were at fourteen. At fourteen I have known them bright and intelligent; then they have gone into this work which has often been well paid, but at which they get no sort of education, and at eighteen they write worse, they speak worse, and they are quite unintelligent. You would say they had never had any satisfactory sort of education at all. It is the work which does it, it is not only the boy who would go into the industrial school, but some of the very smartest and most intelligent boys are spoilt in this way; boys I have picked out myself as boys I should imagine would do well.

96505. I am not contesting your issue, I am simply trying how best to deal with it. I am suggesting that at an earlier age you might deal with the question to prevent further degeneration?—That would be true as regards the subnormal child and child of late development, but there is no degeneration with the ordinary or the specially bright child.

How the half-time system would train boys as intelligent unskilled labourers.

96506. What has struck one very much is that unless a boy is obviously fitted for some skilled work later on, or so-called skilled work, the best thing for him very frequently is work of a different type altogether, which, as you said, would be a general education?—Yes.

96507. Do you think that your half-time system could be brought into your plan for providing the boy with the general education he wants, unless you make it largely industrial education?—There would be an industrial side, I quite admit.

Possible labour opposition to half-time.

96508. If you make it a skilled industrial education, would you not have the forces of labour against you; would you not find yourself dealing with a large number of boys skilled up to a point, and putting them into the labour market, either to join the unions or to be out of it altogether?—I think there is some confusion here. I have not for the moment in view the training of the skilled workman. I want to create the intelligent unskilled labourer. Some part of his training must be of an industrial character; he must learn to use his hands. No doubt we could pick out certain who would be fitted for a skilled trade and give them appropriate training, but I am not advocating the training of everyone for a skilled trade. It is the person destined to remain an unskilled labourer that I am thinking of particularly.

Proposed training of boys engaged in skilled trades in their appropriate trade.

96509. You are not providing, therefore, at all for boys who might do entirely better work than unskilled work?—I should not quite say that. Those who are already engaged in some skilled trade would under the half-time system receive an all-round training in their appropriate trade. There would, of course, be various types of school, and the boys would be sorted out into

these types of schools according to their capacities and according to their occupations. We should undoubtedly provide for the skilled worker of the future, but those likely never to run above the level of the unskilled worker would receive a different training. I do not want one type of school, but many types.

96510. You do not think that you would at all interfere with the trade union ways of working?—I do not see that it should interfere in any way, any more than our technical classes do now. To a large extent where a boy has entered a skilled trade we should provide a large amount of training, but then he would have actually entered the trade.

96511. Then practically you would say that your half-time work would be a sort of public school apprenticeship?—Yes.

96512. With a large margin allowed for unskilled labour?—Yes.

96513. Do you really think that the system of teaching which is within our reach at present sufficiently shows you what should be done to justify you in asking for an enormous sum of money for it?—I think it shows what should be done with the skilled. With regard to the unskilled, I should be perfectly willing to say that the expenditure would be justified if we could have educational control over these boys during half-time for four years. We could watch over their physical health. A great deal is known about physical health, and physical training now. When you come to the mental side, that is, of course, more difficult; but even so, we know a certain amount about the educational development of the mind, and we can teach such subjects as handicrafts which would help in the development of the mind. So it is not pure experiment; we have the whole educational experience of the past to draw on.

96514. Have you yourself seen at work the half-time system as we now have it?—No, I have never seen it at work. We have no half-time in London.

96515. You have never seen the effect of it then on children up to fourteen?—No, I have not.

96516. What will be the effect of this method, do you think? The idea is that there will be a rise of wage for the boy labour, is it not?—There would be some rise, in such positions as district messengers, van boys, and that kind of thing.

96517. Would it be enough to recoup the parent for the boy standing out from full employment and living longer on him, as it were?—Not unless, as would probably happen in many trades, it was accompanied by a tendency to substitute adult in place of boy labour.

96518. But supposing the men came in, they would be unskilled men, would they not?—At the present time they would.

96519. They would be the parties who would come forward for the work that the boy left?—Yes.

96520. Then you would have men who would be practically earning boys' wages?—No, I do not think you would get that, because they would not work for boys' wages. The employer would be in this difficulty, that he would find that the boys that he had to employ on half-time were rather troublesome in that way, and though it might be difficult, it would pay him to put in a man instead, but then he would have to pay that man a man's wages.

96521. Take the lower class of wages in London in the most transitory range of labour; what would you say they amount to?—Do you mean the worst kind?

96522. Yes?—I suppose if it was regular, it would not drop below about 18s.

96523. What would a boy get now?—It would depend of course, on his age. I suppose he might rise to 18s. by the time he reached eighteen years of age.

96524. Is there, then, such a great difference between the boy labouring and the man labouring?—There probably is not a great difference between highest pay of the lad at eighteen and the lowest pay of the adult.

96525. So that you think the adult at eighteen would come in and take a wage equal to the boy's?—Where the lowest paid adult took the place of the highest paid lad of the age of eighteen this might happen, but not otherwise.

Trade union not interfered with. Proposed public apprenticeship in a large margin for unskilled labour.

Advantages of the scheme.

Witness as no experience of a half-time system.

Effect of the system on wages of boys.

Effect of the system on parents. Possible substitution of adult for boy labour.

Effect on employer.

Men's and boys' wages in London compared.

96526. If there is a difficulty in his getting a livelihood, as according to your Statement there is in London, would the man not be forced to take boy's labour and do it even if it was only a matter of 15s. or 16s. a week or something of that kind? You are opening, as it were, by your own statement, a new market for his labour?—I am increasing the demand for adult unskilled labour beyond what it is at present, but I am not changing the supply, and if I increase the demand, the natural thing is that I shall increase the amount that must be paid for it.

96527. It should not affect the standard wage that the employer was willing to pay for that type of labour, otherwise you would have sweating all over again, would you not?—Yes. But I do not think that is probable, and that does not seem to me what would happen. Admitting the actual sweating industries, which I suppose one will have to deal with by themselves, I do not think you will find that employers would try to get these men at sweated rates, because it would be exceedingly difficult to get them for 14s. or 15s. a week; the men would not take the work—except just a few, they would say they would not work at all. What would happen, I believe, is that you would rather raise the wages of unskilled labour by making a greater demand for it; that would be the natural economic result.

96528. You would raise the demand by giving them half the days of the boys, that is, the half time which the boy was taken away for school would be work available for the man?—Yes, but not, of course, on that particular job. What would happen would be that the employer would say: "I am not going to employ boys in this way; I will have men instead." In other cases they would say: "Very well; I will have two boys instead of one boy." What they would not do would be to say: "I will have a boy on half-time, and I will have a man for the other half-time." I do not think that would happen.

96529. You do not think they would rather have a man at a low wage such as they paid before and keep the boy entirely out of it?—I think they would do one or the other. I think they would either dispense with boys or they would work them on the two-shift system. The district messengers would not have the least difficulty in working with two shifts of boys.

96530. If they take the bold course and get rid of the boys altogether your system would fail, would it not?—If they got rid of the boys altogether then there would be an immense demand for unskilled labour as they would have to replace the boys by something; and that greater demand would raise the wages of unskilled labour because there would be more competition for it.

96531. But the boy would be left out?—Yes.

96532. And, therefore, he would be half his time idle and half his time at school?—Not necessarily, because if one employer dispenses with boys, all could not do this. The half-time system would diminish the supply of boys by one-half, so that if half the employers gave up boys there would be enough work left for the remainder.

96533. Are you not counting—for that is what it comes to—on a market which will take absolutely certain definite forms, whereas you cannot control those forms and you cannot foretell what they will be?—The half-time system will be one of the conditions to which the market will have to conform.

96534. But what the reactions may be from your intervention you cannot control?—Of course, in all economic things it is amazingly difficult to prophesy.

96535. You would affect 80,000 children, I understand?—Actually 70,000 children.

96536. And that would be running on from year to year?—Yes.

96537. So your interference with the labour market would be gigantic?—Yes.

96538. Do you think that all those 70,000 children would want the half-time?—Yes, I do; that events show that we must retain some control over children between the ages of fourteen and eighteen.

96539. (*Mr. Patten-MacDougall.*) There are in existence now evening continuation schools, are there not?—Yes.

96540. Those, of course, are voluntary?—They are quite voluntary.

96541. How far do they obtain in the rural districts? *Mr. Reginald A. Bray.*
—I believe in some rural districts they exist; but I could not speak with much experience on rural districts.

96542. Are they largely taken advantage of?—A considerable number attend. I suppose that at our evening schools in London very nearly 100,000 of all districts. ages would be enrolled at one time or another; but then they would not be regular attendants.

96543. You do not know what the attendance is?—It is a very difficult thing to give figures representing the attendance because the conditions vary so enormously. Some go just for one class, others to many; and then a lot enrol themselves and only make a few attendances.

96544. I understand your proposal is that in every elementary school in England there should be in future appliances for teaching these half-timers?—Not in every elementary school. We should not have it in London in any elementary schools, as we should have special centres in London. Of course, in some small remote village you might have to run it in connection with the village school; but as a rule you would make use of special centres.

96545. How about the rural districts?—There I would say that you might have to do it in connection with the elementary school.

96546. Of course, you could not have the boy if he were working half the day in one place, attending school in working at a centre in another place?—No, you could not.

96547. That would be an impossible condition of things, would it not?—Yes.

96548. And otherwise the expense would be enormous?—Yes.

96549. Your scheme is that in the rural districts, say, in an area where there are three or four elementary schools providing for the children now, possibly there might be one centre for the half-timers; is that it?—I was thinking of one parish that I know, in which there are four villages and about 300 children; that would mean about thirty on half-time in each year, or a total of 120 half-timers; it would be worth while putting up a centre for them which you could arrange more or less mid-way between the villages.

96550. Would that not necessitate their almost giving up their whole time to their school work? They could not work where they lived and then go to this centre for the half-time schooling, could they?—Yes; it would be no great distance.

96551. Would that apply all over England?—That would have to be worked out, but I do not think there should be any difficulty in working it out for all England. Of, course, conceivably, in the purely agricultural districts it might be necessary to have instead of a half-day system a half-week system; or you could vary it in many ways; so that the boy spent the whole day at school for a certain time. I have no doubt that in agricultural districts plans could be devised that would work easily.

96552. Would it work in sparsely populated parts of the country, say in Scotland, because the system must be applied all round, you know?—I do not see why it should not work wherever there is an elementary school. If the elementary school system can work, I do not see why this system should not work with the necessary variations, as I have said, of working for a whole day and then off for a whole day. You can get numerous varieties. Then, as somebody has suggested you might perhaps do it more during the winter; in Scotland probably that would be easier than taking the shortened days.

96553. (*Sir Samuel Provis.*) First about finance: Did I understand you aright that your estimate is that it would be £1,100,000 per annum in London?—Yes, cost in London.

96554. Is that for the first year?—That would represent the maximum and include all the half-timers in the four years.

96555. In arriving at that estimate do you suppose that it would be necessary to provide accommodation for the whole of the children at one and the same time?—No. I am assuming that it is the half-time system but I provide accommodation for the whole time, so that every place I find means two places for the half-timers.

16 Mar. 1908.

Mr. Reginald
A. Bray.

How far the
intelligence
of London
boys is
affected by
their work.

96556. That is to say, you do not contemplate that all the children would be under instruction at one and the same moment, but that only half of them would?—Yes.

96557. You would have a morning school and an afternoon school and some would come in the morning and some in the afternoon?—Yes.

96558. Otherwise your figures would be considerably increased?—Very considerably.

96559. Do you think that the arrangement contemplated would be practicable?—I think that would be practicable.

96560. Are there occupations which would lend themselves to an arrangement of that sort where the boys could be employed in the morning and free in the afternoon, or *vice versa*?—It seems to me that with a very large number like the district messengers and the van boys there should be no great difficulty.

96561. Do you think there would be a sufficient number of them to enable the arrangements you have in view to be carried out?—I think so.

96562. You were a guardian at one time, were you not?—Yes.

96563. Was that in Camberwell?—Yes.

96564. There they have the scattered home system, I think?—Yes.

96565. At what age did they let the boys go to work?—They let them go at about fourteen—as soon as they were free from school control.

96566. Whilst they were under the guardians did they get any industrial training?—No, not in the scattered homes when I was a guardian. But the system had only recently been started then.

96567. And they got no instruction beyond that which they received in the elementary schools to which they went?—Yes.

96568. Have you any knowledge how the boys turned out afterwards?—The system had not been going on long enough when I was a guardian to say; but to some extent it seemed to answer fairly because the boys used to come back again to the homes and see their foster-parents.

96569. What occupations did they generally go to from Camberwell?—More or less unskilled and uneducative in character; they became shop-boys or something of that kind.

96570. Newspaper-boys, and so on?—Yes. They would just see who the employer was and then let him have a boy; a shop-keeper would have a boy and so on?

96571. Did they exercise any control as to the arrangements for the boy, namely, as to his hours and as to suggesting that he should go to a continuation school and so forth?—They would try to persuade him to go to a continuation school.

96572. You do not know perhaps how far that was successful?—No, I could not answer that.

96573. (*Miss Hill*). Do I understand you to say that you found a London boy who had been at work from fourteen to eighteen less intelligent at eighteen than he was at fourteen?—That is the case with a great many of them who have been in one of those uneducational forms of employment.

96574. I could quite have understood his being less disciplined and less valuable morally, but I should have thought his intellect as a rule was at least as alive; but that is not your experience?—Not with a large number of these. You get boys who are fond of reading who have a certain interest in intellectual pursuits, but the whole of that would go and they will have nothing but the ordinary street interests.

96575. So it was not exactly their intelligence that had diminished?—It was the way in which their intelligence was manifested.

96576. Their intelligence was devoted to another set of things?—Yes—of a kind you would naturally call less intelligent, I suppose?

96577. Have you any experience of boys who rather become less intelligent by being kept in the ordinary school where their interest would rather be in work—boys who seem to stop growing, but develop far better

with work than with continued schooling?—I think there are certain boys who would be far better with a different kind of schooling—with a schooling that had a much more strongly emphasised industrial side to it, certainly.

96578. Work is more or less educational very often, is it not?—Undoubtedly.

96579. Now with regard to the cost. Of course the cost of training these boys would be considerable, but you would have also to consider the enormous loss to the family from the postponement of their wage-earning years. It is often a very hard struggle for a man, and still more for a widow to keep his or her children until fourteen, and then if after they have become fourteen there are four more years in which they can only work half-time and consequently cannot earn full wages, that side of the finance will have to be very gravely considered, will it not?—I think so. But you see after the four years, when we have escaped from the vicious circle in which inefficient parents, by sending their children to uneducational forms of work, create inefficient men, we should get an efficient and consequently better-paid people.

96580. But you are expecting from the very poorest class of parent an investment of capital which is just what they find so difficult to make?—That is so. But then that is what all education has involved.

96581. You want to make it a great deal more costly not only to the rate-payer but to the parent also?—Yes; exactly as the ordinary elementary education increased the cost at the outset, but proved worth the expenditure in the end.

96582. You have considered that and are prepared for it?—I am prepared for it.

96583. You are prepared for a fresh tax on the poorest parents of the county?—I am prepared for that.

96584. (*Mr. Lock*.) What do you estimate would be the difference, that is, the amount that would have to be brought in to be added to the capital of the individual?—I think it is rather difficult to say.

96585. You have never made any calculation?—I do not know what data you can go on to make any calculation.

96586. (*Chairman*.) What is the expenditure on elementary education now in London?—The rate for elementary and higher education, that is, for all education, is 1s. 7d.

96587. What does each 1d. produce?—About £180,000.

96588. So that the total expenditure is about £3,500,000?—Yes. That is nett, of course, after deducting the Board of Education grants.

96589. Now you are proposing to put it up a million?—If I may deduct the Board of Education grants again it would only put the rate up 2d.

96590. Yes; but that comes out of the taxes?—Yes.

96591. What is the capital expenditure necessary to set up these schools for half-timers?—I think I put it at £40 a place.

96592. How many places?—We should want 120,000 places.

96593. Then that would be about £4,800,000?—Yes; that is assuming that we could not use a great many of the institutions we have got now. But, we could do that, as there are a large number in the Polytechnics and Technical Institutes with vacant places during the day.

96594. What is your sinking fund based on?—I took it at £40 a place.

96595. Then your estimate is a very high one?—I have taken a high estimate.

96596. Mrs. Webb asked you a question as regards the difficulty of successful administration where certain subjects were divided between different authorities; by different authorities I assume you mean not different committees of the London County Council, but distinct and separate authorities such as a board of guardians?—Yes.

96597. You would not call the statutory education committee a separate authority to the London County Council, would you?—No.

the schen

Capital
expense
involved.

96598. Where you have got these committees working in co-operation, the difficulty which you mention of separate authorities who are interested in the same question is to a large extent, diminished, I suppose?—Yes.

96599. (*Mr. Bentham.*) With regard to statistics, I notice that in Mr. Jackson's Report he has not put the total number of boys. According to the last census returns of the total number of boys of fifteen years returned as employed there is a decrease of 12·9 per cent. as compared with the number in 1891; while in regard to the number of messenger boys at the same age, the number has only declined 5·1 per cent. Then a little later it is stated that in the last decennial period the number of persons engaged in the telegraph and telephone services has increased from 14,955 to 22,819, or by 52·6 per cent. Therefore if it had not been for the large increase in the employment of messenger boys in the telegraph and telephone services the reduction in the number of messengers would have been considerable because there was a reduction of 5·1 in the last decennial period; so that really the number of boys employed in that way is a decreasing one?—I am not quite clear about those figures. Where do they come from?

96600. From the General Census of the whole country?—One would have to go into those figures to see just what they meant. One could not answer what was their real significance across the table.

96601. While there has been a steady decrease in boy-labour at fifteen years of age, during the last quarter of a century, there has been a more marked decrease during the last decade?—I have not the figures before me.

Mr. RICHARD HENRY TAWNEY, called; and Examined.

96610. (*Chairman.*) You have been good enough to prepare for us a very able and interesting Paper which we may take as your Evidence-in-chief?—Yes.

(*The Witness handed in the following Statement.*)

1. UNEMPLOYMENT AND BOY LABOUR IN GLASGOW.

I. I am Junior Assistant to Professor Smart at Glasgow University, and since October last have been resident in Glasgow. Since January I have been supplied, by the kindness of the Parish Council and Distress Committee officials, Charity Organisation Society workers, university students, and others, with the particulars as to the previous records of labourers and tradesmen given in Paragraph 8. Since beginning that investigation, Mr. Kennedy, a university student, and myself, have been visiting employers of labour in order to ascertain the prospects before boys in different employments, with a view to assisting Mrs. Gordon of Aberdeen; and in the course of the inquiry made for that purpose we have incidentally found our own views as to the effect of boy labour confirmed. During three years residence in Whitechapel and six months in Glasgow, I have seen various aspects of unemployed administration and other industrial problems.

2. The object of these notes is to call attention to an aspect of the problem of unemployment which is believed to be generally neglected, namely, its connection with the employment of boys between the ages of fourteen and twenty in occupations within which there will be no demand for their services as men, from which they obtain no industrial qualifications likely in any way to fit them for other occupations, and out of which they are thrust at manhood into the unskilled labour market. I wish to suggest:—

(a) That the chief problem with which distress committees in large towns are at present faced is the existence of a large mass of chronically unemployed, or half unemployed, low-skilled labourers, who exist in greater numbers than are required to satisfy the demand for the only work which they can do, who constitute the bulk of the applicants for relief, and who yet cannot be relieved by the offer of temporary employment.

(b) That this mass is continually being recruited by a stream of young men from industries which

96602. (*Mr. Loch.*) You have none of those figures, *Mr. Reginald A. Bray.*

96603. There are no figures, are there?—There are no figures. 16 Mar. 1908

96604. (*Chairman.*) I rather understand you did not go into the actual statistics of the mass of boy employment, but from what you have analysed in the figures you have got, you consider, that a very large proportion went to unskilled labour?—Yes. A large proportion of boys employed recruit unskilled labour.

96605. That is your point?—That is the real point.

96606. (*Mr. Bentham.*) Whilst you do not say that the recent industrial development depended on boy-labour you do say that casual labour should be reduced considerably by influencing the lives of the boys by training them for better occupations before they grow into men. That is your position, is it not?—That you might reduce the casual employment, did you say? Possibility of a reduction of casual employment by better training.

96607. By a better training?—Yes, I think you would; because I think at present there is a considerable amount of man labour which is really not worth employing.

96608. (*Chairman.*) You would stop the flow into that sphere of work which results in casual employment?—Yes.

96609. (*Mr. Loch.*) You will affect the skilled market immensely in this proposal, because you will be bringing a great many more into it; the question is whether wages will stand as they are?—No doubt that is a question to be considered, but I want to make it clear again that I am not advocating a half-time system with a view to making everyone a skilled workman, but in order to make everyone at least an intelligent unskilled labourer. Possib'e effect of half-time scheme on the skilled labour market.

rely upon unskilled boy labour, and turn it adrift at manhood without any general or special industrial qualification; and that it will never be diminished till this stream is arrested. *Mr. Richard H. Tawney.* 16 Mar. 1908.

(c) That this drift of boys into the unskilled labour market is not caused by the absence of a demand for them in more highly paid and better organised occupations; on the contrary, it goes on in spite of a demand for artisans which brings them into Glasgow, from all parts of Scotland. Even if such a present and visible demand did not exist, it is clear that, other things being equal, occupations demanding any special qualifications, whether general intelligence, trustworthiness, or technical "skill" in the narrower sense, are less likely to be overstocked with labour, and therefore more likely to offer secure employment, than occupations such as general labouring, which demand only the single common qualification of average physical strength. No lack of demand for artisans.

3. I will take these points in order. Who are the unemployed in Glasgow? These remarks will be confined to the unemployed problem as it presents itself to the distress committee. It is frequently stated, particularly by workmen themselves, that applicants to that body are not a fair sample of the unemployed. This statement is true in the sense that in periods of industrial depression a large number of men are displaced who would not apply to the distress committee, partly because they would not mix with the class which applies, partly because they would not do the work offered. Such men—engineers, boilermakers, iron-moulders, etc., who find their weekly earnings suddenly reduced from £2 and £3 to 15s., and all their plans upset—probably suffer as much as men with a lower standard of life, who are more obviously on the verge of starvation. Since, however, they are, when in work, able to save money, the immediate effect of unemployment on their families is not so injurious. Moreover, the distress committee is at present hampered in dealing with this class, because it is flooded with applications from men who are continuously on the verge of distress. Before a successful attempt can be made to deal with temporary intermittent unemployment, it is necessary to find a way of diminishing the number of persons whose unemployment is chronic. It is the latter problem alone that I shall discuss. How far applicants to distress committees are a fair sample of the employed. Necessary to diminish the chronic employed.

Mr. Richard H. Tawney. 4. An analysis of the applications made to the Glasgow Distress Committee shows the following noticeable facts :—

16 Mar. 1908.

Figures of applications to the Glasgow Distress Committee. Preponderance of low-skilled labour.

(i.) There is the usual preponderance of unskilled or low-skilled labour such as is found in other towns. This is shown by the following figures :—

	Glasgow.			Dundee.
	Relief Committee, 1904-5.	Distress Committee, 1905-6.	Distress Committee, 1906-7.	Distress Committee, 1906-7.
Total applicants	6,300	2,443	2,199 (total males investigated)	787
	Per cent.	Per cent.	Per cent.	Per cent.
Tradesmen -	22·4	24·1	30·6	9·3
Labourers -	63·7	64·7	49·5	90·7
Carmen -	4·4	4·3	2·8	—
Miscellaneous -	9·3	6·6	16·4	—

Report of the Central Unemployed Body (London) for 1908.

The preponderance of labourers and carmen shown above corresponds very closely to the state of things which the report for the year 1905 of the Central Unemployed Body (London) revealed there. The figures for London were arranged slightly differently, but they show 55·8 per cent. of the applicants (at least) were labourers, and that 18·8 were engaged in transport, i.e., carmen, who in practice are often recruited from and recruit the ranks of "general" labour.

(ii.) In the case of a considerable number of applicants to the distress committee, distress is not the result of some unusual crisis or misfortune, but it is a chronic condition. This point is well put by the investigator (an official of the Parish Council) who visited homes of applicants to the relief committee of 1904-5, and who writes as follows :—

" I think I am safe in saying that out of (every) twenty applicants, five of these have been at the parish. . . . For the third year in succession it has been my duty to visit and report on these applications, and in so doing I have come across the self-same men, and have in many cases found them to be living in the same conditions as they were the previous year. . . . When I find a man who was with us last year, I am careful to inquire how much work he has done since. Almost without exception, I am informed that they have only done a day now and again."

The substantial justice of these remarks is borne out by the figures relating to applications received by the distress committee in 1906-7. Out of 2,199 men investigated, 78 per cent. had been less than three months in their last situation; 461, or 25·9 per cent., had applied to the distress committee in previous years.

(iii.) There is an alarmingly large number of young men among the applicants to the distress committee. It is frequently stated that an important cause of unemployment is the dismissal of old men who are unable to keep up the pace required in modern industry. Such men certainly constitute a serious problem, and information gathered from employers shows that in certain occupations, particularly engineering, boilermaking, and iron shipbuilding, men have little chance of finding a fresh situation after fifty or even forty-five. I wish, however, to suggest that the extremely high proportion which comparatively young men form of all applicants is a much more disquieting feature even than the general shortening of the working life, if only because it means that a large number of men are out of work—sometimes more or less continuously out of work—at an age when their children cannot possibly be in a position to fend for themselves.

The following figures show the situation for the past three years in Glasgow, and for the past year in Edinburgh :—

	Total Occupied Males.	Relief Committee, 1904-5.	Distress Committee, 1905-6.	Distress Committee, 1906-7.
GLASGOW.				
Under 20 -	17·1	3·4	1·9	2
Over 20 and under 45 -	60·6	*69·4	*69·8	*65·2
45 and over -	22·3	*27	*27·8	*32·7
EDINBURGH.				
Under 20 -	15·9	—	—	3·5
Over 20 and under 45 -	59·4	—	—	*63
45 and over -	24·7	—	—	*33·5

Figures for three years in Glasgow and the last year in Edinburgh.

5. Though the proportion of applicants between twenty and forty-five is, of course, swollen owing to the fact that there are so few applications under twenty, these figures show that men between twenty and forty-five form a considerable high proportion of those who are in distress. Moreover, these figures do not adequately represent the extent to which chronic unemployment exists among young men in certain occupations. They refer only to the ages of unemployed in all trades grouped together, whereas, if the ages of men belonging to different occupations could be examined separately, it would almost certainly be found that the average age of the unemployed in some industries is much lower than it is in others. As the clerk of the Distress Committee has not yet completed the work of taking out these figures separately, I am unable to give any proof of this. But it will probably be the case that the occupations where the unemployed are largely young men are those of general labourers, builders' labourers, and carmen, while the occupations in which they are mainly old men are industries such as engineering and metal work, where speed, dexterity, and a quick eye are essential.

That this is so, is suggested by the fact that in Partick and Govan, where 43 per cent. and 63 per cent. respectively of the applicants are drawn from the shipbuilding and engineering industries, the proportion of men over forty-five among the unemployed is far higher than it is in Glasgow itself—58·9 per cent. and 62·1 per cent. against 41·6 per cent. Conversely, in Glasgow, where most of the applicants are general labourers, the proportion of men under forty-five is much higher than in Partick and Govan. If, after further inquiry, it should be found to be generally the case that among general labourers who are unemployed a larger number than in other occupations are comparatively young men, what is said later with regard to the connection between unemployment and the continual recruiting of the unskilled labour market by youths who are dismissed at manhood with no industrial qualifications would receive some additional confirmation. But it is not desired to emphasise this particular point. In any case, whatever the precise age-distribution of different groups of unemployed men may be, it is evident from the figures quoted above that a large number of these men are unemployed, or casually employed, not through old age, but at the very period when their physical and mental energy should be at the strongest. Very many of them are by no means, as it is often said that they are, the "veterans of industry." On the contrary, they are its raw recruits. During the last three winters (1904-5, 1905-6, 1906-7) 3,273 men under thirty years of age applied for relief to the Glasgow committees dealing with the unemployed. Nor is it even true that chronic, as opposed to occasional, distress is confined to the aged. Of the 461 men who applied in Glasgow for relief in 1906-7, after also applying for relief in 1905-6, as many as 312, or 67·9 per cent., were under forty-five years of age. It was stated above that the main

Significance of above figures.

Proportion of unemployed over 45 in Govan and Partick compared at Glasgow.

Many unemployed recruits of industry.

* These figures are calculated from returns showing the number of applicants between twenty and thirty, thirty and forty, forty and sixty; this classification, adopted by distress committees, is not comparable, as it stands, with the census.

About five in every twenty applicants chronic unemployed.

Alarming number of young men out of work.

problem confronting distress committees was that of the "unskilled labourer who is chronically unemployed or half-employed." In view of these facts, one may surely add, "who is usually in the prime of life, and frequently little more than a youth." It appears to me impossible to exaggerate the seriousness of the fact that so many men should be out of work on the threshold of manhood, when they have, in all probability, thirty years of married life before them. If these things are done in the green tree, what will be done in the dry?

6. The explanation offered of the phenomenon of chronic want of employment among unskilled labourers in normal times is that there is in Glasgow and other towns a permanent over-supply of that class of labour which has little other qualification than is given by average physical strength. The whole class of low-skilled labourers could only be fully employed in normal times if it were either to increase its efficiency, or, its efficiency remaining the same, to accept a lower wage. Neither of these things happening, it is the victim of chronic unemployment. But in practice its unemployment takes the form, not of the full employment of some men, and the complete worklessness of others, but of partial or casual employment for a large number—a condition of things which tends to mask the very fact of a permanent surplus of unskilled labour, which is the most important element in the situation. It is the existence of this surplus, and not the mere want of mobility among workmen, which alone makes casual labour possible. Bricklayers are not more mobile * than bricklayers' labourers; but except in periods of seasonal or cyclical depression the former are employed fairly regularly, while the latter, even in the best times, are employed irregularly. The reason is that, when contractor A has finished the brickwork on his house, contractor B, who is building a house in some other part of the town, is glad to take the bricklayers who have been employed by A, with the result that these men pass from job to job with the minimum of interval at the end of each. But the position of the bricklayers' labourers who leave contractor A at the same time as the bricklayers is very different. Contractor B can pick as many of them as he wants anywhere in the town, without being obliged to take on the men who have just finished a job. In normal times, his foreman has only got to go to the gate, and he finds a dozen men ready to carry a hod. Hence, while skilled men pass from job to job, and are, as it were, welcomed, unskilled labour does not pass with nearly the same readiness, and therefore does not have anything like the same continuity of employment. The bricklayers who finish a job in the north of the town, find that the building on the south side is ready to take them on; the labourers, when they leave their first job, know that there are plenty of labourers already on the south side, and that there is no reason why the foreman should take men from a distance instead of picking them up round the corner. In other words, so long as there is a surplus of labour, employers are under no pressure to employ the same body of men regularly, and the phenomenon of casual labour necessarily appears. This example intentionally exaggerates the situation. As a matter of fact, employer B will know in practice that some of A's labourers are steadier men than he could get in his own neighbourhood, that they mix mortar better and are generally handier, and will keep a look-out for them and take them on. But it indicates with sufficient accuracy how, when an occupation, e.g. general labouring, demands mainly physical strength and an easily acquired knack, more men tend to enter it than are required to meet the demand, and how again, when this happens, their employment is necessarily irregular.

7. If the above analysis of chronic irregular employment is substantially correct, the question how the low-skilled labour market is recruited is obviously of fundamental importance. I wish to suggest that, apart from personal and accidental causes, there is in Glasgow, Dundee and London, and probably in all other large cities, one general

* It should be noted that anything which diminishes the over-supply of unskilled labour facilitates the work of labour exchanges. When there is a large supply of labour waiting (as in low-skilled occupations) outside the gates, an employer says he has no use for an exchange. The advocates of exchanges, who say that as long as the system of casual labour exists men will drop into it, forget that as long as the over-supply exists employers need not trouble to abolish the system. Hence the German labour exchanges have adopted the plan of guiding boys into industry, in addition to their other work.

industrial cause which inevitably produces an over-supply of low-skilled labourers, such as have been found to predominate among the applicants to distress committees. This cause is the employment of boys in occupations which offer them no future at man's wages, and which at the same time either do not fit them, or else actually unfit them, for obtaining a situation elsewhere. The result is that there is a regular drift from certain boys' occupations into the low-skilled labour market. How this drift occurs can best be shown by (i.) an examination of the industrial records between fourteen and twenty-one, of men who are now labourers; (ii.) by an account of the employment of boys in certain typical industries.

8. The following facts as to the employment in boyhood of men who are now engaged in low-skilled labour have been collected by the kindness of the parish council and distress committee officials, police officers, Charity Organisation Societies, university students, and others. Out of the 150 labourers as to whom information is given, 125 were in want of employment. For the purpose of comparison, similar particulars are given as to the employment in boyhood of men who are now tradesmen:—

A.—LABOURERS (150).

Occupations entered immediately on leaving school.	Occupations at age of sixteen.
Country worker - - - - 7	4
Seamen - - - - - 4	5
Apprentices or learners - - 8	20

Newspaper-boy - - - - - 1	1
Points-boy - - - - - 1	0

9. Attention is particularly called to the following points: the existence of a gap of about two years between the age at which a boy leaves school and that at which, in the case of most industries, he is old enough to become an apprentice.

The above figures show that, of the 100 boys who ultimately passed through a regular apprenticeship and became tradesmen, only twenty-three started as learners, immediately on leaving school, in the trade which they were to follow. The reason of this is that the school age happens to end at fourteen, and that, except in the case of painting, plumbing, and one or two other light occupations, employers will not take as apprentices boys who are under fifteen-and-a-half or sixteen years of age. Since apprenticeship, whether it is a good or a bad method of training—and in practice it varies infinitely in efficiency, not only from trade to trade, but also from firm to firm, is still the only avenue into all occupations which demand some special industrial qualifications, the fact that it does not begin till fifteen-and-a-half means that boys, on leaving school, have to spend two years in makeshift occupations, such as that of a messenger or van-boy. It will be seen that, out of the 250 cases given above, 134, or 53 per cent., started life as messengers, van or lorry-boys, and trace-boys. Since these occupations, in Glasgow at any rate, do not offer high wages, they do not compete in attractiveness with apprenticeship, nor, like some others to be described later, tempt a boy into remaining in them till he is eighteen or nineteen and too old to qualify himself for any other position. As a matter of fact, the majority of those who enter them

Demoralising
character of
the work of
lorry-boy.

give them up before the age of sixteen. But it is, nevertheless, a very serious thing that so many lads, on being released from the discipline of school, should enter occupations which are often quite irresponsible, and which are purposeless in the sense of being no preparation for future life. The existence of the gulf between the elementary school and the beginning of any kind of industrial training, which makes it necessary for them to do so, is an obstacle at the very outset of their careers: it prevents many from ever beginning to get any adequate training at all, and diverts the less firm of purpose into low-paid, casual, or otherwise undesirable occupations. The work of a messenger, a milk-boy, or a van-boy is no test of industrial efficiency, and cannot select the fit from the unfit. Yet of those who start life in this way a large number become labourers without having had the smallest chance of discovering whether they are fit for something better. Moreover, not only do these occupations supply no industrial qualification; they sometimes inflict an actual disqualification for steady employment later in life. An example of work to which strong objection may be taken on account of the demoralising character is that of a lorry-boy.* The duty of a lorry-boy is to accompany a lorryman, and while the latter is delivering goods, to see that nobody steals anything from the lorry—to act, in fact, like an intelligent fox-terrier. Under the system of employment which prevails in some firms in Glasgow, each lorryman hires his own boy, and is allowed by the firm 4s. a full week, or 2s. for a week of half-days, in addition to his own wages with which to pay him: the firm often does not know the boys employed and has no responsibility towards them. This method of employment places the lorry-boy entirely at the mercy of the individual man who engages him. He may not receive the 4s. or 2s. allowed: one boy was found, on inquiry, to be getting 1s. 6d. He may be set by the man to do work for which he is not fit and for which he is not paid: a corporation department discovered that its lorrymen were compelling their boys to carry heavy goods to and from the cart to the houses at which they were to be delivered. He may, like another examined, be compelled to drive till eleven o'clock at night with a man who stops at every public-house on the way. In addition to this, the system of employment tends to encourage a kind of casual labour among boys. The boy has to go down to the yard, and wait there till his man comes in to take the lorry out: a group of such boys (lorry-boys and trace-boys) can be seen in the neighbourhood of any large contractor, loafing and playing cards on the pavement. There is no obligation on the man to take the same boy with him from day to day; nor does the obligation on the boy to put in an appearance seem to be very strict: a firm may employ eighty lorry-boys, and not be able at any given moment to say where forty of them are. Hence these boys rarely stay with the same firm for more than a few weeks at a time, but go from one to another much as they please, till they are not fit to be taken on as vanmen when they grow up. Out of 148 lorrymen employed by a firm examined, only one had been with the firm as a boy. In short, the opinion seems to be universal that this particular kind of work gets into the hands of a low class of boys and still further demoralises them. In their case, irregular employment in manhood is preceded by irregular employment when they are boys. Though this work is no doubt exceptional in having actually harmful effects, it is only one of several occupations undertaken by boys which do nothing to promote any kind of industrial efficiency.†

Evils of
employ-
ments in
which boys
are employed
between the
ages of 14
and 19.

10. More serious than the type of employment just described (messengers, milk-boys, and van-boys), through which most boys pass, and which usually end at the age of fifteen or sixteen, is the existence of a large range of occupations in which boys are employed between the ages of fourteen and nineteen, but which offer no permanent position to them at man's wages. They differ from those just described in that the wages are high, ranging from 9s. to 16s. a week, for boys of fifteen to nineteen years of age, with the result that, instead of leaving at fifteen, boys stay on to the verge of manhood.

* The number of lorry-boys in Glasgow is said to be diminishing, because it is hard to get them for 4s. a week.

† Street sellers, of whom there are 337 licensed and many more unlicensed under sixteen in Glasgow, are in much the same demoralising position. So are "trace-boys," who wait at the bottom of hills with extra horses to pull vans up, when additional help is needed.

They differ from the so-called "skilled * trades" because the work performed by the boy, instead of being in the nature of training, is a specialised compartment for which his sole qualification is the fact that, as an instrument of production, he is cheaper than a man. Examples of this kind of work are those boys who call themselves labourers pure and simple, of whom a considerable number, thirty out of 150, were in existence at the early age of sixteen. They are engaged in all kinds of work—some as general labourers, some in foundries, some in sawmills, some as builders' labourers, some at the docks. The majority of them, however, are entered above (Paragraph 8) as "in factories or works, not as apprentices or learners," and are employed as loom-boys, doffers or shifters in weaving factories, rivet-boys in boilershops, oven-boys in bakeries, "drawers-off" in sawmills, packers in soapworks, machine-minders in furniture factories, labelling bottles in mineral water factories, turning the wheel for rope-spinners, and in numberless other such positions in which they are performing some simple operation, often as an assistant to a man.

These positions in factories or works, some of which have been enumerated, present two features which are of importance in connection with the question of unskilled and casual labour:—

(a) They usually give no kind of industrial training, either special or general, such as to enable a boy to find a fresh situation when he leaves them. From the point of view of the boy, they are not an avenue into a future career; they are a blind alley leading nowhere. From the point of view of the employer, the class of work done is a species of light unskilled labour, which does not require either the intelligence asked in a boy who is learning the trade, or the strength demanded from an adult unskilled workman, and which, therefore, can be done by a sort of boy labourer. Thus the work of a loom-boy consists in assisting men at the loom, seeing that the supply of yarn does not run short, giving in broken ends, cleaning looms, and generally waiting on the weaver. In some factories no men labourers are employed, and the boys then do all the unskilled work: they do not obtain any knowledge which would enable them to do weaving, for which a formal apprenticeship is necessary, nor are they fitted for anything else. In a similar position are the large numbers of boys employed in soapworks, packing, wrapping, and filling soap-powder packets. Again, the boys tending machines in the biscuit department of a bakery are neither apprentices nor learners, and though they may acquire a certain rough handiness in dealing with machinery, it is only of the most rudimentary kind. A large number of boys are employed in sawmills as what are known as "drawers-off," whose duty it is to carry wood to and from a machine which is worked by a man, and generally act as his labourers. Much the same is true of cloth-finishing works, where a great many boys are employed, taking cloth to and from the drying machines and watching machines under the supervision of a competent man. All these different instances, which could probably be multiplied indefinitely were an extensive inquiry made, are cases in which the boy's work is simply a specialised compartment which gives no kind of qualification for future employment outside it.

(b) Not only are the boys in those occupations receiving no industrial training, either general or special, but the vast majority of them will be dismissed at manhood, or whenever they begin to ask for an adult's wages. This is not because they are inefficient workers, or for any other personal or

* It is almost impossible to avoid the use of the words "skilled" and "unskilled," though they are becoming devoid of significance. Much delicate work in engineering is done by machine-minders at 24s. a week, i.e., labourers who have a few weeks' training, and work a semi-automatic machine. It is the opinion of a good many employers that this type of man will become more and more general. But the fact that manual dexterity is no longer so essential or so valuable as it was does not mean that it is less necessary than it was for a boy to become adequately qualified for employment, though the qualification needed is different and may not be obtained through apprenticeship. What is wanted is not so much "skill" as efficiency.

accidental reason. It follows regularly and inevitably from the way in which the work is distributed between boys and men. The absolute impossibility of their being absorbed as men in the occupations which they started as boys is shown clearly by the following figures of the number of boys and men employed in certain businesses. In order to prevent all risk of identifying the firms concerned, the actual figures are not given; but the proportion between boys and men—the only point of importance—is the same as that really existing.

(1) *A Weaving Factory.*

Men	-	-	-	-	-	-	120
Apprentices	-	-	-	-	-	-	6
Loom-boys	-	-	-	-	-	-	120

(2) *Soapworks.*

Men	-	-	-	-	-	-	98
Boys	-	-	-	-	-	-	114

(3) *Bakery.*

		Bread-making.	Pastry.	Biscuits.
Men	-	96	60	12
Boys	-	8	7	41

(4) *Contractor.*

		Lorries.	Tracing.	Van-boys.
Men	-	148	—	—
Boys	-	50	9	10

(5) *Sawmills.*

		Machine-shop.	Turning.	Chair-shop.
Men	-	78	30	38
Boys	-	64	4	14

(6) *Finishing Company.*

	Store mills.	Drying.	Raising.	Pressing.	Odd hands.
Men	40	28	10	96	18
Boys	40	26	18	10	2

11. It will be seen that in the first two cases the number of boys actually exceeds the number of men employed. A workman employed in the weaving factory estimates that 5 per cent. of the boys employed stay with the firm as men, and that of those who leave, 75 per cent. do so because it is impossible to find work for them at men's wages. He insists on the irreparable damage that is done to the boy's future, and says he would dissuade any boy he knew from undertaking the work. That is in no way the fault of the employer concerned; on the contrary, he is well known to go to trouble and expense to increase the comfort of his employees. It is simply because the work is of a character which can be done by boys, and therefore boys, being cheaper than adult labourers, are employed to do it. This particular class of boys—loom-boys, doffers, or shifters—is to be found in greater numbers in Dundee than in Glasgow; it may therefore not be inappropriate to quote the remarks on this subject contained in the Report of the Dundee Social Union, which confirms strikingly the opinion here expressed as to the effect upon unemployment of this type of unprogressive boy labour. "The demand for men's labour would have to be three times as great to provide work for all these lads (i.e., who are in the jute industry), and a number whose parents have sent them to mill or factory as children are turned adrift at the age of seventeen or eighteen. A few of them become skilled workmen in other trades. (But even) if a boy is not too old to become an apprentice to some trade, he may earn half, or less than half, his accustomed wages. (Apprentices in most trades start at 6s. and rise after five years to 12s. or 14s.; hence, after three years a boy may be earning half what he could get as a labourer.) Some boys become labourers in other trades, others enter the Army . . . a number leave the town to seek work elsewhere, while others live from hand to mouth as casual labourers, or join the ranks of the permanently unemployed."* The evil is, of course, aggravated in Dundee by the fact that most of the adult workers are women, with the result that there are fewer places for adult men.

But the cases quoted above are sufficient to show that it exists in very many different kinds of business.

Take, for example, the case of the soapworks (2): in these the boys actually exceed the men, and they work in different departments; there is no movement from one to the other, because a strong, full-grown man is needed to do the man's work (as a matter of fact they are mainly immigrant Irishmen). None of the boys, the manager states, stay beyond twenty. The position of lorry-boys in (4) has already been examined. A member of the Carters' Union states that there is an enormous leakage of lorry-boys into other occupations, and the figures show that this must be so. In the case of the sawmills (5) and the cloth-finishing company (6), the boys do not actually exceed the men in number. But it is plain that even were there absolutely complete mobility between all the departments a large number of the boys employed would have to leave the trade at manhood. As a matter of fact, 80 per cent. are estimated to leave at manhood in the one case, and 95 per cent. in the other.

12. A general application may be given to the examples quoted above, if one considers for a moment what are the causes determining the demand for boys in different occupations, and in particular how the demand for boy learners differs from that for boy labourers. The considerations which determine the number of boys taken on by, say, an engineering firm, or by the bread-baking department of the bakery described above (3), are fundamentally different from those which settle the number of loom-boys, rivet boys, or boys in the biscuit department of the same bakery. In industries requiring much dexterity or intelligence, the number of boys entering the trade is determined, not by the demand for such work as they could do if they were immediately set to a single specialised operation, but by the estimated future demand for journeymen. Even where no formal agreement exists as to the proper proportion of apprentices to journeymen, as it does in the case of bread-making, this is the criterion to which both employers and workmen habitually appeal, when the former are claiming that the number of apprentices shall be increased, and the latter that it shall be diminished. *Real* learners are always an expense, and as long as boys are taken on with a view to teaching them so that they may recruit the trade, there is no temptation for employers to take on more than are required for this purpose. Hence a boy who enters, for example, a machine-making or bread-baking establishment will, if he is moderately intelligent and fortunate, find a place in it at a man's wage. If he leaves, he leaves because the trade does not suit him personally, not because it is unable to absorb all those who enter it as boys. But when there is no need to recruit a supply of thoroughly trained journeymen, or where many departments of the work are such as can be done by the relatively cheap boy, instead of by the relatively expensive man, there is always a force at work tending to increase the employment of boys without any reference to the openings in the industry which there will be for them when they reach manhood. An excellent example of the different prospects of the boy learner and the boy labourer is given by comparing the bread-baking and biscuit departments of the bakery mentioned above. Eight apprentices (five years' apprenticeship) are held, with the approval of the employer, to be sufficient to recruit ninety-six journeymen bread bakers; yet in biscuit-making forty-one boys to twelve journeymen are employed. Some of these boys recruit the eight apprentices; of the remainder, it is said "some go to other trades; the rest drift into casual employment." To put it concretely, the number of lorry-boys, or loom-boys, in Glasgow bears no relation to the number required for recruiting lorrymen or weavers, or to anything more remote than the number of cart tails and looms now in existence, and the number of boys who can be induced to sit on the one and hang about the other. In the words of an employer, "boys are employed for their *present commercial utility*." That "*utility*," which is to be found in the fact that the wage of an adult labourer in Glasgow is 16s. to 20s., while that of a boy (e.g., loom-boy) is 8s. to 12s., ceases at manhood; and with its cessation, employ-

tradesmen.

ment ceases as well. But, as has been already pointed out, he has learned nothing which will qualify him to do any other kind of work. What, then, can he do? Often he can do nothing but fall back on the possession of two arms and two legs, and either enter the Army (*vide* the report of the Dundee Social Union), or increase the over-supply of labourers, and therefore the irregularity of employment in the low-skilled labour market. It is not, of course, suggested that this is the fate of *all* boys who, at the age of sixteen, or on leaving school, are what have been called boy labourers. Some put up with half their customary earnings and recruit the apprentices (if any) in the firm where they are employed. Thus apprentice rivetters are drawn from among the stronger rivet boys, apprentice bakers from among the oven boys, apprentice weavers from among loom boys. Others, if still young enough, go elsewhere to learn some occupation which offers better prospects than labouring. But the figures given in Paragraph 10 show, what the distinction of work between boys and men in certain occupations makes probable, that a large proportion of these boys "employed in factories and works" ultimately become labourers. This may, perhaps, be seen more clearly if the occupations entered on leaving school by 100 labourers, chosen at random, be compared with those of the same number of tradesmen:—

Drift of
youths into
least skilled
occupations
accompanied
by a
scarcity of
tradesmen
who
immigrate
from country
districts.

13. This continual drift of youths into the occupations which, because they require least dexterity and intelligence, are continually overstocked, is not due to the fact that there is not a sufficient demand to absorb them on the part of occupations which offer more regular employment and (ultimately) higher wages. This is proved by the inability of Glasgow employers to get as many tradesmen as they want in Glasgow, and by the consequent immigration from country districts. Thus, in the bread-baking trade, nearly all the "all-round men" are recruited from the country. The same is said to be the case in tailoring. In particular, the building trades in Glasgow, like the building trades in London (*vide* the Report of the London County Council Committee on the Building Trades, 1898), draw masons, bricklayers, carpenters, plumbers, and painters from all over the kingdom. No statistics, as far as is known, are at present available upon this point, but it has been emphasised so often as to be beyond doubt. The reason given for the immigration of country tradesmen, and the preference they obtain with employers, is, first, the fact that a better all-round training is given in country shops, and, second, that town-bred boys do not make satisfactory learners. Whatever may be the reasons for such a condition of things, the effect is very serious. To the individual boy who is born in Glasgow, it means that he is competing at a disadvantage for the best positions in certain occupations, or rather, since there can be no real competition between a town-bred boy and a country-bred man, that he is forced to take to the less well-paid and more irregular classes of work. Yet it is surely absurd that the labour market should be overstocked with bricklayers' labourers, when, in normal times (though not at present), there are not enough bricklayers in Glasgow to meet the demand. From a broader point of view, it means that Glasgow or London maintains its industrial pre-eminence in spite of the decadence of a portion of its working population,

* The number of apprentices who drift out of apprenticeship because they either want higher wages or do not consider they are being properly taught is considerable. This fact is an additional reason (Paragraph 20) why apprenticeship is not an adequate remedy for the evils of boy labour.

and only by means of a continual draft on the vitality of country districts. Obviously this process cannot be continued indefinitely. A city which allows its own youth, for want of training, to drift into overstocked, and therefore casual, employments, and recruits its best workers in some industries from outside, resembles a company which is continually borrowing fresh capital, while wasting that which it already has. This is a practical argument which sometimes appeals to persons who are not moved by the more theoretical, though no less important consideration, that industrial training increases the productivity and adaptability of labour, and therefore, other things being equal, both the demand for labour and its ability to take advantage of the demand.

REMEDIES.

14. To sum up the argument so far:—The fundamental cause of casual labour (as distinct from seasonal or cyclical fluctuations of trade) is that a certain class of low-skilled labour is in permanent over-supply. This over-supply is, in part, caused by a continual drift of youths out of occupations which employ more boys than they can absorb, and which give them no kind of qualifications for future employment elsewhere. If these boys obtained before manhood some adequate training for industry and life, they could be absorbed in better-paid occupations, and the over-supply of unskilled labour would be diminished; unemployment, seasonal and cyclical, would remain, but casual employment would disappear, because youths would be diffused over many different branches of industry, making an infinitesimal addition to each, but greatly relieving the at present congested ranks of unskilled labour.

15. In devising a practical scheme, two things must be borne in mind:—

(a) The employment of boys in occupations which offer no training and no future is not an evil which tends to remedy itself. In some cases (*e.g.*, that of the "operative printers' assistants" in London, adult labourers have taken the place of boys. But this is not likely to be general. On the contrary, the number of positions in which boys are employed for their "immediate commercial utility," is increasing, as the subdivision of processes proceeds further.

(b) The evils described are not, as is sometimes said, caused by the decline of apprenticeship, though it is true that, as technical changes make apprenticeship unnecessary, they tend to attack trades where they were not felt before (*vide* the case of cabinet-making and boot and shoe making under the factory system). They are found mainly in trades where apprenticeship never existed, and where it would be quite useless to attempt to establish it. Hence, they cannot be removed by any modification or extension of the apprenticeship system. For example, the so-called "skilled employment committees," such as have been established in London and elsewhere, do not touch the real problem at all. Such agencies do not increase the *total number* of youths with adequate industrial qualifications. All they do is to persuade employers to take their own nominees as apprentices or learners, instead of boys obtained through the ordinary commercial channels. Quite apart from the question whether apprenticeship trains satisfactorily those who do become apprentices (which in most cases it certainly does not), it has the fatal drawback that it only reaches a small section of the community, viz., the youths whom employers need to recruit the skilled men in their business. The evil which has been described is not any deficiency in the supply of such youths, but the very low efficiency of a great mass of workers outside the so-called "skilled occupations," which causes them to overcrowd the easiest occupation, viz., that of general labouring. Apprenticeship is no more a substitute for a general system of industrial education than University degrees are a substitute for a general system of elementary education.

16. In these circumstances, there is only one remedy. It is for the State to aim at prescribing a minimum of industrial efficiency, in the same way as it has prescribed a minimum of general education. Two steps should be taken: (1) In order to get rid of the terrible gap existing between the elementary school and industry (*vide* par. 9), trade schools

(2) By insuring
on the employee
attending
trade schools

the leaving age should be raised to fifteen.* (2) It should be made a condition of employment in any capacity, save as a genuine learner or apprentice, that the employee is attending a trade school during his employment. The number of hours per week a boy is allowed to work might be increased as he rose in the school; if this were done, parents would be enlisted on the side of education, instead of being, as at present, against it. It should be noted that compulsory evening schools, unless accompanied by a compulsory reduction of hours, will not be sufficient, because some occupations (e.g. that of a rivet-boy) utterly exhaust boys by the end of the day.

17. Some such system is essential, if the energy of the growing generation is not to be used up in satisfying the community's immediate wants. It would diminish casual employment in normal times, because it would prevent the labour market being flooded with labour which is helpless because unqualified for any work which demands something more than mere physical strength. But it would do much more than this. To describe these youths, and the men whom they become, as "unskilled" or "untrained," gives but a faint picture of the state of demoralisation which exists among some of them, and which is, in part, caused by using boys of fifteen simply as instruments of production which are scrapped when they are no longer remunerative—in employing them, in fact, for their "immediate commercial utility." One symptom of this demoralisation is the inability of boys to remain in one job for more than a year or even a few months at a time. When the stimulus and restraint given by the desire to learn are absent, the only incentive is that of immediately higher wages, and these boys move from job to job with a mobility which is positively nomadic.

18. Here are some specimens copied from inquiry forms:—

(1) T. T., at present a labourer and the son of a brass-finisher, left school at eleven, and is twenty years of age. He gave the following particulars of his first six places:—(a) Delivering milk at 4s. a week; stayed three months; left because of a quarrel; (b) message-boy, 6s.; uniform; six months; (c) message-boy, 7s.; two months; sacked for destroying instead of delivering messages; (d) message-boy, 5s.; seven months; found work too heavy; (e) van-boy, 8s.; over a year; left because of a "row"; (f) weaving mill—working with drawer and serving him with yarn, 8s. 6d.; two years; mill failed. He was not asked for further particulars. Note that he went through six places in less than five years, and learnt nothing.

(2) H. B., at present a labourer and son of a moulder, left school at twelve, and is twenty years old. He gave particulars of the following six places—his first six employments:—(a) Van-boy, 5s.; three weeks; left because "fed up"; (b) van-boy, 7s. 6d.; four months; left because "tired of job"; (c) lorry-boy in brewery, 5s.; one month; left because "tired of job"; (d) message-boy, 6s. 6d.; one week; left because he was hurt and was idle for six months; (e) driving van, 8s.; six weeks; left because "he did not get enough for driving horses" (the substitution of boys for men as drivers is one of the complaints of the Carters' Union); (f) sawmills, "drawing off machine," 9s.; three months; left because he wanted "more money," and went to be a "trace-boy."

(3) M. A. (a Charity Organisation Society case), at present a biscuit cutter and son of a plumber, is twenty-three years old, and left school at thirteen. He gave the following particulars as to his first six employments:—(a) Message-boy, 5s.; two months; left to go to biscuit factory; (b) cleaning biscuit pans, 5s. 6d.; four months; "left to go to G. D.'s for more money"; (c) oven-boy, 11s.; seven months; "left to go to L.'s for more money"; (d) oven-boy, 12s.; eighteen months; left for more money; (e) assistant brakesman in bakery, 15s.; one year; left for more money; (f) brakesman, 16s., for four months; after that returned to L.'s (a bakery), then went to labour in a mason's yard at 22s. a week; then went to Giffnock quarries at 26s., where he stayed for four weeks; then became a crane driver, at 26s. a week; then went back to L.'s—and all this before he was twenty-three years old.

(4) M. C., a storeman, and son of a joiner, is twenty-four years old, and left school at fourteen. He gave the following particulars of his first six employments. He is exceptional in having begun to learn a trade:— (a) Van-boy, 2s. a week, three meals a day; "got another job"; (b) message-boy, 4s.; six months; "work too heavy"; (c) taking samples round for metal polish company, 6s.; one year; "left to get bigger pay"; (d) taking samples round for another metal polish company, 8s.; left because "father advised him to begin a trade"; (e) apprentice engineer, 6s.; two years; left because pay too small as an apprentice"; (f) labouring, 18s.; one and a half years; left because he "couldn't agree with his foreman."

(5) T. G., casual labourer, son of retail shoemaker, is twenty-seven years of age, and left school at fourteen. (a) Took rolls to customers for a baker, paid 2d. in the 1s.; six months; left "to better himself"; (b) lorry-boy, 7s.; one year; "wages too small"; (c) clothier's message-boy, 5s.; three months; left "to get more wages"; (d) bottle-washer in brewery, 10s.; twelve months; (e) sawmills, working a saw, 12s.; eight months; left for "slackness of work"; (f) ice store, 24s.; eight months; at the age of twenty-seven he had never earned more than 24s., and never remained in a place more than a year.

(6) H. B., a labourer, twenty-four years of age. Gave following particulars:—(a) Drove trace-horses for sawmills, 10s.; five months; "sacked for galloping horse"; (b) pottery, packing, 12s.; two weeks; "lazy and chucked it"; (c) foundry, moulding (not apprentice); piecework, 12s. 8d. a week; "couldn't make enough"; (d) iron roofing works, at punching machine, 14s.; six months; "fed up"; (e) selling guides to Glasgow Exhibition, 30s.; six months; (f) sawmills again, "German saw," 12s.; four months; sacked; and so on till now, without definite employment in the last six years. He was able to count up and actually gave name and addresses of employers in *fifty or sixty different jobs* he had been through.

19. It would be possible to multiply indefinitely cases such as have been given above, showing the utterly disciplined life led by these boys. The same facts are put in another way by some statistics kindly supplied me by the Chief Constable of Glasgow as to the "number of youths dishonesty between the ages of fourteen and twenty-one charged with theft and other offences inferring dishonesty, including those remitted to the sheriff court, during the year 1906."

(a) Total number charged (under 21).	(b) Messengers, street traders, hawkers, labourers, carters, rivet- heaters (under 21).	(c) Tradesmen in 20 trades (under 21).	(d) Miscellaneous (soldiers, schoolboys, waiters, etc.) (under 21).
1,454	1,208 or 83·7 per cent.	110 or 7·5 per cent.	136 or 8·8 per cent.

Yet the total number of boys under twenty-one employed in (c), of course, far exceeds those employed in (b).

20. The preponderance of shiftless, inefficient, casual workers among applicants to distress committees gives rise to the view that unemployment is caused by personal, not by industrial, reasons, and to the plausible statement that "any man can get work if he wants it." In reality, whatever may be true of others, the precise opposite is true of these boys, and of the men into whom they grow. They are the victims of a system over which they have no control: in the words of a workman who has exceptional opportunities for judging, "they are ruined before they are twenty," and at the present moment they are probably the most neglected class in the community. To poor parents they are often commercial assets to be realised as soon as the law allows. Organised workers, with left-handed kindness, prevent them from overcrowding some trades, and indirectly intensify the struggle in

others.* Employers, with the best intentions in the world, cannot possibly be expected to point out to lads who are clamouring to sweep their shops, clean their machines, and run their messages, that their service will cease to be acceptable as soon as they demand a man's wage. The only way of preventing them from recruiting the ranks of low-paid, irregularly employed adult workers is to make their labour scarce and dear by law, and to insist on those who are still employed on specialised unprogressive work obtaining at the same time an all-round industrial education in a trade school. The evils which call for interference are not much less serious, though less sensational, than those which led to the regulation of children's work in factories.

21. In conclusion, it may be pointed out that in all probability the evils outlined above are far more serious in Dundee and London than in Glasgow, where the presence of the engineering industry offers good prospects to nearly half—21,000 out of 48,000—of the male occupied population under twenty-one years of age.

2. LABOUR EXCHANGES AND RELIEF WORK IN STRASSBURG.

22. The following information as to the methods of treating the unemployed in the town of Strassburg in Els. was obtained partly from printed reports, partly by personal interviews with the chief officials. It is submitted as throwing light on the possible uses which may be made of labour exchanges, and on the regulation of relief works or other kinds of outdoor relief. Part I. is a description of the means used to prevent or diminish unemployment. Part II. deals with the relief of those who are actually unemployed. These two branches react upon one another because, as will be shown later, the machinery which is designed to prevent unemployment has also the effect of making possible certain kinds of relief which, in its absence, would either be less effectual, or actually harmful. For the sake of convenience, however, they will be treated separately.

PART I.

Arbeitsamt, Management and Constitution.

23. The machinery for preventing unemployment consists of the *Arbeitsamt*, labour office, or labour exchange. This is a municipal department working separately from, though in close touch with, the poor office. It is supported by the rates, and is ultimately responsible to the town council, the chief burgermeister being its chairman. The committee which actually manages it consists of twenty persons, ten workmen and ten employers of labour. Five of each are selected by the council; five of each are appointed by the trades unions of Strassburg, and by the employers' associations. Great importance is attached to this system of delegated management, as it is held that the office cannot command the confidence of employers and employed, which is indispensable to its success, unless it is to some extent under the control of their representatives.

Object and Method.

24. The office is divided into four departments, one for skilled workmen, one for unskilled workmen, one for clerks, and one for women. Its object is to act as an intermediary between employers in need of workmen and workmen in need of employment. With this object it registers all workmen applying to it, and keeps on a card index a record of their age, character, and previous occupations, in the same way as is done by the labour exchanges which have recently been started in London. Owing to the large number of applications made to it, it has at the present day, twelve years after its inauguration, a very complete record of the industrial classes in Strassburg.

Relations to Unions.

25. The labour office has gradually taken the place of the exchanges which were formerly managed by the separate trade unions, and all these societies, with the exception of two, have formerly advised their members to apply for all information as to employment to the city labour office. The favour with which it is regarded by the working classes may be judged from the fact that

* An official of the Weavers' Union states that weavers like to have as many loom-boys as possible in the factory. Being piece-workers, they make higher wages the quicker they are attended by the boys.

certain societies which gave travelling money to those of their members who are on the tramp, are in the habit of handing it over to the labour office, on the understanding that it shall be paid out to members who apply. This makes it certain that the office will be used by all members of the unions concerned.

Relation to Employers.

26. It is stated that the majority of employers are in the habit of applying to the office for workmen, and that as far as can be estimated the majority of workmen employed in Strassburg have been engaged through the office. The means of bringing it to their notice are personal interviews by the officers with employers and employers' federations, and advertisements inserted daily in the local papers. The town council has given a great impetus to the movement by adopting among its standing orders a rule that all departments of the municipality, and all contractors executing work for the municipality, shall be compelled to engage all their workmen through the labour office, under a penalty of 10s. for every man engaged otherwise—an extension to regularity of employment of the principle of the "fair wages clause."

Relation to other Exchanges.

27. The labour office in Strassburg is the centre of a system of similar offices in Elsass-Lothringen, which exchange lists, are in telephonic communication with it and each other, and which form with it a kind of federation. Similar federations of labour offices exist in the states of Baden and Bayern, and (I believe) elsewhere. The Strassburg office claims further to be able to obtain information as to the state of the labour market in any part of Germany, Eastern France, and the north of Switzerland.

Extent of Operations.

28. The magnitude of the work done by the Strassburg labour office, and its growth, in the last few years, may be judged from the following figures taken from the Report for 1906:—

	1901.	1906.
Total population - - - -	—	167,678
Number of wage-earners (as estimated by town council) - -	—	20,034
Applications from workmen (exclusive of women and apprentices)	5,178	23,282
Applications from employers	1,814	18,956
Places found for workmen - -	1,494	12,436
Vacancies filled for employers -	1,494	12,171

29. What is the value ascribed to the system by those who are responsible for managing it, and what assistance does it give in dealing with such unemployment as exists in normal times? The labour office does not pretend to make work when no work is to be had through the ordinary channels, or to increase the total amount of employment. What it does claim to do, is, in the words of the secretary, "to regulate unemployment." The German view of unemployment as an industrial disease, not primarily an affair of individual character, prevents the community from leaving the workless individual to himself, in the expectation that as soon as he starts to look for work he will find it, and leads it to insist that he shall, at all events, be saved from deteriorating through involuntary want of work. In doing this, however, it has a choice of two alternative methods. It may either make work for the unemployed, or find work for the unemployed. It may either support some of its members through the Poor Law, and through relief work, or create an organisation to overlook, as far as possible, the whole field of industry, and so ensure that no one shall go without work through ignorance of where it exists, or want of the means to get to it. In times of bad trade these two methods are no longer alternative but supplementary to each other. When there is no demand for labour, it is necessary to fall back upon the Poor Law or relief works as a second best. But every extension of the area with which the organisation of labour exchanges is operative narrows the field which remains for relief, because it saves workmen from being thrown into distress by depressions

Relation of the exchange to employers.

The exchange of the central labour-exchange through Alsace-Lorraine.

Magnitude of the work done by the Strassburg labour office.

The labour office organises employment.

Alternative methods of making or finding work for the unemployed.

which are merely local. So long, the officials argue, as there is a demand for labour, even though it be at a considerable distance from Strassburg, it is much cheaper and less demoralising to send the unemployed workman to it, than to maintain him at home in idleness at the public expense. To organise this movement of labour by means of printed lists of places where trade is busy and places where it is slack, by advertisements inserted every two or three days in the local papers, by circulars sent to trade union officials, by gratuitous information and a reduction of 50 per cent. in the railway fares of all men who are sent from the office in search of work, is the primary function of the labour office. Are the country districts in want of labour? It is in a position to help men who have drifted into the city back to country life. Are the mines of Westphalia exceptionally busy while its own trades are slack? The labour office supplies the temporary demand and relieves the town market. By keeping in close touch with the school teachers it is able to influence boys to qualify themselves for future employment on leaving the elementary school, to give them information as to the occupations in which there are likely to be the best prospects of regular work, and above all, to diminish at its source the stream of lads who in this country are employed in specialised non-educative labour between fourteen and nineteen and are then dismissed to stock the overstocked unskilled labour market. In view of the statement continually made by employers of unskilled labour in this country that they have no need to go to an office for their workmen, as they can get as many as they want outside their gates, the importance of the latter service can hardly be overestimated. The utility of centralising the demand and supply of labour is perhaps most clearly seen in the case of a temporary and unforeseen diminution of employment, such as takes place through the failure of a large firm. Some time ago an engineering firm's factory was burned down and 160 men were thrown out of work, without any prospect of finding it in Strassburg. Unassisted by any organisation they would probably have lived on their savings, the benefits of their unions, and their wives' earnings, until gradually absorbed in the course of a few weeks or months. Through the mediation of the labour office they were at once brought into touch with employers in different parts of Germany, France, and Switzerland, and in the course of five days more offers of work were received than there were men to accept them. Such an example shows the utility of an exchange in normal times, when there is no general depression; it consists in giving labour the mobility which, at the time when the English Poor Law took shape, it was assumed that it would possess of itself if only it were freed from artificial restrictions. While both systems aim at creating conditions under which the temptation to apply to the Poor Law shall be reduced to a minimum, the English does so by making it hard to get relief, the German by making it easy to find work.

PART II.

Relief of the Unemployed.

30. The use of the labour office as an intermediary between employers and employed is familiar from the similar exchanges which have been established in England, and needs no special explanation. An equally important side of its work consists, however, in acting as a "test" of the character of able-bodied applicants for poor relief, or unemployed relief. It supervises the relief which is given to able-bodied men, decides whether they are to receive it or not, and performs the work of discrimination which, in this country, is carried out (in theory) by the workhouse test. Without it the methods by which the unemployed are at present assisted could not continue for a week, as it would become impossible to distinguish between those who are out of work because they cannot get it, and those who are out of work because they do not want it. With it, it is possible to give temporary outdoor relief without a labour test, to open relief work in winter for the unemployed, to assist unions to relieve their unemployed members, without the danger of sustaining workmen at the public expense long after they could find an opening in independent industry.

31. There is no workhouse in Strassburg, and all persons relieved are relieved in their own homes. The relief which is given to the unemployed takes three forms—a contribution to the funds of those trade societies which

pay out-of-work benefit, temporary outdoor relief, and the provision of relief work. All trade unions which submit a copy of their rules to the town council, and agree by the conditions laid down, are entitled to receive through the labour office a monthly contribution equivalent to 50 per cent. of the sum paid in benefits to their members, provided the town's contributions do not amount to more than 1 mark per day for each member unemployed, or aggregate more than 6,000 marks—an experimental limit in a single year. In order to obtain this contribution members must be registered at the labour office and present themselves there regularly during the time they are out of work. This system, which is of recent introduction in Strassburg, affects only the organised workers, who number about 4,500, or 25 per cent. of the adult male working-class population. Outside it stand those who at present suffer most severely from unemployment, the unskilled workers who do not earn sufficient high wages to save either individually, or collectively through a union, against seasons of unemployment. The assistance provided by them takes the form of work, which may be one of three kinds. The first is really not relief work at all, but necessary work which would be executed in any case, but which the council holds back to the winter season in order to steady the labour market, a commonsense arrangement which might be imitated with advantage by British municipalities. The second class of work is relief work proper provided by the town council, consists of street cleaning, repairing the fortifications, or working for the municipal forestry department in the town forests, and is allotted to unemployed who have families to support, and who have been in regular work during the previous summer. The maximum pay for this employment, which does not count as poor relief, and therefore does not entail disenfranchisement, is 2·20 a day, a sum slightly below the local rate for unskilled labour. For persons who are suspected of loafing, or who have broken the rules laid down for relief employment, a third kind of work is opened, under the supervision of the Poor Law authority. It carries with it disenfranchisement, is paid only with relief in kind, and is regarded in the light of a punishment—an attitude which becomes intelligible when it is remembered that since begging is not tolerated, those who cannot support themselves must get some kind of public relief, the only question being which class of relief they shall get.

32. The system of paying a contribution to trade unions which allow out-of-work benefit has been in existence too short a time for its results to be certain. It has, however, three great advantages. The first is that it reaches a class of highly-skilled workmen who though in need of help cannot be offered any relief works suitable for general labourers, and whose skill might, it is urged, even be injured by rough labouring work. The second is that it places the administration of relief in the hands of a body which has the greatest interest in preventing fraud and the best means of checking it; the third and most important is that it encourages collective insurance against unemployment among workmen who cannot afford to establish it without assistance. The relief works are more open to criticism. Like the system of giving out-relief to able-bodied men, relief works unattended by any special disabilities seem at first sight to embody all the errors against which the orthodox Poor Law administrator is accustomed to protest. What test of destitution is established? How is it possible to discriminate between those who cannot find employment and those who do not want to find it? In the practical answer which the Strassburg system gives to this question consists the fundamental difference between its Poor Law system and that of England. Instead of seeking to make relief so unattractive through the disabilities it entails that none but those on the verge of starvation will accept it, the practice of Strassburg is to ascertain what the demand for those only for labour really is, and to give relief only to those for whom there is no work. It does not ask whether a man is so badly off that he will consent to see his home broken up rather than continue long without assistance, but whether he is willing to take the employment when it is offered him. In short, its test consists not in the workhouse but in the labour office, which thus becomes not only, like English employment exchanges, an intermediary between employers and employed, but the pivot upon which the whole Poor Law system turns. In accordance with the principle that

Mr. Richard H. Tawney.

16 Mar. 1908.

(1) Contributions to the funds of societies paying out-of-work benefit.

(2) Work provided for the unemployed by—
(a) Necessary works held back till the winter to steady the market.

(b) Relief work proper not disenfranchising.

(c) Work by way of punishment for loafing, etc., which disenfranchises.

Advantages of contributions to trade unions which allow out-of-work benefit.

The relief works.

The principle is to relieve those only for whom there is no work.

The labour office is the pivot of the whole Poor Law system.

Mr. Richard relief is only given when the authorities are certain there is no work to be had, no able-bodied workman receives assistance from the Poor Law, or from the public relief work, unless he calls first at the labour office and receives from its superintendent a card stating that there is no work for him within a reasonable distance of the city. Armed with this card, which may be periodically renewed by personal application, an unemployed workman can get relief either from the Poor Law authority or at the town relief works. As soon as trade revives applications for workmen begin to pour in at the labour office, and as these applications are received, cards entitling the unemployed to relief cease to be issued, and men have the option of either doing without work and without public assistance, or of taking the jobs (at their own trade) which are offered them through the office. In short, the public relief given to men in distress, like the unemployed benefit paid by trade societies in this country, is contingent upon the individual assisted accepting the first offer of employment which is made to him. A man is not expected to work at anything except his own trade; if the trade is organised he is not expected to work on other than the conditions agreed upon between his union and the masters' association, and if he refuses a place because it pays less than the standard rate, he continues to receive from the labour office the card which qualifies him for relief. But when once a job under the customary conditions is vacant, he must either accept it or surrender his claim to public assistance.

When applications for workmen come in relief is withdrawn.

Essence of the Strassburg system.

Summary.

33. The essence of the Strassburg system is *that the agency which tests the applicant for relief, and deters the idle, is quite separate from the agency which confers relief.* Whereas in England relief is designed not only to relieve but also to deter, in Strassburg the task of preventing undue reliance on the Poor Law is in the hands of a special body, the labour office, and the relief given is given simply with a view to its being adapted to the ascertained needs of the recipient. There are three effects of this system which deserve notice:—

(i.) An absolutely reliable test is provided of whether the unemployment of an applicant for relief is due to personal or individual causes, and it can therefore be judged accurately when relief work should be opened, and when it should be closed.

(ii.) Since there is no danger of any man being relieved after he could get work, if willing to take it, the relief can be given in the home instead of in an institution, and in an amount fixed, not by the minimum needed to support physical existence, but by the amount needed to keep the recipient and his family in full efficiency.

(iii.) The idea that the receipt of legal relief attaches a permanent stigma to the recipient, which brands him as a social failure, and which may even disqualify him for future employment, is almost entirely absent. On the contrary it is argued that in certain circumstances it may be much less socially harmful that a man should sacrifice his independence, and apply for relief, than that he should struggle on without assistance. This is well put in a report drawn up by the chief burgermeister. "It is urgently to be desired that the necessitous person, when he finds an independent existence practically impossible, should not make his position worse by useless delay, but should apply for relief *immediately*." It is argued that to make public relief so unattractive as only to be accepted by men upon the verge of starvation, is not to get rid of "pauperism," but merely to drive it underground. Hence the Strassburg system of relief, unlike the English, aims not at having as little as possible, but at having as much as possible, to do with persons who cannot maintain themselves, for the same reason that the law wants to have as much as possible to do with the criminals, or a health department as much as possible to do with infectious persons. The reason alleged for this (according to English notions) rather paradoxical point of view, is that, when refused relief, the majority of persons in destitution do not, as a matter of fact, immediately find a place in the ordinary industrial system, but are frequently driven to live in one way or another upon other persons, an undesirable method of existence, from which, as long as they stand beyond the reach of the law, there is on

Absolutely reliable test whether unemployment is due to personal causes. Relief is given in the home and is enough to keep the recipient and his family efficient. The ideal of attaching a permanent stigma is absent.

Aims of the Strassburg system.

way of persuading, helping, or coercing them into independence. To avoid this unnoticed and unrecorded pauperism (which is none the less real because it does not appear in official statistics), relief institutions, permanent and temporary, must aim, it is argued, not at keeping people at a distance till they have lost their physical strength, and perhaps their desire for regular work, but at catching all persons as soon as they cease to be economically independent, with the object of discovering the cause of their position. To the famous principle that "the conditions of the pauper must in no case be so eligible as those of the independent labourer," the Strassburg system in effect adds "but more eligible than the prospect of living on doles from charity, the pawnshop, soup-kitchens, and shelters." On the one hand it does not emphasise the importance of relief being "deterrent" nearly so much as it emphasises the importance of relief being given without breaking up the home, and without impairing the recipient's physical efficiency. It therefore satisfies the public that it is humane, and so is almost the solitary relief agency of the city, instead of being supplemented by the existence of a large number of charities to provide for those who will starve rather than apply to it. On the other hand, it has in the labour office a barometer which measures exactly the state of the labour market, and which enables it to know whether any individual who applies for relief applies because he is unwilling to accept work when it is offered. It therefore also satisfies the critics who fear (with good reason) that relief unaccompanied by special disabilities may create the class which it aims at assisting. Experience of its working suggests that to combine a high scale of out-relief (preferably in the form of a grant to trade societies where such exist, and otherwise in the form of a grant to individuals) with an efficiently organised labour office, solves the problem of uniting a treatment of the unemployed which is sufficiently strict to avoid all danger of "pauperisation," and sufficiently humane to be recognised as just by the working classes who will, in the future, be more and more responsible for its administration. But the necessary condition of such a system is the establishment of labour exchanges.

The importance of relief being given without breaking up the home, and without impairing the recipient's physical efficiency.

A treatment of the unemployed problem without pauperisation.

96611. (Chairman.) In the preliminary part of your Statement you point out that the problem of the unemployed is, to a large extent, caused by a drifting of boys into the unskilled labour market; but you express also the opinion that that is not caused by the absence of the demand for them in more highly paid or better organised occupations?—That is so.

Attraction of unskilled occupations for boys.

96612. You use the term "more highly paid"; would they be more highly paid in the initial stage?—They would not be more highly paid in the initial stage as apprentices, but as men their prospects would be better.

96613. I assume one of the inducements is the high wage at the initial stage?—Yes. An apprentice fitter, for example, in Glasgow, gets 5s. to 13s., while a boy working a screw-making machine would get about 8s. to 16s.—he would start 3s. higher

96614. The evil results of this drifting of the boys into unskilled labour is, you think, well exemplified by an analysis of the figures of the different distress committees?—I think they are suggestive, but I do not put forward those figures as to ages as conclusive at all. There were much fuller figures put forward by Professor Sadler, in a letter which he wrote to the *Morning Post* last December, in which he dealt with the distress committees all over England.

Conclusion of Professor Sadler in letter to *Morning Post*.

96615. Did he arrive at much the same conclusion?—He arrived at the same conclusion.

96616. You point out a disquieting feature of the situation which is the extremely high proportion of comparatively young men who constitute so large a number of the applicants to the distress committees?—That is what I was mentioning just now; I thought that was what you were alluding to.

96617. You go on to say that you are fully confident it would be shown that the average age of the unemployed in unskilled industries is lower than it is in the skilled industries?—Yes. I have since seen the Report of the Distress Committee of Glasgow which was not published

Report of Distress Committee of Glasgow

when I completed this statement, and the Report bears out what I say.

96618. Then you draw another comparison from your locality. Partick and Govan, I assume, would be looked upon generally as less well-to-do districts than Glasgow?—They are more well-to-do.

96619. There is more wealth, there are more well-to-do houses and well-to-do people living in Glasgow than in those places, surely?—Not working-class wealth. Govan and Partick are mainly shipbuilding and engineering, and therefore employ more highly paid labour than Glasgow.

96620. You are speaking there as regards the working-class then?—Yes. They are boiler-makers and engineers down there.

96621. And the proportion of men over forty-five among the unemployed is much higher than in Glasgow?—Yes. What I mean is that in the shipbuilding districts, the men who are out of work are mainly old men; but in a large transporting centre like Glasgow, where fewer skilled artisans and more unskilled labourers are employed, the men who are out of work are mostly young men. This difference in age suggests that one cause of unemployment among unskilled labourers is the drift of displaced youths into their ranks.

96622. The result is that there is a large surplus of this mass of low-paid unskilled labour?—Yes.

96623. And that tends to short engagements?—That means casual labour. Every employer can get as many men as he wants in his neighbourhood, and consequently when a job is ended in one part of the town the unskilled labourers on that job do not pass to a new job beginning at the other end of the town, but a fresh gang altogether is taken on. The employer has only got to lift his finger and he can get as many men as he wants.

96624. That would be so if you took a trade like the building trade, but that would not be the case as regards more skilled labour, would it?—Not so much. Of course, skilled labour is not perfectly fluid, normally casual employment among skilled artisans is less. In Glasgow there is, at present, a considerable over-supply of bricklayers and carpenters owing to temporary causes; but in general, the over-supply of unskilled labour is much greater.

96625. As regards the building trades, that unskilled unemployed surplus would remain in the locality, I suppose?—Yes. My impression is that it is very immobile indeed. I have known men, not in Glasgow but in London, stay in the same neighbourhood in Limehouse from one year's end to another, hardly getting a month's work in the interval.

96626. Men connected with the building trade?—Yes.

96627. That seems to be rather characteristic of the building trade?—I think it is characteristic of all trades where much unskilled labour is employed.

96628. In Paragraph 8 you make an examination which is very interesting, of 150 labourers and 100 tradesmen, showing what were their occupations immediately on leaving school, and what were their occupations at the age of sixteen. In Table A., as I gather, the tendency is for the messenger boys and the lorry boys to drift into the grade of labourers, that is to say, at sixteen they were going down-hill?—What those tables are meant to bring out are these two points: First, that boys when they leave the elementary schools enter into occupations which are not a direct preparation for future industrial life, that is to say, they become message boys, van boys, trace boys, etc. That happens to all boys, whether they are going to be apprentices or not in my experience; but there are certain classes of occupations which I put down under "Boys in Factories or Works," which are more disastrous than being message boys or van boys, because the boys stay in them till they are eighteen. So if you compare the occupations of boys immediately on leaving school in factories and works, and their occupation at the age of sixteen in factories and works, you will see that the number is not diminished at sixteen, as it is in the case of van boys and message boys, but that it has increased, that is to say, they stay on till they are too old to get any other occupations.

96629. Now take Table B.?—B. shows the same thing, namely, that all boys start, whether they are going to be apprenticed or not in these stop-gap occupations.

96630. But the boys in this table are graded upwards?—Yes. That is to say the position of message boy or of van boy is not so bad for a boy's future as is the position of a boy who is doing unskilled work in factories or works, for example, boys like doffers or boys working screwing machines or loom-boys.

96631. Two years after leaving school is, in your judgment, a very critical period for these boys?—Yes, it is very critical.

96632. A number of these occupations would be such that they would take up much of the boy's time and would not probably bring him into contact with any healthy or educative influence?—Yes. I think some of the occupations are neutral, that is to say, they do not teach a boy anything; and some of them are positively harmful—for example, the occupation of a newspaper boy, of which there are a large number in Glasgow, or the occupation of a lorry boy. Of course, any occupation which is not interesting a boy or teaching him anything at all is harmful in itself. These boys who are put on machines directly they leave school have a lot of superabundant energy which goes in rioting in the streets, and so on.

96633. Has the parent a voice in the selection of these occupations, or is the boy's rather the dominant will?—I should not like to say anything about that; but I do know as a matter of fact that the poor parents bring pressure on their boys to go into occupations which are immediately highly paid. On the other hand, I have known parents take great trouble to apprentice their sons. But in the poorest class of all my impression is that the temptation to the parents of immediately high earnings is almost overwhelming.

96634. It is what I might call necessitous pressure?—Yes.

96635. In Paragraph 10 you give various figures to show that many of these occupations offer small prospects of retention or advance of the boy, as the number of boys is excessive compared to the number of men?—Yes.

96636. Take your first example, the weaving factory, is that an average factory, or is it an exceptional one?—It is a carpet-weaving factory. The conditions vary very much in the different branches of the trade. I should not like to say what they are in the cotton industry in Lancashire, but I am told that girls are employed there to do what boys do in the weaving industry in Glasgow. In carpet-weaving I think the usual practice is to use these loom-boys or creelers, as they are called, as unskilled labourers in the way described in my statement.

96637. I assume a textile factory would be one in which boys would get a chance of retention and promotion?—That is certainly not the case in the only textile factories I have seen; but as I have said, I do not know the cotton industry except by repute.

96638. What textile factories have you seen?—I have seen jute and wire-weaving, and I have seen carpet-weaving. This is a carpet-weaving place.

96639. But you have no experience of Lancashire?—No, I have not, except by hearsay.

96640. Are these carpet factories in Glasgow?—Yes.

96641. Another illustration that you give is a soap works, and there I see the boys are in excess?—Yes.

96642. There is a great variety in your third illustration, a bakery?—Yes. The two branches of the trade, bread-making and biscuit-making, are quite distinct. In bread-making the number of apprentices is strictly regulated. In biscuit-making there is an enormous surplus of boy labourers who receive no training.

96643. Does your experience confirm a statement which has been made to us by various witnesses that these boys can obtain a fresh place with such comparative ease that they are apt to break away on very small provocation?—Yes. They are continually leaving; they are simply nomadic in their habits. At the end of my statement I have given you specimens. They throw up a job on the smallest provocation, and can easily get a job elsewhere up to a certain age.

Mr. Richard H. Towney.
16 Mar. 1908.

Voice of the parent in selecting employment.

Excessive number of boys employed in some occupations.

Conditions of the textile trade.

Excess of boys in soap works.

Conditions in bakeries.

Nomadic habits of boys.

Mr. Richard 96644. There is one boy who is said to have been
H. Tawney to fifty or sixty different jobs?—Yes. It is simply
casual labour among boys.

16 Mar. 1908.

Conditions in
Dundee and
London.

96645. Your investigations have been largely confined
to Glasgow and Dundee, have they not?—Mainly to
Glasgow. I have not investigated this problem in Dundee,
but I have investigated others there, and I know the
circumstances roughly.

96646. The conclusions you have drawn from Glasgow
you think would be not only applicable to London and
Dundee, but probably in both places the conditions would
be worse?—Much worse I should take it. Glasgow is
exceptionally well off owing to the presence of the
engineering and shipbuilding industry.

Moral and
physical
effects on the
boys of
present
conditions.

96647. We have spoken of the industrial disadvan-
tages of this system; now what should you say as regards
the physical effect and the moral effect on the boys?—
I have not got any practical experience of a large number
of boys except the experience which everybody has who
keeps his eye open in a town. I know that the boys
engaged in street selling and in the selling of newspapers,
lead lives which are extremely demoralising and which
do harm to their physique. As to the question of morals,
you will see in Paragraph 19 some figures which I got
from the Chief Constable of Glasgow, which throw some
light upon the point, I think.

96648. Those figures are very remarkable; 83 per
cent. of the number of youths between the ages of
fourteen and twenty-one charged with theft and other
offences inferring dishonesty came from the class of
messengers, street-traders, hawkers, and others, as against
7·5 per cent. from tradesmen, and 8·8 per cent. from
soldiers, schoolboys, waiters and others?—Yes.

Impracti-
cability of
apprentice-
ship owing
to specialisa-
tion of
labour.
Point of
view of
employers.

96649. As regards your suggested remedies, I suppose
apprenticeship cannot be put back on the old footing
that it occupied?—No; apprenticeship is quite hopeless
at present in all the trades I investigated. It is frequently
a fraud upon the boy, and is sometimes, I am afraid, a
fraud upon the employer. The specialisation of labour
has proceeded so far that employers do not want to give
a boy an all-round training; they want to put him on a
valuable machine and to make that machine turn out
as much as possible in the shortest possible time. I have
had quantities of evidence about that, both from em-
ployers and from employed. For example, take a boy
who is learning engineering. Formerly he learnt to be
both a fitter and a turner: now fitting and turning are
often separate. Again, a boy went into the machine depart-
ment of an engineer's shop and he learnt to be a qualified
turner, but now he is put upon some particular class of
machine, a boring machine, a planing machine, or a slot-
ting machine, and he is kept at that, and directly he falls
out of that niche he cannot get into any other, because
he is not suited to any other.

96650. In the old days I suppose it was to the interest
of the employer that he should promote apprenticeship?
—Yes—or it was not to his interest that he should not.

96651. Now he has no need to do so?—That is so.
What he wants is cheap production for a wide market;
and that means sub-dividing labour. If you take a loco-
motive shop making one engine a day, as some of them
do in Glasgow, what they want is to put a boy on a process
that he can do and make him turn out as much as possible.
It is simply waste of money to put an apprentice as a
learner on a valuable machine.

96652. There are two suggestions that you make, one
of them being to raise the school age; that would be
whole-time, I suppose?—Yes. I make these suggestions
very tentatively because I have no experience of the ad-
ministration of education, and I daresay the same result
might be brought about by different methods.

96653. Your second suggestion is that the boy should
attend a trade school after fifteen?—Yes.

96654. How long would you make that attendance
compulsory?—I should make it compulsory as long as
the British public would stand—I imagine up to seventeen.
That is what is done in Germany, I believe.

96655. Would you make him a sort of half-timer then?
—Yes.

96656. If you make him a half-timer at school, and you
want the boy to benefit by the instruction, you must put
a limit on his working hours?—Yes. It is quite impossible
to send some of these boys to school after full-time.

Sugge-tions
to raise the
school age.

Compulsory
trade schools
after 15 till
about 17.

Working
hours to be
limited.

96657. Of course, any proposal of that kind would
raise a number of objections; there would be the parents the poorer
for instance?—The poorer parents would object, but parent
I am certain that the better-to-do work-people would not
object, because I frequently talk to them about it. They
would only object if they thought the boy was going to be
sweated and overworked, as he would be unless there was
a reduction of the hours. It is true that the poorer
parents would object, but then they must not be allowed
to use their children simply as instruments of production,
as they do at present.

96658. Supposing you are right in your conclusions, in
the course of a few years the improvement in the physique
of the boys would become manifest?—I think they would
improve in character and physique.

96659. Then coming to the employer, what do you
think industrially would be the effect of raising the school
age, and then on the top of that attaching the half-time
system?—Employers who employ learners and apprentices
are very keen, I think, to get some satisfactory trade
education, because of course it puts money into an em-
ployer's pocket. On the other hand those employers who
employ a large number of boys as labourers do not care
about it at all, because it never occurs to them that a boy
who is a mere labourer ought to receive a trade education,
whereas he is precisely the boy who ought to receive it,
because when he leaves his present employment without
it he will not get any other. As to the effect of com-
pulsion, the effect would be in my opinion that the em-
ployer would have to find substitutes. As a matter of
fact he has found substitutes in a great many cases. For
example, formerly boys were employed as operative
printers' assistants, laying on and taking off paper, but
a union of operative printers' assistants was formed and
now men are employed at 23s. a week, I think. Again
in the boilermaking and shipbuilding the rivet boys are
engaged by the riveters, and sometimes rivet boys are
quite old men; they might just as well be men throughout
the whole industry, that is to say, you could substitute
men for boys there.

96660. (Mr. Loch.) At the wage of the rivet boy?—
Yes. These rivet boys are on piece-work and they make
a high wage, sometimes over 20s. a week. They are paid
out of the riveters' money. Then again you could sub-
stitute machines. Take, for example, the wire-weaving
trade. The boys in the wire-weaving trade are pulling
by hand a beam which closes the threads after the shuttle
has gone through. That is a process which in all other
kinds of weaving is, I understand, done by machinery.
It is not done by machinery in this trade, simply because
it is an old-fashioned trade, and because employers will
not go to the capital outlay of putting in a machine.
Again you can substitute girls for boys. There is a
large supply of girls who are not at present employed in
industry, and it does not matter employing girls in occupa-
tions which have got no future, because the girls have got
a future in marriage, and so you can employ them instead
of boys. Then again you can work boys double shifts.

96661. It would rather rouse the mind of the public
to substitute girls for boys, would it not?—I make the
suggestion because there are processes which in the jute
industry are done by boys and which leave boys with no
future at eighteen or nineteen years of age, but which in
the cotton industry are done by girls. I do not put it
forward as an ideal solution, but it certainly is a better one
than the present situation. Machinery and double shifts of
boys would solve the problem. It has been solved in
Germany.

96662. Now, take the case of the lorry boys which you
refer to; you could not put a man to that work, could you?
—The lorries would go without. A great many employers
do not employ lorry boys because they cannot get them
cheaply enough. It means then that the lorry man has to
be a little more careful in looking after his goods. I
knew a lorry man who employed a dog instead of a boy,
and that dog looked after the cart very effectively.

96663. Do you think that the suggestions you make
could be carried out without any real or permanent damage
to the industries or occupations in which these boys
would be so employed?—Yes, that is my opinion.

96664. Now will you go on to the expense of it?—
Do you mean the expense of the education or of the
increase in the cost of production?

Estimate
increase
cost of
educatio

96665. I was thinking of the actual increase in the cost of education?—I have no information about that, I am afraid, but of course it would vary a great deal in different districts.

96666. If you had the accommodation there would be only the teachers to provide for?—I suppose so; but I have not gone into the question and my opinion is not worth anything.

96667. Have you anything reliable about the increased cost of production; can you make any estimate at all of that?—I think what would happen would be exactly what has happened in the case of the Factory Acts. When employers are cut off by competition in one direction they reorganise their workshop and lay the further cost on some other factor, that is to say, they introduce improvements and substitute adults or machines for boys.

96668. Looking at it both economically and industrially, do you say it is distinctly disadvantageous that the employer should always have available this enormous mass of boy labour?—It is a distinct disadvantage. I think it is the most serious evil there is at present.

96669. In the latter part of your Statement you give us a very interesting account of the Strassburg system of public aid. We will take first the labour exchanges. We have had some evidence before us from persons of experience who believe that a very great deal can be done if there is a proper system of labour exchanges linked up and established right throughout Great Britain; do you agree with that?—I do agree, but with this qualification that I think the use of the labour exchange would have to be made compulsory upon employers.

96670. Is it compulsory now in Strassburg?—No, it is not. It is compulsory on all the municipal departments and on all contractors doing work for the town; but the pressure which a German municipality can bring upon private employers is much greater than an English one can.

96671. Your idea would be to bring pressure on the employer to use the bureau, and you would contemplate this labour bureau or exchange being managed by a joint committee of masters and workmen?—It ought to be under some public authority, but I think that public authority ought to delegate its powers to a representative committee reserving only the ultimate control.

96672. (*Mr. Nunn.*) Is it your idea that you should substitute legislation for the pressure which German municipalities would be able to exercise on the employer. You would have to make use of legislation, would you not?—I think you would. Otherwise why should employers deal with a labour exchange? There is absolutely no reason whatever for it, as they have got a large mass of unskilled labour standing outside their gates. The case is exactly analogous to that of a trade union amongst unskilled labourers. You cannot form a successful trade union amongst unskilled labourers, because there is too large a number of potential blacklegs who would not conform to the trade union rules; and so you cannot get the employers voluntarily to come to an exchange, because they can get plenty of unskilled labour not through the exchange.

96673. (*Chairman.*) Is there not another difficulty about unskilled labour, namely, the difficulty in obtaining the contributions?—That is so, but the question of the over-supply is the root one.

96674. During your visit to Strassburg you were pleased with the system there?—Yes, I was very much impressed with it.

96675. In Paragraph 24 you say the exchange there is divided into four departments, one for skilled workmen, one for unskilled workmen, one for clerks, and one for women?—Yes.

96676. The idea is that they should keep the applicants in the actual sphere or occupation in life in which they have been engaged; for instance, they do not expect a clerk, say, to do heavy manual labour?—No.

96677. Would he be entitled to relief if he could not get work in his particular occupation?—Yes.

96678. You refer to the pressure which has been brought by the town council upon certain employers, but I assume that employers now have recourse to it, because they have found that it answers their purpose?—Yes, that is so. I am informed by the officials that there is not such an over-supply of unskilled labourers in a town like Strassburg as there is in some English towns.

96679. Is the system in Strassburg, do you know, common to all Elsass, or is it confined to Strassburg?—It is common to all Elsass. Strassburg is the head office, the central exchange of Elsass.

96680. You give us some very interesting facts about it, showing the utility of the office, for instance, in obtaining information as to the state of the labour market in other parts of Germany or Switzerland. A part of the scheme which I think is not quite clear is the method in which they deal with the unemployed. I understand that any able-bodied workman who has registered his name and cannot get employment is entitled to get a ticket and to go to the Poor Law; is he?—Yes; that is to say, nobody can get relief of any kind unless the labour exchanges have found out that the state of the labour market is such that there is no employment going.

96681. Then assuming that they have satisfied themselves that he cannot get employment, he is entitled to go to the Poor Law?—Yes.

96682. And the relief he gets may partake of different characters, may it not?—Yes. Poor relief, I should say, is simply one of several different kinds of relief. He may get relief work, he may get relief from his union, and he may get ordinary out-relief through the Poor Law.

96683. Assuming the man who got relief belonged to a union, would he not get something from them to keep him?—He would get unemployed benefit from his union, but, unless he registered at the Municipal Labour Exchange, the town would not pay the 50 per cent. contribution to the union's funds which it now does.

96684. That is part of the bargain?—Yes; otherwise the town would have no check.

96685. (*Mr. Lansbury.*) What about a man who is not in a union?—He has to get Poor Law relief, or in times of exceptional distress he gets work on relief works as in England, but I think they are better managed there. Of course, the payment of the 50 per cent. contribution to the trade unions promotes the formation of trade unions.

96686. (*Chairman.*) The local authority has got a certain check over the operations of the unions in other ways, has it not?—Yes; a union has to comply with certain other forms and rules laid down by the town, of course.

96687. What are those rules?—They simply mean opening the union's books and observing them. I need not go into them. There are certain prescribed schedules, and so on. The object is merely to secure that the town has got the necessary information.

96688. (*Mr. Lansbury.*) Does the trade union man never have to go on relief work; does he always get paid without that, and does the other man have to do the relief work?—I cannot answer that. When a trade union card has run out it is for the union to decide, and not for the town to decide whether they will continue to pay out-of-work benefit; but as long as the union pays out-of-work benefit the town continues to supplement the union's payment.

96689. Does that mean that the town pays half of what the man receives weekly?—Every month the union sends its total bill for unemployed donation, and the town adds to that 50 per cent. of the total sum.

96690. So that the man pays for half of his benefit, and the town pays the other half?—Yes, the man pays in the shape of his contribution.

96691. (*Chairman.*) The contribution from the town is not made in the beginning of the year, but it is made monthly according to the actual disbursements?—Yes. There is a maximum limit at present. I should say that this is a new system, and that it is purely experimental.

Mr. Richard H. Tawney.
16 Mar. 1908.

Conditions on which relief is granted.

Varieties of relief given

Conditions on which the town contributes to the funds of a union.

Relief works for those not on a union.

Rules laid down by the town for the unions.

The union, and not the town, decides on paying out-of-work benefit.

System of payment by the town.

Mr. Richard H. Tawney. 16 Mar. 1908. 96692. (*Mr. Nunn.*) The term "contribution" is a little ambiguous, is it not? The municipality has nothing to do with the contributions of the men at all; it simply has to do with the benefits?—It simply has to do with the actual payment made by the union. The municipality pays half the lump sum disbursed by the union.

96693. (*Chairman.*) Assuming the man runs out of his benefit relief, would he then be able to go back to the exchange committee and get a fresh ticket not for relief but for the Poor Law?—He would have to get a fresh ticket before he could get Poor Law relief.

Relief is all out-relief; payments higher than England.

96694. As I understand it, no man who is not a member of the union can get relief otherwise than through this Poor Law ticket?—Through the Poor Law, or through the relief works such as exists in England; but Poor Law relief in Strassburg is very different from Poor Law relief in England, because it is all out-relief, and because the payment is much higher.

The Poor Law starts relief works and gives out-relief.

96695. Is there another authority besides the Poor Law authority, namely, the superintendent of relief?—No. The Poor Law office is the authority which starts relief works in times of exceptional distress, and in ordinary times gives out-relief.

Out-relief does not carry disfranchisement, except penal relief work

96696. (*Mr. Lansbury.*) Does that out-relief carry with it disfranchisement? I cannot gather from your Statement whether it does? No, it does not.

96697. It is only the relief work that does, then, is that it?—It is only certain classes of relief work—what they call penal relief work—which differs from the other in carrying disfranchisement.

How this is awarded.

96698. (*Mr. Loch.*) Is that penal relief work on a sentence?—No. There are two classes of relief work in Strassburg; one is much more agreeable than the other, and does not carry disfranchisement, but the other does carry disfranchisement.

96699. Is that simply done by reference to the applicant? In other words is the man sent to this penal work by the Poor Law authority?—He is sent by the town office if he is a man who is suspected of idling.

96700. Without any police intervention?—This has nothing to do with penal labour colonies.

96701. (*Sir Samuel Provis.*) Would the local authority determine to which class he shall go?—Yes.

96702. Without any intervention of the police authority?—Yes.

96703. (*Prebendary Russell Wakefield.*) On their knowledge of him?—On their knowledge of his previous work.

Out-relief and relief works.

96704. (*Chairman.*) A man gets his card and goes to the Poor Law and gets out-relief; but that out-relief, I assume, would only be for a certain time?—I am afraid I cannot tell you that; I do not remember.

96705. Would the out-relief be considered an easier and pleasanter form of relief than to get relieved on relief works?—No, certainly not; the payment would be less.

96706. The payment on relief works, I assume, would be somewhat under the standard wage?—Yes. In Paragraph 31 I state that it is "2 marks 20 pfennigs a day, a sum slightly below the local rate for unskilled labour."

Penal colonies—a species of reformatory for all Elsass-Lothringen.

96707. The Poor Law authority would decide if a man was to go to a penal colony you say; is that colony one that is maintained by Strassburg only, or is it an institution to which a number of other municipalities send their people?—I did not investigate the penal colonies. I think there is one workhouse, that is to say, as I understand it, a species of reformatory for the whole of Elsass-Lothringen to which all towns in Elsass-Lothringen can send persons who have committed some kind of offence—but I do not know much about that offence.

Features of the Strassburg Poor Law system.

96708. Then the Strassburg Poor Law system is the ordinary Poor Law, and, in addition, if there is distress or the number of unemployed gets beyond a certain standard, then relief works are opened?—Yes, but the feature of it is using the labour exchange to ascertain whether a man is out of work through industrial or through personal causes.

96709. These relief works are not always going?—No; they are only started in winters of exceptional distress.

96710. This bureau is under the municipality, is it?—Yes. The chief bürgermeister is the chairman, but the municipality delegates the authority to a body of workmen and a body of employers. I have described how they are selected.

96711. It works, I suppose, in very close relation with the Poor Law?—Yes.

96712. Are the people who get relief through the Poor Law considered to have fallen in the social scale?—Not to anything like the same extent that they are in this country, that is to say, the municipal authority in Strassburg encourage persons to apply for relief when they cannot otherwise keep themselves. They argue that if you attempt to use the Poor Law in order to make the Poor Law so unpleasant that men will not apply for relief, you are not curing pauperism, but you are simply concealing pauperism; if that happens the official statistics of relief are absolutely no measure of real pauperism. Official statistics may show an increase in the number of persons relieved when there may be a diminution in the real amount of pauperism; and *vice versa*.

96713. Has this system of the labour exchange been long in operation there?—Twelve years.

96714. (*Prebendary Russell Wakefield.*) But not the whole system of relief works?—I could not say, I am afraid, how long the relief works have been going on.

96715. (*Chairman.*) You say that when trade revives the workmen flock back to their ordinary employment; the inducement is, I suppose the higher wage?—When trade revives, employers begin to apply to the exchange, and for every employer who applies, the exchange cancels a ticket issued to a workman.

96716. Has the exchange the power of making those whom it has on these relief works or in receipt of out-relief take up this employment?—It says: "Either you must take a job or else you must keep yourself."

96717. (*Mr. Loch.*) That is said by the labour authority?—By the labour exchange.

96718. (*Chairman.*) Then the system really does depend on bringing the employers in?—It entirely depends on getting the co-operation of the workpeople and the employers.

96719. I suppose one of the reasons why you recommend some compulsion is that, unless the employers come in, you cannot work your labour exchange successfully?—It is entirely useless unless the employers come in.

96720. Did you talk to people there; and, if so, what was the general impression as to the results of the labour exchange?—I only talked to officials and to philanthropic persons who are interested in it. I did not see any employers or any workpeople, I am sorry to say. The general impression was extremely favourable to it. I was told that the workpeople approved it strongly; and that is shown by the fact that unions pay their travelling benefit through this labour exchange in order to attract men to it. I was told that the employers started by being rather hostile to it, but that they have come to approve of it. The officials asserted that most of the men at work in Strassburg had been engaged through the exchange.

96721. It is rather remarkable that the system which you describe is the solitary relieving agency in the town, and is not supplemented by charity?—That may be an exaggeration; but there is much less of private charity and private institutions for dealing with distress there than there is in this country, because the charitable public in Strassburg and Freiberg are confident that the municipality will not lay down too stringent a standard of relief. The cause of indiscriminate philanthropy in England is the knowledge that a man has got nothing to fall back upon except the workhouse.

96722. You have spoken about the unions; I suppose one of the difficulties that this exchange has to encounter is that the unskilled labourer has no union?—That is so.

96723. Are there many of the others in unions?—About 25 per cent. of the adult manual workers are in unions.

96724. Have any attempts been made to establish any kind of union among the unskilled, or is any encouragement given to the unskilled to save?—I am afraid I have not any information about that.

96725. Did you visit any other institutions of a similar character abroad?—I visited the institutions at Freiberg, which is a small town in the neighbourhood of Strassburg, but is too small a town to be of any significance. The same system of labour exchanges is in use there; it resembles Strassburg exactly, except that no system of supplementing trade unions benefit does not obtain there.

96726. You are clearly of opinion that if labour bureaux could be established, and still more if they could be established all over England, and you could bring employers in, they could play a very great part in diminishing unemployment?—Yes; if you could make them compulsory, and I am quite sure that it would be necessary to make them compulsory.

96727. In what sense would you make them compulsory?—I should say that employers must engage all their men through a central office.

96728. (*Mr. Nunn.*) Regular or casual?—Regular and casual. There is not any hard and fast line between them. As a matter of fact, in a great many trades, the employers do engage all their regular men through the offices of the unions—for example, the Typographical Association in Scotland.

96729. (*Chairman.*) If you did that in this country, where we are not accustomed to such drastic measures in such matters, and you declined to allow the employer to employ anybody except through a labour exchange, you would put it on the local authority which had a labour exchange to find work for all the people who wanted it, or at any rate that might be contended?—I do not quite see why.

96730. You will then be saying that it is not legal to get employment except in one particular way, that is, through the bureau, which is a Government or municipal office?—Yes.

96731. A man goes there and he cannot get employment; what then?—If the exchange is working properly as in Strassburg, that is a proof that there is no employment to be had. A man has got a much better chance of getting it there than he has by walking about the streets.

96732. Still, the pressure on the Government or the local authority to provide work for a considerable number of persons, it seems to me, would be very great?—If it is the case that there is really no work to be had, the pressure ought to be applied, I think. It is not desirable that the municipality should escape it.

96733. Your answer would be that it is a test of distress?—It is an absolute test whether distress is due to industrial or personal reasons.

96734. And therefore, being a test, the local authority must be responsible for it?—Certainly.

96735. (*Prebendary Russell Wakefield.*) Can you imagine the reverse case, in which there are not sufficient people to go round, and an employer is obliged to apply to an exchange, and he does not get what he wants; what is to happen then?—He does not get what he wants because what he wants is not to be had in that case.

96736. He would have to do without it?—Yes.

96737. (*Mr. Gardiner.*) Could they not telephone to other parts?—It would have to be in touch with exchanges all over the country. It really increases their choice of men, because it brings them into touch with all the available workmen everywhere.

96738. If highly skilled workmen are required and there are only six on the list at the exchange and the employer does not like any of them, the exchange could telephone to some other towns?—Certainly.

96739. The men would not object to that, you think?—No.

96740. (*Mr. Loch.*) Would they not object to other men coming in?—It happens continually.

96741. (*Mr. Gardiner.*) That is to say, these six local men who are not so highly skilled are kept out of employment whilst the seventh man is imported?—If he was a better man.

96742. Or because he suits the employer better?—Yes.

96743. (*Chairman.*) Have the people who are registered at the exchange got to qualify by residence?—No.

96744. Then there is nothing analogous to our settlement?—No. The object is to make labour as mobile as possible and a man registers at the exchange directly he enters the town.

96745. And *vice versa*, a man going away from there to get employment would not have to qualify in the other town by residence?—No.

96746. (*Sir Samuel Provis.*) Is the labour exchange limited to Strassburg itself?—There are several exchanges in Elsass-Lothringen.

96747. Are they all linked up?—Yes.

96748. Supposing there was an insufficiency of employment in Strassburg, would they communicate with the other exchanges?—Yes, they are doing that continually. In the rooms I saw hanging on the walls printed lists of the places in other parts of Germany where there is a demand for labour.

96749. In that case do they render any assistance in moving a man from one place to another?—Yes, the State railways give a reduction of 50 per cent.

96750. Does the labour exchange itself pay any part of that?—They may have an arrangement with the railway, but I cannot say who bears the ultimate charges.

96751. Referring to your tables in Paragraph 8 it seems that according to Table A. there were eight lads becoming apprentices immediately on leaving school, and at the age of sixteen there were twenty?—Yes.

96752. Therefore it does follow that although a certain number of boys go into casual employment to start with, they ultimately become apprentices?—Certainly. The normal thing when a boy leaves school now is not to become an apprentice. The age of apprenticeship is rising. There are only about four trades—painting, printing, plumbing, and iron-moulding—where boys become apprentices in Glasgow when they leave school. The employers do not want them till fifteen or sixteen, and some unions will not let them be apprenticed till they are fifteen or sixteen. So they all go into these occupations to begin with, and some of them pass on into apprenticeship.

96753. In the case of Table B. the proportion is very high; at the age of sixteen there are eighty-seven?—Of course—because they were tradesmen.

96754. They went into the trades?—Yes.

96755. There were eighty-seven of them at sixteen, although there were only twenty-three immediately on leaving school?—Yes.

96756. (*Chairman.*) The boys in Table B. would be of a different class to those in Table A., would they not; they would be a good deal above the social standard of the labourer?—Yes; they are joiners, engineers, masons, and so on.

96757. In receipt of good wages?—Yes.

96758. (*Mr. Loch.*) With regard to your suggestion about girls' work, you do not think that by the time they have had work of the type mentioned for some years they would, on their side, be rather uprooted and put into a different frame of mind as to their own futures?—I suggested the girls as a possible substitute, but I do not want to emphasise that. However, I think it would be a better arrangement than the present arrangement. The advantage is that it does not matter if a girl has no industrial future because she has a future otherwise.

96759. I take it you would think that it is on the whole not good that women should be working in factories, and so on, when they are married?—Certainly; but it does not do girls any harm provided the factory is fit to work in.

96760. Would you be in favour of saying it is desirable that married women should not work in factories?—I think it is desirable, but I do not know how it could be brought about. It would kill Dundee, for example.

96761. Would the economic result be so serious as to make the proposal impossible?—That is a matter on which I have not any evidence. The work-people in Lancashire say it would not, because the women there work and are paid the same piece-rate as men, and some earn as much as 27s. a week. They are not any cheaper than the men there, and what keeps them employed is simply custom. But I have not got any direct information about that.

Mr. Richard H. Tawney.
16 Mar. 1908.

Labour exchanges in Elsass-Lothringen linked up.

Reduction on State railways to help move a man from one place to another.

Figures in Table A. referred to.

The age of apprentice-ship is rising.

Figures in Table B.

Advantage of girls as a substitute for boys.

Serious results of married women working in factories.

Mr. Richard H. Tawney. 96762. You use the argument as to Dundee; the Dundee jute-working women are drawing higher wages than the men, are they not?—No; they are drawing much lower wages.

16 Mar. 1908. In Dundee 96763. Even in the weaving part of the jute?—Yes; theirs is very low-paid work in Dundee.

the women draw much lower wages than the men. 96764. As compared with what the men who are doing the same work are getting?—Yes.

96765. If that is so, this argument as to Lancashire would not apply to Dundee?—That is so. I have no personal knowledge of Lancashire.

Trade schools should supply general knowledge of a trade. 96766. You make the suggestion that there should be trade schools; trade schools, I presume, would be schools that would give men just that sufficient knowledge which would enable them when they came to the age of starting in life for themselves to do the specialised work which they now require in industry?—No. I do not want them to have specialised knowledge. I want them to have general knowledge, that is to say, ability to make openings for themselves and to adapt themselves to a number of different circumstances. Let me take an example. A boy in a particular kind of works is set down to a machine turning out screws or bolts; he could not take any other niche or any other job because he does not know how to do it; what you want is that he shall get, out of the workshop, the general knowledge that he does not get in it.

96767. And so be able, in his turn when the time comes, to take special work?—Be able to take work of a different kind. An engineer ought not to be a fitter only; he ought to be a turner as well, because that doubles his chance of employment.

96768. You would generalise his education industrially in order that he might specialise afterwards?—The employer will specialise it afterwards.

Proper education for unskilled labourers. 96769. Coming to the unskilled or general sort of labour, your trade schools would hardly serve in that case?—Perhaps the term trade school suggests the wrong thing. The boy is being employed on something which offers no industrial or moral training; he sometimes becomes utterly demoralised and irresponsible. What I want to do is to exercise moral discipline and to give him the self-restraint that come from education, and the adaptability as well.

What is expected from a half-time school. 96770. Do you think you will get that from a half-time school of any sort?—I think so.

96771. Have you found it so actually? Is it the case that the half-time system will apply to this type of boy we are speaking of?—The fact of the system being a half-time one does not alter the quality of the education, does it?

96772. No, but it alters the quality of the control over the boy?—Because it halves it; but even then it is better than it is at present.

96773. But you have no home control over him, unless you work it in connection with the home. It is said in some of these papers that we are dealing with boys who are on the verge of homelessness, in the sense that their home is not much to them?—I should not like to say that always, but it is true in a great many cases.

96774. I am thinking of those cases, rather, where the tendency is in that direction; do you think that half-time would suffice for those cases?—I should rather have the whole-time system, of course; but that is impossible.

96775. You do not think this bit of work could be accomplished in other ways than by an alteration in our education plans?—No, I do not.

96776. Did you see anything of this sort abroad?—No, I have merely read the literature on the subject.

A combination of trade teaching and moral discipline wanted. 96777. Do you think our sixth form teaching pushed into two years further would suffice for the purpose?—I want to see some sort of combination of trade teaching, with moral discipline, that is, teaching the boys the principles of trades and giving them an interest in life.

Few facilities for sports in Glasgow. 96778. Do you find in Glasgow that these boys form clubs or anything of that kind, and do much in the way of sports?—Not much in the way of sports; there are very few facilities for sport among the boys.

96779. And you want something really in that direction?—That would be desirable, no doubt, but it was not what I was thinking of.

96780. Would it not be necessary to have that as well?—I dare say it would be better to do it as well, but if you could not do it it would not alter the merits of this proposal.

96781. Do you think that the half-time education which you propose would teach the boy all round as you desire?—I think it would do him a great deal of good.

96782. With regard to the unions in Germany which you have referred to, may I take it that the method of giving half the relief money, if I may so call it, to the union leads practically to the creation of what I may call out-of-work benefit in the unions, of which the municipalities pay half?—It does not lead to its creation; it leads to its extension. Unless the fund already exists the municipality does not pay half. In Germany The extension of out-of-work benefit by the municipality giving it

96783. If the municipalities did not pay half it could hardly be a public service to the extent that it now is?—That is so. Of course, if we paid half the £100,000 which the Amalgamated Society of Engineers spends in two or three years it would immensely increase their resources.

96784. Do you find that owing to this payment any lower class of men are organised in Germany?—I did not get any information about that; I asked the officials, but they could not tell me. I should think that it was a bounty on trade unions.

96785. Has it at all suggested to you any method of forming a quasi-public fund as an insurance against want of work?—Yes. I think if this system were adopted it would be desirable not to confine it to unions, but to extend it to any association which performed the functions now performed by trade unions with regard to unemployment. I think it would create a lot of ill-feeling to confine it to unionist workmen. I think the example of putting the administration of unemployed relief not into the hands of distress committees, but into the hands of the workmen themselves, and of throwing the obligation of ascertaining whether a man was malingering or not on themselves, is the only principle that can succeed. I should suggest the creation of "Unemployment Insurance Associations," to which a grant should be paid from public funds. Possible extension of this system

96786. In England, amongst our unskilled labourers, it is generally said there can be no union; but could there not be a union if a large grant like this were available, and the union existed simply to put £50 down to another £50?—Yes, I think that is quite possible.

96787. So it would not be a combination on the lines of the trade itself, so much as on the lines of qualifying themselves for a particular benefit?—Yes.

96788. With regard to the relations of these unions to the municipality, does that relation affect their union trade union spirit adversely?—No; they are just as much trade union organisations as they are in England. Effect on the union trade union spirit.

96789. They are not made too pliant?—No. I did not gather so in conversation.

96790. I understand that the labour exchange, as used in this way, acts as a first line of defence against the troubles and distress that may follow an unemployment?—It minimises the need for relief by seeing that the men get whatever employment is to be got at once; and it also acts as a test for relief when there is no employment to be had. Work of the labour exchange

96791. Suppose we had a system like that working in West Ham, would the pressure for employment be so great that in most of the cases it would simply have to be recorded that the men wanted relief?—I think that would be probable, but then we should for the first time know the real extent of unemployment. The information as to extent of unemployment and necessity for relief is wanted.

96792. The result would be that until some sort of balance was reached, as there is, perhaps, in Strassburg and the surrounding districts, between the amount of work available and the number of people applying for it, you would throw a great mass of people on to relief in some form?—You would not throw them on to relief, but you would show that they were in need of relief. The State would be under no more obligation than it is at present, if it is under any, to provide relief; it would simply know how much relief was actually wanted.

96793. Each of these cases would be applications, I understand, that is to say, the men would have applied in the same way and have been tested by the labour exchange itself, and so would be qualified to that extent for becoming applicants for relief?—The labour exchange need not undertake the functions of a test in this country unless it wants to. When a man applies to a labour exchange he does not apply for relief; he asks: "Is there any work in ordinary employment?"

96794. If he chooses to go there the testimony of the labour exchange is for him if he wants relief?—If the State wants to organise relief works the labour exchange provides it with the machinery for knowing what the causes of distress are.

96795. You would bring these labour exchanges into force on the plan that is adopted in Strassburg?—Using them as a test?

96796. Using them as a test?—Yes, I think that is what we ought to work for.

96797. But prior to that it is essential that the representative trades of the district should become partial administrators?—Yes; I think that is essential, to get confidence.

96798. With regard to the relief work, I understand that relief work is not provided by the poor authority?—That is so.

96799. I presume that the authority would get its information about the individuals who applied at the labour test?—Yes; they have a very complete record.

96800. And then the man's *dossier* all through is available?—Yes.

96801. Granting that we might get a labour exchange test working as you suggest, do you think that their possession of a *dossier* in Strassburg enables them to carry the test out in a way that we could not?—Yes, I do. That is very important.

96802. Does it not follow, therefore, that unless you have the *dossier* system you cannot carry this out?—The *dossier* system is simply a note as to a man's qualifications for employment and his previous record.

96803. And there, to a certain extent, all the references to a man's past career are down?—Yes.

96804. We have nothing like that here, I think?—We have it in the labour exchanges in London, I think.

96805. The *dossier*, I think, if I am right, in Germany, really carries you back to the man's past, so that practically from the time of his confirmation almost you have particulars?—I do not think there is anything like that. I saw their *dossiers* and I did not gather that.

96806. Did they use the police for making inquiries?—Not that I know of, especially in connection with the labour exchange. Of course, the police know much more about people in Germany than they do in England.

96807. (*Prebendary Russell Wakefield.*) The police *dossier* and the *dossier* you are speaking of now are two different things, are they not?—Quite different things. This is merely an industrial record.

96808. (*Mr. Lock.*) The system in Strassburg and other German towns is relief without working?—Yes.

96809. Have you found practically that there is a poorhouse somewhere near in which such cases as drink cases and other ineligible cases are kept?—There is not a poorhouse for Strassburg, but there is for the whole State or Province.

96810. Did you go into one?—No, I did not; but how they qualify for it I am not quite certain.

96811. You draw a distinction between that and the *arbeitshaus*?—There is not an *arbeitshaus* in Strassburg.

96812. But there is for the area?—Yes. The *arbeits-haus* is what I was speaking of.

96813. Are they sent to the *arbeitshaus* by sentence of a magistrate?—I am not sure about that.

96814. Would those cases which we in England would refer to the house, unless they were suitable for the poorhouse or the *arbeitshaus* be relieved by way of allowance?—Yes—by the ordinary method of relief.

96815. The ordinary definition of relief, I think, runs something in this form in Germany—that the person has relief if it is absolutely necessary, provided that no one is able to furnish him with what he needs, and that he will do whatever work he is required to do?—I did not see any formula of that kind, but they do get relief without working.

96816. That is given in a little booklet, like the Elberfeld booklet, showing what the conditions of relief are: you do not remember the definition there?—No.

96817. You say the destitution is not in existence there as it is in England?—A man gets relieved before he has got destitute, and he gets relief in order to prevent his becoming destitute.

96818. Is there not a common rule that all he can claim is what may be called the absolute necessities of life?—Yes.

96819. Is that not very near, technically, to our definition of destitution?—I do not think so. I think it is interpreted in a much more liberal sense as to what the necessities of life are.

96820. That is to say the interpretation is different, but the principle is common?—It is rather hard to distinguish them.

96821. Will you take it for granted for the moment that what I put to you as the general rule in almost all their regulations is fairly correct; would you in that case say that he had only a claim for necessities?—The necessities of existence are much more liberally interpreted in Germany than in this country, or rather I would say the necessities not of existence but of efficiency—that is the difference.

96822. Is it relief by scale? Do they say so much is required for existence, and we will give that amount?—There is a very elaborate scale drawn up for all conceivable persons, such as for widows with families from any number down to one.

96823. Do you think that the scale system which they adopt is better than our system—you know that I think—for giving relief?—I do not think I am personally familiar with our system to answer. What feature do you mean?

96824. I mean the way we deal with our widows?—It is infinitely better, because in England we give an allowance to the widow just sufficient to keep her alive if she goes out to work; but in Germany they give her an allowance to keep her and her family, provided she does not go out to work, so that she should bring up her children. We keep the home together by sending the woman to a factory.

96825. That is to say they provide a scale of what is necessary for relief in a different way?—Quite different.

96826. (*Mr. Bentham.*) Could we have that scale?—I have not got it here, but I will send it in. (*See Appendix No. XVI. (A).*)

96827. (*Mr. Lock.*) Did you come across the visiting part of their relief?—I heard a great deal about it, and I saw persons who were engaged in it. The reason why the out-relief is so efficient there is that they have got a staff of 600 visitors in Strassburg who keep in touch with the cases.

96828. Apart from their 600 visitors they have the ordinary committees of the town and district committees under them?—Yes.

96829. What aids have they for making inquiries apart from the police?—They have what we should call relieving officers, but the difference is that they are investigating officers. A paid officer investigates in the first place in order to get the facts right; then if the case is going to be a case for permanent relief it is given over to a voluntary visitor.

96830. Did you see the decisions in those cases, and did you go through any number of them?—No, I did not go through any cases.

96831. Did it strike you at all that in any way they were mostly allowance cases, and that very little was done in the way of getting a person off relief?—I did not see the cases, but my impression is exactly the opposite, and that a great deal of personal influence and enthusiasm was brought to bear in administering the law.

Mr. Richard H. Tawney.
16 Mar. 1908.

In Germany a man is relieved before he is destitute.

A man has a claim for the requisites of efficiency.

An elaborate scale is drawn up.

Advantages of German scheme.

A staff of 600 visitors in Strassburg.

Paid relieving officers and voluntary visitors.

Mr. Richard H. Tawney. 96832. You have not got any evidence taken down by you, then or since, that you can lay your hand on showing actual results?—No, I have not.

16 Mar. 1908. 96833. This system is a municipal system entirely, and it is not connected with any other form of local government, if one may say so?—No, it is a municipal system.

Strassburg has not got the Elberfeld system. 96834. So that there may be the greatest possible variety as to the methods if the localities each desire to have a different method?—Yes there might. Most localities have the Elberfeld system, but Strassburg has not.

96835. You do not call it Elberfeld there?—I do not call it the Elberfeld system; there is not the same minute sub-division or specialisation.

How the Strassburg system would work in West Ham. 96836. (*Miss Hill.*) Supposing that this plan were adopted in a place like West Ham where there might be conceivably a great number of unskilled labourers for whom it would not be easy immediately to find work, then there would be no test whatever in their applying, and it would soon become known that they had only to apply to get immediately on what we should call the Poor Law?—No, I do not think so. The labour office would show for the first time how many people could not get work in private employment. We do not know that at present. The State could then say whether it is going to deal with them or not. At present the State decides without adequate information as to their real numbers or the cause of distress.

96837. We should know nothing about the circumstances of the people, nor their relations—whether they were able to help, for instance—nor their characters—whether, for instance, they would spend well what was given them?—The labour office would not tell you that, of course.

The labour office establishes a *prima facie* case. 96838. I gather that the application to the labour office is to be sufficient to give a certificate for outdoor poor relief?—The labour office establishes a *prima facie* case, that is to say, it shows that, if a man cannot get work through the labour office, it is not his fault that he cannot get work.

96839. But you mean that there would be nothing to prevent the Poor Law in a large poor district from following up the enquiry, because the labour bureau would only establish one fact, namely, the fact of the absence of employment, and it would not establish any other fact?—Yes.

The preponderance of casual workers caused by the industrial system, not by personal reasons. 96840. I was a little puzzled by a sentence in Paragraph 20: "The preponderance of shiftless, inefficient, casual workers among applicants to distress committees gives rise to the view that unemployment is caused by personal, not by industrial reasons, and to the plausible statement that 'any man can get work if he wants it.' In reality, whatever may be true of others, the precise opposite is true of these boys and of the men into whom they grow." Surely it is a personal thing as illustrated by these cases that you quote just above?—No, it is caused by the industrial system.

96841. He leaves a place because he is tired of the job, or because he could not get on with the foreman or because he wanted more money?—Certainly. The employer offers him work of a kind that is absolutely uneducative, and done under purely monotonous and mechanical conditions. It is often the best boys and not the worst who leave jobs because they are enterprising.

96842. It is not very often the want of discipline in the boy? It may be increased by the system, but surely it is the want of steady work very often that prevents them from rising into better places?—The majority of them cannot rise in the industries I am speaking of, because the number of better places is so small that all the boys are not wanted to recruit them, as my figures show. You cannot expect boys to rise above the average boy nature.

96843. But you cannot say it is not personal, can you? It seems to me that it is due to the personal characteristics of the boy, even if he cannot be very much to blame for that?—It no doubt depends upon that, which boy is the first to go and which boy suffers most. The general system degrades the whole class of boys, and puts an incentive in the way of all boys, good and bad, to make a mess of their lives.

96844. I do not see the distinction between the man and the boy that you make here—I do not know that it very much matters, but it seems to me that what these boys want is not so much industrial training as moral training?—I agree that they want both.

96845. If we had a loyal boy, a punctual boy, an obedient boy, a good tempered boy and an industrious boy, he would get on?—Certainly, but I say the present conditions of work-shop life tend to produce precisely the opposite type.

96846. And you think the half-time school would not?—Certainly.

96847. (*Mr. Gardiner.*) Would you kindly indicate the kind of pressure exercised by the council or municipality in Strassburg to induce employers to seek the aid of the exchange?—They wrote round to them and visited them. Then the public opinion behind a German municipality is much stronger than the public opinion behind English municipalities—the public interest is much more powerful.

96848. In Table A, Paragraph 8, you put down the number of boys as four immediately on leaving school, and when they become sixteen the number has grown to five?—That merely means that somebody else has become a seaman.

96849. (*Dr. Downes.*) You investigated their lives backwards?—Yes.

96850. In Paragraph 19, you give us the number of youths between the ages of fourteen and twenty-one charged with theft and other offences under the headings (a) (b) (c) (d); have you got any figures of the total numbers employed?—I can give you the census figures for 1901, which indirectly throw light on the subject. The total boys occupied in Glasgow then, between ten and twenty years of age, was 42,990, this being divided as follows:—In the conveyance of goods and messages, 9,411, or 21 per cent.; on metals, machines, implements and conveyances, 9,336 or 21 per cent.; in commercial occupations, 4,115; on food, tobacco and drink, 3,710; on buildings and works of construction, 3,682; on wood, furniture, fittings and decoration, 1,802; on textile fabrics, 1,556; on other trades, 1,236; on paper, prints, books and stationery, 1,063; on precious metals, watches, etc., 853; in and about mines and quarries, 420; on chemicals, oils, grease and soap, 359; and other occupations undefined, 3,870.

96851. Thank you; I was rather under the impression that (b) would exceed (c)?—What makes the difference is the existence of the engineering and ship-building trade in Glasgow.

96852. Could you tell us how the town council of Strassburg is composed, and how it is elected?—I am afraid I cannot. I think there is a high property qualification, but I am not certain.

96853. Do you know whether the Chief Bürgermeister is a paid official?—Yes he is.

96854. How is he elected?—He is elected by the council.

96855. Do you know what his salary is?—I do not, I am afraid.

96856. What is the tenure of his office?—I think it is nine years in Strassburg, but I am not absolutely positive about that.

96857. I notice that the applications from the employers have risen in a greater proportion than the other figures given in Paragraph 28; does that mean that there has been a shortage of labour in Strassburg, or what is the cause?—I cannot say. I imagine the employers started by being very distrustful of the system, and are now beginning to adopt it.

96858. The applications from the workmen represent almost an equal number to the total number of wage-earners?—Yes.

96859. Have you any information as to how long each place is filled?—No.

96860. What is the attitude of the labour office in time of strike?—It does not take any attitude. It simply closes as far as that trade is concerned, and it will not find employers for men or men for employers.

96861. Have you any statistics as to Part II., the Relief of the Unemployed in Strassburg?—I think I could supply you with the number relieved at different periods.

96862. (*Prebendary Russell Wakefield.*) On that subject in regard to the number of wage-earners as compared with the population, is that not much smaller in Strassburg—namely, 20,000 as compared with 167,000—in proportion, than it is with us in London?—I have not compared the figures, but I should not have said that it was. It may be.

96863. (*Dr. Downes.*) I see that one class of work provided by the Town Council of Strassburg is repairing fortifications?—Yes.

96864. Is that done by the town council?—Yes; the men get work on that.

96865. It is not done by the military authorities?—They do it as well. But repairing the fortifications merely means working on the ramparts.

96866. You speak of the Poor Law authority, but what is the Poor Law authority in Strassburg?—It is an elected body like the Poor Law authority in this country.

96867. Is the town council represented on it?—No, not that I know of.

96868. Do you know what franchise it is elected on?—I cannot tell you that.

96869. Relief, apparently, is contingent on the individual accepting the first offer of employment under certain conditions?—Yes.

96870. If he does not accept the offer of employment, what happens to him?—He does not get his card which qualifies for relief, and he must keep himself if he chooses to stay out of work.

96871. Is the alternative that he has to starve if he cannot keep himself?—If he refuses to work when there is work going of course the municipality does not provide for him.

96872. That is the logical result?—Yes.

96873. To what extent does that occur in practice?—I could not tell you that; I imagine it does not occur at all.

96874. (*Miss Hill.*) What about his dependants—his wife and children, in such a case?—If he is a drunkard or something like that?

96875. Yes; is he sent to a labour colony?—Yes; he would be if he neglected his family. He would come under the police regulations.

96876. (*Dr. Downes.*) Do they prosecute men for not maintaining their families?—Yes.

96877. Do you know to what extent those prosecutions are carried out?—No, I cannot tell.

96878. (*Mr. Bentham.*) In Strassburg, does the labour exchange attempt to provide any work as a test?—No.

96879. Are all cases which need relief for which the labour exchange cannot find employment through the ordinary channels referred to the Poor Law?—The labour exchange gives them a ticket stating that there is no work in private employment for such and such men; that ticket qualifies a man for relief unless there is something else against him.

96880. It is really referring him to the relief department?—Yes.

96881. Would there be any further investigation of the case by the relief authority as to its qualifications for relief?—Yes.

96882. Then it may accept the case, or it may not?—Yes.

96883. What becomes of the class that Miss Hill has referred to, who are known to be drunkards, and who neglect their families: what do they do with those?—I cannot tell you, I am afraid; I did not investigate that subject.

96884. When you said that the relief was on a higher scale and there was a higher standard of relief in Germany, what would you take as your measure of quantity here?—I was thinking of the relief which was given to widows in the Scottish towns with which I am acquainted. The relief there is usually about 2s. 6d., sometimes it is 5s., sometimes 6s., but usually it is much less than that.

96885. The expectation in many cases is that the widow herself would be able to supplement that by her own earnings?—In a place like Dundee—it is not so much so in Glasgow—the policy is sometimes to drive a woman out to work in a factory, and leave her children to be looked after at home.

96886. That would vary in different towns in Scotland with the number of children, and the age of the children, and the ability of the women to work?—Yes.

96887. And would not the same thing apply in Strassburg? They would not say that a widow with two children would need full relief where both her children were going to school and she was an able-bodied woman, and besides managing her two children could very well manage to get her own livelihood? Would they give her the same as they would a widow with four children?—The relief they give is such as to enable the woman to bring up her children. What I did was to draw a distinction between that and the usual system in Scotland, which is to assume that the woman ought to go out to work, however young her family may be, and to base the amount of relief on that. The Strassburg system gives her enough relief to stay at home and look after her young children without going out to work herself.

96888. Could you really say that without giving a typical case, showing how that would be done in Scotland, and the way in which it would be done in Strassburg? Really the judgment of the relief authority must come in in both cases, and must be exercised in both cases, and it need not necessarily follow in Scotland, or under the Scottish system, that they would drive a woman out to work who needed to spend all her time on the children?—It does not legally follow, but that was the practice in the towns I visited, Dundee, for example. It is also the practice in certain London unions, e.g., Woolwich. It is not so much the case in Glasgow. In Glasgow they have recently started a new experiment for specially supervising widows with young children, and are giving them a higher scale of relief.

96889. What you mean is that that is already done in Strassburg, and is done more perfectly than anything that is done in Scotland?—In the towns with which I am acquainted in Scotland.

96890. I think you said in answer to a previous question that you would prefer to see all men tested as to their ability to work before they are referred to the relieving agency, that is, before you know whether a case is an ineligible case or not you want to offer employment of the kind that will be accepted?—I did not mean to say that.

96891. I must have misunderstood the answer to the Visitation of question. Do you know whether the Poor Law Committee persons get at Strassburg divides itself up for visitation purposes?—The visitation of the persons who are getting relief is mainly done by the 600 voluntary workers.

96892. That is really the Elberfeld system?—Yes; but the difference which prevents Strassburg from being a perfect example of the Elberfeld system is that more work is done by paid officials in Strassburg, that is to say, the preliminary work of investigation; and, secondly, that the areas under each local committee are much larger.

96893. You did not examine carefully into the working of the system, I understand?—How would you test the working?

96894. You did not inquire into the working of the Poor Law as to how it worked, the number of people in receipt of relief, the amount of relief given to the various classes, and so on?—I can give you the amount of relief given to the various classes, and I can give you the number of persons in receipt of relief—not for the last year, because there is not a report for the last year, but for two or three years back.

96895. Will you put those in?—Yes. (*See Appendix No. XVI. (B).*)

96896. (*Mr. Lansbury.*) First of all, supposing your proposal for raising the age limit comes about, it is only going one step further than we went when the Factory Acts came in and we abolished children working in mines?—Precisely.

Mr. Richard H. Tawney.
16 Mar. 1908.

Mr. Richard H. Tawney. 96897. People had to organise their businesses differently then?—Yes, certainly.

16 Mar. 1908. 96898. This would be a smaller thing even than that was, because we dealt with women as well as children at that time?—Yes; the interference would be much less by the half-time system.

96899. So that there is quite a good precedent for taking some action in this matter?—Yes, certainly.

96900. After all, that was not taken out of sheer pig-headedness, but simply because it was felt that it was not good for the community that children should work in that sort of way?—This step is exactly in series with that, but it is not quite so dramatic or so sensational.

96901. But the effect of it on the people concerned is just as bad?—The effect of employing boys merely as labourers is to create a class who are not fit for employment after the age of twenty.

96902. Therefore if industry could adapt itself, as it did adapt itself, to the Factory Acts, that is good evidence that industry could adapt itself to meet these new conditions if they come about?—Yes.

Increase to the productive power of the community hoped for. 96903. About the cost to the State in doing this, the thing the State gets for it is an improved number of citizens who at present are of no use to them, but who would be useful if dealt with in this way?—Exactly. The productive power of the community would be infinitely increased exactly as it is by elementary education.

Trade unions for unskilled workers and out-of-work pay. 96904. Then with regard to the Strassburg system, of course there are trade unions in this country for unskilled workers?—Yes.

96905. But they are not at present able to pay out-of-work pay?—That is so.

96906. I do not know whether you have got any opinion or whether you have been able to form any opinion on this subject, but do you think it would be possible for the unskilled workers to form a union and pay a sufficient contribution to get a small amount of out-of-work pay which might be subsidised as it is in Strassburg?—I think if you pay 50 per cent. on any contribution you would offer incentives to the formation of unions who give unemployed donations, and that I should regard as one of the advantages of the proposal. At the same time by decasualising labour by means of labour exchanges you make the ability of individuals to contribute to a union much greater.

96907. Supposing that is done, you do not make the statement, do you, that there is work for everybody?—No.

The State to be supplied with materials to form a judgment. 96908. It has been put to you that if you register a man and woman and there is not enough work to go round you will strengthen the demand for the right to work?—In so far as you supply the knowledge on which that demand is based, of course you strengthen it, but you do not strengthen the case. You merely strengthen the case which persons are able to make out, but which persons are not able at present to make out because they do not possess the knowledge. You do not place any greater obligation on the State. You simply supply the State with materials for forming a judgment.

96909. Except that the State has already undertaken certain obligations to people in regard to want of work, sickness, and old age; I mean that through the Poor Law, for instance, it has undertaken certain respon-

sibilities for citizens who are not able to take care of themselves?—That is quite true. Are you asking me whether I approve of the right to work?

96910. No. What has been put to you is something which is not quite correct. What I am really wanting to get out of you is this: supposing people are asking for the right to work, the State has already said that no person shall starve in the country because he cannot get work. Therefore the State having said that already—since the time of Elizabeth—all that we are asking is a change in the method of meeting the need of the people?—It is a change in the method, but it is such a considerable change that I do not think you can argue from one to the other, or from the rightness of the one to the rightness of the other. The State has never admitted the duty of providing employment for all persons at trade union rates, which I understand is asked for by those who advocate the right to work.

96911. But the State has taken on itself the responsibility for dealing with those whom individual people cannot employ?—The State has said: "We will not let anybody starve."

96912. And so far it has taken on the responsibility for dealing with the problem of unemployment?—Yes, it has taken on the minimum responsibility and limited it very carefully.

96913. That has brought me to the point: Are you of opinion that the Strassburg method of meeting that disability on the part of the individual is a much better one than has been in vogue in England?—Very much.

96914. (*Mr. Bentham.*) But the Strassburg system does not provide work?—The labour exchange does not provide work. It simply ascertains the state of the labour market. But that knowledge is a necessary condition to the State making up its mind whether it will or will not provide work. It does not increase or diminish the obligation; it simply enables the State to form a judgment.

96915. (*Prebendary Russell Wakefield.*) I suppose your contention with regard to the State here would be that the State has not made the alternative to dealing with destitution, the provision of work, but has determined to deal with destitution by various means not exactly by providing work for the individual?—In England, yes.

96916. In reference to the term "destitution," I rather gathered from one answer which you gave that the definition of destitution is quite different in Strassburg from what it is here?—They do not enquire in Strassburg whether a person is destitute; they enquire whether he is in need of relief to maintain himself in efficiency.

96917. To maintain himself adequately?—To maintain himself adequately. Of course they do not give these people enough to keep them in their ordinary comforts.

96918. With regard to the provision of relief works, that is comparatively speaking easy on a large scale in Strassburg and the surrounding neighbourhood, is it not; that is a great deal of possibility of work there?—The fact that the town owns extensive forests in the neighbourhood offers a large source of employment.

96919. Of course, you can realise that is quite a different thing to the provision of relief work in this metropolis?—Quite.

ONE HUNDRED AND FIFTY-SECOND DAY.

Tuesday, 17th March, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. C. S. LOCH.

Mr. J. PATTEN-MACDOUGALL, C.B.
Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.
Miss OCTAVIA HILL.

Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. EDWARD J. URWICK, called; and Examined.

Mr. Edward
J. Urwick.
17 Mar. 1908.

96920. (*Sir Samuel Provis*.) I believe you are President of the Morley College for Working Men and Women; Lecturer to the School of Sociology and Social Economics; and you were Sub-Warden of Toynbee Hall, Whitechapel?—Yes.

96921. You have been good enough to send in a Statement which we propose to take as your Evidence-in-chief, if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

1. In the following memorandum no attempt is made to show in detail that a direct connection exists between the unemployment of adult men and the kind and amount of labour among boys. It is assumed that such a connection exists in certain industrial centres, and is due mainly to two facts; first, that an increasing number of boys are employed in occupations which are either uneducative (in the sense of producing no increase of efficiency or of intelligence), or unpromising (in the sense of leading to no permanent occupation during adult life); secondly, that there is a constant tendency for certain industrial functions to be transferred from men to boys, especially when changes in the processes of manufacture or in the organisation of industry are taking place rapidly.

2. The resulting difficulty is the double one of the over-employment of boys and the under-employment of men. It is maintained that the causes of this difficulty may be reduced to two, of which the second is much more important than the first. These are:—
I. The quickly-rising standard of living (or scale of wants) of the family in all the working classes in excess of the satisfactions procurable by the father's earnings alone.

3. This leads to (a) The employment of boys of school age in occupations which react unfavourably both on their capacity and on their choice of subsequent occupations.

This is not now a factor of much importance, owing to the stricter limitation of work of school children. But so far as it exists it affects adversely the prospects of some of the most intelligent boys and those whose industrial character is above the average.

(b) The employment of boys immediately on leaving school in occupations relatively well paid, but unlikely to lead to permanent work or to fit the boys for well-paid work as men.

4. It is unnecessary to dwell upon this factor. It is, however, usual to connect with it another factor, namely, the carelessness or apathy or ignorance of the parents in regard to the industrial prospects of their sons. I believe that this factor is somewhat exaggerated, so far, at least, as indifference as to their sons' future prospects is imputed to the parents. The latter are certainly ignorant as to the best occupations in which to place their boys; but this ignorance is, on the whole, an inevitable consequence of the industrial complexities and changes by which they are faced.

The desire of the boys themselves to earn a high wage quickly is, of course, a contributory cause. And when the wage earned is high it has a bad effect upon the character and energy of the boy. (Boys of 16 are occasionally found earning a piece-work wage of 14s. or 15s. a week in London at simple labouring work, entirely to the detriment of their future prospects.)

5. II.—The requirements of industry, dependent upon changes in industrial process and organisation. Second cause of over-employment of boys.

These changes appear to be at present in the direction of simplification of manual processes, leading to greater demand for what is called unskilled work; and in the direction of an increase of unspecialised labour (*e.g.*, in connection with transport, etc.), resulting from the growth of commerce.

At any given moment the relative proportions of skilled and unskilled workers required in actual industry may be regarded as fixed; but the proportions are constantly changing, and, on the whole, the change appears to be continually towards increase in the numbers of unskilled and decrease in the numbers of skilled workers. (See note below as to the meaning of the terms "skilled" and "unskilled.")

From this results a tendency towards the employment of a disproportionate number of boys and youths. The demand for boys as against men increases, and the wage offered to the former tends to be fairly high.

6. It is important to notice that this result is not confined to industries or industrial centres in which (as in London) "labouring" work predominates. It appears to be found in an artisan city such as Coventry, and in a specialised industry such as the jewellery trade in Birmingham. In the Coventry metal and machine trades 41 per cent. of the males employed are under 25; and the percentage of wage-earning boys of 15 is far in excess of that of London. This preponderance of the youthful element may be partly due to the comparative newness of the industries; but it is evident that if the industries can be carried on successfully with so much dependence upon youthful labour, they will tend to be so carried on in future, for the sake of cheapness alone. It is to be noted that the young workers are not apprentices, apprenticeship being practically unknown in these industries.

Large proportion of boy labour not confined to industries or industrial centres in which "labouring" work predominates.

NOTE.—It is impossible to give satisfactory definitions of the terms "skilled" and "unskilled." As the argument is concerned with the connection between skilled work and training for work, I have adopted the following definitions:—
Skilled work, or a "trade," is any manual industrial occupation or process, the performance of which requires that the workman shall have had a definite training extending over a term of years. Unskilled work is any manual industrial occupation or process the performance of which requires that the workman shall possess some degree of strength, dexterity and knowledge, which may be obtained by practice and without a definite training (apart from an elementary education).

Mr. Edward J. Urwick.

17 Mar. 1908.

Proportion of young persons engaged does not differ greatly in skilled and unskilled trades.

Evils resulting from excessive employment of boy labour traceable chiefly to natural forces operative in development of industry.

Artificial attempts to counteract these tendencies unlikely to produce much result. Meaning of contention that supply of specially trained labour is insufficient.

7. It is significant also that the proportion of young persons engaged does not differ greatly in what are commonly regarded as the skilled and the unskilled trades. Sometimes the relatively greater numbers of employees under 18 are found in the trades in which more skill is needed, though, on the whole, the reverse is the case, and it is doubtless true that the smallest proportion of boys is found in the definite trades the entrance to which is by apprenticeship, as in the watch-making industry in Coventry.

8. It would thus appear that the evils resulting from the excessive employment of boys in industry without regard to their prospects as men are traceable chiefly to natural forces operative in the development of industry, which tend to increase the relative importance of the boy or youth as an industrial factor by comparison with the importance of adult males. And the rising standard of living on the part of the family unit tends to make parents acquiesce in or assist this change, in spite of its ill-effects upon the occupation or remuneration of men.

9. It would seem, further, that artificial attempts to counteract these tendencies by diverting increased numbers of boys into skilled trades (as defined above) cannot be expected to produce much result. It is hardly possible, nor is it desirable, that employers should be induced by these efforts to drop the cheaper methods of production which lead to the great demand for boys' labour; and it is so far impossible to increase the demand for specially trained adults. The argument put forward by some employers that such a demand now exists and is not satisfied is often found to mean merely that they do not get good enough workmen—a complaint common to all employers at all times. If it means that they cannot get workmen who have learned a particular set of manual processes which must be performed in their industries, it would seem to imply that the employers have either failed to provide for the needs of their own industries, or that the industries do not or cannot offer sufficient inducements in the way of wage, etc., to attract learners or workers. In either case there is a presumption that the industries in question are not qualified to compete successfully with other processes or trades; and it is doubtful whether in the circumstances it is the function of philanthropic effort to endeavour to persuade the young workers to accept the employers' terms or choose such industries for their life work. In any case, the operations of committees for encouraging apprenticeship or skilled employment seem likely to be limited to the selection, on behalf of the employers, of suitable boys for existing openings in certain occupations, and to the safeguarding of the boys' interests and furthering of their chances of efficient training as learners in the occupations chosen.

10. But in a different way the tendency of industrial development may be checked more effectually, namely, by the legal restrictions of the employment of young persons. The extent to which this is desirable depends upon the extent to which longer education is necessary to produce the greater intelligence, the general manual efficiency, the adaptability, and the habits of steadiness, which are undoubtedly required in increasing degree in all industries. Some limitation of the hours of labour of young persons in all occupations, coupled with a system of compulsory continuation classes, might be expected both to improve the industrial character of the young workers, and to react upon industry in the direction of checking the excessive use of boys and youths. This is, of course, an interference with the normal tendency of all industry towards the use of the cheapest agents and instruments of production. But it may be held to be a less dangerous interference than one which (like most attempts to revive or extend apprenticeship) runs the risk of introducing fixity of process or of industrial ability, to the detriment both of production and of the earning power of the workers.

96922. (Sir Samuel Provis.) You deal with the difficulties that arise in connection with boy labour, and the amount of employment of boys as compared with that of men. You think there are two points to which the cause of difficulty may be chiefly referred?—Yes.

96923. Namely, to the quickness in the rising of the standard of living; and the requirements of industry dependent upon changes in industrial processes: that, I think, is your argument?—Yes.

96924. Upon the first point, would you wish to add anything to what you have already said in your Statement?—I think not.

96925. How far do you think that the parents exercise control over the boys in the selection of their employment?—In London, which is the only place that I know at all well, it varies a great deal according to the class of the parents; a great many parents that I have known have taken a great deal of trouble, and control the boys extremely well; in others, especially where there is no father, I have found an absence of control; and the boys have just gone out and looked for work and chosen it without regard to the parents' wishes.

96926. It was suggested yesterday that the father is much occupied, and rather leaves it to the boy; you think that is only partially true?—I think it is only partly true; I have known a good many fathers who have certainly talked it over a great deal, and discussed it with the boys, and the boys have deferred to their fathers' wishes. I should be inclined to modify that a good deal.

96927. Do you think that turns at all on whether a father thinks he can get the boy into his own occupation?—Sometimes it does; sometimes I think the father thinks he can get the boy into the particular yard, or particular house or trade in the neighbourhood where he knows some of the workmen. Usually by some special knowledge of his own.

96928. Then we come to the second point; namely, the changes in industrial process and in organisation, you are of opinion, and it has been supported by other witnesses, that there is a tendency to employ boys for one particular piece of work, and not give them a general instruction in the work in which they are engaged; is that so?—Certainly.

96929. That tendency is increasing?—I think the tendency is for that to increase.

96930. Have particular classes of work in which that is so come under your notice?—Not particular classes of work that I am familiar with; but particular instances of many different kinds of work.

96931. To what extent would you think that increases?—I do not think I could estimate it at all.

96932. You point out that the proportion of young persons engaged does not differ greatly in what are commonly regarded as skilled and unskilled trades?—Yes.

96933. Is that new, or has that always been so, do you think?—I think it has always been so; except that I believe the line between the skilled and the unskilled trades was quite different when you go back, say, half a century—more than it is to-day. I am taking in that statement the definition that I have given of trades from different parts of the country, and the figures as supplied of the proportion of young persons engaged in them as compared with nondescript trades; and the proportions in these I find vary rather, and the variations are very peculiar sometimes; because in London in some of the skilled trades with apprenticeship you find the highest percentage of boys, and in skilled trades elsewhere you will find the lowest percentage of boys in the town or particular place; so that I am only putting together generally the figures from different places and different trades, showing that there is not any significance in the figures taken as a whole.

96934. You do not think that the evils which result from this state of things are easily remedied, because you say they are due to natural causes which cannot very well be interfered with?—I believe so; it is difficult to interfere with them.

96935. It has been suggested whether something might be done to encourage apprenticeship, which seems to have fallen somewhat into disuse?—Yes.

96936. Do you think that is practicable?—I think it is practicable only to a very small extent indeed.

96937. You would agree that it has fallen into disuse?—Certainly.

Decay o
prentice

Limit of operations of committees for encouraging apprenticeship or skilled employment.

Legal restrictions on the employment of young persons.

Limitation of hours, with compulsory continuation classes.

Less dangerous than most attempts to revive or extend apprenticeship.

Boy labour.

96938. To what do you attribute that?—To the changes in industries primarily which modify the processes in such a way as to alter the actual skill required in particular industries, alter the range of processes, and further to the movements in industry which with competition brings grown-up men from one part of the country to another appearing as qualified workmen, whether they have been through an apprenticeship or not, and being engaged necessarily in the centre they have come to on a par with those who have passed through an apprenticeship in that place.

96939. That being so, you do not think it is practicable to do much in the way of encouraging apprenticeship. Do you think anything can be done?—I think that a modified form of apprenticeship at the dictate, really of the employer, as is the case to-day in certain big employers' works, such as, say Thorneycroft's, where they have their own system of apprenticeship, is possible; and probably could be extended among certain other employers in certain trades; they might lay down their own apprenticeship of so many years, according to the processes required in their own industry, as they understand them. I think more could be done in that way, but not taking trade as a whole: engineering, carpentry, saddle-making, and so on.

96940. What are the trades chiefly in which the process you are describing exists?—It exists in the engineering yards of certain employers; although apprenticeship has very largely gone out in engineering as a whole, in certain yards, like Thorneycroft's, and Yarrow's in London, for instance, that particular sort of specialised apprenticeship, on the lines laid down by the firm, exists, and I believe in some other industries too.

96941. In that case do they only take boys for a length of time, except perhaps casually; do they insist on them being apprentices?—They insist on that, they apprentice the boys, and keep them as apprentices.

96942. For how long?—I think five years in these cases.

96943. Beginning when?—I think the age is fourteen, though I am not sure of the limit of age.

96944. The point is whether they take them direct from school, or whether they have some other occupation in the first instance?—I believe they do take them from school.

96945. Do they retain them afterwards?—In most cases I think so.

96946. So they can pass their lives practically in working under the same firm?—Subject, of course, to fluctuations in the trade which may occur.

96947. Are there any remedies, other than that, which you would like to see in the nature of compulsion?—I have referred to the general remedy, which I believe is a possible one, to some extent, of the compulsory education of boys in continuation classes up to the age of seventeen or eighteen.

96948. Would you do that as half-timers?—I am not sure whether they would be classed as half-timers at all. I am only contemplating the education in the evening, with a compulsory limit of hours during the day, to enable the boys to gain by the teaching in the evening.

96949. And compulsory instruction?—Yes, for all boys under seventeen or eighteen.

96950. Do you think if it was made compulsory, and you had it in the evening, the boys would be sometimes too tired to derive much benefit from the instruction?—Very seldom, I believe, if the hours were at all limited on those days. I have had experience of teaching those boys who are now working longer hours than would be contemplated; and it is only occasionally they are really too tired to learn.

96951. In the case of which you have had experience, what sort of hours do they have?—Very long hours many of them. I am speaking now of the East End of London, and boys who have been employed in every sort of rough occupation, such as errand boys, van-boys, yard boys, and boys employed in the docks—very rough work: long hours from six or seven o'clock in the morning in many cases till six in the evening, and sometimes even later.

96952. The boys that came to you, of course, came voluntarily?—Yes,

96953. Therefore I suppose they were somewhat keen to improve themselves?—I do not honestly think they were. I think they came through other inducements, in almost all cases the inducement of club amusement.

Mr. Edward J. Urwick.
17 Mar. 1908.

96954. Why I asked was to know whether, although you find under the voluntary system boys do work after long hours, you think that would be equally true if it was a compulsory system?—I could not say; I think there would be more who would either be too tired, or claim to be too tired, unless the hours were shortened during the day on which the instruction took place.

96955. You prefer that system of continuation schools to a system of half-time employment in which a portion of the day, morning or afternoon, as the case might be, was devoted to industrial training?—I have so little experience of the half-time system that I could not speak on the matter. I have heard that there are so many disadvantages connected with it in the general organisations of the industries that I have found a certain prejudice against it; but I have no experience of it, and could not compare it.

96956. What do you say to some alteration of the Manual system of instruction in the elementary schools?—I believe that a little more might be introduced, after the age of twelve or so, in the way of general manual training. I do not believe at all in the specialising or specialised manual training before the age of fourteen.

96957. Do you mind stating your reason?—Certainly. The specialised manual training ties the boys down to a particular form of occupation in most cases, which usually has an uncertain future, which tends to stereotype both his ability and his choice of occupation, his range of occupation, and at such an early age it is inadvisable to fix that in the present very changeable conditions of industry.

96958. You must have seen a great deal of the particular class of boy in the East End. Did you find that they were to a certain extent demoralised by getting employment as newspaper boys, or work of that kind, directly they left school?—Yes, though I am not sure that the demoralisation of the newspaper boy appears at the age at which I have come across him, I mean between fourteen and seventeen particularly. I think it probably appears at a later age. I have not noticed it in the boys who have been employed as newspaper boys or scavenger boys, or any occupation of that sort; I have not noticed the demoralisation in them up to the age I have been dealing with them particularly.

96959. During the age that you were dealing with them they were in continuous employment probably?—Usually.

96960. The difficulty of their getting employment when they were adult showed itself at a later date?—Yes.

96961. Is there any other suggestion in the way of remedies that you would like to mention?—No, I have none to suggest.

96962. Or anything else you would like to say by way of expansion of your statement?—I do not think so, unless I might add a suggestion which for the moment I had forgotten, of the possibility of influence through an extension of the labour exchanges. I believe there is a possibility of the labour exchanges having to do with the offering of employment to boys, or registering the boys as well as men; if so, I believe they might be used as a selective influence also, which probably would be very valuable from the point of view of the boy.

96963. How would that work exactly?—It would bring the good and the bad jobs equally into competition. At present boys seem to fall into good and bad jobs almost by chance. If they were in any way brought into competition, that competition would tend slowly to starve out the bad jobs, or at any rate make boys eager to get the good job rather than the bad one. The bad ones would wait rather longer to be filled, and there would be a tendency towards making them less popular, and making boys think it worth while to wait longer to get the good job.

96964. In other words, the labour exchange should rather select the boys?—I think they might have to.

96965. And give the better boys the better jobs?—Yes, though I think the boys would select themselves

Mr. Edward J. Urwick. to some extent, if they insisted on waiting a little for a better job to come in.

17 Mar. 1908. 96966. Meanwhile, while they were waiting for something to come in, they would have to be kept by their parents?—Yes, by their parents, I presume.

96967. There might be difficulty in some cases in that way, might there not?—Yes, there would be difficulty in some cases.

96968. Still you think on the whole that plan would work?—I think it would probably have a tendency in the direction of rendering the boys themselves and their parents a little more averse to taking the bad jobs.

Extension of increase in school age. 96969. (*Mr. Nunn.*) With regard to the extension of education, have you any definite suggestion to make as to any increase in the actual school age for children in elementary schools?—The increase of school age above fourteen?

96970. Yes?—I should very much like to see it raised to fifteen, but I do not think it is practicable at once.

96971. Why do you not think it practicable?—Although the public opinion stood the rise to fourteen, I think the parents are very much on the look out now for a further raising of the age, and would be inclined to resent it a good deal more than they have done in the past.

Extension of school age; effect on employment generally. 96972. Do you not think a considerable economic saving might result in the extension of the school age? We have been confronted by a considerable mass of evidence as to the number of young married men who are out of work from the cause which you have touched upon in your statement. Would not the extension of the school age have this economic effect, that it would give considerable employment to other classes who are above the age of sixteen? It would have to have that effect to a certain extent, would it not?—It would have to have to a certain extent.

96973. Have you formed any opinion of the direction which that shifting of the employment would take? Would it effect the young men or the old men?—I have formed an opinion, but I think it is impossible to be dogmatic about it at all. I think it would probably affect all ages almost equally.

Public opinion on extension of school age. 96974. Do you think that could be represented sufficiently clearly to demonstrate the value of an extension of the school age to the public generally?—I am afraid it could not be, because it would imply a reference to what the public I am myself considering, the poor public, think so badly of; I mean, it would imply a certain amount of re-organisation, and the distribution of the work which is done, and a change in the processes by which it is done. That would involve the introduction of various kinds of economical machinery for doing the work which is now done by these young boys; although that work would fall into the hands of the men it would at first fall into the hands of a smaller number of men comparatively.

Independence of parental control. 96975. Is there not a back thrust felt a good deal in the families of the working classes by the increased independence of the boys who are earning high wages? Would that not help to reconcile the parents, at any rate of the working classes, to an extension of the school age? It is true that they help the family income to a certain extent, but to a certain extent also the increased independence of the elder sons of the family rather tends to break it up, does it not?—Yes; it is a disadvantage to set against the wages they earn, of course. I am afraid in my experience I have not found that the parents feel that very acutely.

96976. They do not realise it?—No; and they have, I am sorry to say, discovered the independence even during the school age; they have felt the assertion of the independence to a certain extent before the boy has left school.

96977. With regard to the extent to which manhood is at present being wasted in the employments, you do yourself believe that the extension of the school age during which boys would be trained to be industrial citizens would be a means of creating a most emphatic saving after a few years?—Especially when the effect of the increased education was felt.

96978. It has been suggested to us, rather tentatively Girl labour, it is true, that girl labour might to a certain extent take the place of the boy labour without all the disadvantages that attend boy labour, (because girls have a future in marriage and boys have a future in unemployment), if they are dealt with by unskilled employment after they leave school. Would you have any belief in that at all?—I think not. Most of the employments that I have noticed as being bad for a boy, the bad jobs, I should say would be bad industries to put girls into, and would have none of the effects we want to produce, but rather the reverse, on the absorption of the young men in employment.

96979. Supposing one could get an increase of the Manual years of a boy's life devoted to elementary education, training have you any suggestion to make as to the way in which that time should be occupied?—The Chairman has partly raised that question, and I expressed my own very strong feeling that up to the age of fourteen (and I would increase it to fifteen) specialised manual training which is sometimes advocated should not be introduced, but after the age of twelve more general manual training by which I mean manual training associated with the educational point of view, should be introduced into the curriculum for all boys.

96980. The training of the eye and the hand by drawing, and so on?—And also actual woodwork, and so on; manual dexterity of a general kind.

96981. Of course, you would advocate the same extension of age for girls?—I have not really considered what the effect would be, or how far it is necessary, or how far the same arguments apply. I suppose it would be necessary.

96982. To a very inappreciable extent girls are trained in cooking, nursing, and housewives' work generally?—Very little indeed at present.

96983. The increased years of elementary education might be very valuably employed in teaching them some of those things, I suppose?—I am not sure how far the teaching of those things before the age of fourteen or fifteen has much effect afterwards.

96984. I am thinking of the extension between fourteen and sixteen?—I certainly agree it is equally necessary for the girls.

96985. Have you at all considered the question of the extent to which London boys might be utilised on the land; might receive a technical education in the direction of agriculture?—Very little. I have always found an aversion on the part of the boys to leave a town like London, or any other town.

96986. Is it not the fact that boys who are between the ages of, say, twelve and sixteen are more likely to take to a country life than men whose lives have rather been wrecked by want of employment being turned out on farm colonies at ages between twenty-five and forty-five?—Certainly.

96987. There would be a much better chance for habituating boys to the life of the country than there is in wrecked unemployed men later in life?—Certainly, it has been tried in a few instances in Devonshire with a few successful results.

96988. (*Mr. Gardiner.*) Can you tell us where?—I cannot. It has been done in connection with one of the committees of the Children's Country Holiday Fund, for the last few years in conjunction with some people who are interested in the experiment of boarding out boys of school age on the land and leaving them there and getting them to learn agricultural pursuits. I have been informed that the boys have subsequently gone back to work on the land. I do not know the name of the place exactly.

96989. Could you get us that information?—I could get it for you: I could get a *precis* of it from the Secretary of the Children's Country Holiday Fund. (*See Appendix No. XVII.*)

96990. (*Mr. Nunn.*) The state of things appears to be somewhat like this: that all the towns are subject to the influx of fairly well-trained men who take the better posts in the towns and that the less well-trained city lads after the age of twenty-five or thirty gradually fall into unemployment and become subjects for farm colonies, or some such treatment. Might not elementary education

Training of
London boys
for
agriculture.

during those later stages be used in connection with the present development of agriculture that is going on, organisations of small holdings in the country, in order to get the boys out on to the land before their lives have been muddled away, as it were?—I should think so. I do not know how it would work or what the effect would be.

96991. Have you had any experience of industrial schools and the training the boys get there in country life?—None directly.

96992. You have not come across the figures at all?—No.

96993. With regard to what we may call the more moral aspects of the case, the boys do receive a greater physical training if they follow the land, they would get some kind of manual dexterity, some kind of alertness of mind, and they would be turned out better neighbours?—Certainly.

Raising of
intelligence
of unskilled
worker
necessary.

96994. I suppose a good deal could be done during the later stages of the elementary school life to turn out a man who even was not intended for any industry that involves special skill as a stronger and more alert and capable labourer?—That is very strong in my opinion: that is what is needed, it is not the alteration of labour into skilled work but the raising of the intelligence and capacity of the unskilled worker which is needed.

96995. Then besides the physical and manual aspects of the case, there are the moral aspects of the case. I suppose a good deal could be done in the way of education to illustrate to the older boys' minds some of the main civil aspects of industrial life such as trade unionism and benefit societies?—You are speaking now of educating up to seventeen or eighteen, continuation classes or something of that kind.

96996. I am still considering the ages from sixteen downwards gradually to impregnate those years of school life with something of physical training to turn out powerful and alert labourers, something that would give them manual dexterity or train them for the more skilled occupations, but something might be done to the moral and intellectual side to prepare them for the industrial life in its moral and intellectual aspects in the way of trade unionism, benefit societies and labour exchanges. When I came in you were discussing the proposed introduction of the superintendent of the labour exchange into the school at a later stage when the parent was beginning to consider what the child should do in after life?—The Chairman was discussing the effect that would have upon the possible starving out of certain jobs.

Interest of
boys in trades
unions and
friendly
societies.

96997. Do you think that the ordinary boy of sixteen has much idea of what trade unions and benefit societies can do for him in after life?—Very little, but from the age of sixteen onwards they begin to take a great deal more interest in it than they might do before.

96998. Might not you begin their interest in these matters, at any rate in friendly societies, by forming the actual habits of thrift and mutual help in them before they leave school?—Certainly, I think it can be done. It is done to some extent: the higher the age limit the more effectually it would be done.

96999. And the more permanent the results would be probably?—Certainly.

Lack of
organised
games.

97000. Do you attach much importance to games in the latter stages of boy life at school?—As part of the education and training?

97001. Yes, as being organised and supervised to a large extent by those who are conducting their education, but being managed of course by themselves?—Yes, I think one of the defects of the discipline of the London boy is the absence of the organised games to a great extent at school, and the want of the discipline that comes from organised play.

97002. You do not feel yourself that agriculture is a sufficiently interesting organised game for a boy, if I may put it in that way? It seems rather a pity that we should turn away the wasted lives on to the land in the shape of farm colonies when young boys might take an interest in animals, and a good many other departments of agricultural life, and grow up real agricultural citizens of a good type. Have you had any experience of getting

boys into the country and ascertaining whether they take a natural interest in agricultural pursuits and the management of animals?—Only in two cases of older boys, boys over eighteen, none at all of young boys, no direct experience. I do not know how it might appeal to them or some of them as an interesting occupation.

Mr. Edward
J. Urwick.

17 Mar. 1908.

Placing boys
on the land.

97003. It would be a case of directing more an enquiry to take a step to interest boys in something that would be really useful to them in future life?—I think so certainly if it could be done: if it would appeal to the boys it would be very valuable indeed: they would take it up as their interest and become workers on the land.

97004. Do you see any practical difficulty?—I cannot say that I do, except there is one practical difficulty really, and that is the rather poor future that is offered at present by the land for men.

97005 I suppose the prospects are brightening a little in England with regard to the labourers on the land owing to the Small Holdings Act and the examples we have had from abroad of what agricultural organisation can do? Evidently prospects are altering and might improve still further, but the prejudice to the London boy's mind is very strong indeed that there is not a future for him there.

Prejudice of
London boy
against going
on the land.

97006. I suppose the great attraction to the London boy is the excitement of the street and the music-hall and other entertainments of that kind. If you could get the boy before he reaches that stage and lead him to take an interest in country life, country occupations and the care of animals, do you think it would be useful?—I think it is an experiment that might be tried to a greater extent. I cannot say how far it would be successful. It seems to be the general opinion of those who know better that there is more chance with those who are already born on the land than there is with anybody born in the town—even a boy born in the town.

Placing
London boys
on the land.

97007. The experience of those men is that they come up to the towns in increasing numbers?—They might be kept there.

97008. They might be kept there if these same advantages were offered them?—There is more hope of keeping them than getting the London boy to settle down there.

97009. (Mr. Lansbury.) Have you had experience of country boys?—I have not at all, except a very few who have moved up into London. I have had no experience of boys living in the country at all.

97010. You would not say they were more alert than London boys?—I certainly should not.

97011. What really is the advantage of tempting the London boy into the country?—Only this I think, that if the country will give him an opportunity for both a healthier life and a sufficient wage earning life when he becomes a man as compared with what he has in London, the advantage is clear in the gain in health and his earning capacity.

97012. It is not there at present?—I fear it is not there at present. It depends on the prospects which, as Mr. Nunn says, are now opening out, or appear to be.

97013. It depends on something that will be done in the future rather than something which is being done now?—I think it does.

97014. With regard to the number of boys employed, are there more boys employed now in industries in London than previously? We have had some difference of opinion among some witnesses as to whether there are more boys now proportionately than previously. Have you any information on that point?—I do not know whether any accurate information is available. I have none.

97015. In your experience do you think that the class of work that boys in the East End are being put to is improving or getting worse? That is to say from the point of view of the development either of physical or mental powers?—On that point I could not say either. I think it is an extremely complicated question whether the work they now do as compared with the past is worse for them that it was, or better for them than it was.

Class of work
on which
boys are
engaged.

97016. Do you think it is good for them on the whole?—In the majority of cases at present I think not.

97017. Are you in favour of raising the age at which a boy shall be allowed to leave school?—Yes, I am quite in favour of raising the age to fifteen if it is practicable, and as soon as it is practicable.

Extension of
school age.

Mr. Edward J. Urwick. 97018. You would go higher if you could get it?—Eventually.

17 Mar. 1908. 97019. That would be for the purpose of using the later years in teaching him some trade, I suppose, or not a particular trade, but teaching him the use of his hands?—I have already explained that it would be for the purpose of teaching him the use of all his faculties, including his hands.

Military drill. 97020. Would you be in favour of military drill, to make him a soldier for a year?—No, I am not in favour of it. I have no experience of the way it would work though.

Effect of military service. 97021. Have you any experience of young men who join the army quite young and come back after a short period to civil life?—Yes, one or two, and it is not a particularly favourable one.

97022. What is your opinion of the effect upon the character and morale of the men who come back?—I have known so few that I hardly like to express an opinion in general terms, but in the one or two I have seen the effect has not been in any marked degree a good one. They have not come back more capable of taking to ordinary occupations.

Parental influence and boy labour. 97023. It is not sheer cussedness that makes the parent turn the child out to work, is it?—Not at all, I believe.

97024. It is an economic necessity?—I think it is first and foremost an economic necessity, or at any rate an economic need which is felt as a necessity by them, and after all the choice is determined a good deal by chance, in their inability to know what is best.

Lack of information as to, and difficulty of finding, employment for boys. 97025. And also the fact that there is very little information available?—Very little indeed.

97026. Even if the parent is desirous of apprenticing his boy the openings for apprenticing are very much more limited now than previously, are they not?—Undoubtedly.

97027. Therefore the poor person, the family where the breadwinner is earning 25s. or 30s. a week, is surrounded with difficulties that are almost insuperable in placing out his boy to work that really is going to be of permanent use to him?—He is surrounded by very great difficulties indeed.

97028. Take the carman, for instance, whose hours are fairly long on the average in London. He has not much chance of going out and searching out to see which is the industry, which will lead on to something, in which he can place his boy?—No, he has a chance of course, and does discuss with his mates, and men in other occupations, as to what is likely to be good and what is good, but he has no bureau of information to go to, and no chance of knowing in the complex state of industry, what is going to be best for the boy.

97029. In your experience, and you have means of knowing, have you not found great difficulty yourself in placing out your boys?—Extreme difficulty.

97030. Do you think that is a growing difficulty?—Certainly I do.

97031. That is in being able to fix on a particular trade or industry that offers some prospect of permanent good for the boy?—I think it is a growing difficulty.

97032. (*Mr. Bentham.*) Do you say it is a growing difficulty to place boys? Do you mean in occupations which would be a training-ground for skilled employment in later life?—I mean in a wider sense. With regard to the last question from Mr. Lansbury, I thought his meaning was that there was a greater growing difficulty on the part of myself, or anybody else, to know which is the best occupation, as well as to put a boy into it when known.

97033. You mean which is the best occupation so far as the future of the boy is concerned?—Yes, so far as future prospects are concerned.

Information bureau. 97034. What would help you in that respect? What change in method would assist you to deal with a boy?—To a certain extent any bureau or committee which could collect information of the actual prospects of particular industries, and so on, would be of help, but I believe nothing at the present day would be a sufficient help to justify me in saying to somebody else's boy: You should choose this occupation for your life's work.

97035. Is not the rate of wages paid in certain occupations to a certain extent a guide?—Not, I am afraid, wages not a guide to the security for the future at all.

97036. The rate of wages are usually high either because of the extraordinary skill that is required in the trade, or because of the scarcity of men in the particular employment. Either of those things indicate a good occupation for a boy?—Of course, they would if there were no other factors to take into account. I would be inclined to suggest there is another influence always at work in the wages of any grade, and that is partly the custom and partly the standard which has been set up in the past for it, not merely the two causes you mention; but even taking those two causes my point is there are changes going on in industries both in processes and demand which may at any moment, and do perpetually, affect in one direction or another certain processes and certain occupations, as, for instance, the reaction of the motor car industry upon the saddle and harness makers. There are many other instances of the same kind that one could quote, so that the highness of the wage earned by the skilled artisan or skilled tradesman in a particular industry to-day is not, I think, an index of the security of that trade ten or twenty years hence.

97037. The rate of wage in a particular industry may be kept up by the combination of men, even though the industry may be a dying one?—Yes.

97038. The introduction of the motor car industry has caused an extraordinary development in the engineering trades?—Certainly.

97039. Are there not more openings now for boys in connection with engineering than ever there were, or is it merely a change from one occupation to another?—I think it is probably so. There are many more openings now in certain metal trades connected with machinery and so on for boys than there were.

97040. It is not difficult to foresee that the employment is growing in that direction and decreasing in the occupation you mention?—I think it is easy to see that now.

97041. You think a labour exchange would help you by giving you an indication of the number of people unemployed in the different trades?—Yes, I think it would be a help to a certain extent.

97042. But the labour exchanges would principally deal with unskilled men, the more highly skilled and organised man is not expected to go to the labour exchange?—Not to the same extent certainly.

97043. That would not be an indication as to the state of the organised trades, would it?—I was assuming that the labour exchange would have a bureau of information in connection with it that would receive information from all trade unions and all skilled employments as well as its own figures.

97044. Have you thought of a bureau in connection with the schools; there is such a thing as adaptability of the boy for a particular trade, and sometimes the parents do not know this: they do not know what the boy is fitted for, but the school master might have a much better idea. Bureaux in connection with schools have been suggested. Do you see any hope on those lines?—I am afraid I do not much, because I do not see any possibility of the bureaux, however, they are formed in connection with the schools, being able to avoid the disastrous results of giving bad advice, as the school masters have in some cases done already where they have taken it on themselves to advise boys.

97045. (*Mr. Nunn.*) Where do you suggest that any purpose in life should be suggested to the boy: surely you could not depend on the parent alone, could you?—No, certainly there is the boy as well.

97046. There is the parent, the boy, the school master and the managers. I suppose they all take an equal interest in it?—Not an equal interest perhaps.

97047. But they all have an equal legitimate interest in it?—Yes.

97048. They are all equally bound to consider the matter?—Yes.

97049. Is not the suggestion that a labour exchange superintendent, who was qualified by having sources of knowledge which these others might not possess, would

be a useful adjunct in fitting the later years of the boy's life for the purposes of his future life?—Yes, I think he might.

97050. He only adds his fifth to the total?—Yes, with more expert knowledge than the others possess.

97051. He brings in the expert knowledge?—Yes, the pros and cons of particular occupations he would only be asked to decide upon.

97052. (*Mr. Lansbury.*) Have you been a guardian?—Yes.

97053. Did you have anything to do with placing out boys then?—Not that way. I had but very little: I was the representative of the guardians on the East End Apprenticeship Fund which apprenticed boys, and in a general way I had a little to do with the advising of occupations, but they took up but very little.

97054. I wondered whether you found any difficulty there. Where the guardians and the school master and everybody concerned were taking an interest in the individual boy, was there not a difficulty to find a place for which the boy was suitable: was not the difficulty to find a place where you could put him?—There was that difficulty certainly.

97055. (*Mr. Benthams.*) Did you find any difficulty raised by the organised trades with regard to getting apprentices in?—I think the secretaries and so on I have spoken to vary a good deal. I do not think the organised trades have made up their minds on the subject as to how far interference from outside as to apprentices would affect them.

97056. In most trades there are restrictive rules as to the ratio of apprentices to journeymen?—Yes, in the strict trade unions they have that distinctly.

97057. Have you found that against your placing boys?—Yes, decidedly that is so, a limit to numbers. If you take the pattern makers or boiler makers in London, where they have strict apprenticeship rules, it is difficult to find a place at all, because the position is generally filled.

97058. Do you think a rule of that kind acts prejudicially against the putting of boys into the skilled trades?—In a way it does, because it obviously prevents an increase in the number of boys you may have training at the same moment. It does not follow that it would be to the prejudice of those boys when they were men that there should be that restriction.

97059. But if the boy does not get in it makes a difference to him now?—Obviously it limits the chances of a boy.

97060. (*Mr. Lansbury.*) You might lower the whole standard?—The effects might be extremely bad if you had an inrush of boys to the boiler-making without any check; you might have a large number of unemployed ten years hence.

97061. (*Mr. Benthams.*) You do not think the skill of the trade is a sufficient safeguard against a wholesale modification of wages in that particular industry? If the wages came down to such a point that it was only on the level of casual labour, people would not care to put their boys into that trade, because there is no need to put them to the particular trade unless with the object of getting good wages?—Of course not.

97062. So that it would regulate itself very soon?—It is found that the wages fall in a skilled trade in that way, is it not, because the competition takes place between the numbers rather than on the wage?

97063. If there were a large number seeking employment the wage would fall; you could not keep it up by a trade union even?—It would fall, but not to the extent you expect, for a number of years; it would not fall in the way that the weavers' wages fell from 40s. to 14s. a century ago; it would not fall in that way owing to competition.

97064. But it would fall?—Yes, in the long run.

97065. If certain employers found that they could fill their works with men not connected with the union, without any interference on the part of the union, some would do it at a low rate of wages; so it would operate as it does in some trades now?—I only meant it would operate to keep it up to a standard.

97066. Your experiments with regard to boy labour are with the object of reducing the number of people who might be unemployed in after life?—Yes.

Mr. Edward Urwick.

17 Mar. 1908.

97067. You recognise as a decreasing quantity the number of boys employed up to fifteen, and even up to eighteen?—Up to the age of fifteen certainly; up to eighteen, that is between fourteen and eighteen, I do not know. I have not any figures, and I do not know how it compares with different periods in the past.

Decreasing number of boys employed up to fifteen.

97068. When you say that an increasing number of boys are employed in occupations which are either uneducative in the sense of producing no increase of efficiency or of intelligence, or unpromising in the sense of leading to no permanent occupation during adult life, you really mean there is an increasing number of boys who are now working in occupations which would not lead to a permanent occupation in after life, not that there is an increasing number of boys employed?—No, I do not mean that; I do not know whether that is so or not to any great extent.

97069. The kind of work young people are put to now is not educative in the sense of fitting them for their calling in after life?—That is so.

Non-educative boy labour.

97070. You say there is a constant tendency for certain industrial functions to be transferred from men to boys? Is that really true?—I should say most certainly it is. I have come across it in various industries where work that was done (I have not the instances with me, but I could get instances) a few years ago at 35s. a week by a man is now transferred to a boy at 15s. or 16s. a week with a greater output.

Effect of boy labour on employment.

97071. By the introduction of machinery for the purpose?—Yes, by a change in the machinery.

Boy labour increased by introduction of machinery.

97072. (*Mr. Patten-MacDougall.*) The work is not the same then?—No, I am afraid one would have to admit that; it is not the same process, though it is the same production. The article produced is the same, the process is changed.

97073. (*Mr. Benthams.*) That has not called into existence an increasing number of boys employed, it has only changed the occupation from an occupation where the boy might have been learning a trade, which might have been a proper trade for him, and instead of that he is minding a machine?—As I have said once or twice, I have not figures, and cannot judge the proportion of boys of the young person age who are actually employed now compared with the past. In certain places I believe it has called an increasing number of actual boys as compared with the past into existence. I think Coventry is a case in point where the number of boys and young persons employed is in excess of that in the whole country.

Proportion of boys now employed compared with the past.

97074. You say in the Coventry metal and machine trades 41 per cent. of the males employed are under twenty-five; but twenty-five is the age of manhood?—That is true.

97075. Have you the figures between fifteen and eighteen?—I have the figures at the age of fifteen, and they compare in this way; 79.5 per cent. of the boys of fifteen are employed in Coventry as compared with 60.1 per cent. in London. Those are the figures of boys actually at the age of fifteen. I have not the figures between fifteen and eighteen; but I think it is arguable that the same relative increase would be shown at the different ages.

Percentage of boys of fifteen employed in Coventry and London.

97076. That is due to the rapid growth of the motor car industry, I suppose?—Yes, chiefly, and to the fact that there is probably a very large young population there, as there is, on the whole, an older population in London.

97077. Taking the skilled trades of London they are not, as a matter of fact, particularly the building trade, recruited from London boys, are they?—I believe not.

Skilled trades of London not recruited from London boys.

97078. Do you see any way in which a change could be made in that respect? Builders have a prejudice against taking boys into the building trade from London for some reason or other?—Yes.

97079. Do you know why?—No, I do not know what the causes are beyond the prejudice.

Mr. Edward J. Urwick. 97080. (*Mr. Lansbury.*) Is that an established fact that builders will not take London boys?—I could not say whether it is an established fact; I have heard from various sources that they prefer men from the country.

17 Mar. 1908. Building trade and London boys. 97081. Boys, I mean; apprentices, for instance?—I could not say.

97082. (*Mr. Bentham.*) It is not that they have a prejudice against boys as apprentices, but a prejudice against boys of any kind?—I think at any rate it is true that they take on a very small number of boys comparatively.

97083. (*Mr. Lansbury.*) I think the argument was that the London boy was displaced by the country boy?—I think that was not suggested.

97084. (*Mr. Bentham.*) The trade is not recruited really in London, but it is recruited from the men who have learned their trade in the country?—So I have always understood.

97085. That points to an increasing number of boys, probably between the ages of fifteen and twenty, who have not openings for learning a skilled trade?—Yes.

97086. You have no explanation of that?—Probably because there are more openings in connection with the nondescript occupations in London, such, for instance, as the transport service.

97087. Whether these boys between fifteen and twenty are in better-paid occupations than going into a contractor's yard or not is a question, the call for these boys in transport service may be the cause for their not going into other trades; and the contractors found it difficult to get suitable boys to train in their particular trade for that reason?—I think that probably is so in London.

97088. (*Mr. Lansbury.*) Might I suggest that another reason is that the London contractors carry out so very many big works outside London that that may be a reason why a good many of their staff are people who are not actually born in London or known as London people?—Yes, I suppose that is so.

97089. (*Mr. Bentham.*) Would that really be so? Would a London contractor who has work outside London take London men to do the work, the scale of wages in the country is lower?

97090. (*Mr. Lansbury.*) I am suggesting the reverse: that the contractor takes country men?—And brings them to London.

97091. (*Mr. Bentham.*) When he has finished his country job and gets a London contract?—He keeps some of the country men on.

97092. That cannot go on to any great extent; they cannot all be coming in and none going out, or you would get the market overstocked in those particular trades and wages would fall. Surely he does not stop his London men and stick to his country men?—I should think in some case he does, does he not?

97093. Do you think that is the process that is going on?—I do not know how far it is, but I should say to a certain extent that process is going on; the substitution of the country men for the London men.

97094. (*Mr. Nunn.*) You do not say it is peculiar to the building trade, do you; it is the same with the police and the carmen?—Certainly, very much so with the police; and also, I believe, with compositors and printers; and perhaps several other trades.

97095. (*Mr. Bentham.*) You cannot devise any means of turning the stream of these men that are left out back to the country somehow?—No, I have no suggestion to make there at all.

97096. (*Mr. Gardiner.*) In Paragraph 2 (1) you speak of the quickly-rising standard of living or scale of wants, etc. Could you give us the evidence on which that statement is based? It is often stated, but I want to know what the evidence is?—There is the evidence of the actual rise of wages, of course, and the actual amount of satisfactions which the wage would buy on the whole in the last fifty years. Of other evidence of the actual rising scale of wants, I am afraid there is none whatever, except the impression of almost everybody that I have known who who has had much to do with the people, poor people, in their lives, which seems to point to general agreement on the fact that they are perpetually demanding more

owing to the example of others, and owing to the suggested possibility of getting more satisfactions.

97097. There is no evidence really, except the opinion or impression?—No.

97098. In answer to the Chairman you spoke of the compulsory limitation of the hours of boy labour as a possible remedy. Could you tell us how you could get that?—I think it is to some extent done already in Germany, where they insist on the boy attending six hours, or whatever number is fixed, per week at the continuation classes; and insist also on the employer limiting the number of hours during which he works on those days, letting him cease work at four o'clock in the afternoon, or whatever time is fixed.

97099. Have you ever thought of the plan of having in a place where they employed many boys, two shifts?—No, I have not thought of that. I do not know how it would work.

97100. Have you ever considered the possibility of making that arrangement?—No.

97101. And extending the Factory Acts in that direction?—No.

97102. (*Miss Hill.*) With regard to the evidence of a raised standard of living, I suppose there would be evidence that a great many families now occupy more rooms than they used to long ago? There were more one-roomed tenements in years gone by than there are now?—Yes, I think the census figures show that clearly.

97103. And on the whole, the hours of labour would be shorter, would they not?—Yes, on the whole.

97104. And Saturday half holidays more general?—Yes.

97105. And the holidays given at the periodical holidays, such as Bank Holidays, longer?—Yes.

97106. I should think very few people who are familiar with the homes of working people would have any question that there was more food and more clothes, than in the old days, would they?—I believe not, from those who can judge of the past.

97107. In fact, you would consider there was evidence, although it might not be easily brought out in a statistical form, that the standard had risen?—Yes, that the standard of satisfactions has risen certainly. I was rather thinking of a different thing, the scale of demand for more satisfactions in excess of the existing standard.

97108. I should think there is very good evidence of that, is there not?—Of the same kind.

97109. Would you not say that the standard is steadily rising?—Certainly; I think the general agreement is so now; but I am afraid it is difficult to point to any statistics in the form of figures, or anything of that sort.

97110. Have you any evidence with regard to the various registration and apprenticeship committees, and voluntary bodies, which have sprung up in London of late years, as to whether they have been successful in their working? I know it has been on a very small scale, Have they been successful and beneficial?—I think they have been distinctly beneficial within certain limits. I mean distinctly beneficial within limits which I believe are definitely fixed by the condition of the industries of London. Within those, I think they have, both in the more careful selection of the right boys and girls for the openings that are offered, and still more, as I think I have stated, in safeguarding the interests of boys and girls in the apprenticeship.

97111. Do you know a large reformatory near Norwich from which the boys have been placed out on farms?—I do not know of it.

97112. You are not aware that that has been done?—No.

97113. Rather with a view of keeping them away from London—that has been done?—I do not know of it.

97114. (*Mr. Loch.*) With regard to these classes after the period of school age, I understand that you would limit the day's work of young persons up to the age of sixteen or eighteen?—Yes.

Comptrol limitation of hours of boy labour.

Rising standard of living.

London contractors and country trained employees.

Influx of country men into London employments.

Rising standard of living and scale of wants.

Practicality of compulsory limitation of hours of boy labour.

ability 97115. Do you think that is feasible in view of the broken kind of work in the various shops, grocers' shops, and so on, where these young people are working? Does not the business of the employer require the services extended or restricted according to the business of the day?—Yes, certainly.

97116. Would it not be very difficult to fix the hours of a day's work for a boy of that age?—I think it would be difficult to enforce a fixed limit, but it is done to some extent at all events at present under the by-laws as to working during school age, although it is difficult always to see that they are not broken.

97117. That is up to fourteen?—Yes.

97118. I was under the impression that the difficulty would be very much greater after fourteen, because the boy himself is then an earner, and it is of great importance to him to keep his place?—I am assuming always, which I think would be the case, that the boy would be engaged almost wholly for time wages by the week, and the employer would probably lower the time wage, to a slight extent at first, if this compulsory limit of work was put on; at any rate, after that, having lowered it from 6s. to 5s. a week for a certain class of work, there would be no inducement to the boy to go beyond hours, although there might be an inducement for the employer to work him overtime; that might be stopped.

97119. I am thinking of the extreme difficulty that the employer would find himself in. It is in the day hours, the later hours, that the pressure comes in?—I see that. I think the employer would have to find some way of getting over the inconvenience; he would have to settle it as I believe he always has done with regard to the limitation of boy work.

97120. You think somehow or other the difficulty can be met?—Yes, I think so in the case of shop-boys, or errand boys, on Saturday night or the early closing evenings.

97121. Would you penalise the employer if the boy were working over hours?—Yes.

97122. Just as under the Factory Acts?—Yes.

97123. (*Mr. Lansbury.*) I would like to suggest that a way out would be to give the employer the choice of whether the time off was at the beginning of the day, the middle of the day or the end of the day. It might be, as Mr. Loch suggests, that it is just at the certain hour which might be fixed that you get the hour when the boy is most needed, but there would be no reason why you should arbitrarily fix it in every trade at a given hour?—No; I take it it would be done under by-laws in nearly all cases, allowing certain days longer work, according to the particular trade; a longer day on Saturday for all shop work.

97124. (*Mr. Loch.*) Mr. Lansbury's question goes further and suggests that the employer might have an hour or two hours given up in the morning rather than the evening?—I do not know how that would be practicable with regard to the education which presumably would have to take place all together at some given time in the day.

97125. (*Mr. Lansbury.*) I suggest again there would be a considerable number, and some classes might be fixed at some time and some at another?—A variation might be made in the time that was fixed; I do not know whether your suggestion is easy to carry out.

97126. (*Mr. Nunn.*) Have you considered the possibility of using up not old men, but men in rather more advanced life than middle age to do a good deal of the errand work, less rapid, but perhaps more steady, instead of boys?—That would happen probably if no change took place in the process, but as far as one can judge at present, if you starved out the messenger boy there would be an increased motor carriage of all kinds of goods, which would only probably necessitate the work of one man to do the work of, say, five boys; it would probably mean the employment of a motor van with a middle-aged man in charge of it.

97127. You think that would come?—It is coming in, and it would come more quickly if such a provision with regard to errand boys was strictly enforced.

97128. (*Mr. Loch.*) With regard to education, do you propose there should be a new and separate staff for the teaching of these boys in the extra time?—I think that a certain part of the staff would have to be a new one. I think part of the general manual training I am suggesting could be done by the staff that now teaches in the continuation schools, for instance.

97129. How many less hours of work would these boys have because of the extra time at school in a week?—At first I am only contemplating our fixing six or eight hours in the week.

97130. Does that include all physical education as well as the rest?—That includes all the compulsory education that he would be obliged to attend.

97131. You spoke about military work or teaching. Have you seen anything of cadet corps?—I have a little, but I have had no direct personal experience of them.

97132. You are quite of opinion that the kind of education the present system could give, with assistance, is the kind of education the boys want for the practical purposes of life, as a preliminary for the practical purposes of life?—With a certain amount of supplementing.

97133. Supposing a boy joined a cadet corps or some quite legitimate outlet for an interest of that sort, would you take it into account, or would you say that that is a breach of the law—it would take him, say, one night a week?—I have not really thought whether that could be included in the curriculum, or whether it would have to be treated as an extra like an amusement.

97134. It might be that the physical opportunities of good for a boy would be cut off by the system?—In that case it would be well to include it in the system and recognise cadet corps or physical training as part of the system.

97135. Apart from the educational method, you see no method of meeting this difficulty of the boy after he leaves school before he joins the regular fixed adult class of labour?—No, I see no general remedy.

97136. You are not inclined to think that a labour bureau, well organised, might place a boy at the start under better conditions, and so avoid altogether the necessity for this?—I cannot see how it would, because, as far as I can see, it would not alter the proportion of bad jobs to good jobs that exists.

97137. You are of opinion also that this refers particularly to the particular class of boy, the less capable, who might be picked out as less capable before the age of fourteen, and who might at that time be differently handled altogether?—They might be differently handled, but I cannot see myself that there is any less need for prolonged education in the one case than the other; the necessity with regard to both the stupid, slow boy and the quick boy appears to me to be equally great.

97138. You are of opinion that the education a boy gets now between thirteen and fourteen or thereabouts is the best for him at that time, considering his future life?—No, I cannot say that it is. I think, as I have said once or twice this morning, there is desirability of putting in more general manual training between the ages of twelve and fifteen.

97139. Is it not possible in framing a curriculum at that time to modify your proposals for the later age?—In what direction?

97140. In this direction, that the boy would start fair for better work than he now does.—At the age of fourteen?

97141. Yes.—A little, but I cannot say still that it would be enough to produce an effect; he would be a little better when he was twenty or twenty-five, but not so much as he should be.

97142. (*Mr. Patten-MacDougall.*) You are speaking chiefly for London?—Yes.

97143. Have you considered the possibility or the practicability of extending your proposals to the rest of the country, the rural districts?—I do not know enough of the rural districts and their needs to say what modifications would be required. I have not thought of or discussed the advisability of extending it to other parts.

97144. Nor the expediency or the advisability of having continuation classes in all the elementary schools of the country, have you?—I am assuming that would follow

Mr. Edward J. Urwick. probably, that it would be adopted universally if adopted for London, but I have not considered the modifications necessary in the different parts.

17 Mar. 1908.

Club
amusements
as the
inducement
to attend
voluntary
continuation
schools.

97145. Have you considered the cost at all?—No.

97146. I do not know whether I rightly understood you; I think you said that the inducement at present to boys to attend these continuation schools is the inducement of club amusement; was that what you said?—That was only in the case of those I had to deal with.

97147. What do you mean by club amusement?—Such as the provision of amusement, of games, both in the evenings and on Saturdays, such as billiards and so on, and physical drill.

97148. How are these provided by attendance at continuation schools?—Not that I know of in continuation schools. I am speaking of the boys whose education I have directly had to deal with, who have been members of a club. I am speaking of those in Limehouse particularly, where two or three clubs have been founded, where the club and continuation school have been combined under private management; it does not apply to continuation schools as such, but continuation schools have been carried on in connection with club amusement.

*Mr.
Archibald
Campbell.*

Mr. ARCHIBALD CAMPBELL, called; and Examined.

17 Mar. 1908. *(Sir Samuel Provis.)* You are a Justice of the Peace, a Solicitor in the Supreme Courts of Scotland and Clerk and Law Agent to the Distress Committee of the City of Edinburgh?—I am.

Experience of
witness.

97154. You have prepared a Statement which we will treat as your Evidence-in-chief if you will kindly hand it in?—Certainly.

(The Witness handed in the following document.)

EXTENT OF UNEMPLOYMENT.

Extent of
unemploy-
ment in
Edinburgh.

1. The extent of unemployment in Edinburgh in recent years has been very great.

(a) On 2nd January, 1906, the Distress Committee opened a Labour Exchange, where, since that date, 4,837 individuals have enrolled.

Since 15th May, 1907, 2,133 individuals have enrolled. Of these 797 were new cases, and 1,336 persons who had previously applied.

The number on the roll as unemployed at this date is 1,801.

Character of
unemployed.

Of the number of those who have enrolled, about 15 per cent. may be taken as habitually out of employment, working only when driven to it by great need, or when they desire money for dissipation, and content for the most part to live upon the earnings of wives and children, or in any other way which does not entail labour. This class now enrolls in reduced numbers, since they have found that they must work for any money received from the Distress Committee.

About 25 per cent. appear to be casual workers, often out of employment. The work secured by them is generally for a month or two at a time, and even for shorter periods.

There, however, remain about 60 per cent. who appear eminently deserving of assistance, anxious and willing to work, but unable to procure it.

Seasonal
trades.

(b) There are trades which are termed "seasonal trades," such as painters and tailors, where the men are busy for several months of each year, but at other times of the year do not expect to be fully employed. The winter also stops many outdoor employments.

Chronic un-
employment
in building
trade.

2. In Edinburgh there is at the present time chronic unemployment in the building and allied trades. About one-fourth of our present roll of unemployed belong to these trades. In addition, there is a surplus of men over and above the required supply in many trades. In our public rubber works many hands have been paid off recently. By the closing of the Scottish Vulcanite Co.'s Works, which at one time employed 500 hands, many workers, after long periods of steady employment, have been thrown idle.

97149. Are those club amusements provided in order to induce the boys to attend the schools?—That is a good reason, though they are available themselves as an amusement, they are really a draw to the boys to come to the class.

97150. You do not think very much of the advice that the school-masters give as to the future of the boy who is under his care?—I am afraid I do not.

Adv. of
school-
masters
as to
future of
boys

97151. Do you not think the schoolmaster is as well able to judge of the boy's capacity as anyone else, because the boy is more under his care, when he has had him in charge for years?—I would like the schoolmaster to continue as part of the advisory body, but you are compelled to go further as to the state of the industry in the choice of an occupation as well as what the boy is fitted for. The schoolmaster would not know what is likely to continue a good opening in the future, and what is not.

97152. Do they generally take an interest in the boy's future?—Some headmasters I have known have taken an interest to a great extent and have given advice to the boys and to the parents in cases when they have come to them. Certain of them take a very great interest, but others I know do not take much.

3. The number mentioned as having enrolled at the Labour Exchange in no way represents the total number of unemployed in Edinburgh. It has been found that the best class of tradesmen do not care to register at the Labour Exchange, as relief work is also given there. Recognising this, the Distress Committee have opened a Municipal Labour Exchange where persons may register who desire only employment at their own occupations. More reliable statistics as to the state of unemployment will thus, it is believed, be procured. Since the opening of this Exchange, about nine months ago, 1,575 persons have registered there. If an applicant does not renew his registration each month, his name is removed from the roll. At present 654 names stand upon the roll. By the medium of this Exchange situations have been found for 406 persons.

Best class of
workmen do
not register
with distress
committee.

Municipal
labour
exchange.

CAUSES OF UNEMPLOYMENT.

4. One of the most fruitful causes of unemployment is the constant displacement of labour in all industries by the introduction of labour-saving machinery and new processes of production. Such machinery enables a partially-skilled man to do work formerly done only by a highly-skilled man. In many cases the machines are even of such a type that women or boys or girls can attend to them, and do the work formerly done by adult male labour.

Machinery.

5. The skilled workman is thus in many instances, by the introduction of machinery, forced into the ranks of the unskilled, as his previous training becomes valueless.

6. Mechanical appliances are also displacing the labourer as well as the skilled tradesman.

7. The smaller trader is being crushed out by the consolidation of businesses, which permits of work being done in a large establishment with fewer hands than when it was distributed over a large number of small men. This also helps to create unemployment.

Consolidation
of business.

8. The Workmen's Compensation Act has thrown a great many thoroughly decent older men out of employment, as employers are afraid to retain their services, as the risk of accident increases with men as they grow older.

Workmen's
Compensation
Act.

9. In Edinburgh there was some years ago a very great amount of building. Two large new hotels were built, our municipal chambers were extended, the North Bridge Street was rebuilt, and a great deal of speculative building took place. During that period a great number of builders, joiners, etc., were attracted to the town. When the employment which had brought them here ceased, these men, having taken houses and settled in Edinburgh, remained on, hoping to see a revival in trade, and now are not in a position, owing to lack of means, to move elsewhere.

Depression
in building
trade.

EFFECTS OF UNEMPLOYMENT.

10. The effect upon the workmen is to make those who are unemployed in course of time become unemployable. The habit of work is very readily lost; and when men have lost their self-respect by having to sell their furniture, to leave a decent neighbourhood for a poorer one, and to associate with undesirable neighbours, they very naturally deteriorate. It thus becomes of great importance to make it impossible for any men who are willing to work to be without work.

11. Further, the very best class of young men, those who have shown thrift and saved money, are leaving the country in large numbers; and as they pay their own way, little is heard of this emigration.

REMEDIES FOR UNEMPLOYMENT.

12. The problem of unemployment should be dealt with as a national question, as practically the same causes operate throughout the whole country. The organisation of labour under a State Department might be tried. Such a Department could consider as to the shortening of the hours of labour, and also as to how overtime work could be prevented.

13. The Department might also take up the question of preventing boys drifting into the ranks of unskilled labour. The Boys' Brigade, through its officers, who are in close touch with about 60,000 lads in this country between the ages of twelve and seventeen, might be made use of in this matter. At present much is done by the individual officers of the Boys' Brigade to induce their lads to qualify for trades, but much opposition is raised to this by parents who desire large wages immediately, without regard to the boys' future.

14. The Unemployed Workmen's Act should be amended so as to confer upon committees power to pay wages out of the rates, and also to compulsorily acquire land.

15. The word "Distress" should be dispensed with, as it gives unnecessary offence to self-respecting tradesmen, and the committees might be termed "Employment Committees."

16. Municipal Labour Exchanges should be made compulsory in all towns of any size.

17. One would also suggest the establishment of penal colonies, where those not willing to work would be compelled to do so. If the unemployed and those not desirous of working were separated from those deserving of assistance and anxious to work, the problem would be much simplified.

18. To justify the establishment of penal colonies, one would first require to be in a position to offer employment to all, and this could perhaps be best brought about by the establishment of works on a national scale for the purposes of, say, the reclamation of moss lands, foreshores, etc., or other works of national utility, to which men could be drafted in periods of depression in their own trades. The Distress Committee in Edinburgh have acquired the estate of Murieston, and are there employing 400 men in improving the land by incorporating with it city refuse. A scheme of this kind on a larger scale might be tried.

19. If the works so instituted were on a sufficiently large scale, there would be, in connection with them, employment for men of skill, and such works might also be used as a training school, fitting men for skilled labour when opportunity for such labour occurred.

97155. (*Sir Samuel Provis.*) The subject which you wish to give evidence upon is connected with the unemployed and the work of the Distress Committee in Edinburgh?—That is so.

97156. You tell us that in January, 1906, the Distress Committee in Edinburgh opened a labour exchange, and you give us certain figures. Are those figures made up to date?—To within the last week.

97157. The labour exchange which you refer to there is really a register of the applicants for relief work?—Yes. The first figures deal with the applicants for relief work: later on I give you those who apply for help to get work at their own occupations.

97158. The labour exchange referred to in the first paragraph is merely to register the applicants for work?—Yes, for relief work.

97159. The number at the present time is under 1,800. Is that an average number? Is the average pretty constant all the way through?—Except in summer that I may say is a fairly average figure. It is an increasing number, at the present time we have probably about fifty per day added to it. It has been going steadily up in the last three months, but in the summer time the figure is much lower.

97160. Do you keep the register open all the year round?—Yes.

97161. What sort of ages were these applicants: have you any figures in your mind?—I could have given you all these figures: I had them tabulated for a Report which I gave to the Local Government Board, but I am afraid I could not supply you with them from memory. One thing we were surprised at was the number of applicants who are comparatively young men. (*See Appendix No. XVIII. (A).*)

97162. You give the number as about 15 per cent. who are habitually out of employ?—Yes, that is the number that we consider really are not very deserving of help. We have deferred their cases to take up those of other people considered more deserving.

97163. As you keep that register open all the year round, do you review it from time to time. Do you close it and begin it again?—Yes, we purge it periodically. We take steps to satisfy ourselves that all those appearing on the roll are still desirous of obtaining work.

97164. Do you find the same people recurring?—Yes, you will find I have given you the figures: since May 15th, there were 2,133 individuals who have enrolled, of those 797 were new cases, that is something more than one-third, and 1,336 were persons who had come to us on previous occasions.

97165. There are about 60 per cent. who were apparently deserving of assistance as unable to procure work. How far were you able to meet those applications?—Until this year to a very limited extent. We were at first wholly dependent on work which we could procure from the Corporation of Edinburgh and also work which we were able to provide in a factory which we started for dealing with waste paper. We collect the waste paper of the city and get it sorted out and then sell it to paper manufacturers. There we have about 140 people steadily employed: we also make firewood, and we get old tins and take the solder from them: any sort of odd thing that might not pay an ordinary employer of labour but enables us to pay for the labour engaged in doing it and provides work, is taken up by us. This year we have at the present time about 1,000 men employed by the Committee. We have purchased an estate and have about 400 men there, and we have this 140 in the factory, and then we have various pieces of work for the Corporation in hand. We are better able to meet the applications this year, and I hope will be still better able to meet them in another year on account of the way we are working this estate.

97166. That is the one you refer to in Paragraph 18, I imagine?—It is.

97167. You say 400 men are employed there in improving the land by incorporating with it city refuse that is to say, you get the refuse from the city council, I suppose, and are putting it into the land?—Yes, we are trying to get the waste labour, the waste land and the waste material to produce something worth having by working the three waste products together. Our reason for hoping to be able to deal more efficiently with unemployment in another year is this: that now we are unable to put out as many men as we otherwise would, because we have only as yet a daily supply of refuse providing work for 300 or 400 men: we are using up the supply we can get out each day by digging that into the land. In the summer we hope to be able to put a much larger quantity of refuse on to the estate than we have men to work it into the land, so that when the winter comes we will be able to send out a large number of men and have the material there to work with.

97168. Do you have to house those men?—We are doing it both ways: we have so many housed, and then we have a special train running backwards and forwards morning and evening.

Mr.
Archibald
Campbell.

nature of
work.

Improvement
of land.

Mr.
Archibald
Campbell.
17 Mar. 1908.
Economy
effected in
disposal of
city refuse.

97169. What distance is it from Edinburgh?—Twelve miles. We have been able to effect an economy in that way. The city was paying 1s. 4d. per ton merely for the purpose of getting their refuse disposed of, for getting other proprietors to take it off their hands in some cases, and in other cases they had to purchase old quarries or disused land in order to get rid of it. We are making use of this city refuse, and at the same time we have got a place so much nearer that we save 6d. per ton on railway carriage, which the city has given us the advantage of.

97170. Do you take all the refuse, or do they prepare it in any way?—We cannot take it all of course yet, but we take the refuse just as they get it, then we take out all hard material. Of course, the land is a clayey land which needed draining very badly, and a great deal of the refuse is cinder refuse, and that cinder refuse is providing drainage. They are trenching the land about 18 inches, putting in first a little of the cinder refuse, then a little of the clay and so on; the soil is being lightened in that way, and the process also helps to drain the soil, and then whatever is of manurial value also improves the land.

Municipal
Labour
Exchange.

97171. Coming back to the earlier part of your statement, I see you have a labour exchange apart from the applications made for relief work, that is to say a labour bureau from which employers and employees may find out where work is to be had, and who are willing to take it?—That is so.

Trades
unions and
labour
exchange.

97172. What class of people come to that exchange; all classes?—Practically every class. We have endeavoured to get the trade union people in Edinburgh associated with us so that we might make it the common meeting place of both employers and employees, and we are getting a few societies to keep their out-of-work books there, and the men are getting familiarised with the place in that way; they come and sign the societies books when they are out of work, and they get paid there by their own officials their out-of-work allowances. In that way we have practically every kind of tradesmen making use of it; as you will see we have had over 1,500 people registered there, and we have been able to put about 406 people into employment. I have a list of these different kinds of employment here which shows how varied they are. For instance, we found places for box-makers, brick-makers, cabinet-makers, cattlemen (one or two farmers have taken men out as cattlemen) clerks, engine keepers, farm labourers, gardeners, joiners, masons, painters, packers, pig men, pocket-book makers, port-manteau makers, sign-writers, slaters, stone polishers (lithographic), tinsmiths, upholsterers, van drivers, waiters, warehouse-men, window cleaners, and so on.

Numbers
registered.

Employments
found.

Employers
and labour
exchange.

97173. Perhaps you would put that list in?—I shall be very happy. (*See Appendix No. XVIII. (B)*). One satisfactory feature of the exchange has been that a number of men, the employers particularly, have come back again, and towards the end of the autumn when farmers had a great demand for labour for lifting potatoes which they could not meet, one or two farmers came to us, and then they sent others, and we having a big supply of labour were able to send men out at once to different places all round Edinburgh. We sent out quite a large number of men, 157 people, as farm labourers for temporary periods of four weeks up to perhaps eight weeks.

Nature and
locality of un-
employment.

97174. So that the employment you found was not merely in Edinburgh itself, but in the neighbourhood as well?—Yes. There is a brick work to which we have been able to send a number of men, and to these farms all round about, quite a large number.

97175. (*Mr. Patten-MacDougall.*) The farmers were very well satisfied?—Very well. After a man had served a period with one farmer he was passed on to another farmer in the neighbourhood if he had done well. Some of the men were quite useless men, they could not stand the strain of stooping so much, but a large number did extremely well. We had a card sent in by the employers giving a report as to how the men had done.

Advisory
committee of
members of
trades
unions for
labour
bureau.

97176. (*Sir Samuel Provis.*) Was the employment exchange entirely worked by the distress committee or did you have any co-operation in managing it on the part of the men or the employers?—We instituted it,

and at the time of its institution in order to carry with us the trade unions of the city we invited each trade union to send a representative to a meeting at which we discussed the lines on which we proposed to establish the labour exchange. Then we asked them to appoint an advisory committee of seven; these men have no power to vote, but we take their opinion upon points in connection with the conduct of the Exchange if we think it advisable.

97177. Do they advise you on the allocation of men to particular classes of work?—No, that has not been necessary.

97178. They would only advise upon general questions?—Yes, just on general questions. They have circularised the various trade unions, and have offered to come and address trade unions upon the advantages of this central labour exchange. We have had favourable various expressions of opinion both from the men and from employers as to the convenience of this place, and the men have no feeling about coming there because the relief work is not particular given at this office.

97179. Now we come to the causes of unemployment. You have referred to several which have been brought to our notice before. You refer to the Workmen's Compensation Act as having thrown a good many men out of employment. Has that come under your personal notice, or are you referring to general knowledge?—It has come under my personal notice through my association with different employers, and it has also come under my notice from the fact that my firm happens to act as solicitors for a large accident insurance company, and I know the general feeling that there is amongst employers in that way.

97180. Do you go so far as to say that men have been got rid of because they are old?—Yes, I think you can go that length; men if they are wearing spectacles, or are getting at all up in years, are the first men to be asked to go whenever there is slackness.

97181. The building trade is bad in Edinburgh at the present time, is it not?—Very, it could not very well be worse. We have a large number of hewers; we are different from England in that respect; These men prepare stones for buildings; they have served a considerable apprenticeship and earned good wages, but to-day stones are mostly dressed by machines. Hewers consequently to-day are without a trade and practically are thrown back on unskilled labour. The building trade as a whole is in a deplorable condition in Edinburgh. We have a tremendous number of men who are associated with the building trade, who are on our rolls as applicants for relief.

97182. You mention one or two reasons why that is so, namely, that one or two large works have come to an end and the men have not gone away?—Yes.

97183. Do you find with regard to the building trade there is a recurring season of depression in Edinburgh in that trade?—Yes, but at very considerable intervals. I can recall perhaps twenty years ago that there was a very great depression and then property gradually mounted up and up; particularly there was a big boom in Edinburgh after the failure of the Australian Bank; people were very keen to put their money into property after that, but the thing has been over-done. When building was going up we had a district called Gorgie in Edinburgh which suddenly became the centre of a great deal of industry and tenements were built there for the occupation of men, working in the factories and the men employed in building those tenements wished for houses in the immediate neighbourhood. When trade became dull and there was no need for further building that emptied these houses to an extent, and then the dismissed workers in the factories left the houses in the neighbourhood of these works. In consequence you had tenements in that place practically standing empty, there was no there was no need for creating new property under those circumstances.

97184. That is to say that for the time being the place was rather over-built?—Very much so.

97185. You have pointed out the effects of unemployment, and you make certain suggestions as to remedies. Your chief remedy would be the establishment of a State Department, would it not?—I should fancy that that might help, to let us at least see how matters stand and see whether it could be regulated in some way.

97186. Do you mean by that the State should undertake a certain amount of employment itself?—Not necessarily; ultimately that might be so; Bigger schemes on similar lines to our Murieston estate might be tried, but at the same time the State might devise some way by which labour could be better spread out so that some men should not have long hours and overtime while other men were without work; if more wholesome distribution of labour in that way could be effected by such a Department it would be an advantage.

97187. Would your object be effected if you had a system of labour exchanges all over the country linked up together?—Yes. I am strongly in favour of such an arrangement. Even in our limited experience we have tried to work in with Glasgow. If a man were asked for in Edinburgh and we had not that particular class of man, by telephoning to Glasgow we have tried to get such a man. If we had an extended system we might be able to draft men to different places where there was a need for them.

97188. (*Mr. Patten-MacDougall*.) Has that been done in any case?—We have tried to do it, but the need has not arisen often. I do not think we have ever been actually successful, but we have put ourselves into communication and tried to get a man, but where a man was not to be got in Edinburgh he was not often to be got in Glasgow in the cases in which we tried it. From our labour exchange we have drafted a number of men to Linlithgowshire and other places outside Edinburgh.

97189. (*Sir Samuel Provis*.) You dwell upon the fact that boys drift into unskilled employment. I daresay you heard the evidence of the last witness?—I did

97190. Would you agree in his view about the extension of the age for education?—I would agree with it if practical, but I know how the parents of the boys regard it, and I should fancy it would be some little time before there came a practical way of dealing with it. In Edinburgh we are starting an apprenticeship committee working along with the School Board, and the Boys Brigade battalion officers are represented on that, as they have been elsewhere, to try and get a sort of guardian or curator appointed to each boy who will take an interest in them when they choose a trade and keep sight of them during their apprenticeship.

97191. Is the system of apprenticeship existing in Scotland to any large extent now?—Probably to a less extent to-day than formerly, but in our engineering works, and our bigger works, the system of apprenticeship still obtains.

97192. We are told that in England it is declining a good deal: would your opinion be that it is the same in Scotland?—I should think so; it is not a point on which I profess to have definite information, but that is my impression on the matter.

97193. You say the parents are anxious that the boys should get into employment: are not the boys themselves also rather keen upon that?—I fancy it is more the matter of the parents. I know we have had a great deal of difficulty in the cases of boys in whom one takes an interest, because if the boy was able to earn 6s. or 7s. a week instead of 2s. 6d. the parents have said they needed that 6s. or 7s., and they insisted on the boy taking that. I have known cases where in order to prevent that the difference between what the boy would earn as an apprentice and what he could earn for unskilled labour has been made up by persons interested so as to make the parents let the boy have a chance in life.

97194. You have a system of continuation schools in Scotland, have you not?—Yes.

97195. Is that largely made use of?—Not as largely as it ought to be, but it is made use of to some extent. A few years ago I took an interest in dealing with what they called a Fifteen Club School where it was attempted to give classes specially pertaining to the trades of the boys, and we had classes for policemen and all that sort of thing. That has been to some extent taken up by the

school board: they are making the combination classes appropriate to the different trades. There was nothing of that sort eight or ten years ago when this experiment was started.

97196. You would suggest one or two amendments of the Unemployed Workmen Act, but I gather you think that Act should be continued. You know it comes to an end this year?—Quite so. I think this problem of unemployment is with us and must be dealt with in some way or other.

97197. Do you make any suggestion as to the alteration in the constitution of distress committees?—In our case the Committee as constituted is working admirably. As far as Edinburgh is concerned, it has been rather a happy combination of representatives which was made by the Local Government Board.

97198. You suggest that the committee should have compulsory powers. Have you had any practical difficulty arising from the want of those powers?—Yes, very serious difficulty. We were fortunate at the end of the day but we sought quite a number of places which would have been admirably suited for our purpose, but the owners were not prepared to part with them, or only prepared to part with them at a price which was perfectly prohibitive, and we could not go any further forward. Within touch of Edinburgh certainly there is a lot of land suitable for our purposes. We have the foreshore further up in the Forth, where reclamation has been done on a limited scale by individual proprietors, and there were various places which, if we had had compulsory power to acquire at a reasonable price, we would have dealt with, but it was quite hopeless to deal without such powers.

97199. Do you think under compulsory powers you would get the land fairly cheaply?—If you were not going to do it in that way one would not exercise those powers—if you could deal reasonably without them, but it would give you a weapon to obtain your end with, if you thought fit to use it.

97200. (*Mr. Patten MacDougall*.) I think I understood from you that employers of all kinds of labour have been coming to the labour exchange as now constituted?—Yes.

97201. From the list you have given, it appears that you have sent men to all different kinds of trade?—That is so.

97202. I suppose that is the result of employers of labour in those trades being connected with it?—Yes.

97203. So there is a considerable co-operation between the employers and employees in working the labour exchange, as managed by the committee?—That is so.

97204. And it continues to grow?—Very much so.

97205. You are satisfied that, in order to make it a success, it must be altogether apart from the work of the distress committee; that it must not be associated with it in any way?—We have very clearly proved that, because we tried in the first instance working it along with the distress committee relief work, and we found the best men would not register in those circumstances. We hardly got a place for any man at his ordinary occupation at all, so long as we ran the two registers together. From the time we opened the separate office and kept a separate register at which we only ask a few special questions, mainly as to a man's capacity at his own work, the men have registered in numbers and we have been successful in finding them places.

97206. I suppose, as originally worked, not only employees but employers fought shy of it?—Yes, the employers thought they would only get wastrels if they came to the relief work department.

97207. I do not know whether you have had any experience, at any rate, you have knowledge, no doubt, of the relief work which was done by the town council prior to the Unemployment Act?—Yes, I have general knowledge of it.

97208. You are of opinion that the Unemployed Act must be continued in order to meet the situation?—I have no doubt of that.

97209. One amendment which you think is essential is that provision should be made for the payment of wages out of rates?—Yes.

Mr. Archibald Campbell.

17 Mar. 1908.

Unemployed Workmen Act.

Distress committees.

Compulsory powers of purchasing land.

Employers and labour exchange.

Labour exchange must be quite apart from work of distress committee.

Provision for payment of wages to unemployed out of rates.

Mr.
Archibald
Campbell.

17 Mar. 1908.

97210. Tell the Commission the difficulty that is found with regard to that in Edinburgh?—The first year we issued a very strongly worded appeal, and I think we succeeded in getting perhaps £900, that is all we got in voluntary subscriptions, and I think about £300 or £400 the next year. It is practically about £300 or £400 this year, although we have a very much better case. Upon that we could do practically nothing, because we are spending far more than that on wages each week at the present time. If we are to deal with the question and assist the unemployed, we must have some other means of getting the wages than by voluntary subscriptions. It is quite impossible to raise a reasonable sum to meet those wages by voluntary subscriptions. There are only a few who are paying twice over, both by taxation and voluntary subscriptions, and they resent it.

Voluntary
subscriptions
and Govern-
ment grant.

97211. Then I suppose you also find it a difficulty that the voluntary contributions are essential and necessary before you can get the Government grant?—Yes.

97212. That has been found a very great difficulty, has it not?—A serious difficulty.

97213. Accordingly your suggestion would be that in any future amendment of the law, that requisite should be done away with?—That is so. I would suggest that a limit be put to our expenditure; you might put the same limit in our case that was put in the Act, that is, a rate not exceeding a limit of $\frac{1}{2}$ d. in the £, or 1d. in the £, with the consent of the Local Government Board. We have already expressed an opinion which we sent to the Secretary for Scotland, that that would be a satisfactory arrangement as far as we are concerned, but we do not see how the Act can continue workable without some such power.

97214. Under existing conditions it is also the fact, is it not, that great inequalities result and great injustice is done, because in the case of some distress committees, the voluntary contributions are very small, and in the case of others they are very considerable, and accordingly one distress committee may get a much larger grant for a very small voluntary contribution, when the reverse may be the case with another. That has been the experience, has it not?—That has been our own experience, that we have got more than other committees in voluntary subscriptions, and less in Government grant.

97215. That should be redressed in any future legislation?—That is my belief.

Discipline.

97216. In the working of the Murieston Farm, you have had some trouble, have you not, with the men?—We have, but not through the men, it was practically by the interference of outsiders. The men who have engineered all the trouble are men who are receiving a regular wage themselves, they are in regular employment, and they have come in and made this agitation, but the agitation really extended to a very small number. A number were terrorised and afraid to go out, but a good many went out. The disaffection only extended to about 120 out of the 1,000 we had working.

97217. I think it was the case that when you sent fresh men out from those upon the list—you made some fresh selection—and when it was found that they were going to do the work that the others had done, the others asked to come back?—Yes.

97218. They had gone on strike?—So-called. We have had a request to reinstate those who did so, but in the meantime, unless a man has shown good reason for not turning out he has not been restored.

Remunera-
tive nature
of work.

97219. (*Miss Hill.*) Do I gather that the work on this Murieston farm is remunerative or not?—We have had no opportunity to test it so far. We are advised that by treating the land in the way we are treating it it will be worth at least 50 per cent. more in annual value afterwards. At the present moment, except the garden of the old mansion house, and in one field where we are treating it experimentally and planting various kinds of fruit trees and shrubs, we are reclaiming the land. Nothing has been done to it for a very long time; it grows very poor grass and that is all. We are told, supposing we do nothing else but deal with it in the way I have mentioned, it will produce in rental 50 per cent. more than it did in the past. If that proves to be the case, that will make it remunerative, but that is a matter of many years hence, so that we can hardly judge of that to-day.

97220. At present it is being done with funds either voluntarily subscribed or the Government grant?—Yes.

97221. How does the labour compare with independent labour?—Of course, it is not so highly paid, but we have been very satisfied with the efforts which the men, who never handled spades in their lives before, have made to do the work efficiently. We have painters and all kinds of men working there, and they have honestly tried to give a decent day's work for what is paid to them. Of course, they are not paid standard wages, they are paid at the rate, roughly, of $3\frac{1}{2}$ d. per hour; that means they are getting 14s. 8d. a week; then there is an allowance for children over and above that up to 4s., so that a man may get 18s. 9d., and he costs us £1 2s. 9d., because we have to pay 4s. for the train fare. The other men's conditions are practically the same, deducting what we estimate the cost of boarding them is.

Rate
wages

97222. (*Mr. Lansbury.*) Will you put in the figures showing what the payments are?—I will be glad to. (*See Appendix No. XVIII. (C).*)

97223. (*Mr. Patten-MacDougall.*) The cost of the railway travelling is about £40 a week, is it not?—We pay 4s. a head, and we must run at least 200 men. If we are running 400 men it is more than the figure you mention.

97224. (*Miss Hill.*) Do you employ these men for an unlimited time, or are you limited to sixteen weeks or not?—We have no limit in Scotland as to the length of time we may employ them, but our intention is for the present time to do six or eight weeks. We do not pretend to have solved the question, but we have in particular helped a number of painters who are season tradesmen, and a most gratifying number of these men, after we have given them four or five weeks at Murieston, have gone back to their work just now. Every week we are sending back more and more of these painters who have been tided over the worst part of the year and are now back to their own trade when the brisk season comes on in their particular trade.

Length of
employment.

97225. You would consider it a very important point that the wages should be lower than the standard rate of wage, in order to give every impetus to the men to return to their work as soon as possible?—Undoubtedly.

Wages
lower
than
standa-
rate.

97226. Although you have been so successful in drafting these men to independent employment and have got these employers coming forward, and such an excellent labour exchange, you still think you ought to have power to throw the cost, up to a certain extent, upon the rates?—Yes. Just now we are in the unenviable position of having to face bankruptcy more or less if we are not well treated by the Local Government Board, because we are committed to expenditure which we are not able to meet. We trust to a proportion of this Government grant. We have no other way of doing it. We have only £300 or £400 of voluntary subscriptions and are paying out a great deal more than that every week.

Rate for
employment.

97227. In what way exactly did you think the boys' brigades throughout the country could help?—The officers of the boys' brigades are so closely in touch with the individual boy, they take a personal interest in that boy, not merely for drill purposes, but they have him at the recreation rooms, they have him probably a week at camp, and get to know that boy intimately, or should do so. They know that boy's inclinations and his possibilities to a certain extent. They would be willing, I am sure, to act as a sort of guardian or curator, as the suggestion is, and keep in touch with the boy. They are in touch already and would keep in touch, they do so now, but their hold might be strengthened in some way by co-operation.

Boys'
brigade and
boy labour.

97228. Have you any knowledge of the great increase in the physical capacity of the boys from such training as is given by the boys' brigade?—Yes, I have distinct knowledge of it. I happen to be Vice-President of the Edinburgh Battalion, and I have been associated with the movement for about twenty-one or twenty-two years, so that I know thoroughly the possibilities of the movement.

Physical
effect of
training
by boys'
brigade.

97229. You have found that the discipline gives the boys just that kind of education that makes them most valuable to themselves and other people?—Undoubtedly you can do with a little discipline such as they get what could not possibly be done without it. In Edinburgh we take over 500 boys down to camp; those boys are drawn from the poorest districts in Edinburgh. If you took a mob of 500 down there without discipline the thing would be hopeless, but the camp is worked like clockwork—absolute discipline.

97230. I suppose you find that they themselves learn to admire obedience instead of scorning it?—Undoubtedly.

97231. And also the power of endurance rather than indulgence?—Yes.

97232. They respect people who can endure and march well and keep up with their comrades?—Yes. We find that the officers who command the greatest amount of respect from these boys are exactly the men who, besides being their superiors in all other different directions, are their superiors in sports and various things of that sort, the men who can do that sort of thing better than they can.

97233. It puts rather a different standard before the boys of what they should admire and aspire to?—It gives them wholesome ideals in a way that nothing else has done so far as my knowledge goes.

97234. (*Mr. Phelps.*) You say that the people whom you have restored to their ordinary form of life were painters?—That was one trade that was particularly in my mind. In Edinburgh at the present moment that trade is just reviving.

97235. In painting in the ordinary course of things there are long periods of unemployment, are there not?—That is so, it is a season trade.

97236. Supposing that you enabled these painters to tide over the time of unemployment, what do you think would be the effect on painters' wages generally?—Of course, I suppose your suggestion is that it might reduce the standard of wages?

97237. Are not their wages calculated on the assumption that there are long periods of unemployment?—That might be. I think it is quite possible, but the fact remains that we have these men in the direst straits, absolutely starving.

97238. Is that due, do you think, to not treating their wages as having to cover the long periods but spending them as they come in?—I cannot say. The average painter is deluded by thinking to begin with that he is going to get a big wage, but there are very very few of these painters who have anything like a decent average wage; their average wage would not be a very good wage for ordinary purposes.

97239. You speak of a large number of people having been attracted into Edinburgh by the building of these hotels and so forth, and having settled there. Do you look forward in the future to there being sufficient employment in Edinburgh for all these people?—I do not. We have a famous Usher Hall, which is the only big building in contemplation, but it has been in contemplation so long I doubt whether it will ever be started.

97240. Do you think with regard to building houses there is likely to be a revival in that so as to employ all the people who have come in?—I cannot say I do. Property certainly is almost unsaleable.

97241. Do you think on the whole the congestion is normal or chronic?—This congestion in the building trade? We have ourselves helped some people out to Canada, but I think these men were not likely to find employment in Edinburgh at the present time, or in the near future.

97242. How do you propose to deal with that question?—It is very difficult to say. I know no other part of the country in Scotland where there is any demand for builders. The demand does not exist as far as we know.

97243. You do not do very much in the way of emigration to foreign countries?—We carried it out on a small scale; we sent out an experimental seventy-five people.

97244. Do you think on the whole that is a good remedy?—If one regards Canada as another part of our own Empire, perhaps it is; one does not like to see the

labour going out of our own country, but we may take that view of it. Those we have sent have done well.

97245. They have improved their position to what they were doing in Edinburgh?—We have had some very grateful letters from those that were sent. Their gratitude has not extended to the point of paying back the cost which we were put to, which we thought would be done, but perhaps we have waited too short a time to expect it.

97246. Do you think the form of employment you are giving these people at Murieston will give them a taste for country life and help you to migrate them to different parts of Scotland?—I doubt that because, while the men have expressed satisfaction with the labour they are getting there, what they are doing there is simply trenching the ground and incorporating city refuse, which is not a very savoury article. It is quite different from the ordinary land labour where they would have an interest in plants and animals and so on.

97247. You do not think you might be able to work it in connection with small holdings and so on?—It might be possible, because this site is well planted with trees, but we are not at that stage to-day; we are simply getting the estate improved.

97248. Do you look upon that as a possibility in the future?—It is a possibility.

97249. Have you gone into these plans for re-forestation in Scotland, which have been a good deal before us?—No, I have not.

97250. In the ultimate future, looking very far forward, do you think, if your system of labour exchanges was adopted and extended over the country, and also if the problem of boy labour was dealt with in the way you suggest, that unemployment would become a very rare phenomenon?—No, I cannot say that these are going to remedy it; you want something far more far-reaching than that. We have a greater supply of labour at the present time than we have work for.

97251. You think it is more than a question of re-adjustment?—I think it is obviously more than a question of readjustment.

97252. What would you suggest as the remedy?—National Take Scotland; we have great tracks of mossland which, in the course of our investigations we were advised could be made into crop-producing land, very much on the same lines as we are working at Murieston, taking what to-day is thrown away as useless, city refuse. If such work was done on a really large scale it is work that could be stopped for a few months and be taken up again, which is a great advantage. If you had some large scheme of that sort on hand where you could draft men whenever there was a period of depression in any particular trade, not waiting till the man has sold his furniture and got very low down, but when a man is in a state of unemployment, if he comes to you to-day you would say: You can at once go out to the farm, and you will at least have subsistence and will not need to part with your goods.

97253. That is assuming that unemployment will be a constantly recurring factor?—At the present time I do not think there can be any other assumption than that, at least to my mind.

97254. I am supposing that these various remedies that are suggested were put in force; you still feel that that would be a recurring feature in the industry of the country?—Yes, I say in my evidence also that I fancy that has got to be provided for.

97255. (*Mr. Bentham.*) I am not quite clear as to the division between your labour exchange and your distress committee, as to how far the names are kept separate?—They are kept separate, absolutely distinct. A man comes to us for relief work, and he is shown the schedule which is prescribed for any applicant for relief work, which contains a very large number of questions. The other man comes to another office altogether, what we call the municipal labour exchange, and says: I want to get work as an upholsterer or work as a joiner; then a few simple questions have to be replied to, such questions as would show his capacity for the work he desires, and probably his previous record with other employers, and a separate record of that man is kept altogether.

97256. Men are not selected from that register for employment relief?—No, they must register for employ-

ment relief at the other place. In point of fact, we check the two registers and we know which men are on both. We do not tell the employers that. We have a private code which shows that a man has registered for relief work as well.

97257. How far do they overlap?—I could give you the actual figures of that, but I have not them here. We have just now, say, 600 or so on the municipal labour exchange, and of those probably 200 are also at our relief work department.

97258. And really may be doing relief work?—They may be doing relief work.

97259. Or they may be on the selected list for whom work is not found?—Yes.

97260. That is one-third of them?—Yes. These men are anxious to fill in time.

97261. It would be interesting to see at what trades these 200 men work. Could you put in particulars of that?—I should be very happy to.

97262. We want to see how far they belong to the particular trades that are connected with building?—You want the trades of the men on both registers?

97263. Yes?—I could furnish that quite readily. (See Appendix No. XVIII. (D)).

97264. (Mr. Lansbury.) As I understand it you wish a kind of universal labour exchange for the whole of the United Kingdom?—That is my ideal.

97265. You want that because then we should be able to tell whether there is a scarcity of labour in a given place, and so be able to transfer labour to that place?—That is exactly so.

97266. I understood you to say just now that so far as you could judge in Scotland there was not a place anywhere where you could find these men employment?—With the men attached to the building trade I know of no place. The whole of the country is affected in the same way as far as Scotland is concerned.

97267. Of course, while it is true that you have had this small dispute with the men, or with some of them, it is still true that the great bulk of them are really decent men who only want employment?—Yes.

97268. They only want the means of getting their living?—They are most decent men. We have been greatly impressed with that. We have men working at Murieston to-day with records of fourteen and eighteen years continuous employment at one job.

97269. The work that you are giving them is not at all as nice work, and the wages are not so good, as they would get under ordinary conditions?—Certainly not.

97270. So you have not given any inducement for men to rush at you for this work?—Far from it.

97271. It has all been the other way?—That is so.

97272. Do you think that the men are voluntarily staying in Edinburgh having knowledge that there is work for them elsewhere, and they will not go to it?—No, I am sure they are not; they are most willing to go. We have never had any difficulty in getting men to go out to work in other places where work was offered.

97273. When you have been able to offer the men work away from Edinburgh, the men have only been too willing and anxious to go and do it?—Most anxious. I have proof of it in men going out to lift potatoes, work which is not agreeable work, but they take it most willingly.

97274. You have had a good deal of experience with lads one way and the other. ?—Yes, I have.

97275. You said that continuation schools were not very much used?—Not so much used as one would wish to see them.

97276. Do you think that is because the boys have had enough discipline and sweating in their work and they feel they want some other kind of recreation?—I think it is just boy nature; he feels as soon as he has done with school he wants to be absolutely done with it and he thinks a continuation class is another way of remaining at school while he is at work.

97277. He feels he is still at school?—Yes, he has not made the great step from boyhood to manhood so long as he is associated with the school.

97278. Do you think it would be practicable to have a half-time school for boys from fourteen until seventeen or eighteen?—It would take a great deal of readjustment.

It would be a very advantageous arrangement if it could be carried out, but it would take a lot of adjustment of various trades.

97279. There was a lot of adjustment had to be made when the Factory Act came in, was there not?—Yes.

97280. This would not be so big a job as that?—No, I would certainly favour an attempt to arrange such a matter.

97281. There is only one other thing, and that is with regard to painters' wages, or anyone else's wages, I gather from your answer that the wages a painter earns are not sufficient to enable him to save up for himself during the time that he is not employed?—No, I do not think they are.

97282. They do not earn sufficient to maintain themselves during the period when they are not at work?—That I cannot say absolutely. There are a lot of men who are on a sort of permanent staff of firms and they are quite well off, but it is the large number of men who are taken on regularly every year by the same firms at their busy times, but are dismissed when the slack times come on. The average wage of these men I do not consider sufficient to enable the men to go through the winter on their own account.

97283. (Mr. Bentham.) You do not suggest that they should be provided with work winter by winter regularly?—No, I fancy you would have to readjust matters in some more general way than that, because those men for the next few months in Edinburgh certainly, and I suppose it will be the same here, will be getting very big wages and over-time work of all sorts. If in some way you could control the work so that men were not getting over-time at one time of the year and doing nothing at all at another time, it would be an advantage.

97284. The provision of work for these men during the winter is no remedy for that?—That is quite the case; we are only dealing with palliatives.

97285. (Mr. Phelps.) It makes the matter worse?—Yes, it is tiding them over until you can find a solution, that is all I mean.

97286. (Mr. Lansbury.) Although it might make the conditions worse, there is often a worse thing than that and that is to allow the physical and moral deterioration of these men and their wives and families by leaving the problem alone?—I agree with you.

97287. (Chairman.) You seem to think that unemployment is likely to continue chronic; should you say the conditions with regard to unemployment were worse in Edinburgh now than they were a few years ago?—I think so.

97288. How do you account for that?—As I have explained, we are in a somewhat exceptional position; for many years our building trade in Edinburgh became gradually more and more active, but for years past it has been in a state of stagnation, and any number of men are out of employment who are associated with such trades. Then again (I am dealing entirely with the place I know most of) we have that Scottish Vulcanite Works closed where they employed 500 men, so that makes 500 more.

97289. In the building trade are they the skilled or the unskilled men?—Both skilled and unskilled. Of building course, there is the trade of hewers practically wiped out of existence by the machines for dressing the stones. Those men are practically unskilled labourers now.

97290. Has the population of Edinburgh increased very much of recent years?—It has materially increased; it is not a manufacturing town, and does not increase at the same rate as others.

97291. Is there much immigration?—At the time of the boom in the building trade there was great immigration to Edinburgh.

97292. And the people have remained there?—Yes.

97293. Should you say that the majority of the people who were on relief work are persons who, in ordinary conditions, are in permanent employ?—I give a certain percentage of these things. I think there are a great number of people in Edinburgh who belong to season trades, and are very busy at one time and not busy at another. Those people come on to starvation when it comes to slackness; they do not seem able, either by the wages earned or natural capacity, to put enough on one side to keep them.

97294. They are not able to dovetail employments to occupy them the whole year?—No.

97295. Do they go down to Leith and try to get work there?—Yes, but the docks are doing very little now; the men are tramping down there day after day, and are not able to earn half-a-crown as they used to be.

97296. How does Edinburgh compare with Leith with regard to the poor parts. I suppose the poor parts of the combined burghs are much the same?—Leith is very much not combined with Edinburgh; in a way it is alongside of Edinburgh, but it is very strongly of opinion that it is an independent burgh.

97297. For all practical purposes you cannot tell

Mrs. OGILVIE GORDON, called; and Examined.

97300. (Chairman.) You are D.Sc. (London), Ph.D (Munich), Fellow of the Linnean Society of London, Honorary Corresponding Secretary of the International Council of Women, Vice-President of the National Union of Women Workers, and hold many other offices?—That is so.

97301. You have prepared a statement as to a proposal to establish educational information and employment bureaux under the local education authorities which, if you will kindly hand it in, we will treat as your Evidence-in-chief?—Certainly.

(The Witness handed in the following Statement.)

1. In any general survey of the trades and industries in our country, it is customary to think of them in two main groups—skilled and unskilled. Yet within the last forty years machine work has so extensively entered into the skilled trades, that the old dividing lines have become much less sharply defined, and new work values have established themselves between the unskilled worker drawing the recognised wage for unskilled work in a particular trade, and the highly expert worker earning the recognised wage for skilled work in the same trade.

2. The trades unions, by means of strict upholding of a minimum wage for fully trained workmen, have counteracted the tendency that might have ensued of loose definition of wages. But the trades unions have not been able to withstand the greatly increased use that can now be made of semi-skilled or half-trained workmen, of active, deft-handed women, and young lads in the first glow of youth and strength. These classes of workpeople suffer many disadvantages attendant upon new and insufficiently regulated conditions of labour notwithstanding which their numbers continue to increase in all large industrial cities, and unemployment is a common evil. Conversely, there has been a diminution in the number of skilled workpeople, although, owing to the smaller demand for expert handwork, it is only locally and in certain trades that this diminution makes itself felt as an actual dearth of skilled workers.

3. The decrease of the skilled worker, if allowed to continue unrestrainedly and without counterbalancing influences, would inevitably result in a loss to the good citizenship of our nation. The beneficial effect of systematic, continuous training in any direction is well known. The habits of careful work, and necessity for mental activity called forth in the training of a first-class workman, have been as important in determining our standard of national character as other specialised courses of training in our public schools, our universities, our service colleges. In virtue of the industrial supremacy of Great Britain, we have in the past been able to afford the benefits of careful workshop training to a far larger proportion of the working-classes than other European countries. Private employers in many trades and industries could not have won success unless their apprentices and learners had received an almost individual training in the workshops. The advantage to the employers coincided with the advantage to the nation, and it built up generation after generation of self-respecting, well-informed workpeople from whom our middle classes have been largely recruited.

4. The rush and competition with other countries is now much keener, and one outstanding result of machine production is that the majority of our young workers in industrial centres are brought up under the

when you are in Edinburgh and when you are in Leith?—That is so.

97298. That being so, the poorer the people are the more they migrate to the poorer parts of the town. Do the poor of Edinburgh migrate to Leith so that Leith, you would say, was a poorer place than Edinburgh; is it the receptacle of the poor of Edinburgh at all?—No, we could not do anything with them if they did so; we can only deal with those residing twelve months in Edinburgh. Leith has its own Distress Committee. On the whole Leith is a poorer place than Edinburgh.

97299. You believe that the conditions with which Chronic you are dealing in Edinburgh are not abnormal but are Depression in likely to continue?—Certainly, one has no reason to employment, see the end of them at the present moment.

cramping and often disheartening influences of factory work, and only a limited number have the benefit of a journeyman's training. The personal bond between master and apprentice is becoming a thing of the past. It still lingers in the country and smaller towns, and the class of apprentice that is trained there differs in many respects from his city-bred colleague. Elaborate machinery cannot be afforded in the smaller workshops, and the lads have to learn to put their hand to all parts of the work and in this way acquire a fairly general dexterity. Again, the evenings are almost perforce spent in the open air, and the lad's physique has a good chance of full development.

5. In cities, where the output is at high pressure, the Effect of employer who cannot afford efficient machinery falls machinery on behind in the race. In all trades where machinery is extensively used, apprentices become a minority, and therefore a minor consideration. Thus arises the prevalent complaint of the trades unions, that the employers make use of their apprentices as they would use their "boy labourers," keeping them at specialised forms of work and in no sense providing for them a general training at their trade.

6. To take saw-milling work as an example, the Narrow best of the boy labourers in a workshop are selected training due to be trained—nominally as apprentices—at some of to machinery. the closely specialised machines, and become "machinemen," who can earn good wages when trade is brisk, but are particularly liable to unemployment in slack times, as they have neither the training nor the dexterity of the typical journeymen of twenty or thirty years ago. In joinery, cabinet-making, plumbing, the same tendency holds; in many workshops the apprentices do not see all the details of their work, but only assist in putting parts together that have been prepared by machinery there or elsewhere. The number of really first-class journeymen correspondingly decreases, and there is a growing conviction that the long periods of training do not always carry sufficient advantage to the apprentices.

7. The more limited opportunities now afforded in Apprenticeship the towns may account for some of the cases of in-ship of efficient journeymen to be found among the unem-unsuitable employed. But there is also this other factor—that lads. many lads who apprentice themselves are thoroughly unsuitable for the work. Some may be poor scholars and unprepared for apprenticeship in the matter of general education; others may only discover after beginning that they have no special aptitude for the particular trade they happen to have selected and may render forced and unsatisfactory service all the time. They may shift along under an employer so long as they are on apprentice wages, but no employer would retain an unsatisfactory apprentice as a full-paid journeyman. Hence there is always a downdropping of incapable young journeymen, calling themselves skilled workmen, and yet unlikely to get work except in times of busy trade. Such youths have not even the ready wit of the "casual worker or boy labourer," who has always had to fight his own battle and prove himself worthy of his wage. Consequently the same employer who discards the less fit apprentices at the end of their time may elevate the smarter "boy labourers" to be "handy-men" or "machine-men" with a full weekly wage, not very much below the wage of the skilled worker.

8. Such are the fortunes of working lads; as a rule, Effect of the beginning makes all the difference, and, above all, home life on what counts most in securing success is the kind of future of boy. home from which the young worker comes. Is he

17 Mar. 1908.

Mrs. Ogilvie Gordon.
17 Mar. 1908. well cared for, housed and fed, is he punctual, has he natural enjoyments and recreations? If so, the chances are that whatever good is in him will develop, and the lad will find his own values in life whether he starts as an apprentice or a boy labourer.

Increasing laxity in treatment of apprenticeship agreements.
9. An important feature of present conditions is increasing laxity in the treatment of apprenticeship agreements. The indenture bond between employer and apprentice is retained in comparatively few trades: pottery and some departments of the glass trade have a signed indenture. In some of the building trades and in plumbing, indentures are drawn up by certain employers after a few months' trial of an apprentice. In engineering, shipbuilding, and the metal and wood-work trades generally, the apprentice that does not serve out his time gets no "lines" from his employer, and stands little chance of becoming a recognised journeyman. In most trades an oral agreement is made for the length of the period and the conditions of apprenticeship, but it is too often the case in the large industrial cities that apprentices tire of serving their time, and are tempted by the higher wages in some factory to enter there as boy labourers; or they hear of another shop in the same line as their employer's, but where the weekly wage is sixpence or a shilling more, and they only wait their chance of an opening. These are the difficulties the employer has to contend with, and they naturally tend to diminish his personal interest in apprentices.

Decline of apprenticeship.
10. Each locality has its own combination of conditions and circumstances, but from one cause or another it is undoubtedly the case that a large and increasing proportion of boys never pass through that period of apprenticeship discipline which has been in the past of the utmost value to the physical and moral welfare of the artisan classes. And it is imperative in the interest of our race and country that measures be adopted to replace, so far as possible, the salutary effects of a system that is weakening and changing with the times.

Effect of factory work on after life of girls.
11. Again, the girl who at fourteen enters factory work, or undertakes unskilled or skilled work of any kind, and gives no further thought to home and domestic duties, becomes a positive menace to the community. For, no matter how steady and capable a workman may be, if the woman he marries cannot buy economically, cook, sew, and keep a house and the children clean, his wages will not provide the necessary comfort and sustenance. One hears of a workman earning from 30s. to £2 a week, yet, after being two weeks out of work, his household is in beggary. If thrift be not inborn and bred, it must be taught and insisted upon in the girls and young women, and, even then, a woman's thrift will only be of use if a fair proportion of the man's wages be allowed for the house-keeping, and the savings or insurance fund.

Constructive measures necessary in regard to care of infants and children, and guidance of boys and girls.
12. The prolonged depression of recent years in certain trades has shown conclusively that there are widespread weaknesses of use and wont among the industrial classes, which remain untouched by our existing Poor Laws and voluntary agencies. Constructive measures on a broad basis are called for, first, in regard to the care of infants and children; second—and, as I think, no less urgently—in the guidance of our boys and girls during the early stages of their industrial career. Only when our country shall have devised a connected series of measures, and set them working in such perfection that no link overlaps the other more than is necessary to give strength to the chain, will a truly statesmanlike system be attained—constructive, preventive, and remedial in effect.

13. Just as the first few years of childhood are the most critical years for the physical well-being of the individual, the first few years after leaving school are the most critical for the moral and mental well-being of our working population. If these years can be spent industriously and to good purpose, the parents and the public may have confidence in the future of the boy or girl.

Removal below school age.
14. The beginnings of work for the factory hand and boy labourer are even more haphazard than those for the apprentice. It has to be remembered that it is open to the local Education Authorities to grant a parent the right of removing a child from school at an earlier age than fourteen under special circumstances, such as delicate health of the child, attested by a medical certificate, or extreme poverty of the parents, and the need of the child's help at home.

15. In some of the industrial towns with a large number of factories, parents are apt to take undue advantage of this privilege. They apply to the Local Education Authority on all sorts of pretexts to get their children free from school at twelve or thirteen years of age, and immediately send the children to work at the factories and earn a wage. Even when the children only leave school at fourteen years of age, the parents, in selecting work for them, too often think mainly of where the highest wage can be obtained. As a rule boys and girls of fourteen years of age can earn 6s. a week at once on entering factory work, and in a few months or a year, if they are paid by the amount of work done, they may earn 8s. or 9s. a week. The disadvantage, however, is that as they grow older they rank as *unskilled workers*, and their wages will as full-grown men and women always remain lower than the wages of the *skilled workers*, and their prospects extremely narrow.

16. A quite ordinary rate of wages given to young apprentices in Great Britain is about 4s. a week for the first year, and a rise of 1s. a week each year, or a rise of 2s. a week in the later years. This compares unfavourably with the early payments in unskilled work, and the parents who are very poor and in need of money cannot afford to let their family go to trades where there is a long period of training. At the same time there are many parents who might quite well manage it by a little economy, but either do not think very seriously about it or are influenced by the thought that they can only get the good of the boy's or girl's wages for a year or two while they live under the parents' roof, and, therefore, the more that can be made at once by the children the better. Thus many a capable lad may be prevented from becoming a skilled workman, and from making in after-life the larger wages of the skilled trades.

17. There are, again, cases where the parents have hardly any controlling hand in the matter. The lads or girls themselves wish to earn high wages, and purposely select any highly-paid temporary work, especially some with a little excitement, such as newspaper-selling or van-driving, or they go to some factory where their companions happen to be employed. If they do not give much thought to the future, or attention to the work in hand, their places can readily be filled in the factory, and they may drift through carelessness into the ranks of the idle and inefficient. At first they may simply have secured temporary work; then they take to looking round for other work, and loafing about the streets. It is only the exceptional boy that would devote time out of work to school classes and think of "bettering" himself. As a rule boy labourers prefer to continue at unskilled work, because they may be engaged for a few weeks or months at a busy time, and be given high wages, and afterwards they rather enjoy the idleness of a slack time. So long as they are young and strong, youths are always fairly sure of finding some work to do, even if they are unskilled, because the wage of the "boy labourer" is small compared to the man's wages, and employers are glad of the extra hands. The habit of the boy labourer is to move from one workshop to another, according to the busy time in each. But the difficulties for such casual workers begin when they become men, as by that time their spells of idleness have taken effect upon them, and they rarely become the steady workmen that employers can depend on as labourers, and care to engage as regular workmen.

18. Irregular habits either among the unskilled or skilled, the boys or men, are a very serious consideration in all trades where work is done in squads, such as the foundries and engineering workshops, the ship-building yards, pottery, glass, and bottle-making industries. They are the cause of much of the present incompetency and unemployment, and are altogether destructive to the best interests of our working classes.

19. The evil is one that by its very nature spreads in all directions, and if we would strike at its roots, we must take precautionary measures to guard our wage-earning boys and girls, so far as possible, against it, when they leave the elementary public schools. It would undoubtedly be a means of assistance to our working classes and an economic boon to the country if we could devise some system whereby the actively

Factor wage of boys and girls, and effect on employment.

Wage of apprentices compared with that of unskilled boy labour.

Parent influence.

Absence of parent influence.

Attractions and dangers of unskilled boy labour.

Incompetence and unemployment largely results of irregular habits.

developing energies of boyhood and girlhood could be directed into channels of work likely to be congenial to the worker and to lead to some permanent means of livelihood.

20. At present no civic or other local authority regards it as one of its functions to keep itself cognisant of industrial conditions in the locality and to be prepared to place its knowledge at the disposition of parents anxious to advise their children for the best. The scheme which I have the privilege of laying before the Royal Commission is designed for the express purpose of supplying this deficiency in a manner likely to throw the least possible cost upon the public. It proposes no new organisation, but simply that in England the Education Committee of a Local Authority, and in Scotland the School Board, with the support of the Town and County Councils in each district, should make any necessary additions to the office staff, and conduct an Educational Information and Employment Bureau for the use of out-going scholars and young workers.

21. The work to be undertaken in the bureau would be that of supplying the scholars and their parents or guardians with information about the occupations open to young workers, the prospects in each case, and the likelihood of an opening being available at once, or when the worker reached the necessary age. If the occupation that seemed most suitable happened to be one which could not be entered upon for some little time, then advice could be given on the basis of the school record of the boy or girl as to the further classwork that ought to be carried on in the interval, and the wage-earning work that might be taken up temporarily.

22. The ideal is that every boy and every girl should be given the chance of making a good start in life, and that they should have the opportunity of talking over their possible future with some experienced mind well able to give expert advice and to judge how far a little help might be beneficial, either in the form of maintenance allowances or personal supervision. Neither the parent nor the teacher can have the accurate knowledge and broad outlook that can be acquired by an expert placed in charge of such a Bureau.

23. The two essential points in my scheme are (1) that it proposes to deal with each child individually, and (2) to make use of the school organisation as the most appropriate means of arriving at the individual children. When the children leave school they are scattered here and there, and only a small fraction of the thousands that leave school annually in any large city can be brought under the notice of voluntary organisations.

24. But there are other considerations that make me select the schools as the best basis upon which a broad scheme might be founded. The teachers know the actual standard of education arrived at by each child, and are often better qualified even than the parents to form an opinion of any particular bent or aptitude and the kind of employment that would be likely to prove suitable. Again, we must look to the Local Authorities in charge of school administration to provide some further discipline of mind and body that shall reach our young factory-workers after they leave the elementary schools, and which shall to some extent make up for the want of mental interest and stimulation in automatic forms of labour. Healthful methods of physical recreation are often as necessary to these growing lads and girls as further mental training and a certain provision in this direction comes within the sphere of the Local Authority.

25. Upon the Local Authorities also falls the responsibility of organising the technical and commercial teaching, whether in the technical colleges, higher-grade schools or trade schools, or continuation classes, and all such teaching has to be carefully adapted to the demands of each district. In view of the decline of apprenticeship the possibility of our country retaining a high position in skilled workmanship rests mainly upon the value of these classes, their entire relevancy to the needs of the various groups

of young workers whose attendance they invite, and their inspiring influence in awakening young interests and enthusiasms and imbuing work with vitality and elasticity.

26. Above all, it depends upon the local authorities to secure the co-operation of the employers in their districts, a condition absolutely essential to success, and to consider with them the best distribution of time between the workshops and the classes for learners in the various local industries.

27. In order to carry out successfully the educational part of its duties, a Local Authority inevitably finds itself under the necessity of collecting information regarding the occupations and employments open to young people in the district, the demand for young workers, the higher grades of work for which technical teaching ought to be provided, the methods of the workshops, and the best way in which the classwork might supplement them. Very little additional expenditure would be required to add some further details, such as the wages and prospects in the various employments, and to arrange that the information possessed should be made practically useful to every parent and applied to the case of each individual out-going scholar.

28. The information to be supplied by the bureau would require to be tabulated and arranged in an orderly way. For example, the local trades and industries might be grouped under:—

- (a) Skilled trades and occupations in which an apprenticeship of several years has to be served; the scale of wages during the apprenticeship, also the full wage to be obtained after apprenticeship.
- (b) Less skilled traders and occupations or factory work, where the beginner does not serve an apprenticeship but learns the work in a comparatively short time; the wages to be noted as given to beginners, and the average wage earned by expert workers.
- (c) Unskilled labour connected with almost all trades and industries; to be specially noted here is the demand for boy labour and the probability or insecurity of continuous employment.
- (d) Casual labour and local occupations of quite temporary character for young boys and girls, ceasing at definite ages; such as the delivery of parcels, selling newspapers, etc.

29. In addition to the orderly arrangement of various occupations open to out-going scholars, there would be definite recommendations as to any educational work that might be continued during the period of the boy's or girl's training in the workshops; and also a full statement of any maintenance funds or bursaries that are open for competition or application, and the conditions attached.

30. Where any boys or girls seem so situated that a little extra care and supervision might be desirable, the official in charge of the bureau would recommend their cases for special attention to committees of voluntary workers, either those already existing, or any that might come to be organised in connection with the bureau.

31. It is hoped that the social and philanthropic work so willingly rendered by many associations and committees, would thus be made more effective, as through the local school bureau they would be supplied with the particulars of the actual educational attainments of the cases referred to them, and the direction would be suggested in which suitable work might be found.

32. On the other hand, by far the larger proportion of out-going school children ought not to be necessitous, and for these the expert guidance and advice obtained at the bureau should amply suffice. There is scarcely any boy or girl, or any well-meaning parent, that would not be glad to feel they might have the benefit of an interview with an official, appointed by the educational authority for the purpose of gathering all information that might be useful to the scholars, and keeping himself in touch with the best interests of the young people after they have left school.

Mrs. Ogilvie Gordon.

17 Mar. 1908.

Co-operation of employers.

Collection of information.

Arrangement of information in available form.

Recommendations as to continuation work.

Information as to maintenance funds.

Co-operation with social and philanthropic effort.

Advantage of skilled advice to young people.

Mrs. Ogilvie Gordon.

1, Mar. 1908.

Advantage to employers.

Value of information collected for public purposes.

Constitution of Committee of management.

Local variation of problems to be met.

Small working expenses of the scheme.

Inquiry into present prospects of young workers in four chief Scottish cities.

33. The employers in the neighbourhood who offered suitable work and terms, would soon find it an advantage to be able to apply to the bureau find it an advantage to be able to apply to the bureau for their young workers, and the very fact of their doing so would encourage a frequent interchange of views between the employers and bureau officials, and draw out helpful suggestions as to methods and modifications of classwork likely to be advantageous to the children afterwards. It is always a difficulty to keep the teaching of the schools thoroughly practical in character, and the bureau would serve to bring the teaching of the schools and the requirements of the workshops into closer and kindlier relations with one another.

34. While the Bureau is intended primarily as a means of helping the young workers, the information collected for its own purposes would be valuable reference material to all public bodies on occasion, and as the Bureau came to be more and more used, it would serve as a distributing centre of more enlightened views about our industries. One great advantage of connecting the proposed system of Bureaux with an elected administrative authority is that the interests of all sections of the community would meet there on a common neutral ground. Matters concerning the interests of the employers and the employed, the hours of workshop employment, the hours of school work, the facilities for recreation, would there be considered from the point of view of the public and national advantage, and would draw public attention in one place and another to the good of the boys and girls, that is, the good of the future citizens.

35. In order to make sure that all the different sections of the public should become familiar with the working of the Bureau, and there should be no tendency to a narrow sphere of action, it is suggested that in forming the Committee of Management of the Bureau, the Local Authority should invite representatives from other leading bodies in the same locality, such as the Chamber of Commerce, the Trades Council, and any social and philanthropic associations. It is also particularly desirable that some of the leading employers be asked to join. The large Committee, including the representative members, might be called together at stated times, say, once a quarter, while a small Sub-Committee might be entrusted with the ordinary conduct of business during the intervals.

36. The precise problems that would have to be met by the Bureau Committee would be a little different in each locality, depending essentially upon the habits of the place, the chief pursuits, and the local conditions of labour and industry.

37. The working expenses of the Bureau need not be very great, as in most places a Local Education Authority could spare a room to serve as an office to begin with, and the authority might have among its present teachers or officials some one who might be selected as suitable to take charge of the Bureau. The Director of the Bureau ought to be familiar with the ordinary work of the schools, and to have good organising power. It may be helpful to append a brief draft or outline of the general plan of the work to be done in a Bureau, and the duties that would probably devolve upon the Director. (*See Appendix No. XIX.*)

38. The above scheme has been submitted by me to a number of representative bodies. It may be worth mentioning that at an annual meeting of the Educational Institute of Scotland the teachers gave the most cordial support to the proposal. Thinking I might encourage a beginning to be made in Scotland, I organised an inquiry into the present prospects for young workers in the trades and industries followed in the four chief Scottish cities. The result of this inquiry has just been published in book form, under the title of "A Handbook of Employment," and I take the liberty of referring the members of the Commission to that printed work for a fuller statement regarding various causes of unemployment. They are there treated under the separate headings of the trades and industries. A tabulated list is also given of the most common occupations, skilled and unskilled, the ages at which the boys and girls enter upon them, and the wages given during

and after the period of learning. The treatment of the subject in the Handbook will show the kind of information which, according to my scheme, might readily be made available to young workers in all localities, and it is essential for success that the personal element should be added in the working of the Bureaux.

39. The beneficial results which might be hoped for under the influence of the Bureaux may be briefly summarised as follows:—

A.—AMONG THE YOUNG WORKERS.

1. Encouragement of capable lads to take apprenticeship training; closer co-operation of the school and workshops with a view to providing the best possible training; and the resultant greater efficiency of skilled workers. It ought to be added that any danger of overstocking the trades with apprentices would be less under the Bureaux system than now because the experts in charge of the Bureaux would be quite familiar with the conditions and the supporting power in each trade.

2. Check of any ill-considered rush for a high wage, and steady application of an active, thinking force, impressing upon outgoing scholars the unsatisfactory results to themselves of irregular employment, and encouraging them to discover their own powers and aptitudes and apply them.

3. Reduction in the number of casual workers and incompetent, irresponsible workpeople.

4. Spread of more enlightened views as to the use that might be made of the hours out of work for improving and developing both the mental capacity and the general physique.

5. Recognition of the fact that the Local Authority places the best guidance it can command at the disposal of the young population, takes thought for each one individually, and relies upon each one to put forth in return his or her best efforts to attain a good place in life and grow up a worthy citizen.

B.—AMONG PARENTS AND EMPLOYERS.

Both for parents and employers it may be assumed that all those who earnestly wish the ultimate good of the children will welcome the support and assistance to be derived from the Bureaux, and the stimulus of a more intelligent public opinion will add to this number as time goes on.

C.—FOR THE LOCAL AUTHORITIES.

The powers vested in the Local Authorities are not only those that affect the industrial and commercial interests of a city or district, but also those that affect the moral and physical well-being of citizens. From all aspects the Bureaux ought to prove helpful.

40. The saving of life is always a first necessity, and every large city has already provided itself with elaborate precautionary measures for the prevention of such diseases as can be communicated by bad water, drainage, personal infection, etc. The upkeep of a high standard of health is a pride to a city. It still remains for Local Authorities to treat preventable moral weaknesses and ailments with the same thoroughgoing system. The habit of irregular work and shiftless living is one that could be avoided in a large percentage of cases, and the Bureaux recommend themselves as a comparatively simple precautionary measure. At the same time, they would greatly strengthen and develop the efforts towards adequate education for all classes.

97302. (*Chairman.*) You have had a very considerable experience and have given a great deal of your time to the particular question of boy labour, I understand?—I have not taken the question of boy labour by itself, but it has had to be looked at by me in connection with my general enquiry into the probable openings for both boys and girls when they leave school.

97303. What have you found out in that investigation in connection with boy labour?—That the amount of boy labour that is now being taken by employers in large industrial centres, such as Glasgow and Dundee, in Scotland, is undoubtedly detrimental to the best interests of the boys when they grow up.

Beneficial results of the bureaux among young workers.

Among parent and employers.

For local authorities.

Advantage of bureaux in prevention of irregular work and shiftless habits.

Detrimental effect of boy labour.

97304. Your statement is very interesting, and I do not propose to ask you questions on those parts of it which tally with and are corroborated by those of previous witnesses, but I should like to put some questions where you supply fresh material. Should you say that the tendency of boys to drift into this class of unprofitable occupation directly on leaving school is on the increase?—It has been very much on the increase in recent years. It has been on the increase since trade has been so much interfered with in its trend, specially by the introduction of machinery. In so far as machinery has been introduced not only into the so-called unskilled trades but into the skilled trades, that necessarily means that a greater number of untrained boys and men can be occupied, and often girls and women.

97305. The evils as regards girls getting employment which is not reproductive afterwards do not last so long and are not so far-reaching?—I think the chief detriment to the girls is that if they at once, on leaving school at fourteen, enter some factory or some work of an ordinary automatic description, they lose all hold of the home, because they become wage-earners. They have a certain amount of money to spend on their own personal desires, and they lose touch with the needs of the mother; they are not at home except in the evenings, and then, of course they are more outside than inside, as there is more room outside than inside as a rule. It tends to make girls thriftless and extravagant in their own small way, and perfectly incapable of being good wives and mothers afterwards, so that I think its effect on girls has been very serious, quite as serious as on boys, and even more serious for the country, because the fewer good mothers you have the fewer good children you have.

97306. So that the tendency of young people to drift into this class of work has had, in your judgment, as prejudicial effects in connection with girls as it has had with boys?—I should say quite as prejudicial. I regard it personally as one of the most serious considerations of the moment for women that so many are allowed to go into factory life without any provision being made that at the same time their general culture, their moral tone, their physical condition, and also such little education as they have got, should be maintained.

97307. I suppose that this class of occupation is, in certain senses rather attractive to the girls?—It is attractive because the girls have the money in their own pockets. They may give so much of it to the parents, as a rule they do do that, but the desire in the girl by and by is to go out from the home; and to a certain extent that desire is encouraged by the attempts of these Industrial Homes for girls. I think the efforts in that direction have to be extremely carefully guarded.

97308. There is a social attraction in these factories in the way they meet their friends?—The social attraction to girls is that it is more interesting to them to do the same work as other girls do, and in the evening they can go about with them here and there, than it is to stay at home and help the mother; but I know as a fact it makes them extremely rough, almost inhuman, one might say at times.

97309. The work the girls do undertake of this detrimental character would be almost entirely connected with cheap factories?—Cheap factories and the cheap tailoring factories as well, not only the mills and factories, but the tailoring works: low paid factories are really the chief outlets for girls. Of course you have in Lancashire much higher payment in the mills and factories than we give in Scotland, and I have no doubt the class of woman is a little better in consequence, but our mill hands are very poorly paid in some parts of the country.

97310. You are thinking more of mills and factories where there are little prospects of advancement for the girl when she becomes an adult?—Really about a 10s. wage is all they can hope for in a great number of the towns.

97311. As regards boys, I think you state in your Paper that one of the attractions of the unskilled labour is that the boys gets a higher rate of payment than he would do if he tried to apprentice himself to a skilled trade?—That is the case.

97312. The parent in your judgment exercises very little controlling hand over the child?—I think the parent does exercise a control over a certain proportion, but there is quite an equal proportion where the parent is not much considered: where his own self-will, and the habits of others, determine the boy's action.

97313. You would contend that the parent has not the sources of information, or the facilities for acquiring information which are requisite in order to guide a child in regard to its occupation?—I do not think the parent takes much trouble in this way, because he has never seen it is possible to get it. The mere fact that there was actually existing a place where the parents could get information would act as a stimulus even to unheeding parents: it would spread the habit of thinking about it at least.

97314. Admitting the evil, one of your suggested remedies would be to establish a bureau in connection with our educational system which would give information to parents as regards the occupations for their children?—Yes, I think that that would help very largely: it would, as I say, create something which does not yet exist. There is an actual gap, as you can understand, between a boy leaving school at fourteen and a great number of trades that he might enter a year or two later. At present there are no means being taken to guide the boy as to what he should do in the interval. The parents themselves think nothing further than that he should do what they did, or someone else's boy has done, and so the matter goes on, it floats, as it were.

97315. Then you would suggest that there should be this bureau established of which you give a description later on, which would work in connection with the school and afford facilities to the parents to get information. Would you look at Paragraph 23 of your Statement and a little explain it. You say:—"The two essential points in my scheme are: (1) That it proposes to deal with each child individually; and (2) to make use of the school organisation as the most appropriate means of arriving at the individual children." Take the first point, the system would only enable the parent to get information concerning each child individually: that was the idea?—Yes.

97316. You would not propose, would you, that the teacher, or somebody in each school should look after the children individually with the view of advising her or him as regards their future occupation?—No; my idea was that the head-master of a school should be supplied with a perfectly simple printed form, fill in that form, and state exactly the stage of education that the child had reached before leaving school. As you know, some children although they reach fourteen years of age are really not much further than what we should call the Third Standard, they may be only at the stage of the ordinary average child of eleven; so that each child on leaving school by no means reaches the same standard. Of late years a qualifying examination has been instituted and only from 35 to 55 per cent. pass that examination which allows the children, if they wish, to go into the supplementary classes. The examination is of the simple type which one would expect that any child who has been through a school career up to fourteen would be able to pass. Yet it seems that half the number of children pass out without reaching the desirable standard that has been set. Obviously, the educational standard must largely measure what the child is able to do afterwards; so if the head teacher were to put on the printed form the standard attained by the child, and also the punctuality and regularity or irregularity of its attendance, that might be passed on to the bureau, and the bureau has in that case a perfectly recognisable individual statement for each scholar passing out; a duplicate of that might be given to the child himself, and could be shown by the child to any employer to whom application was made.

97317. That is the way you would deal with the child in future?—Yes; the director of the bureau would deal with the individual child.

97318. Under the present system there is nothing of that kind, is there?—Nothing at all.

Mrs. Ogilvie Gordon.

17 Mar. 1908.

Parental control.

Bureaux would fill the gap between school age and age for skilled employment.

Two essential points of the scheme.

Information as to state of education of children to be supplied to bureaux by headmasters.

Director of bureau to deal with individual child.

Mrs. Ogilvie Gordon.

17 Mar. 1908.

97319. Then the second point, the full use of the school organisation, is the most appropriate means of arriving at the individual children. That is covered by what you have just said?—Yes; it really means that if this statement is sent on to the director from a month to three months before the child leaves school, that statement can be filed just as much as at the War Office they file everything with regard to their officials, and their army officers. It would mean that in the bureau a regular file was kept for the individual pupils that leave school, so that the files could be referred to for the next two or three years when the lads and girls came back to get the advice of the director at the bureau; that would be dealing individually with the outgoing scholars.

Extension of school age.

97320. You suggest co-operation between the employers, and a sort of continuation school as regards those whom they employ. Would you propose at all to raise the school age?—Not the elementary school age. I think the age of fourteen is quite a good age; as it is in Scotland we have no difficulty, since those who at twelve, thirteen, or fourteen pass the qualifying examination to which I referred may continue at school until they are fifteen. There is a higher Merit certificate then granted to all out-going scholars who arrive at the stage which the department thinks they might arrive at when they reach fifteen; so that in Scotland we have a means of continuing the more capable children until they are fifteen; but our age at which all children may leave school is fourteen, and it seems to me perfectly good. I do not think that it is necessary to alter that.

Half-time principle.

97321. Would the co-operation that you want to secure result in establishing a number of half-time children?—No, I have not that in view; I doubt if the half-time principle as it stands would be successful. I think the matter of co-operation would really operate in a great variety of ways; one point is that at present the comparatively small percentage of boys and girls who continue to attend the evening classes after they leave school, and who, therefore, ought to be more capable, are in no way differentiated by the employers from those who do not. There is no encouragement given by the employers as a rule, not at least in the matter of pounds, shillings and pence, to the boys who do take the training that is at present being provided for them. A few masters talk a good deal about it in public, and do speak as if they were giving little prizes and paying fees, and so on; but it may be taken that these are quite exceptional. They certainly do not, as I think they might, extend the payment a little more to the apprentice who takes all the possible means he can of improving his standard. That is simply one point in which employers might by-and-bye help rather more. Again, I do not know that it would be impossible for employers in an industrial area, where there is so much temptation for boys to go at once into the field of unskilled or casual labour, to raise the earlier wages of their apprentices, so that they should not have quite the unfavourable comparison that they have at present. But far more important than these points which affect the employers directly are the points which would come up in connection with the possibilities and facilities to the child for continuing his education. It is perfectly necessary, if a child is not to go down the scale, that he should maintain at least the amount of education that he has received while he attended school. If he has even to maintain it, without developing or extending it, it means that he would have to attend continuation schools twice or thrice a week, and that the possibility must be given him of attending these regularly. At present employers, if they require a little overtime, keep their boys and girls, and think little about it; if they ask them to stay on, the fact that it is a class night does not make much difference; and I think in that way a good deal might be done by the co-operation of the employer with the education authority.

Necessity for continuation school.

Half time.

97322. It has been represented to us that the boys and girls are tired after a day's work; and unless you have some system of half-time the continuation schools are not very effective?—Half-time is a very sweeping term. Does half-time mean that for all trades and industries you would introduce a morning at the work and an afternoon at the school?

97323. I have used it, perhaps, in too wide a sense. I will put it in this way: some limitation on the hours so as to prevent the children being tired?—Some limitation in hours is certainly necessary, but half-time is not; it is very big and very sweeping, and I doubt if it would be in the least successful, because I think it would be so disorganising to the trade and industry, and to the boys themselves, as to entirely militate against the possibility of the good it might do. It cannot be good for a boy to jump about every day from his work to the school.

97324. You are against the system of half-time?—I am against a system that would mean that every boy of fourteen, no matter what trade he begins, would be called upon to leave it every afternoon to go to school.

97325. Assuming you had your bureau, it would give information on various points connected with the skilled and the unskilled labour market?—It would do more, it would also, it is to be hoped, bring the employers into the circle of thought in connection with education, and encourage suggestions to be made for allowing young workers some proportion of school attendance which would not in any way damage the trade, but be a distinct advantage by making it possible for them to continue a certain amount of education.

97326. I suppose you would associate this with various proposals, or means by which the parent would be brought in contact more with the teacher with regard to the child's future occupation?—The parent is not supposed in this scheme to go to the head-teachers of schools, because that would make a very great addition to the work of the head-teachers. He is only supposed to go to the director of the bureau who is placed there for the purpose, and paid for it.

97327. It has been suggested to us in various quarters that a labour bureau might be established in all the big centres of population, which would give information, and keep a record of the amount of unemployment in the locality. Your proposal is really an education bureau for children; that, however, could be easily tacked on, and assuming the other was formed, might be made a necessary part of the general labour bureau?—My proposal is not one for education only, it is explicitly educational information and employment; it does not only deal with children, it deals with them until they are of man's age; it really is a labour bureau for young workers, which I consider is more advantageously carried on if attached to the Education Authority than if conducted independently.

97328. You want to make it part of the Education Committee's work?—I think that only the Education Committee can safeguard the results of a labour bureau for young workers.

97329. Assuming there was a general labour bureau, all the information that this bureau got would be obtained from it?—Yes, but perfectly irresponsibly to the individual obtaining it; there would be no security of adoption of what was said, or attempt at guidance, or in any way supervising the use that is to be made of the information.

97330. You want to keep this bureau, by whatever name it goes, under the Education Committee, and distinct and apart from any general labour bureau that might be established?—Yes; but I do not believe that another labour bureau for that age would be necessary in the same town, certainly not; if a labour bureau is to benefit children, it ought, in my opinion, to be managed with the full co-operation of employers, but under the same authority that the education arrangements are placed with.

97331. What inducement would you give to the employers to have recourse to your bureau?—One complaint that I have had in connection with my scheme is that it will mainly benefit the employer, because it singles out for him the most likely article; that he has no trouble; he gets the best people for his purpose; but, on the other hand, that signifies an advantage to the workers themselves; if they are best for his purpose, the occupations selected are probably well suited to them.

97332. You do not put any compulsion on him, but you would offer him the inducement you mention?—I would put no compulsion on any employer to use it, except

the moral compulsion of being a loyal citizen, as he is supposed to be; and knowing that it is to be good for the younger population, he would encourage it. Public opinion would be the only form of compulsion.

97333. You would try and enlist the sympathies of as large a number of persons in the locality as you could; and you would have representatives of the various bodies of the city upon this committee?—Yes; if all those different interests were represented on the committee one might be fairly certain that matters would be treated from a broad point of view, and that there would be no danger of running into extremes, either for education or for employment; as long as you dissociate the two things, the labour and the education, you always will run that danger.

97334. You would still have a difficulty, would you not, that the unskilled employments thus protected are detrimental by reason of the higher pay?—They are only higher paid up to a certain point, say up to the age of seventeen or eighteen. Then the apprentice, even at present, is usually earning the same wage as the boy labourer; so that the difficulty is simply in the first years of apprenticeship. The main difficulty is, of course, that unless a boy begins as a boy labourer, he very often gets nothing to do, because there are a great many trades in which they cannot begin their apprenticeship until they are sixteen.

97335. How would you prevent your bureau, with the records and names of all these children leaving school, becoming a possible recruiting ground for this class of industry or occupation that we all admit is detrimental to a boy? The wage would be higher; there would be that inducement. How would you prevent that class of employer, or that class of occupation, getting hold of your boys or girls through the bureau?—I think it would be quite desirable that some boys at fourteen, if they are very set upon a trade they cannot enter till they are sixteen, might go to a mill, or might go to any of those factories where the conditions were supervised by Factory inspectors, and undergo approved-of, regular work there. I think that would be better in many cases than messenger-boy and van-boy work. It would not be the recruiting ground for them.

97336. I am thinking of this case; take London, if you have the labour bureau, supposing so many messenger boys were wanted, the manager of the particular business or enterprise which wanted those messenger boys would probably have recourse to this bureau?—Supposing he did so, and the bureau director thought the messenger work in that particular business would be quite good enough for a time, I should not see any disadvantage in the boy going. The bureau would raise the whole tone of labour, because by-and-bye those industries to which the bureau did not think it right to send the boys would become unpopular, and such occupations would simply get the worst boys that were left.

97337. There is the attraction of the higher wage?—Ordinary regular work of any approved description between fourteen and sixteen is better than work taken up for a few weeks. It would be the business of the bureau to try, as far as possible, to get the boy to take up some work that would last a year at all events. We cannot get over the fact that we have from fourteen to sixteen to occupy in a great many cases.

97338. Do not you think it would influence the parent?—I do not see how one can get over some trouble between fourteen and fifteen. You cannot insist on the child being at school all day; it would not be well, and it is desirable he should be doing some kind of work.

97339. I wanted whatever machinery was set up, assuming these occupations are detrimental to the future of the child, to be an obstacle to the child going into those occupations than in any sense an encouragement?—The bureau director would know what are the desirable and undesirable outlets; he would advise the boy for the best, and if the boy went as a messenger boy, would still keep note of him.

97340. The director would advise the boy?—Yes, advise him and the parents. Then in cases where the boy had taken up one temporary occupation after another he would refer the case to the attention of an after-care committee with which the bureau would constantly keep in touch.

97341. You have not confined your investigation to Aberdeen alone, but you have acquired information concerning a good many of the populous centres of Scotland?—Yes.

97342. Is there much difference with regard to the occupations which boys obtain say in towns like Glasgow and Aberdeen?—There is a great difference from fourteen to sixteen; in a town like Aberdeen so long as a boy remains as a messenger and does his ordinary work, he stands to be no worse at sixteen except that he may have forgotten his school work, but morally the boy does not run the same risk as a boy in Dundee or Glasgow. The great moral danger to boys of that age in the large industrial towns, where they have so many ways of working at factories, is that it brings them under the influence of older boys who have already gone so far in the way of irregularities of all kinds.

97343. I suppose the proportion which would go into these unskilled and unprofitable occupations would be much larger in Glasgow than it would be in Aberdeen?—Much larger; in fact, apprenticeship in Aberdeen still is a real living thing. In Glasgow it is a very shifting matter; a boy does not think himself, even though he enters an apprenticeship, bound to remain; and even in some of the trades like engineering where it means all the difference to an apprentice whether he stays out his time and gets his lines, you hear of about 50 per cent. dropping out during the period of apprenticeship. In engineering certainly that is a large proportion, but 15, 20, 25 or 30 per cent. are quite commonly dismissed or drop away during the period of apprenticeship in a city like Glasgow. It is not nearly so bad in towns like Aberdeen or even Edinburgh where there are fewer industrial temptations.

97344. What about Dundee?—Dundee is not quite as bad as Glasgow in many ways, and yet worse in others. In Dundee there are something like 20 per cent. of the boys and girls who leave school by exemption,—that is, before they reach the age of fourteen, so that they really become factory workers too early in a great many cases, and they know little of school life; they are much less cultivated in every way than the boys and girls in towns like Aberdeen and Edinburgh.

97345. Summing up your evidence and your experience, should you say that the evil to which you call attention is so serious that Government would be justified in legislating for it?—Which evil? There are so many really.

97346. Your Paper is mainly concerned with the evil results that occur to young persons, boys and girls, if they get into one of these unprofitable occupations?—I think that the worst evil is that at fourteen there is no longer any compulsion, nobody is really responsible for that boy's or girl's behaviour. After fourteen, the parents presumably are not (we know that they are not) sufficient. It seems that it is very necessary that there should be some authorised supervision; a labour bureau such as you mentioned a few minutes ago would not fulfil that purpose: it would not be sufficient.

97347. Would you make the boys report themselves periodically at all?—Yes, most certainly, in fact they will not get on very well unless they do, because there are few trades,—painting, plumbing, printing, and one or two very light trades,—that are open to boys at fourteen, so they are bound to report themselves if they want to get into one of the better apprenticeship trades.

97348. Would you make the reporting compulsory?—I would make the reporting compulsory and attendance at school compulsory. I do not agree with the amount of time you were suggesting in the matter of school attendance, I do not think there is a demand for that.

97349. How long would you continue the period of reporting?—Till seventeen at least.

97350. Your experience is, I suppose, that it is in, say, the first three years after leaving school that most of the mischief is done?—Yes, indeed it is. Every year from fourteen to seventeen is equally important; I could not say that one was less important than the other; in fact, the whole period of youth and apprenticeship is important.

97351. (Mr. Phelps.) Could you compare the future Institution of children brought up in families and those brought up in children institutions? Have you had much experience of children in institutions?—I have seen a good deal of it.

Mrs. Ogilvie Gordon.

17 Mar. 1908.

Different effect of uneducative labour in different towns.

Different proportion of uneducative boy labour in different towns.

Desirability of authorised supervision after fourteen.

Boys to report periodically to bureaux.

Compulsory reporting and attendance.

Mrs. Ogilvie Gordon.

17 Mar. 1908.

97352. Do you find in those cases there is more after-care or less?—I think a child brought up in a family is superior to a child brought up in an institution.

97353. I mean in that particular point of the interest in them after they have left school?—By the institutions where they give education as well, do you mean?

97354. Yes?—I do not think the after-care is very much there.

97355. It does not come to much?—I do not think so. The worst of institution training is that it turns out a specialised type of individual who takes a long time before shaping into the normal conditions of life.

97356. What kind of calling do institution children follow generally?—It depends on the form of institution. You have domestic service for girls as the chief calling, and for boys such occupations as basket making, bell and blind hanging, bag making and different forms of weaving, box and packing-case making and a few trades of that description; they are almost given over to boys coming from the institutions, and they are trades at which a boy can enter at the age of fourteen—either as boy labourer or apprentice. The ordinary school boy usually shuns them when he gets out of school, he will do anything rather than go to them, the feeling of class is still quite strong.

97357. An institution does not as a rule apprentice its children?—No, it apprentices them perhaps to some trade of that kind, but, as a rule, they let them work as unskilled workers, in firewood making, rope weaving, and a number of smaller industries.

97358. Have you seen much of children who have been apprenticed to live in the house?—I have not seen much of that.

97359. Have you anything in Edinburgh answering to the Metropolitan Association for Befriending Young Servants?—We have voluntary aid societies for women and the Girls' Aid Society, the Travellers' Aid Society, the Young Women's Christian Association, and a few such associations. They are all of that type, where they have homes in which servants can stay when they come up from the country to look out for work. They are always provided in the Scottish towns by voluntary workers.

97360. Supposing that a child goes from the Poor Law into service, could you be certain that some agency would take her in hand and look after her?—Not unless she were referred to it, or she were directed to it by her mistress or put in touch with it. Each town has developed its own voluntary work in that connection. In Aberdeen we are well provided, because Lady Aberdeen made that one of her chief points. We are probably better provided there than in any other Scottish town.

97361. Are you in favour of girls being prepared for some calling in life?—Yes, all.

97362. What do you think will be the effect of that, let us say, for instance, on the industries of men?—I think if you can make women feel their own responsibility in life, that you may trust the fact that they will remain women all the same, and that they will probably, even in the home, be more capable than if they had not been trained to regular effort in any way.

97363. Do you find in Scotland a tendency on the part of husbands to rely on their wives' earnings?—In Dundee, yes.

97364. Do you think that has a bad effect?—A very bad effect; it could not have any other.

97365. (*Chairman.*) And elsewhere, should you say, in Scotland? Is that the tendency rather of modern life?—Not in Aberdeen.

97366. But elsewhere?—Outside Aberdeen. I think in Dundee it is very bad. I do not think elsewhere in Scotland, except probably in the South, in some of the smaller towns, where there are the hosiery factories and the woollen factories. I do not think that is complained of in Glasgow to any extent, nor in Edinburgh, at least I have not heard of it.

97367. (*Mr. Phelps.*) Take a girl leaving school, in whom you were interested, would you rather that she acquired an industry, or that she went into service?—Into service.

97368. Do you think on the whole she is more calculated to make a home comfortable?—I think I know a great service many servants in all classes who could make a comfortable home; but the worst of it is that, so far as the working man is concerned, he does not find them as attractive as the girls that run about after factory and shop hours; so that it is decidedly not always the best class of woman that gets married in the working classes.

97369. Do you find that girls have an increasing dislike to go into service?—Yes.

97370. In Scotland?—Yes.

97371. On which side do you think the fault lies?—I think the fault lies on the side of the schools to some extent; they seldom teach the girls domestic work, or very seldom teach it in any attractive way to begin with. You have the same difficulty with domestic service as you have with the boy labourer. We do not want a servant as a rule until she is sixteen; you have again that gap from fourteen to sixteen, and by that time the girl has begun to look around her own home, and to have companions who are at some work or another, and to rather look down upon service. If the girl could be got hold of at fourteen I think it would help.

97372. Should you like to see a system by which the education of girls for service went on after school age for that year?—Very much.

97373. A training home?—I think every girl, whether she goes to school, factory, or service, should still continue to be trained at the school; but again, half-time is beyond necessity.

97374. Are you familiar with any of the institutions for that purpose for children from poor-houses?—Yes, there are one or two schools, but they are always on a very small scale; they do not in any way take up the problem from the whole aspect.

97375. Do you think the results are satisfactory?—I think the results would be more satisfactory if they were taken up on a larger scale, as a nationally organised, recognised need. The moment you allow a thing to be done voluntarily, you make it quite, as it were, a question of its worth.

97376. Do you think it would be worth while to have a system of technical instruction in special schools for children (girls) from fourteen to sixteen?—Always and everywhere.

97377. You think it would be a profitable investment to have them?—Very profitable.

97378. Have you formed any idea what the kind of cost would be?—Yes, I have looked very carefully into that. I think as a rule the cost need not be nearly so large as the voluntary establishments make out, because the error that many of these establishments make, is to do it on too liberal and detailed a system. The moment you have large classes you almost unconsciously minimise the expense for one thing, and you would require to treat them simply, on the basis of how to boil a potato and how to do the simplest things. You would not for a moment think of giving those classes technical instruction if you are giving it to all and sundry; you would single out the few that are fitted for the higher work and arrange accordingly, but a simple system to cover all the needs ought not to cost a great deal. It would be very well worth while if not too elaborate. The moment it is elaborate it fails in its purpose.

97379. You think the gain to the community would be worth the cost?—I should not hesitate at all. I think no money could be better spent.

97380. I quite follow you when you say it would be very difficult to insist on half-time in the case of boys. Do you think in the case of girls the parent would equally object?—Yes, I do. I think that half-time is far too large a demand.

97381. Your notion would be that the girl should be engaged in a shop or factory or what not?—Yes.

97382. Within certain hours, and should go in the evening to a technical school to be taught domestic economy?—It is not necessarily in the evening. One might have afternoon classes, but the difficulty between fourteen and sixteen in arranging that the child should go every afternoon is that then the child has every evening to spare, and you may get just as much harm learned

Occupations followed by institution children.

Apprenticeship of institution children.

Homes for young servants.

After-care of child going from Poor Law into service.

Effect of women's labour.

Reliance of men on wives' earnings.

Domestic service, increasing dislike for.

Domestic service, increasing dislike for.

Continuation of training for girls.

Technical instruction for selected children. Danger of over-education.

Objections to half-time for boys and girls.

Technical instruction for girls.

on the streets in the evening as any that can be gathered in the workshops during the day.

tion of 97383. Do you not think having these schools in the evening would check that to some extent?—Yes, I think it is better to have them in the evening, if you lessen the length of the day. You require to make a shorter day. For example, from fourteen to sixteen one might allow only six hours work in the way they do with beginners in the postal service, and then class attendance in the evening.

97384. You mean for girls?—Boys or girls either. One could shorten the length of the working day, or you could arrange it otherwise; reduction of time would do in some trades, in others again it would be more convenient to allow the children off three whole afternoons and alternate them, so many working in the work-room one afternoon and so many the other afternoon. I think all those matters would come up in the course of the working of the bureau, and could be satisfactorily arranged; provided it is made perfectly clear that there must be a minimum of school attendance, and that minimum is stated.

97385. It would be much easier to get legislation of that kind for girls than for boys?—I do not know why it should be, because really it is just as important for the boys as the girls.

97386. Take the town of Aberdeen, what kind of industries do the girls go into there?—In Aberdeen curiously enough we have nearly all the textile trades. Our cotton mill was closed lately, but we have wool and jute and linen, and then, of course, there is a great deal of shorthand and typewriting done now by girls, but that means continuing school till sixteen at least; we have the usual commercial occupations, messenger girls developing into cashiers or counter hands, all sorts of shop girls, fish-curing and provision factory girls, and we have domestic servants. I think that would about cover the common occupations.

97387. Now take the industries you mentioned first, the cotton and jute?—Cotton is no longer in Aberdeen but wool is.

wages. 97388. Take wool and jute; what amount of wage, would a girl look forward to receiving when she first entered that business?—About 5s. or 6s. to begin with, sometimes it is less, but 5s. or 6s. is a sort of recognised wage.

97389. What would she hope to rise to?—She would rise to about 10s., seldom 11s.

97390. Supposing, for the sake of argument, she remained working in the mill till she was fifty?—They rarely do.

97391. She would not look forward to more than 10s. under any circumstances?—I do not think so. If she became a forewoman she would get 12s., if she were a very expert piece-worker she would get 12s. or 13s., but anyhow higher wages are so extremely rare that they need not be taken into consideration.

work. 97392. Is piece-work common?—Very, it is nearly all piece-work.

97393. Do you think that makes a great drain on the strength?—Yes, I think that piece-work is very disadvantageous. Piece-work has a certain advantage, however, for the mothers of families; they get through their work and get to their homes sooner. It would be a pity to do away with piece-work entirely. It does help in some ways that they make a sufficient wage by piece-work, if they are well-intentioned, to keep the home going.

97394. There is a great temptation, is there not, to stay longer and earn more?—That may be, but it does not hold so much in a place like Aberdeen. We have very much kindlier conditions than in the places where the rush of work is greater; Glasgow is different and Dundee also.

97395. In what way do you think it is different?—Because there the employer wants a great deal turned out, and there is every possible encouragement given, and the managers do not keep on the girls unless they do a great deal of work.

97396. They are encouraged?—Yes, where the rush of work is greater they are encouraged to do more than their capacity. *Mrs. Ogilvie Gordon.*

17 Mar. 1908.
97397. Would that be normal or by fits and starts?—I think it would be by fits and starts naturally, but it is a sufficiently normal condition to be considered.

97398. What is the average age, should you think, Average age speaking quite roughly, at which the women leave the of leaving factory in Aberdeen?—Twenty-five and upwards. factory.

97399. They generally look forward to marrying about that time?—Yes.

97400. Now take a shop girl, supposing your girl goes into a shop what would she expect to earn?—She might make from 6s. to 12s. 6d. and 15s., and she does not get much beyond that, up to £1 a week, unless she is a very capable girl and given charge of a department. Wages of shop girls

97401. The wages are higher there than in the factory?—They are higher, but then the class of girl is higher, the education is necessarily higher, and the dress is different. She might go up to 14s. or 15s. a week, which is quite an average wage.

97402. Are many girls of that type apprenticed as Dress-dressmakers?—Yes, a great many are apprenticed, maker's apprentices. they are even apprenticed for ordinary counter work.

97403. What premium would you be expected to pay for an apprentice to a dress-maker?—They very seldom give a premium; perhaps 10s. at some shops, but it does not amount to much in money; at other shops they give no premium. They begin perhaps with nothing for the first six months, and then get half a crown a week, and it goes on till the girl is making about 6s. or 7s. by the time she has been there three years. After that she may go on to 11s. or 12s. a week, when she is really a properly expert worker. Anything more than that means that she is a particularly clever worker.

97404. Would the same wages hold for tailors' work? Women—You mean women tailors? tailors.

97405. Yes.—No, that is rather lower, because the women tailoring is mostly ready-made, not bespoke, so it is really a factory wage.

97406. Supposing she went into domestic service, what Wages of wage would she expect, as a general servant let us say?—domestic She would not be of much use to anybody until she was servants. eighteen years of age, because a general servant requires a good physique, and requires to be a perfectly well developed strong young woman; then she might get about £14 a year; if she were a very good servant and much appreciated £16, that would probably be the amount. Anyone that was able to give more would have two servants.

97407. Are generals as a rule thought to have very hard places?—Yes, but they rather like them because they get everything their own way if they are good servants.

97408. In the interval between school and eighteen where would a girl like that be?—She might be a little nurse-maid, or something of that kind, from the time she was fourteen; she would certainly not be at the factory, because if she were, she would never become a general servant. She must be in service of some kind.

97409. She would get into a family first?—If her own mother had not a good few children that she had to take care of till she was sixteen, she would go into a family straight away.

97410. The majority of girls would prefer to have their own kitchen to being in a family?—The majority of girls like to remain at home and go into the streets a good deal and generally feel their way: then at sixteen they begin to think about what they will do. It is if we could just bridge that little while.

97411. (*Mr. Gardiner.*) I do not understand why you object to this education employment bureau being organised in connection with the labour bureau just as it is done in Germany?—I wish to associate the occupations for young workers with their farther education.

97412. Under one management?—Yes.

97413. Do I understand that the Education Committee Management as set out here is to manage the labour bureau?—The of Bureau. Education Committee, plus the representatives that it invites, and that are sent to it by the public bodies, should manage it.

Mrs. Ogilvie Gordon.

17 Mar. 1908.

Bureau to do what is required for employment up to eighteen.

Raising of school age.

Decline of apprenticeship.

Military training for boys.

Physical training.

Use of rifle.

97414. You really want that, do you not?—I want it certainly. What I think is that this bureau should do what is required for employment up to the age of say eighteen, but that it should work co-operatively with any ordinary labour bureau for older men and women, that may come to be placed under the town council or some other organisation. I may say that in Edinburgh there was a Conference attended by a number of representative delegates from public bodies and trade unions; it took place about three weeks ago, and there that point was clearly brought up. One of the labour representatives suggested that the two things might be dissociated: he suggested that the bureau under the school board should be limited only to education, and that all the labour work should be done by the labour bureau people. It was not necessary for me to answer him, because two or three others answered that that would not meet the purpose; they understood that it was perfectly possible that the two bureaux, the one for men and women and the other for those of school-going age, should work into each other's hands and be complementary to one another. In England, they would both be under the same Local Authority.

97415. I do not quite understand why, as you said in answer to the Chairman, you should think it is undesirable to raise the age of children leaving school to fifteen?—At present we have no need of it in Scotland. We have the possibility at present of every child being kept to fifteen who seems likely to take advantage of the further education, who seems able to go on and really take full advantage of the increased quality and standard of the education.

97416. Have you ever looked at the raising of school age from the point of view of reducing the mass of unemployment?—I think if you raise the school age to fifteen, that it could not but be an advantage in one way. Still, it would immediately give you the employer who complains that the apprenticeship period is shortened; because after all there are a considerable number of trades that are begun at fourteen. And many small employers want the boy at fourteen; he is of use to them as a boy labourer in the first year of his working life. If one can get over the difficulty of the employer, and the shortening of the apprenticeship period,—if it does not put industry back in that respect, and prove too great a sacrifice for poor parents and small employers, then it could not but be an advantage to the children.

97417. I understood you to say that the apprenticeship system outside Aberdeen is running down very much?—In Glasgow and in busy industrial centres where there is a large manufacturing business going on.

97418. It survives in Aberdeen more than in other places?—In Edinburgh it is fairly existing, but in Dundee and Glasgow it is much less.

97419. Have you any opinion or advice to give or recommendation to make with regard to what is called military training for boys, in order to get more discipline?—I think the training can be given without calling it military training. To call it military training at once ruffles the feelings of those who are in favour of encouraging peaceful ideas. If you set out by giving all these boys a military training in order to encourage them to go on to the Territorial Army, you undoubtedly strike against the other side of our policy, which is to encourage peace. I think you can give them a physical training without calling it military.

97420. Physical training of a military type?—No doubt military people have worked out the best methods of physical training. I think the boys' brigade is excellent; but I think its work would be as well done under another name.

97421. Would this physical training include the use of the rifle?—I do not see that that is an advantage; I do not think the Government need consider that unless it wants to make an army.

97422. You do not think it good to teach boys to shoot straight as a matter of discipline?—No, I do not think so. I think one can get all the benefits of discipline without the rifle.

97423. (Miss Hill.) I understand you would not be in favour of the half-time system after fourteen for boys system and girls?—Certainly if the school age were to be raised to fifteen it would be most unnecessary.

97424. You would not look upon them as alternatives? Half-time is nearly so good as to let each trade, as it were, be considered, and have a minimum, that is determined, of attendance at school sufficient to maintain the education that has been received. At present with regard to those that go to the trades at the age of sixteen, the employer complains that they cannot write their own names, often they have forgotten any little arithmetic they knew; they cannot take down their ordinary work; they really have succeeded in forgetting anything they knew by the time they are sixteen. If that is the case, it seems clear that what one wants is sufficient school attendance for the average child to keep up the standard which it has reached, with plenty of encouragement and facilities for capable pupils to further their education. I think half-time is too much for a standard of maintenance.

97425. Would you feel that the training in a life of work was quite as important as the school training, and that it was important not to defer that too long, that it was really a good thing for a boy or girl to begin work, whether at fourteen or fifteen—at any rate pretty young?—Yes. I think if the life is to be one of work, that when they start it they ought to be allowed to go on with it regularly, and feel that they have left school, but that a certain amount of attendance is still demanded; the moment you make it half-time, they really have not left school.

97426. You think the continuation school would be free from that difficulty?—I think so.

97427. What you propose would also tell rather less heavily on the poorer parents, who perhaps have waited what seems to them a long time for their children to begin earning?—I think it would arouse a very, very great deal of dissatisfaction to insist upon the fifteen; but it would give very little dissatisfaction, either to the parents or the employers, to introduce a system by which two or three afternoons or evenings a week of two or three hours each would be occupied by school training and the day's work be curtailed.

97428. You do not feel at all anxious with regard to having dissociated your director of the bureau too much from the whole knowledge of the demand for adult labour. the knowledge of the child is a very definite thing; and it does not seem to me quite so difficult to pass on the knowledge of the child to a director who should be attached to the adult bureau as it would be to pass on the knowledge of the labour market to a man who is primarily attached to the Education Department?—I think that the knowledge of the individual child is the first matter, and that could only be given to a director in a bureau associated with the education committee. That director can acquire in two or three years' time, if he has not already got it, a very complete knowledge of the conditions around himself with regard to industries.

97429. They are always changing very much, are they not?—Yes.

97430. It would require very perpetual watchfulness on his part with regard to not only the demand for labour between fourteen and eighteen, but for the latter part of the life of the workman or workwoman?—Yes. That is why one would like, if possible, that the committee of the bureau should include representatives from the labour bureau for adults, and from other organisations in the town.

97431. You think that would not be calling upon him for double work. I think my instinct would be much more to put one director at the bureau who should specially attend to the children, and not put him under the Education Department?—But if he were at the adult bureau you would not get him in touch with the schools in the same way, with the teachers and school facilities.

97432. The master would send the children on from the school, and the parents would attend?—Then you would

have the same bureau dealing with the boys and girls and with the adults, and you know quite well what goes on in such bureaux, you know the class of people that come up day after day to find work.

97433. You need not have the same rooms and the same entrance?—I think it would be desirable to keep the two apart: the class of children we hope to deal with would in many cases be rather better.

97434. You do not object to the double machinery?—We want this, not only for the labourer's child, but we want it for the child of the higher class artisan, and the professional man's child, and the teachers' children themselves; we have not only the industries to deal with, but we want to find the hopeful boys and girls, and pass them on to professions, if they are fit for it, or to be teachers. I think a great many of those parents would not come near a director that was simply a labour bureau director.

97435. The idea of the labour bureau as it is contemplated now is very much to be dissociated from all the broken labour that goes to the relief committees and distress committees?—There is one point which I might call your attention to, that at present little is being done under the education authorities to see that the continuation classes and certain other work that the children undertake are really in touch with their industrial occupations. Of course the director of such a bureau as I propose must have a very special knowledge of the schools, and must be constantly in touch with the working staff and with the education committee's work before he can give educational information; and it is the actual suitability, the perfect relevancy of the teaching to the industries that the pupils are engaged in, which makes it of any value. All this seems to me more naturally associated with the education committee than with the labour bureau pure and simple.

97436. As to the supervision of the continuation education as well as the mere finding of the employment?—Yes. It is not only the placing in an occupation; there is also to be considered the education the child has received and the education he still seems able to obtain and keep on assimilating, and whether that child could go on to this particular trade or that, or whether he might be kept on by maintenance funds during his apprenticeship, and so on. That is more than you can think of a labour bureau undertaking.

97437. (Mr. Loch.) Have you worked this scheme out at all experimentally anywhere in Scotland?—No. It has not been worked out experimentally, but I am glad to be able to tell you that after the Edinburgh School Board has had this matter under very careful consideration for six months and taken all possible advice in the matter, I received a wire this morning saying that it has decided to start it. It decided so yesterday evening.

97438. You have not started it privately or personally in any sense?—By no means. I should have thought if I had done that, it would militate against the public authorities doing it.

97439. On the other hand you would have made your experiment?—I do not think it was necessary. I think that this matter could only be done on a large scale. Had I tried to make an experiment it would have been again on a voluntary scale, and it could not have been done without the full sanction of a school board.

97440. Are the masters and mistresses in Scotland generally taking much care about their children?—They have not the time, neither have they the time to get the necessary knowledge about industries. Our ordinary school-teacher does not know what goes on in the workshops; he only knows his business.

97441. You have not had any societies or others who have taken up this question particularly?—I have placed this matter before a great number of societies, among others the Educational Institute in Scotland. The teachers said it would be an immense support to them, that they often had difficulty in getting such information as the bureau would supply, and they would be glad

to help in the work by bringing these matters a little more before the children. The moment you place it in connection with the teacher you have a driving force and a guiding force of immense power; the moment you take it away, the teacher no longer feels that he has this support.

97442. Have you managers of the schools in Scotland?—No, we have no managers; we have simply the school board authority.

97443. To your knowledge no society or anybody of that sort has taken it up in a small way?—As you know, the scheme is entirely thought out by myself, and I have not asked them to.

97444. I thought, quite apart from you, there might have been experiments in this direction?—I do not know of any. If there are any I am not aware of them.

97445. (Mr. Patten-MacDougall.) Do I understand the Edinburgh School Board have decided to set this on foot at once?—Yes. I have here the telegram I received. A meeting had taken place subsequently to the Conference that had been called together, and had drawn up a Minute in favour of the bureau. Would you like to know the bodies that were represented on that Conference?

97446. What I wanted to know was, have the Scottish Education Department approved of the scheme?—The telegram runs, "Minute passed: committee appointed to frame scheme." The suggestion was that a scheme should be framed for actually working a bureau upon the lines indicated by me, and this means that the school board is now going to really begin the work of this bureau.

97447. (Chairman.) Would you kindly give us that list of representative bodies?—The Edinburgh Parish Council, the Edinburgh Chamber of Commerce, the Edinburgh Master Printers' Association, the Edinburgh Merchants' Association, the Edinburgh and Districts Chemists Trade Association, the Edinburgh, Leith and District Building Trade Association, the Edinburgh and District United Trades Council, East of Scotland Association of Engineers and Iron-founders, the Scottish Association of Master Bakers, the South Side Merchants' Association, the Advisory Committee of the Distress Committee (Trades Council), the Church of Scotland Presbytery, the United Free Church Presbytery, the Boys' Industrial School Committee, the Heriot Trust, the headmasters under the school board, and there were also present members from the distress committee, which was represented here to-day; so that it was really a very representative meeting and it discussed the proposed bureau from all the points of view.

97448. The telegram is rather the result of that—It is the result.

97449. (Mr. Patten-MacDougall.) Has the scheme come before the Scottish Education Department, do you know?—At the very beginning, before I spoke of it to anyone, I went to the Scottish Education Department, and told Dr. Struthers there what I was thinking of doing, and asked whether the Education Department was likely to approve of it. He spoke most highly of it in every respect. I also had an interview with the Secretary for Scotland and told him of it. He was very much pleased with it too. I have since kept Dr. Struthers exactly informed as to what I was doing; he has known step by step everything I have done in connection with this scheme. He said he did not think it would be necessary for me to have any more formal support than the letter he gave me, which was printed at the beginning of my inquiries. I think that letter undoubtedly helped me very largely.

97450. Is that scheme consented to in Edinburgh?—The Edinburgh Board knows that the Department approves of it.

97451. Is it not necessary to have the sanction of the Authority for Education Board in connection with the expenditure?—It is not the Education Board which sanctions the expenditure; it is the auditor of the School Board Accounts, from the Treasury, but the School Board must have looked into that: that is not my business: they have passed it. That is all I know.

Mrs. Ogilvie Gordon.

17 Mar. 1903.

Mrs. Ogilvie Gordon.

97452. You said in answer to a question that there were very few trades open at fourteen?—Yes.

17 Mar. 1908.

Few trades available at fourteen.

97453. That, of course, is a great difficulty in the way of providing these boys with work at the time they leave school?—There is no trade more popular than engineering, any form of mechanical engineering; and that cannot be entered until the boy is sixteen. In the foundry work it is the same thing; moulders are sometimes taken on at fourteen; but usually they work as boy labourers for a time.

97454. Is that under the rules of the trades unions, or how is it provided for?—That has grown up by an arrangement, no doubt, between the trades unions and the employers. From the employers' point of view in those trades, engineering, boiler-making, and others, they really want strong, young fellows. They cannot get sufficient use out of an apprentice of fourteen to make it worth their while to take him; and in that way it is to their advantage. On the other hand, the trades unions prefer the apprentices as old as possible, because the apprentice, sooner or later (he is only five years an apprentice) has to have, and must have, a man's wage; and naturally they want it to be as late as possible in the boy's life before he arrives at the man's wage.

Inquiry into periods of training required by different occupations.

97455. You have yourself made inquiries with the object of tabulating the occupations which require short periods of training, and those that require longer periods?—Yes.

97456. Your scheme is to put the result of these inquiries into the hands of the committees in order that they may use them with a view of seeing what occupation is best suited to the individual boy?—Yes; I have prepared a Handbook of Employments to make it easier for the Scottish Boards to take the matter up at once, because naturally an inquiry has to be made in every district before a bureau like this can be worked. The labour bureaux that exist can only give a general account of labour; they have not gone into the boy labour question; so I went into this in order to facilitate the establishment of bureaux by the Scottish Boards.

97457. These statistics are obtained entirely from traders in Scotland?—Entirely from Scottish traders.

Attendance at Scottish continuation schools.

97458. As regards the continuation schools in Scotland, are they well attended?—The attendance varies in the different localities. I should think it is about one in eight, or one in six of the boys leaving school in most localities. That would be about the average; but we have as many as one in five in Aberdeen. That is the highest of all.

Lack of compulsion by parents.

97459. Do you find the parents quite willing that the boys should attend these schools? Do they assist to make them attend?—The parents would as a rule assist; but what one does not get from the parent is sufficient compulsion. There is the mother that I have come across myself often, who says: "Oh, poor things, they have had plenty of school, let them stop it." There is that mother to be constantly met who does not encourage it. Then there are the careless people who do not think about it one way or the other.

Fitness of children for school after day's work.

97460. You do not think much of the objection to these continuation schools that the boys are tired and wearied with their day's work before they go there?—I think that it is disadvantageous to a tired child to

go to any school, it would not do any good; but at the same time I think a great deal too much can be made of that. I think that even if you work six or seven hours a day you are quite fit to do a change of work; it is not the same work.

97461. (*Sir Samuel Provis.*) Did you form any opinion yourself as to what would be the cost of carrying out the scheme in Edinburgh?—You will notice that I say in Appendix A. to my Statement (*see Appendix No. XIX.*) what in Edinburgh it would probably cost. You have the salary of the director (he must be a good man) from £300 to £400, and £100 additional for a clerk; so that in salaries one may calculate anything between £400 and £500. Then there is always a certain amount of expense for sending pamphlets and circulars round, and the printing expenditure probably would come to about £100. I should think it would cost about £800 a year.

97462. You also contemplate a correspondence clerk?—In the employment department as time went on that might be necessary.

97463. I think you contemplate further that the employers would pay some fee?—Yes.

97464. So that would be deducted?—Yes, when the employers use it to such an extent that a clerk is wanted, their money will support the expense of a correspondence clerk, and he can be added.

97465. That would not involve any extra cost on the rates?—No, that is a strong point.

97466. (*Chairman.*) How do you propose to make the employer pay a fee, put a stamp on the engagement, or something of that kind?—It is usual to pay on entering their names. I think many employers would wish to pay an annual subscription of a certain amount.

97467. Their names would be on the list?—Yes.

97468. Would they expect the director to give them information?—When they actually wanted an employee.

97469. For instance, if a man wanted so many boys, the director would let him know when he had that class of boy?—Yes; sometimes they have to be on the books one way or the other for several months. The employer would say: During the next year I shall want two boys for clerical work, or something else; and that is taken a note of; and he would receive a notice when they are there.

97470. If you did that, the director would have to discriminate because there may be employers of labour whom he would think undesirable men for the boys to go to?—Undoubtedly. That would be one of the advantages, that he might discriminate, and guard the boy against going to such employers.

97471. It might make it a little difficult?—With the employers of that particular class of labour it would, of course, but that difficulty has to be faced sooner or later. You cannot get over those difficulties, you have to meet them. The director would bring these difficulties up before the representative committee, and they would be talked over. If there was anything really wrong in that industry, then it would be brought before public notice in a way.

97472. You would take precautions so that the director should discharge his duty impartially, and not be subject to unfair criticism?—Yes.

ONE HUNDRED AND FIFTY-THIRD DAY.

Monday, 23rd March, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.

Mr. C. S. LOCH.
Mr. T. HANCOCK NUNN.
The Rev. Prebendary H. RUSSELL WAKEFIELD.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. ERNEST GRAY, M.A.; Mr. PHILIP E. PILDITCH, L.C.C.; Sir SHIRLEY F. MURPHY, M.D.; and Mr. EDGAR J. HARPER, called; and Examined.

97473. (*Chairman*.) You gentlemen, representing the London County Council, have been good enough to send us some very full statements. We have taken so much evidence about the administration of the Poor Law in London, and I think we are so thoroughly conversant with the details of the Poor Law administration and the relations which the different authorities occupy one to another, that I do not propose to trouble you with those matters at all. I will confine the few questions I wish to put to you to the scheme which you put forward in the Statement of evidence that has been prepared on behalf of the Council?—(*Mr. Gray*.) Very good, my Lord.

(*The Witness handed in the following Statement.*)

STATEMENT OF EVIDENCE SUBMITTED ON BEHALF OF
THE LONDON COUNTY COUNCIL AS TO THE AD-
MINISTRATION OF THE POOR LAWS IN LONDON.

1. The London County Council, at its meetings on March 10th and 17th, 1908, passed the following resolutions—

(a) That while refraining from expressing any opinion on the future redistribution or apportionment of any Poor Law charges, whether national or local, the Council is of opinion that in the Administrative County of London the powers and duties of the Poor Law authorities should be merged in the general municipal government.

(b) That the City Corporation and the Metropolitan borough councils should be the authorities charged with the administration of those duties now performed by the London boards of guardians, which are local in their character.

(c) That to the City Corporation and the Metropolitan borough councils should be transferred—

(i.) The powers and duties of the guardians of the poor and sick asylum district managers with respect to all local Poor Law services, including the maintenance of workhouses, infirmaries and casual wards and outdoor relief, except such relief as shall take the form of providing wholly or partially for the children.

(ii.) Services of a municipal character, viz.—

(1) Assessment (in the six cases where boards of guardians appoint assessment committees).

(2) Registration of births, deaths and marriages.

(3) Vaccination.

(d) That the City Corporation and the Metropolitan borough councils should appoint poor relief committees (consisting, as to the majority, of members of their own bodies and a number of co-opted or appointed members, including women) for dealing with Poor Law services; and that the administration of other transferred duties should be amalgamated with the administration of the existing duties of those authorities.

(e) That the central Poor Law authority for London should be the London County Council, the membership of which for this and other purposes

should be enlarged by giving to those electoral districts at present insufficiently represented their proportionate representation, and that such authority should act through appropriate committees.

(f) That the central Poor Law authority for London should appoint a committee consisting, as to the majority, of members of its own body and including persons representative of the City Corporation and the Metropolitan borough councils and a number of co-opted or appointed members; and that all matters relating to the exercise by the Council of its powers under this scheme, exclusive of such matters as shall be referred to other committees of the Council, should stand referred to and may be delegated to the committee so constituted, except the power of raising a rate or borrowing money.

(g) That the asylums now under the control of the Metropolitan Asylums Board, which are workhouses under the Lunacy Act, 1890, should be transferred as county asylums to the Council; and that the Asylums Committee should continue to be the visiting committee under the Lunacy Acts, but with power to co-opt members, only to such extent as shall conserve the control of expenditure to elected members.

(h) That there should be transferred to the Council, which might act through its Public Health Committee, the powers and duties of the Metropolitan Asylums Board in respect of—

(i.) Infectious diseases hospitals.

(ii.) Ambulances.

(iii.) Other health services.

(i) That there should be transferred to the Council, which might act through its Education Committee—

(i.) The powers and duties of the Metropolitan Asylums Board in respect of—

(1) Special schools for Poor Law children.

(2) Remand homes.

(ii.) The management of institutions and homes for Poor Law children now in the hands of the guardians of the poor and the joint boards for school districts; the education of Poor Law children; and the maintenance of Poor Law children other than those maintained in workhouses: aided where possible by local committees of management: provided always that the cost of maintenance of Poor Law children apart from education, shall not be charged upon the amount included in the county rate for educational purposes.

(j) That such general co-ordination and control as may be necessary as regards the principles of administration, the sanction of loans, the provision of buildings, classification of paupers and the like should be exercised by the central Poor Law authority for London.

(k) That it should be the duty of the Local Government Board to frame such general rules as may be necessary to co-ordinate the practice and expenditure of the London Poor Law administration with that in the rest of the country.

Mr. Ernest Gray,
M.A.;
Mr. Philip E. Pilditch,
L.C.C.;
Sir Shirley F. Murphy,
M.D.;
Mr. Edgar J. Harper.

23 Mar. 1908.

County Council to be Central Poor Law Authority for London and to appoint Poor Law Committee of County Councillors, Borough Councillors and co-opted members.
Metropolitan Asylums Board Asylums and powers to be transferred to County Council.
Powers of relieving children to be transferred to County Council acting through Education Committee.

Mr. Ernest Gray,
M.A.;
Mr. Philip E. Pilditch,
L.C.C.;
Sir Shirley F. Murphy,
M.D.;
Mr. Edgar J. Harper.

23 Mar. 1908.

Functions of Local Government Board as to London Poor Law. County Council to administer Metropolitan Common Poor Fund.

London's Existing System of Poor Law Administration.

Apathy of electors at London Guardians' elections.

School and Sick Asylum Districts.

The Metropolitan Asylum Board.

Provision for pauper lunatics in London.

(l) That the audit of accounts should remain in the hands of the Local Government Board.

(m) That the administration of the Metropolitan Common Poor Fund should be transferred to the London County Council.

(n) That the foregoing resolutions be communicated to the Royal Commission on the Poor Laws, and that evidence be submitted to the Commission with respect to the matters referred to therein.

2. The Council has decided that the evidence should be submitted by the chairman (Mr. Ernest Gray) and the vice-chairman (Mr. Philip E. Pilditch) of the Local Government, Records and Museums Committee, the late chairman (Mr. Alfred O. Goodrich) of the Asylums Committee, and the medical officer of health (Sir Shirley F. Murphy), the statistical officer (Mr. Edgar J. Harper), and the clerk of the Asylums Committee (Mr. H. F. Keene).

3. The resolutions of the Council were based mainly on the recommendations of the Local Government, Records and Museums Committee, who have had the subject under close consideration for several months. It has been considered principally from the point of view of the reform of municipal government in London. In other words, the Council's views have been arrived at not merely in regard to the improvement of Poor Law administration, but also, and chiefly, in regard to the place which Poor Law administration should occupy in the general scheme of London local government.

4. In the County of London Poor Law matters are administered by thirty-one boards of guardians, four boards of managers of school districts, two boards of managers of sick asylum districts, the Metropolitan Asylums Board, and the Council as regards pauper lunatics.

5. The boards of guardians are charged with the local administration of the Poor Laws. They manage the workhouses, casual wards and infirmaries and grant relief; and, in addition, they undertake certain duties unconnected with the Poor Laws, such as assessment (in six cases), registration of births, deaths and marriages and vaccination. The work of the guardians is to some extent subject to administrative and financial control by the Local Government Board.

6. Boards of guardians are elected by the parochial voters, but each board may co-opt not more than four guardians. Much apathy prevails in London at guardians' elections. At the last general election of guardians in 1907 only 28 per cent. of the electorate voted, and 145 out of the 329 wards were uncontested. The figures with respect to the percentage voting at other London elections were as follows:—Metropolitan borough council election, 1906, 48·2 per cent.; County Council election, 1907, 55·5; Parliamentary election, 1906, 78·3. At the borough council elections only 30 of the 269 wards were uncontested, while all seats were contested at the County Council and Parliamentary elections.

7. The managers of school districts and sick asylums districts are appointed by certain of the boards of guardians jointly for the purpose of providing and maintaining Poor Law schools and infirmaries, and the guardians concerned have no direct control over such institutions.

8. The Metropolitan Asylums Board is a central Poor Law authority, but it has no jurisdiction over the boards of guardians, nor are its duties confined to poor relief. It is composed of seventy-three managers, of whom fifty-five are appointed triennially by the several boards of guardians, from inside or outside their own bodies, and eighteen are nominated by the Local Government Board. The Metropolitan Asylums Board provides and maintains imbecile asylums and special schools for Poor Law children; it also provides hospitals for infectious diseases and an ambulance service for patients suffering from these diseases.

9. The Council and the common council of the city provide asylum accommodation for pauper lunatics belonging to their respective areas; and they are also responsible through their asylums committees, for the maintenance of pauper lunatics who have settlements in London unions, and the expense is charged to such unions. The existing system of charging the cost of pauper lunatics is unnecessarily complicated and cumbersome, and the effect is in many respects unsatisfactory.

A separate statement dealing with this branch of the subject has been placed before the Royal Commission.

10. The expenditure of the London Poor Law authorities for the year 1904-5, the latest year for which complete figures are available, was, according to the local taxation Returns, as follows:—

	£
Guardians of the poor - -	3,416,986
Managers of school districts - -	112,735
Managers of sick asylum districts - -	104,871
Metropolitan Asylums Board - -	1,002,521
	4,637,113

11. Receipts-in-aid, however, amounted to £278,843, leaving the net expenditure borne by rates as £4,358,270. About 68 per cent. of this net expenditure was borne equally over the whole county of London, including the amounts centralised by the operation of the Metropolitan Common Poor Fund and the county grants (central funds administered by the Local Government Board and the Council respectively), and the expenditure of the Asylums Board. But the systems whereby so large a proportion of Poor Law expenditure is centralised are exceedingly and unnecessarily complicated. Much of the expenditure is incurred by central authorities, and by them charged upon local authorities who are afterwards enabled to charge it upon a common fund; while some items of expenditure are actually centralised twice over.

12. The present system of Poor Law administration in London admittedly leaves much to be desired both as regards the election, constitution, and jurisdiction of the various authorities, and the centralisation and control of expenditure. The division of services between several central and several local authorities has led to much overlapping. Thus the Council, through the Asylums Committee, is responsible for the maintenance of pauper lunatics, but the Metropolitan Asylums Board is responsible for the maintenance of such pauper lunatics as might, in accordance with the Lunacy Act, 1890, be detained in a workhouse. The Council is responsible for the education of all children (including Poor Law children) who attend elementary schools, while the guardians, the school district managers and the Metropolitan Asylums Board are responsible for the education of children maintained in Poor Law schools. The Council is the central health authority for the county, but the Metropolitan Asylums Board maintains hospitals for infectious diseases for the same area. The Council is responsible for the custody of children sent from police courts to industrial and reformatory schools, while the Metropolitan Asylums Board is responsible for the custody of children sent to remand homes. Notifications of infectious diseases are sent to the Metropolitan Asylums Board by the medical officers of health of the metropolitan boroughs, but the cost of maintaining the Board's hospitals for infectious diseases is charged upon the Poor Law unions. Such a conflict of jurisdiction causes confusion and unnecessary expenditure. The cost of maintaining the inmates in the different institutions varies to a remarkable extent, a fact which points to the need both for an alteration of the system and more economical administration.

Principles on which Reforms should proceed.

13. Very careful consideration has been given to the question of the principles which the Council should adopt in expressing its views to the Royal Commission.

14. It is desirable, from the point of view of good government, that the number of authorities within one area of administration should be as few as possible, consistent with efficiency, and the trend of recent legislation has been in the direction of unification of administration and concentration of authorities. The Local Government Act, 1888, united the administration of the county justices and that of the Metropolitan Board of Works in the hands of the Council. The London Government Act, 1899, united the administration of the overseers, vestries and district boards in the hands of the metropolitan borough councils. The Education Act, 1903, amalgamated the educational powers of the School Board for London with those of the Council. The City of London (Union of Parishes) Act, 1907, has concentrated the powers of 112 separate parish authorities in the City Corporation.

15. It is desirable that reform should proceed on this principle, and that in London the powers and duties of the Poor Law authorities, some of which are municipal in character or closely associated with that class of work, should be vested in municipal authorities.

Consolidation of Local Administrative Authorities.

16. The Council is of opinion that all local administration should be concentrated in the hands of one local authority in each district, and the City Corporation, the council of the City of Westminster and the metropolitan borough councils are obviously the appropriate bodies to undertake Poor Law duties which are local in character. These authorities already perform duties similar to those of the guardians of the poor, such as the administration of the Unemployed Workmen Act, 1905. Both the metropolitan borough councils and the guardians of the poor are elected by the same electorate, and there is now no material difference between their constitution, as women may be elected to serve on metropolitan borough councils as well as on boards of guardians.

17. The question of areas presents little difficulty. Seventeen Poor Law unions are conterminous with metropolitan boroughs; three and four Poor Law unions respectively are within the City of Westminster and the metropolitan borough of Stepney; the Hackney and Wandsworth Unions each comprise two entire metropolitan boroughs; and in only five unions do the boundaries conflict with those of the Metropolitan boroughs. The Council on April 10th, 1906, expressed the opinion that advantage would be derived from the assimilation of the London Poor Law and municipal areas.

18. The Council proceeds on the principle that every duty which can best be performed locally should be in the hands of the metropolitan borough councils, and that only such powers as cannot be conveniently and economically exercised by those authorities should be centralised.

19. In the City Corporation, the council of the City of Westminster, and the metropolitan borough councils should therefore be vested the duties of the guardians and of the managers of sick asylum districts with respect to all local Poor Law matters, such as workhouses and infirmaries, casual wards, and outdoor relief. It is essential that all applicants for relief should be dealt with by authorities having intimate knowledge of local conditions. This branch of Poor Law work is the most important and demands a large amount of time and care, as the local authorities have to discriminate between outdoor relief and indoor relief, and under any reformed system of classifying paupers they would no doubt have to make detailed inquiries as to applicants and decide as to the kind of treatment. An exception should, however, be made in the case of children in respect of whom relief is granted to parents, either by in-maintenance or out-relief. If the cost of maintaining a child is thrown, wholly or partially, upon the ratepayers, the education authority should have the control of such child, inasmuch as its maintenance and education cannot well be separated, except by leaving it in the hands of parents receiving out-relief. In that event there would be no guarantee that the child itself would enjoy the benefit intended. Under the Education (Provision of Meals) Act, 1906, the education authority has the power to feed necessitous children; and complete control would enable it to secure that the whole benefit, both of maintenance and education, should accrue to the child.

20. The workhouses belonging to the unions whose areas are conterminous with metropolitan boroughs could no doubt be managed by the borough councils equally as well as by the guardians. Where several unions are within one borough, viz., in Stepney and Westminster, the concentration of workhouse administration would probably conduce to economy. In Hackney and Wandsworth where two Metropolitan boroughs are comprised within one Poor Law union, the workhouse is in each case too small for the indoor paupers chargeable to the unions. If, however, there were no need for additional accommodation in the county as a whole, it would be possible for the workhouses in these cases to be managed by joint committees. In the few cases where the union and borough boundaries conflict, it happens that the local situation of the buildings would apparently give rise to no practical difficulties.

21. To the same authorities should also be transferred services of a municipal character, such as assessment, registration of births, deaths and marriages, and vaccination.

22. With regard to assessment, the trend of legislation has been to transfer these powers to municipal authorities. Before the Valuation (Metropolis) Act, 1869, all assessment committees were appointed by boards of guardians, but under that Act, sixteen assessment committees were appointed by guardians and fifteen by vestries. Since the London Government Act, 1899, came into force only seven assessment committees have been appointed by guardians. The City of London (Union of Parishes) Act, 1907, transfers the appointment of the city assessment committee to the corporation, so that only six out of the twenty-six assessment committees will in future be appointed by guardians. In two cases (Hackney and Wandsworth) where assessment committees are appointed by guardians, such committees act for areas comprising the whole of two metropolitan boroughs, but in the other instances (Holborn, Greenwich, Woolwich and Lewisham) confusion and inequality of assessment is caused. As each union area contains parts of borough areas, the remaining parts of which are in other union areas, the union assessment committees cannot reconcile the bases of assessment adopted by the metropolitan borough councils concerned, who are the authorities for making the valuation lists, without creating discrepancies within the borough areas themselves. Thus the appointment of assessment committees by boards of guardians leads to conflict with metropolitan borough councils. Apart from the question of uniformity and simplicity of local Government it is of greater importance that there should be equality of assessment within the metropolitan boroughs than within the Poor Law unions, because there is a larger amount of borough council expenditure than of Poor Law expenditure borne locally.

23. Registration of births, deaths and marriages is essentially a municipal duty, intimately affecting the public health administration of the borough. This fact is recognised by the Notification of Births Act, 1907, which provides for an additional and immediate notification of births to the municipal medical officers of health in districts where the Act is adopted. The transfer of all registration duties to the municipal authorities would remove the anomaly and confusion arising from the obligation to notify births both at the town hall and to the registrar, while the further information obtained by the latter would be valuable for public health purposes. A majority of the metropolitan borough councils have expressed themselves in favour of a transfer of these powers and duties.

24. Vaccination is a public health service closely associated with the registration of births, and it is anomalous that the duty of preventing or suppressing smallpox and of enforcing the Vaccination Acts should be vested in different authorities, who may possibly hold opposite views.

25. For the purpose of dealing with the local administration of the Poor Laws, each of the local authorities should, in the opinion of the council, appoint a special Poor Law or relief committee. In view of the nature of the work, it would be desirable for such a committee to be composed, as to the majority, of members of the local authority, and that there should be provision for co-opted or appointed members, including women. This would allow of the appointment of persons whose experience in philanthropic, charitable or poor relief work would be valuable but who might be indisposed to stand for election as councillors. The committee might have independence as regards administration, subject to reporting their proceedings to the parent body, but their expenditure would, of course, be controlled by the local authority.

26. The other transferred duties should, in the opinion of the Council, be referred to existing appropriate committees of the local authorities. The revision of the valuation lists should, it is submitted, be placed in the hands of a statutory assessment committee, as in other metropolitan boroughs, and the remaining transferred duties for the most part be in the nature of health services which might be associated with the general local medical service.

The Central Poor Law Authority for London.

23 Mar. 1908.

Advantages of making County Council Central Poor Law Authority in London.

27. Having dealt with the authorities for the local administration of the Poor Law and other duties at present performed by boards of guardians, there arises the question of the central authority to be charged with the administration of Poor Law and certain other powers and duties, mainly central in character, and now in the hands of Poor Law authorities, which it is necessary or desirable should be in the hands of a central body.

28. The Metropolitan Asylums Board is the only local authority other than the Council which performs any central Poor Law functions in London, but this board would disappear with the abolition of the boards of guardians, inasmuch as it is mainly composed of persons elected by those bodies. There are therefore alternative courses—(1) To establish a new central county Poor Law Board, or (2) to vest the powers and duties in question in the Council.

29. Reference has already been made to the confusion arising from the conflicting jurisdiction of the various authorities and to the desirability of limiting, so far as is consistent with efficiency, the number of authorities within administrative areas.

30. It is of great importance that one authority should be responsible for central rates, and should be in a position to determine the relative claims of county services; competition between authorities must inevitably lead to increased burdens on the ratepayers generally and a shifting of responsibility. Difficulties would arise in dealing with Poor Law schools, if poor relief and education services were entrusted to two central authorities; and the relations between the central and the local authorities, which it is desirable to improve, would be complicated. The council has had experience in the management of pauper lunatic asylums and in educational administration, and has, therefore, machinery for the economical management of the imbecile asylums and special Poor Law schools of the Metropolitan Asylums Board.

31. Having carefully considered the matter in all its bearings, the council has arrived at the conclusion that, subject to the provision of the machinery hereafter mentioned, the council should be the central Poor Law authority for London.

32. To deal with the large and important duties which would devolve upon it, it is essential that the central Poor Law authority for London should appoint a special committee. This committee might consist, as to the majority, of members of its own body, and should include persons representative of the City Corporation and the metropolitan borough councils, and a number of co-opted or appointed members. All matters relating to the exercise by the council of its powers under the suggested scheme, exclusive of matters referred to other committees of the council, should stand referred to this committee. Following the precedent of the Education Act, 1902, it would be well also to allow the central authority to delegate to the committee all or any of such powers, except those of raising a rate or borrowing money. The suggested constitution of this Central Poor Law Committee is similar to that of education committees. Precedents for the inclusion of appointed members are to be found in the present constitution of the Metropolitan Asylums Board and the Central (Unemployed) Body, upon both of which the Local Government Board appoints members.

Transfer of Metropolitan Asylums Board imbecile asylums to the London County Council the remedy for existing overlapping in control of pauper lunatics.

33. The asylums for lunatics now under the control of the Metropolitan Asylums Board, which for the purposes of the Lunacy Act, 1890, are workhouses, should be transferred to the council as county asylums. This would remove the anomaly of two central authorities providing and administering asylums for the lunatic poor. The distinction between the class of lunatic receivable in the asylums controlled by the Metropolitan Asylums Board and many of those in the London county asylums is practically imperceptible. The council, under the Lunacy Act, 1890, is the local authority which has to provide, through a visiting committee, asylum accommodation for lunatics. The definition of a "lunatic" under the Lunacy Act is "an idiot or person of unsound mind." This definition is sufficiently wide to include all the inmates of the Metropolitan Asylums Board's asylums. Under the provisions of the Lunacy Acts, 1890 and 1891, lunatics duly certified may be kept in workhouses, if they are suitable cases for a workhouse and there is accommoda-

tion for them. The workhouse accommodation for lunatics in respect of London unions and parishes has been provided by the Metropolitan Asylums Board. One of the chief duties for which this Board was created was that of providing accommodation for "such harmless persons of the chronic or imbecile class as could be lawfully retained in a workhouse." Failing accommodation for lunatics in the workhouses (*i.e.*, the Metropolitan Asylums Board's asylums), the Council, as the authority to provide accommodation for lunatics generally, becomes responsible to provide also for a class which it otherwise would not have to deal with, because they could be kept in the workhouses. In 1890, when the council took over the control of the London county asylums, the number of London lunatics certified for asylum treatment was 10,104, while the number certified for detention in a workhouse (*i.e.*, in the Metropolitan Asylums Board's asylums), was 5,566, or rather more than a third of the total number. On January 1st, 1908, however, the number of London lunatics in asylums was 19,249, but the number in Metropolitan Asylums Board asylums was 6,531, only a little more than one-fourth of the total number. As a consequence, the London county asylums contain a large proportion of quiet chronic cases of the class fit to be kept in a workhouse. Moreover, owing to the present division of authority, there are frequently vacant beds in the Metropolitan Asylums Board's asylums, whilst the county asylums are crowded. If all the asylums were under one authority classification would be simplified and this difficulty would be removed.

34. As the council already has machinery for administering lunatic asylums, namely, the Asylums Committee appointed under the Lunacy Act, 1890, no alteration of the powers and duties of that Committee is called for under the council's proposals; but the asylums of the Metropolitan Asylums Board might be entrusted to them to be administered as county asylums. It is only logical that this course should be adopted. In order, however, to cope with the additional work which the administration of five new asylums would impose on the Committee, it might be necessary to increase their numbers, and this could most conveniently be done by giving them power to co-opt members. There are many duties which members of a visiting committee have to perform at the asylums which could well be discharged by persons co-opted for the purpose, *e.g.*, the statutory visitations and the discharging of patients. But it is proposed to limit the co-option so that the elected members would have full control of expenditure.

35. The powers and duties of the Metropolitan Asylums Board in relation to hospitals for infectious diseases, ambulances and other health services would also under such a scheme be transferred to the council and administered by a suitable committee. These services are obviously of a municipal character, falling within the domain of public health rather than that of Poor Law. They should, therefore, be undertaken by a municipal and not by a Poor Law authority. They are essentially central in character and could not be so efficiently and economically performed locally.

36. The duties of the Metropolitan Asylums Board and the boards of guardians with respect to the care and education of children have yet to be dealt with. The first-mentioned authority has charge of special Poor Law schools for children suffering from ophthalmia, ringworm and mental deficiency; and there are also the schools provided by joint boards for school districts, and in some cases by individual boards of guardians. The Metropolitan Asylums Board is responsible for the custody of children under remand and has provided homes for their reception.

37. There has been on foot for some time a movement having for its object the removal of the stigma attaching to Poor Law children. Endeavours are being made to dissociate from the workhouses as much as possible children who have become chargeable to the unions. "Cottage Homes" and "Scattered Homes" have been provided by Poor Law authorities where children are brought up under more home-like influences than are possible in workhouses. In the case of "Scattered Homes," the children are sent to ordinary local elementary schools, but in the case of "Cottage Homes" schools have, in some instances, been erected on the estates.

Advantages of transferring to the Council the Metropolitan Asylums Board's asylums and lunatics.

Metropolitan Asylums Board powers to infectious diseases should be transferred to London County Council.

Reason for transferring to the Education Authority all powers to relieve children.

33. The provision of education by Poor Law authorities is anomalous. The council, as the education authority for London, is required to provide free education for all children in the county, and has provided schools and institutions similar to those above mentioned, viz: special schools for mentally and physically defective children, and blind, deaf and dumb children, as well as for children suffering from certain diseases; it manages residential institutions like industrial and truant schools; and it is responsible for children sent to reformatory and industrial schools.

39. The transfer of these powers to the council, as education authority, would be to the benefit of the county ratepayers, upon whom the greater part of the cost now falls, for there is little doubt that their administration by the council would result in considerable economy being effected. At the present time considerable difficulty arises in the matter of the provision of school accommodation owing to the shifting of population. If effect were given to the foregoing proposal, the council would be in a position to overcome this difficulty by placing in a district in which there was an excess of accommodation some of the Poor Law children under its care. There can be no doubt that the transfer of the service to the council would benefit the children, who would be removed from association with the Poor Law and all its attendant disadvantages. There would be a further advantage so far as the children are concerned in that the council would be able to discriminate between the various classes of Poor Law children, and so abolish any undesirable segregation which may obtain at present.

40. It is proposed, therefore, that there should be transferred to the council, which might act through its Education Committee, the powers and duties of the Metropolitan Asylums Board in respect of special schools for Poor Law children and remand homes, and also the management of institutions and homes for Poor Law children now in the hands of boards of guardians and joint boards for school districts, the education of Poor Law children, and the maintenance of Poor Law children other than those maintained in workhouses, provided, however, that the cost of maintenance of Poor Law children, apart from education, shall not be charged upon the amount included in the county rate for educational purposes. The council attaches importance to the continuance of the interest displayed by persons and societies in the welfare of Poor Law children, and suggests that, where possible, local committees should aid in the management of the institutions and homes above referred to.

41. If the administration of the Poor Law were placed in the hands of municipal authorities solely responsible for the local rates, it is probable that a larger measure of independence might be accorded to them than is possible under the present system. It would, however, be necessary to make provision for some co-ordination by the central Poor Law authority such as in administration, the sanction of loans, the erection of buildings, and other matters.

42. The loans of boards of guardians and of sick asylum district managers are subject to the sanction of the Local Government Board, whilst the loans of the Metropolitan Borough Councils are, with certain exceptions, subject to the sanction of the council. The existence of two sanctioning authorities for loans raised on the security of the rates of the same area, is in the council's opinion, not conducive to the efficient control of local indebtedness. The council, therefore, desires to represent to the Royal Commission the desirability of the council being made the sanctioning authority for all loans in connection with Poor Law services.

43. A table prepared by the Local Government Board as to the accommodation and occupation of the various workhouses and infirmaries on February 10th, 1906, indicated that the workhouses of seventeen London unions were too large for the paupers belonging to such unions, the total excess of accommodation being 3,259 places. On the other hand, the workhouses of fourteen unions were inadequate for the accommodation of the paupers belonging to such unions, the total deficiency being 3,706 places (excluding the new Hammersmith workhouse not then occupied), the net deficiency being 447. After providing for the accommodation of paupers in the workhouses which had surplus places (without as

well as within London), there was an excess of places in the workhouses of fifteen of the London unions amounting to 2,255, and an excess of inmates in the workhouses of fifteen London unions amounting to 1,799, a net excess of places amounting to 456. The infirmaries of seventeen unions had an excess of 1,031 places, whilst those of eight unions had deficiencies amounting to 485 places. The new infirmary at Hammersmith, with 374 beds, increased the net excess of places to 920.

44. Any regulations with respect to the classification of paupers would probably be prescribed by the Local Government Board.

45. There would still remain the necessity for co-ordination as between London and the rest of England, and this could best be provided for by the Local Government Board, in whose hands the audit of accounts should also remain.

46. In any change of the Poor Law system in London the opportunity should, it is submitted, be taken to remove the anomaly arising from the fact that the Local Government Board acts as a local rating authority with respect to the administration of the Metropolitan Common Poor Fund, a central fund for the equalisation of Poor Law expenditure. The council administers the county grants, which are mainly in aid of Poor Law expenditure and also the equalisation fund in aid of municipal expenditure. It is most desirable that all these central funds should be administered by one and the same authority. Any question of redressing existing anomalies in the administration of these central funds is outside the scope of this statement, which, as already stated, is confined to the question of the administration of the Poor Laws in London.

97474. (*Chairman.*) I wish to be quite clear about this scheme. You would propose to transfer to the Poor Law borough councils all the duties at present discharged by the Poor Law guardians as regards Poor Law proper, except those relating to education?—Yes.

97475. You do so on the ground that you think that every duty which can be best performed locally should be in the hands of the Metropolitan borough councils?—Yes.

97476. You think under this scheme that it would be possible or probable that a larger degree of independence should be accorded to the borough councils than is possible under the present system?—Yes.

97477. That being so, I assume that the borough councils would have all the institutions at present vested in each separate board of guardians, vested in them.—Yes. We suggest that they would take over all local Poor Law services, including the maintenance of the workhouses, the infirmaries, the casual wards, and outdoor relief with one exception specified in the scheme; and in addition, they would take over the municipal services now discharged by the boards of guardians.

97478. They would, in that way, have the same powers of control over the appointment and promotion of their officials which are at present exercised by the local guardians?—Subject to such control as might be exercised by the central authority for London acting through a composite committee of the County Council.

97479. Would they be allowed to make their own contracts?—That is a question we have considered. Without coming to a definite decision, we thought it probable that the central committee would make arrangements with the borough councils for contracts on a large scale.

97480. Those two points are not mentioned in the Statement, but, as you will see, they are a serious curtailment of the existing powers of boards of guardians?—Yes. With regard to contracts, although the council express no definite opinion upon the subject by resolution, the view is strongly held by many members of the council that it would be an advantage to London if with regard to the purchase of material it could be accomplished by a central authority.

97481. Now let us go to the question of the officers. Was it the idea that the whole Poor Law services of London should be run as a whole?—Was that the point of view that the London County Council was to interfere, or was the promotion to go on as it practically goes on now within each area?—It was to go on within each area,

Mr. Edgar J. Harper.

subject to that criticism which we thought would naturally arise by bringing together representatives of the local and central authorities.

97482. Now coming to the central authority I see you propose to transfer to the central authority all the duties at present discharged by the Metropolitan Asylums Board ?—In substance, yes.

97483. You also propose to take over and transfer to the central authority the education of Poor Law children ?—Yes, subject to the reservation with regard to charges.

97484. You mean that all charges in connection with these children should be levied on the local poor rate, and not on the general county rate, or rather that part of it dealing with education ?—Not on that part of the rate which is devoted to education.

97485. We have taken an enormous amount of evidence about London. Poor Law reformers, or those who wish changes in the Poor Law have been unanimous on one or two points. The great evil they say of the present system of Poor Law administration in London is that there is no uniformity ?—Granted.

97486. It seems to me that you would perpetuate under this scheme the present lack of uniformity ?—We hardly think that. We feel that it is to the advantage of local government that every section of the community should come under the constant observation of the local borough council, and for that reason we are anxious that the section of the local population which comes into contact at the present time with the Poor Law and its officials should in future come into closer contact with the borough councillor. But while we recognise that in striving to maintain that advantage there is the risk of diversity of treatment, we thought we should remove that by the institution of what, for want of a better term, I might call the Poor Law Committee of the London County Council, which would be a committee consisting of representatives of the County Council, persons representative of the local borough councils, and others who are engaged in Poor Law work, who might be co-opted or appointed. We thought, having regard to the fact that the greater part of the charges would fall upon a common fund, and that every section of London would therefore be interested in securing good administration and economical administration, that criticism, and ultimately direction, would be sufficient to bring all the local governing bodies to one common line, and would prevent any wide diversity of treatment. Without imposing any very strict regulations at the outset we thought that similarity of treatment would be evolved rather than decided upon at the outset.

97487. The difficulty of Poor Law administration is this—that the decisions of those who are on the relief committees practically determine the principles and policy of the board to which they belong ?—Yes, that is so.

97488. Unless the board upsets their decisions those decisions therefore become governing factors. At the present moment in London there is the widest diversity of opinion, as you know, in the administration of the Poor Law ?—Quite so.

97489. If you hand these powers over to the borough councils, the probability—and the certainty, I think—is that the work of the Poor Law committee of the borough council will become a mere factor at the periodical elections, and I think it is almost certain that in some parts of London, possibly say in Bermondsey, Camberwell or Poplar, the majority may be in favour of an adequate and generous system of outdoor relief, while in other parts of London you may probably have all outdoor relief refused ?—Yes.

97490. What, under those conditions, would the Central Authority do after they had put the borough councils in the position indicated in this Statement ?—If the Central Authority had the administration of the common poor fund they would have behind them a large force which would enable them to give effect to the regulations which they issue.

97491. (Mr. Lansbury.) Do you mean now the Metropolitan Common Poor Fund ?—Yes.

97492. That does not touch outdoor relief, does it ?

97493. (Chairman.) I understand they might refuse to make the contribution to which the guardians would

be entitled ?—That is it, or rather to which the borough council would be entitled.

97494. (Mr. Lansbury.) Towards the cost of indoor administration ?—Yes. We thought we could say to them for example: "You are proceeding upon very wasteful lines; in another district this has been worked with equal efficiency and far more economically; if you proceed upon your present lines you will have to bear a large proportion of the cost of administering the Poor Law locally. (Mr. Pilditch.) And, of course, outdoor relief might remain entirely a charge upon the local rates.

97495. (Chairman.) It is now ?—Yes, it might remain as now.

97496. That does not establish uniformity ?—No, but the principle is that those who give it have to pay for it.

97497. Would that not put you in a greater difficulty ? The local authority says: "You have handed over to us these duties; our constituents have said there is to be a system of outdoor relief, and they have to pay for it." It would be exceedingly difficult for you, then, to say: "We will stop contributing towards the indoor relief ?"—Possibly; but the cure then would be found in the power of the local ratepayer to say: "We have to pay the whole cost of local relief, and we having to pay the piper shall call the tune."

97498. Take the case where the mass of the people, or at any rate a very large proportion of the voters are compounders; the burden of the rates is not felt by them in the same way as by those who pay the rates directly, is it ?—Not directly; but in many districts in London there is now a very strong movement for making it clear to the poorest class of ratepayers how the rent is made up.

97499. Do you really think in these days when, perhaps properly, sentiment and emotion play a big part in public life, that you could refuse the funds necessary for indoor maintenance because a borough council in response to an election determined on a system of generous outdoor relief ?—I think any necessity to stop anything of that sort, as I said a moment ago, would not arise, because of the fact that all outdoor relief would have to be paid for directly out of the pockets of the local people.

97500. That is the system now, and in practice there is the widest divergence prevailing in the different unions ?—Yes, because the expenditure is in the hands of more or less irresponsible bodies, and not in the hands of one central, rate-raising, body for the whole district, which depends directly upon its electorate for its power. And uniformity might arise out of the laying down of general rules as to the payment of relief and specifying means of enforcing them.

97501. That body, do you think, should be the London County Council, or the boroughs, which ?—The boroughs.

97502. Do you think there is much difference in certain parts of London between the boards of guardians and the borough councils ?—There is an immense difference. (Mr. Gray.) Undoubtedly. You have only to look at the percentage of the electorate which records its votes.

97503. Surely they are very often the same thing ?—They are; but strangely enough the electors take a far greater interest in the election of the borough councils—and that is particularly noticeable during the last few years—than they do in the election of boards of guardians. You have only to look at the percentage of the electorate recording their votes; I think the last board of guardians election it was only 28 per cent.

97504. (Mr. Lansbury.) Was not that because the electors had probably got very sick of elections ? You had first the borough council election, then the General Election, then the county council election, and then the guardians election came last of all ?—Yes, that was so on the last occasion; but at the previous board of guardians election the percentage was even lower—it was 24 per cent.

97505. The board of guardians election always comes last, does it not; first you have the borough council election; then the county council election, and finally the guardians election ?—Yes. But you have further evidence of this electoral apathy in the very large number of wards not contested.

97506. Exactly; that was because people's interest had died out ?—There seems to be a general notion

about amongst ratepayers that it does not particularly matter what you do at the board of guardians election. There is a vague idea that the whole of the money, or the greater part of the money, is coming from some central fund, and that they will only contribute a very small proportion of it.

97507. Do you suppose they are thinking about the money part of it at all?—In a vague way, yes. That is my experience of the last twenty-five years of public work in London. There is a vague sort of notion that the money is coming, not from their own pockets, but generally from all London, and that the general rates are going to contribute very largely to the relief of the poor, and therefore in these poorer districts they may spend quite liberally, and it will not make much difference to them. I think, too, that very much depends upon the present isolation of boards of guardians, and their inability to scientifically study the question. I am myself founding large hopes upon the influence which a central committee would exercise by a careful examination of the various methods adopted in the different districts, and by bringing the successes of the one before the representatives of the other in the hope that those successes would be imitated.

Possibility of
Poor Law
Committee
of L.C.
exercising
effective
control over
the borough
councils
etc.; as
local Poor
Law
authorities.

97508. What machinery did you propose for the Central Authority to ascertain what is going on and to bring their views to bear on the Poor Law authorities and the borough councils?—We thought the county council would constitute a Poor Law committee which would consist as to a majority of its members—

97509. That would not give them information; they must have some machinery by which they could get information, and by which they could investigate questions?—We have not considered the question of machinery.

97510. Is that not vital?—I presume that the committee being once constituted, the council would empower it to take such measures and to appoint such officers as they might think necessary to secure information throughout the whole of London.

97511. You put the discharge of these local duties into the hands of the borough council, and they have direct sanction behind them by the vote of their constituents; any interference by the Central Authority would therefore be resented, unless it had been prescribed and laid down, and a mere recommendation from a committee would be of no use unless you had a system of inspection and of report somewhat similar to that which the Local Government Board have in connection with the Poor Law guardians?—Possibly, but we do not find conflict arise in the administration of the Public Health Acts. We are to some extent a central authority for public health, and the borough council is the local sanitary authority. We have succeeded in establishing cordial relations and complete co-operation in many branches of the public health, and why should we not secure that same co-operation in the administration of the Poor Law?

97512. You think that the public health and the Poor Law are quite on the same level?—To some extent. They are mixed up already.

97513. But in the one case you deal generally with property, and so on, and with the prevention of disease; and in this other case you deal with a mass of individuals whose conditions vary, and on the individual decisions taken depends very much the policy of the local authority. I can only give you my opinion, and that is that the Poor Law work seems to be far more difficult than any other local work that any local authority can undertake; I think you will agree there?—I do agree.

97514. Just follow that up a little. You would not get uniformity under this scheme, and the only pressure you have got by which to establish uniformity is to deny to the local authority the means of making adequate provision for indoor relief. Do you think really that in times of pressure, and it is probable that in times of pressure that your scheme will be most tested, that the Central Authority should have recourse to that pressure?—The alternative presents even greater difficulties, I think.

97515. The alternative of what?—Of the complete centralisation of control.

97516. I admit the difficulty of the situation, but I am rather looking at this scheme as it is. It does not seem to me that you secure, or are at all likely to secure, what is one of the main objects of nearly all Poor Law reformers in London, that is uniformity?—Granted. We thought—and I think so still—that we could, through a committee, given the commonsense which usually characterises representatives of public authorities, secure all the uniformity which is desirable. I will not say that you would secure complete uniformity, and I should not like to commit myself to the statement that absolute uniformity is desirable throughout London. The circumstances of the various localities differ so considerably that it might be essential that you should give a wider latitude in the one than in the other. I think even if you put the whole matter into the hands of a single central authority which started out with the idea of having complete uniformity, it would have to depart from that principle to some extent. I doubt whether the richer districts of London could be treated exactly on the same footing as the poorer, because the problems of life are not quite the same.

97517. No, but the conditions of the individual are pretty much the same?—Those conditions are the consequence of environment. Take the treatment of the poor; that seems to be very closely bound up with housing accommodation, with the administration of the laws of health and so forth, and in those respects we have not made the same progress in every quarter of London. You would have, therefore, to leave a certain elasticity of treatment. But I believe that the central committee working, as it were, through local agents as the borough councils in effect would be, would gradually string up the administration in one and possibly slacken it in another, until we had an approach to uniformity. I do not want to commit the council to the view that absolute uniformity is essential.

97518. We come now to the second point that almost all Poor Law reformers lay great stress on, namely, a better system of classification?—Granted.

97519. It is contended by them that if you want a really effective system of classification you ought to devote certain buildings to specific classes?—Yes; and I believe that we should secure that by friendly conference with borough councils, acting under the guidance and invitation of the Central Poor Law Committee. The complete system of classification would be of gradual growth. No one, I believe, would attempt to sit down and write off at once the various classes into which the paupers should be divided. I think an arrangement could very easily be made between the various borough councils whereby they would transfer from one district to another various sections of their poor, until you maintained in one district a particular class and in another district another class of the poor, possibly with as complete freedom as if the whole of the workhouses were under the direct management and control of the central authority. In some boroughs the accommodation is sufficient to allow of classification within that area.

97520. I do not see how your system would work under the classification you suggest. Each board of guardians at present has a workhouse and an infirmary, and to that workhouse and to that infirmary they send the different applicants for relief who they think should be treated indoors. You have suggested in answer to my questions that there should be certain buildings set apart in London to receive a certain class of pauper or other person. That destroys practically the whole of the autonomy of the Poor Law in London, because the children, the able-bodied, the infirm, and the aged of a particular locality would, under that, have to be sent to another locality and would be under another set of officers. It seems to me that there would be absolute chaos there. Who would be responsible for those officers? Who would inspect those institutions? The only way it seems to me you can in London maintain the present system is by making each locality self-contained, but having, perhaps, a body like the Metropolitan Asylums Board, which exists for the convenience of the local authorities. Classification such as you have suggested seems to me quite incompatible with the working of your scheme?—I do not think so. It seems to me that each one of these poor persons would come under the observation of the borough council Poor

Classification of paupers under Borough Councils.

Law committee in the first instance, and their conditions would be inquired into, the circumstances which led to the poverty, the life that the applicant had led, and so forth; and the borough council would then come to the conclusion: "This is a sort of patient who, for the future, had better be treated in a building which is not situated within our boundaries, but is in the adjoining district." They will have acquired at first hand a very large amount of information with regard to the particular applicant, and with regard to the circumstances which led to that person becoming an applicant for relief; and in making those inquiries they will have learnt much about their own particular district, which, it appears to me, they have now no opportunity of gaining, because now that work goes entirely to the Poor Law authorities and not to the borough council. The future care of the individual is not a matter of such supreme moment, to my mind, as the acquisition of the knowledge which the borough council would thus have gained. Having learnt all about the individual, his future care will not affect the life of the locality.

97521. But then, you see, I asked you whether you proposed a uniform Poor Law service for London, and you said not, but that the local authority was to have control over its own Poor Law service. Now, the classification, that is, the allocation of particular workhouses to a particular class of inmate, that inmate to be drawn from the whole of London, would necessitate a more or less universal service; you could not work it otherwise?—That is so. I am not binding the council to this, because the details of classification raise a question which the council did not go into closely, although our committee did, to some extent, consider it. I have to face either that, or what I regard as excessive centralisation; and while I admit that classification does, to some extent, break down local autonomy, the alternative is one I cannot contemplate.

Effect of excessive centralisation on local authorities.

97522. Just let us go to the central authority. You see at present the Metropolitan Asylums Board is not a controlling authority; it is a convenience for the various boards of guardians; but you propose to make the central authority a controlling authority?—Yes.

97523. When you set up a central authority and a number of local authorities who are to work together, the pivot of the whole arrangement is the relation between the central authority and the local authorities?—Granted.

97524. Your words in Paragraph 1 (j) are very vague, namely: "That such general co-ordination and control as may be necessary as regards the principle of administration, the sanction of loans, the provision of buildings, classification of paupers, and the like, should be exercised by the central Poor Law authority for London." Those words are sufficiently elastic to deprive the local authorities of almost any initial power; and the real difficulty of the situation is here only solved by very vague words?—The council was really pledging itself to broad principles expressed in the desirability of merging Poor Law in municipal administration, and in placing the administration of the Poor Law in its proper position with regard to the other services of London. It has not gone into minute detail as to the manner in which that central control would be exercised. (Mr. Pidditch.) Or the extent of it. (Mr. Gray.) That is so.

97525. Do you think it is possible to frame a scheme on such a foundation?—Yes. We think, for example, that where borough councils are asking for loans, they should require our consent, and that if that consent were refused they should not be able to go elsewhere, except perhaps it might be to the Local Government Board acting as umpire between us in some sort of appeal. We thought that would prevent a borough council needlessly pledging the rates in the construction of buildings which were not wanted. The present system, as you know better than we do, has led to some wasteful expenditure, and we thought that would be avoided by securing sanction for loans. We felt, too, that in the construction of buildings, apart from the mere question of the loans, the character of the building and the purpose for which it was to be used should be a matter of conference between the local authority and ourselves. We do not believe that local authorities act sometimes through malevolence, but we believe that they act through ignorance of what is transpiring even in the adjoining district, let alone what is happening in the other end of London.

97526. Just take that point. You say they act in ignorance, but it seems to me that in any difference between the local authority and the central authority it would be the local authority who would be informed and the central authority who would be in ignorance, because they have not any machinery by which they can inform themselves?—May I take an illustration? Take the relation which exists between the Board of Education at the present moment, and the 330 local education authorities throughout the country. Some of these local education authorities are important bodies such as the London County Council, the councils for Birmingham, and the West Riding of Yorkshire, which are great authorities—and they are supposed to be endowed by Parliament with very large powers; but, as a matter of fact, they exercise those powers under the direction of a central department situated in London, gaining its information of the locality through a comparatively small number of officers. But the central department is able to devote itself to a scientific study of the questions at issue and to direct and advise, by constantly changing regulations, the local authorities; and the central department can largely enforce the direction and advice which they give to the local authority, having in its hands a large Parliamentary grant. It seems to me that this is largely parallel to the plan which would be adopted in London. If we have in our hands a large central grant we should be able to advise the borough councils in the same manner that the Board of Education advises county councils on a subject quite as extensive, quite as expensive, and quite as important as the relief of the poor.

97527. That is putting the London County Council, as regards the Poor Law authorities in London, in the position that the Board of Education occupies as regards the education authorities throughout the country?—Quite so.

97528. But that is not the proposal in your Statement?—It is not contrary to that proposal.

97529. If you ask me to give you a better analogy it would be this: Would you apply that scheme to education in London?—I do not know that I would, but I know others who did when the Act of 1903 was submitted to Parliament. I think it was the proposal of the Conservative Government at that time.

97530. There have been various proposals made, and you have great experience and you are a great authority on education; would it be possible for the education of London to be managed on the principles laid down here, namely, that every borough council should have control over all its schools and over the services connected with those schools, and that the only hold which you had over them was to refuse them the grant necessary for carrying on education?—I do not admit that that is as close a parallel as the one I have drawn. One of the reasons why the control of education in London was not given by Parliament to the borough councils was the desirability of free movement amongst the officials, another was the constant movement amongst the parents from district to district.

97531. It was also surely in order to have one uniform system of education in London?—That was the line which I took.

97532. I think it is a very good line?—But you put it to me as an illustration. I know I had to fight for it very hard at the time.

97533. What I feel is that however happily disposed the borough councils may be towards the London County Council, they know that the Metropolitan Asylums Board exercises no control over them, but if the London County Council took over such functions as those of the Metropolitan Asylums Board, and the functions of the existing Poor Law guardians were transferred to the borough councils, I think the borough councils would resent being interfered with, and would say that it was a misuse of the powers which the Metropolitan Asylums Board previously had—I have not learnt from my friend, Mr. Pidditch, that he entertains that fear, although he is a borough councillor.

97534. Does it not really come to this: Is it not the almost universal experience of local administration, that if the central authority is to be a controlling and directing authority, that authority must have control over the

Analogy of Board of Education and suggested centralisation of Poor Law control.

Effect of centralisation on local authorities.

local committees, so as to require them to carry out its policy?—In general terms, yes; but as I pointed out, Parliament did make the county and borough councils autonomous, yet they do act under the direction of the Board of Education. You cannot say that Parliament gave in any Act a complete power to the Board of Education to revise the conduct of local authorities, or to compel local authorities to do certain things—with trifling exceptions; and yet there is a directing influence throughout, and a local authority which ran counter to the expressed views of the Board of Education would find very serious difficulty in carrying out its own views. Of course it could do it; we could disregard the Board of Education entirely; but we should have to reckon with the ratepayer immediately, as we should have to bear the whole cost, to throw the whole cost upon the London rate. Supposing the borough councils chose to resent this direction—I do not wish to call it control—if they chose to resent this, we could say: "Very well, go on, do it at your own expense, but you will get no help from the central fund. If you want to fall in with the central fund, you must fall in with the central regulations," (Mr. Pilditch.) or, in default, appeal to the Local Government Board. (Mr. Gray.) Yes, there could be that appeal.

97535. It seems to me that if you set up a central authority, that authority ought to be a reality, and I cannot see from these vague words that this authority would be a reality?—(Mr. Pilditch.) I think the vagueness of these words meant that the council perceived that a due measure of co-ordination and control was necessary; but that it would perhaps come more fitly from such a body as this Commission to say exactly how that is to be done, and the way in which that is to be worked out.

97536. That is, we should say upon this assumption, if you put this work upon a central authority and upon local authorities, the whole thing turns on the powers given to the central authority and to the local authorities, and if you do not define those, your scheme is practically without foundation?—You fear an absence of uniformity arising from an insufficiency of central control?

97537. I am only giving you my own views. My belief is that if you have a central authority, that central authority must, unless it is established for purposes of convenience like the Metropolitan Asylums Board, be supreme within the area, although it may delegate to any extent it chooses, its authority in certain matters to committees and such things?—We did not go so far as to assume that there should be delegation of powers given by the legislature to the county council from it to the borough councils. We worked from the other end rather. But, surely, if we provide for proper co-ordination and control in regard to the accommodation provided in workhouses, infirmaries, etc.; if we provide that all expenditure, loans, and such matters, should be first sanctioned by the central authority; if we provide for the laying down of principles upon which the classification of paupers should take place, of the principles upon which out-relief should be given, and of the principles upon which the general expenditure of the borough Poor Law committee should take place, with a provision for the revision of such expenditure where paid out of central funds—does that not go a long way to meet your point of the necessity of absolute central control?

97538. Yes?—If, beyond that, you say, assuming questions of difference arise between the suggested central authority and the suggested local authorities on points of importance or principle, there should be means of obtaining the decision of an even more central authority than the London County Council's Committee would be, namely, the Local Government Board, it certainly seems as though out of such principles it ought to be possible to devise a scheme which would be a working scheme of co-ordination and control.

97539. I daresay it would work if the central authority had those powers, but that is not the scheme here?—The words in 1 (j) "as may be necessary," are, I think, designedly meant to cover a good deal of what may be looked for from this Commission.

97540. Anybody reading this provision would think that the new local Poor Law authorities, that is, the borough councils, would have a larger measure of independence than the existing Poor Law authorities?—I think what is meant is this, that those words

relating to the larger powers to be given to the borough councils mean on points of detail. I think it is admitted that the control which the Local Government Board have been able to exercise over guardians in the past, although it has been exercised perhaps efficaciously with regard to many matters of detail—small expenditures, and the like—has perhaps, if we can judge from what one has read in the papers lately, not been altogether efficacious on larger matters. I think the idea of the council was that you might quite well give to a more representative, a larger and more important body, fuller powers of acting with regard to small matters—ordinary expenditures and the like—whereas you might, in fact, be putting them under greater control or regulation with regard to questions of method of principle.

97541. The powers you propose to give to the central authority are very large, and I do not at all dispute that such a scheme might be workable; but I know what the borough councils would say?—(Mr. Gray.) May I put it to you in this form, in reply to that suggested question? The council has not gone with care into every detail of the method under which the county council might become the central authority and the borough councils might become the local authorities; but they thought it might be of some service to this Commission if they placed before you the view that, assuming the central authority were necessary, the county council was prepared to become that authority; that such a decision, adopted as it was by both political parties in the council would not be without its value; and that the view also adopted that the borough councils could take over the work locally, might be helpful in deciding the future of London. But the exact method under which that should be brought into being, and the details of administration by the borough councils and by the county council, were not and would not be carefully considered by the county council, unless they were told "The general principles are adopted; now sit down and elaborate a scheme." This does not pretend to be a scheme dealing with the whole of the details of the subject; it deals with broad principles.

97542. And it is rather broad principles that I want to deal with. The difficulty that occurs to me is this: You propose to give very large powers indeed to the borough councils in connection with the Poor Law; then when I point out to you that the central authority under those conditions have little control over the borough councils, you, I think, suggest that they might have very large powers of control. Then, I ask, what would the borough councils say? That has quite altered their status. Admitting, as I think everybody would, that any proposals to set up an authority to carry on the whole Poor Law administration in London and all the local details is an impossibility, has it occurred to you at all that local committees might be appointed right throughout the London area, for which a central authority had been established for the purpose of Poor Law administration in which the county council and the borough councils would have joint votes?—That particular form of treatment was not considered by us. We have proceeded from the outset with the idea that you must not multiply the number of governing or administering bodies in London.

97543. But there would be no difference between this and your scheme in that sense, except that the committee would be under the control of the county council and would be partly appointed by them and partly appointed by the borough councils?—(Mr. Pilditch.) There is just the difference that the local committee in the council's proposal would be the direct outcome of the borough councils and of the locality, and that there would be a greater measure of autonomy in an arrangement based on that principle than in the one you suggest.

97544. I quite understand the difficulty; it is a most difficult problem?—Yes; whichever way you look at it, and from whichever point of view you look at it is difficult. I do not think anything that we have just mentioned with regard to the nature and extent of the powers of co-ordination and control that might be desirable go beyond the general words of 1 (j).

97545. These words are very wide?—They are very wide and they are purposely meant to be wide. It was hardly for the council to cross the t's and dot the i's of

Uniformity as to control of vagrants.

Education of institutional pauper children and allocation of rate therefor.

Proposed provisions for children on out-relief, and procedure as to obtainment.

how it was to act in the matter if made the central authority. That is more a matter which we thought should be left to some independent authority such as yourselves.

97546. You propose to leave the casual wards as they are under the direction of the different local authorities, I think?—They are more or less now centralised. They are centralised so far as inspection is concerned for the whole of London.

97547. How is control exercised over them?—Centrally from the Local Government Board. They are, I think, maintained by the guardians now, but they are under a special amount of central control.

97548. The proposal that there should be one uniform system as regards vagrants was a proposal of the Vagrancy Committee, was it not?—Yes.

97549. Now take the question of education. You make a suggestion here which I do not quite follow, that the children of the Poor Law should be handed over to the education authority, but that any cost connected with those children should be charged to the local or borough rate?—(Mr. Gray.) Not to the local or borough rate, I think, but to that part of the general county rate which is not allotted to education.

97550. That is to be a general charge, then?—It is a general charge but we do not want it to figure upon the demand note as part of the education rate. The feeling we have is that the whole future of education is being jeopardised by the large demands which are thrown upon that particular rate for services which, although indirectly educational are not directly educational; and while we should like to have the care of these children, their housing, clothing, trade-teaching, and school education, all being worked together in cottage homes or scattered homes—thus breaking up Poor Law schools—yet we should separate the total charge into a charge strictly educational and borne by the education rate, and a charge for housing, clothing and feeding which would fall on the general county rate which is not ear-marked for education.

97551. Did you propose to take over the children whose parents are in receipt of out-relief?—We propose to take over the whole of the children except those who are temporarily accommodated in workhouses. Then we propose under that scheme to deal with a class of children which in our judgment is very badly treated in London at the present time, namely, the children on whose behalf the parents are receiving out-door relief.

97552. How would the education authority deal with those cases? I can understand that you will take over the children in the institutions, and of course there will be no difficulty about them; but as regards this other class of children for whom the parent receives relief from the Poor Law authority and who are to be handed over to the education committee, who would investigate the cases; would it be the Poor Law authority or the education committee?—I should think that if the parent made application to the Poor Law authority and pleaded the difficulty of maintaining the child and asked for relief in respect of the child then the case would be transferred at once to the education officers for investigation. We are finding at the present time that some of these people are receiving out-door relief in respect of their child, and yet the child arrives at school breakfastless in the morning, and we are again having to find relief out of the Feeding of Children Fund, the relief money not having gone to the quarter for which it was intended. Then, too, we get so much wider a knowledge of these children day by day in the schools and learn so much more from them of their home conditions than one can learn with accuracy from the parents—the child, as a rule, speaks the truth.

97553. I am not quite aware what is the machinery; have you got local education committees in London who go into this class of case?—We have local managers, and we have an Anglicised *cantine scolaire* which we call the Children's Care Committee.

97554. In each locality?—Yes, associated with each school.

97555. Would the parents of these children go before one of these local committees?—I presume that the parents in applying for relief would in the first instance go to the borough council, the borough councils are represented upon all these committees through the

managers of the schools. Two thirds of each board of school managers are in London appointed by the borough council, the remainder being appointed by the county council, so that these school care committees are composite bodies already. If a case is brought under the notice of the local Poor Law authority, relief being asked for in respect of a child, then the case of that child would be at once transferred by the education committee or the Children's Care Committee for investigation. Of course, the child would have to be looked to at once, and provision at once made for its necessities. The inquiries are being very rapidly made in London; usually one day is quite sufficient to ascertain the whole of the particulars with regard to a child. We should then say to the parents: "Now, we will either feed this child ourselves through our Care Committee, and give him the clothing that he requires through the Care Committee, and continue his education, the child remaining at home; but you"—the parent—"will not touch any money at all in respect of that child; or, if you choose to hand the child over to us altogether, instead of continuing for several years in the receipt of outdoor relief on account of the child, we will treat him as though he were a child in a work-house school, place him under proper care, and feed, clothe and educate him."

97556. Would you fix the amount of relief to be given to the mother or would you in any way interfere with the arrangements made by the Poor Law authority?—We would give it in kind to the child. We would stop this monetary payment to the parent, which is given so often in respect of the child and which the child does not get; and we should look after the child. The general idea is that we can cut off the child altogether from contact with Poor Law administration and with the poverty of the home, and not only feed the child but give it that which the parent as a rule is quite incapable of doing, namely, the elements of a profitable occupation, so that there will be a better prospect of that child going out into the world as a wage-earner.

97557. Just let us see the process: A widow with three children comes, say, to the guardians in Bethnal Green; the case is investigated and there is outdoor relief given to her by the guardians. That is the present system. What would happen under your system? First the woman comes up before the Poor Law guardians; then what happens after that?—With three children of school age?

97558. No; say two of school age and one under?—With regard to the child under school age there, I think, very much would depend upon the results of the investigations made by the various officers concerned. It might be that the mother, that is, the widow is exceedingly fond of her children and well-informed as to the treatment of children. In such a case speaking personally, I would leave the child under five years of age with the mother and give her some form of financial assistance in respect of the child under school age. But if, on the other hand, I found, as one so very frequently would find, that her interest in the child was small and that her knowledge of the methods of treating the child was even less, that she was quite incapable either through her daily occupations or through her want of knowledge of taking care of the child, then I would suggest with regard to that child, that she had better transfer it to a nursery school and have it looked after there than continue under existing conditions. With regard to the children of school age, they are far more easily dealt with than the child under school age. Take those children of school age. Instead of giving her money for the benefit of those children you would relieve her of the expenditure which she incurs on behalf of the children, except such expenditure as she incurs on housing them—always with the alternative that if she cares to part with the child—and I do not think you can insist on her parting with the child—it would be in the interests of the child, and I believe in the long run of the ratepayers, that you should treat that child as though the child were deserted.

97559. (Mr. Bentham.) Who would be responsible for the maintenance of the child if the mother would not part with it?—The mother would be responsible for the housing of the child, but the Children's Care Committee would see that the child was fed and clothed.

97560. Even though they thought it might be more desirable that the child should be taken into an

Provisions for children on out-relief, and procedure as to obtainment.

Functions of Children's Care Committee

institution?—Yes. I do not think that public opinion would support you in saying to a parent, "You must part with the child."

97561. Would you give financial assistance?—No money would pass at all.

97562. What did you mean by "financial assistance" then when you said that financial assistance might be given to the mother to keep the child at home?—I was speaking then of the child under school age for whom you have no accommodation. I should like to draw a distinction between the home of which I have been speaking and the home of a fairly good standard and a well-informed mother who might be helped financially with regard to the child under school age. This question, the treatment of children under five years of age is a question into which, in another capacity I have been going somewhat closely during the last two years—as a member of the consultative committee of the Board of Education. It has been made perfectly clear by evidence which we have received there that you have two classes of parents to deal with—one being well-informed and desirous of taking care of the child; that parent can be trusted with money. But there are many of the others ill-informed, injuring the children's lives, quite incapable of taking care of them, squandering the money which they get in outdoor relief, and even when food or clothing is given not taking care that the child gets the benefit of that food and clothing. In those cases, which we may call for brevity bad homes, undoubtedly no money should pass between the relieving authority and the parents, but the relief should go in food and clothing to the child, who would be attending a public elementary school.

97563. In the case of a desirable home, what authority would grant the financial assistance?—The Poor Law authority.

97564. Not the education authority?—No; because that child would not be receiving education in school at all.

97565. (*Mr. Lansbury.*) In the case of the children who are receiving education, who would pay the rent if it were a family where there were four or five children of school age dependent on the mother, which is very commonly the case?—In the matter of rent—

97566. There is the rent, there is the doctor, and there are all the other things that make up the cost of home?—Yes, but there is a greater certitude if you give the mother money to meet the rent that she will have to pay that.

97567. She will have to pay it, do you say?—She will have to pay the rent, because if she does not she is ejected, and then you get her and her children entirely under Poor Law care. There is a power behind which will compel her to pay the rent; unfortunately there is no power behind which will compel her to give food and proper clothing to the child.

97568. (*Chairman.*) I do not quite follow this. A woman is living, say, in the East of London, or in the South of London; she becomes a widow, and she is left with children. I understand your object is that whatever public funds are given her should be utilised to the best purpose for the benefit of the children; but I do not quite see the process. Do the board of guardians give her certain relief, or are the board of guardians to hand the case over to the school authority?—She applies for relief to the Borough Council, acting as Poor Law authority. She makes out a case; she is a charwoman, left a widow with three children, and she picks up a wage of half-a-crown a day irregularly two or three days a week. It is proved that she has not a sufficient income to properly support these children, and some relief has to be given her. She may be able from her income to fully meet her rent, but she cannot manage to properly feed and clothe the children. That case is at once transferred to the education authority who make their investigations and relieve her of the burden of feeding and clothing the children. She can, on her own showing, pay her rent. If she is in such a condition of poverty that although it is not essential she should go into the workhouse with her children, she needs some help towards the cost of the rent, I assume that that payment would be made direct to her by the Poor Law authority, it being no part of the duty of the education authority to see that she and her children are housed, so long as she keeps those children. But if, on the other

hand, she were to part with the children who might have to go into a scattered home and be under the sole care of the education committee, then she would be, *pro tanto*, relieved of the obligation to pay rent in respect of the rooms occupied by those children.

97569. Then the woman would receive double relief—she would receive relief from the guardians and relief from the education body?—She might receive her relief in two portions if it were an acute case.

97570. Would that not be very inconvenient? These two authorities might differ, and one might consider that she was not entitled to relief?—I am afraid I have not made myself clear if that is the impression which I have left. I see no difficulty whatever in carrying through this procedure; the woman has applied for relief; she is seeking outdoor relief in respect of children—

97571. (*Sir Samuel Provis.*) She would not say that; she would ask for relief?—She would state her circumstances.

97572. That is it?—The Poor Law authority would say: "Obviously the financial stress is consequent on the existence of these three children; if she had not these three children she would make both ends meet; very well, this is a case obviously for the education authority, because her difficulty is a difficulty arising out of the children."

97573. (*Mr. Loch.*) Is it part of the duty of the education authority to feed and care for children quite irrespective of their education?—Supposing she does not go to the Poor Law authorities at the present day, but she cannot afford to feed the child, then she sends the child to school and we have to feed it. We are feeding them every day—some 43,000 children were last week fed in London.

97574. I should think you would feed a great many more on your terms; you would feed half the population who are attending, would you not?—No.

97575. Is it not true that you have raised the number to be fed from 26,000 to 43,000 already this winter?—The number has been materially increased.

97576. It has been almost doubled—from 26,000 to 43,000?—I have not the last return at hand.

97577. You may take it from me that 26,000 was the figure before. Is that not a sign that your policy is bringing in a great number of people to be recipients of relief apart from education?—I am afraid the answer I shall have to give to that is one which I gave in the county council chamber the other day, and would be regarded as eminently controversial. I mean it is purely the outcome of the Act itself. (*Mr. Pidditch.*) Hear, hear. (*Mr. Gray.*) It is largely the outcome of political agitation which has induced people to make the claim; and it is largely due to the fact that the machinery was not in existence which would carefully scrutinise the applications. I am proposing that before the relief is given there should be a scrutiny; I do not say before any meal is given, because the first duty is to see the child is fed, but having done that it would not be continued till investigations were made. Then the demand has further been increased by the fact that no prosecutions have yet taken place, and no attempt has been made to recover the loans. There seems to be a wide-spread feeling at the moment that if attempts are made in the Courts to recover the constructive loans to parents in respect of meals, the demand will fall off. But all that will be in operation when my scheme is brought into working order, and therefore I do not anticipate that there would be a large increase in the number of children. Even if there were an increase they would be the children who are now being helped out of public funds from another source, and not helped with any advantage to the child.

97578. The question I raised was this: Do you advocate the policy by which you maintain the children irrespective of education?—We are not initiating it.

97579. You are not initiating it, you say?—No; it is done now for all deserted children.

97580. You propose then to continue it?—I propose to continue it and extend it to the child who is at home with its mother, and that mother will not, or cannot, support the child, who is practically a deserted child.

97581. Then you propose practically to make the education authority partly a Poor Law authority?—I do not know that the physical well-being of a child is

Definition of deserted children.

separable from his mental development. If it becomes necessary to give that child some food in order that it may be educated, I should be sorry to say that that was not a part of the educational work of the country.

97582. (Mr. Bentham.) Then why should not the charges go direct to the education authority, if that be so?—It might, if the public rightly appreciated the work which is being accomplished; but I fear that in practice the growth of the education rate will not be regarded with as much favour as the corresponding diminution of the Poor Law rate.

97583. (Miss Hill.) Do you really consider that a woman who cannot support her child is in the same position as a woman who deserts her child? Would you treat the child whose mother could not support it in the same way as you would treat the child whose mother had deserted it?—For the child there is no distinction.

97584. Surely there would be a great distinction in its relation to its mother and its mother's relation to it? I was astonished at the statement, and I did not realise that you could intend it?—Take the child who is not deserted, who at seven o'clock in the morning is locked up in the room while the mother goes off to clean up a City office—

97585. That is another question?—No; I am taking the child whose mother cannot look after it, and as far as the child is concerned I say that is practically a deserted child. That child is let out by a neighbour at nine o'clock in order to go to school. Its gets its meals as best it can, possibly by the expenditure of 1d. or 1½d. left by the parent. That child does not see its mother throughout the whole of the day. If that child is not a deserted child I have some difficulty in saying what it is.

97586. But there must be an essential difference between its position and that of a child whose mother cannot support it; of course, there may be other circumstances, but the mere fact that the mother cannot support it does not make it exactly like a deserted child?—In effect there is little or no difference though details will doubtless vary in every case.

97587. (Prebendary Russell Wakefield.) I might ask whether you justify the mother going out to work when she has a child of that kind to look after, or more than one child?—A widow?

97588. Yes; I ask from the point of view of the State's welfare and of the child's welfare, is it desirable that the mother should go out to work under those circumstances?—I appreciate the suggestiveness of the question, but I think on the whole it is right that the mother should work and go as far as she can towards the maintenance of the child.

97589. (Chairman.) In the Statement you suggest that it is to the benefit of the child that you should remove it from association with the Poor Law and all its attendant disadvantages; but does it not really come to this, that you are going to set up a new system of Poor Law relief in connection with education?—It is set up.

97590. (Mr. Loch.) Can we take it for granted that that system of Poor Law relief is set up?—I say that when the local authorities are empowered by Act of Parliament to feed children, and various local authorities have put that Act into operation, you are practically giving to the children what was previously Poor Law relief through educational channels.

97591. (Chairman.) Is it not rather an inducement to the mother to neglect her children?—The fact that she will have the child well cared for?

97592. Yes; she has apparently only got to get the child and the child is taken care of?—Very well; you give her half-a-crown a week now to take care of the child and she spends it and the child gets nothing. You do not get any better off with regard to the parent, I admit, and you may offer some temptations to the parent; but you get better off with regard to the child.

97593. Suppose there is a well-conditioned mother next door; she says to herself, "What is the use of my looking after my children if this woman, who does not, get them as well fed, if not better fed, and clothed than I can"?—Well, the attendance officer will be a very poor official if he cannot discriminate between the one and the other. (Mr. Pilditch.) I heard of a case yesterday where a man

came to a board of guardians and said: "My wife has just left me, and she has left me with five children; I cannot possibly look after them, you must take these children and look after them for me; I earn sometimes 26s. a week, and I can find you 10s. a week." The reply was, "We cannot do anything of the sort; you are not a pauper, and you must look after them." He said "If you do not do it you must take the consequences." They refused to do it and the consequences were that he deserted them and the children came fully upon the rates; they were taken into the workhouse and there are the five children now in the workhouse.

97594. (Mr. Loch.) What is the moral?—The moral is that it might have been better in that particular instance for them to have dealt with that man when he was in the way with them.

97595. Why better?—Because they would, at any rate, have kept the man earning money in that locality and providing something towards his children.

97596. Having 26s. a week he left his family?—Yes—it was a supposed 26s. a week.

97597. But he would have been provided actually with money from the State, although he was earning 26s. a week?—Not necessarily; they would not discuss the matter with him or admit any responsibility for the children, and as a consequence the whole cost of maintaining them has come upon the rates. The alternative appears that they would have grown up neglected.

97598. All his children and his wife are assisted?—His wife had deserted, and his children have come upon the rates.

97599. Do you know the secret history of that family in the least?—I know something about it.

97600. Was there any quarrel or anything of that kind?—Yes, to a certain extent.

97601. So there were other reasons which affect the issue than those which, at any rate, from your first statement one would think would be the only considerations?—There were, no doubt, plenty of personal consideration as between the man and his wife. I am only putting the case of the children who, through no fault of their own, are in the condition described by Mr. Gray. My illustration may not be the best but it occurred to me at the moment. But there were the children.

97602. You bring this case before us as a type, and in this particular case the circumstances are such that you deal with it, as you must confess, individually rather than generally?—Yes. Each case would have to be dealt with individually in one sense: though on some general principle. I want to say something on one point, namely, the concurrent organisation of local charitable and self-help agencies in London boroughs, and centrally. It arises partly out of what the Chairman said with regard to the position and suitability of borough councils for doing this work. I have had a good deal of experience of borough council work, and of borough councils in different parts of London, being a member of one, and I was a member of one of the old boards which existed before the borough councils were constituted in 1899. I want to say from my own knowledge that the improvement in the personnel and status generally of the local governing bodies in London which has taken place since 1899 has been not only great, but is rapidly increasing, and I think borough councils will become bodies capable, as they have shown themselves in the work they have done in the purely municipal sphere, of dealing with other large matters from a responsible point of view.

97603. (Chairman.) Would you make that remark generally as regards the whole of London?—I should make that remark very nearly generally with regard to the whole of London. I have come in contact with a great many borough councils and councillors in the poorer districts as well as in the better-to-do districts, especially within the last three or four years, and I have been surprised at the amount of ability and public spirit which I have seen devoted by borough councillors to the work of the various authorities, and the large and important matters which they have to deal with now all over London. Arising out of that, there is another point that I think I should like to mention to the Commission as I think it is germane to the matter at issue. It is this, that the principle that we have suggested of

Illustration of necessity of discriminating relieving officers.

Status of persons of Borough Councils.

amalgamating the Poor Law with the other municipal work in London would, it is believed, also open a way for the organisation and development of the means for combating some of the evils arising from poverty which already exist in many districts, but in a sporadic, insufficient and consequently ineffective form. I refer to the various charitable, philanthropic, self-help, and medical agencies which attempt to relieve distress on the part of individuals and families who might otherwise become chargeable to the poor rate, and, in their most effective forms, seek to do so in such a manner as to preserve the self-respect and independence of the recipients, by helping the wage-earners of families over periods of want caused by illness or accident, and finding suitable work for widows and careers for orphaned or neglected children without bringing them in touch with the Poor Law. Such agencies, which have their counterpart on some parts of the Continent in what is known as the Elberfeld system, are to be found in London in branches of the Charity Organisation Society and local charitable and philanthropic societies and so on. And, attacking the same problems, are also the hospitals and dispensaries and the various friendly societies. All these work independently; their operations frequently overlap and sometimes conflict, and their methods are based on no generally recognised principles. Endeavours are being made in some provincial towns to work a system similar to the Elberfeld, but when it was tried in London some years ago from the Mansion House as a centre the attempt failed, as all attempts based on working from a centre in so large an aggregation of humanity would be bound to fail. But I believe, and I think it is generally believed by a great many who have studied this subject, that with the Mayor and Council of each of the twenty-nine municipal boroughs in London including the Cities of London and Westminster established as the authorities responsible for the administration of the Poor Laws in each district, it might be possible to concentrate at the town hall under the presidency of the Lord Mayor, and with some measure of touch with the administration of poor relief, and to develop, co-ordinate and regulate such agencies as now exist for getting and keeping in touch with cases of distress that can be helped at such a stage and in such a way as to prevent the recipients of assistance and their children from becoming paupers. If upon the proposed Poor Law committees of the local councils as well as upon any Town Hall committee for the organisation of charitable and prevention of pauperism agencies as might be formed in pursuance of this idea, it was found possible to obtain the services of representatives of the various friendly and self-help societies and of the hospitals and dispensaries, it is probable that much benefit might result from co-ordinating their activities. The part of the central London authority in such an organisation of means for combating pauperism at the source would take the form of co-opting amongst its members representatives of the great central self-help and friendly societies, the Charity Organisation Society, the various philanthropic societies and the great London hospitals, or of obtaining the help of such experienced and expert persons upon any sub-committee which might be formed to aid the various borough committees by the formulation of principles, the working out of methods and the bringing together of those engaged in the work locally for general or special purposes. The Chairman of the Central Poor Law committee would be for London as a whole an appropriate centre round which such charitable and self-help agencies as were general to all London might revolve, as the Mayor of each borough might be, or would be, under such a scheme, for his own district.

97604. I think we all agree that the municipal boundary should be the area of the municipality, the centre round which a number of institutions should cluster; but just taking what you have said, you would not suggest, would you, that a great scheme of charity or benevolent organisation should be directly associated with the Poor Law? Would you not keep them separate?—I should keep it separate from the Poor Law, but I would centralise it at the town hall in each district as it is done for instance, in those towns of Germany where some such system is worked. One advantage arising from this change, if it came about, of dealing with London for Poor Law administrative purposes as thirty distinct districts, would be that you would have a centre at each of those thirty districts and a well-recognised centre which would be brought together and from which, as a pivot,

would be worked and brought together all these various charitable agencies which are now working at loose ends.

97605. Just taking one of your points, medical relief, what you would wish, no doubt, would be that there should be a general improvement in the medical relief of the poor right throughout London?—A general improvement, co-ordinating it with the other forms of relief.

97606. If that is to be done for medical relief there must be some central controlling authority?—Yes.

97607. If there is any difference, the difference between us is really what should be the autonomy, or what should be the powers of the local areas or bodies who have got to fit in to the general system?—Yes. I quite realise that the point I have last mentioned is perhaps a little outside the lines of our evidence, which deals with the question of the administration of the Poor Law; but it seemed so important a point, that the adoption of the principle of the municipalisation would provide a centre round which these things could usefully revolve that I thought I ought to mention it to the Commission.

97608. It is part of the question that you wish to link up with it?—I personally wish to link it up.

97609. (*Prebendary Russell Wakefield.*) I want to get clearly into my mind the principle that the London County Council seems to have laid down. First, I believe it is the centralisation of the initiative of general principles; you wish that centralised?—(*Mr. Gray.*) Yes.

97610. And practically all initiative?—I should hardly like to go quite so far as that.

97611. If that be not the case, are you not immediately landed in the probability of a very great diversity of initiative in various localities?—No. I should like to see localities, after consultation with the central authority, indulging in experiments with the hope of securing more satisfactory results; and I should think that a wisely directed central authority would encourage such local initiative, such departure from established rule, and would watch the results with interest with a view to adopting or rejecting them elsewhere. Hence I should be sorry to say that all initiative should come necessarily from the central authority.

97612. Just now in reply to a question you said that you wished to trace some likeness between the attitude of the Board of Education in regard to local education authorities, and what you would like the London County Council to do in regard to these various administrative bodies in London?—Quite so.

97613. It seems to me that there is one difficulty. The London County Council is itself an administrative body, and the Board of Education is not in the same sense an administrative body; does that not make a very great distinction between the two authorities?—No, I think not. The Board of Education is very largely an administrative body *e.g.*, school trusts and Parliamentary grants. The Board administers a very large sum every year, for, although those sums are paid over to the local authorities, yet the Board themselves by an individual inspection of the schools satisfy themselves that a standard of efficiency is being maintained. Really that bears upon this question of local initiative.

97614. That is just what I want to know. Might I take it in this way—that the central authority, the London County Council, would have anything in the shape of inspectional authority with regard to anything that was done in the various localities, the institutions, and so on?—Yes, I think it would; but I attach far more importance to the knowledge that it would derive from the presence on this Poor Law committee of representatives of local authorities. If I know anything of public life, the members would be largely criticising each other's methods.

97615. Is there not just the possibility that if you had this power of a central authority over the local ones there might be occasions when the central authority was out of harmony, politically and otherwise, with these various local authorities, and then a good deal of friction might possibly arise?—That is the case now between the London County Council and the Board of Education; but the friction is not very acute.

97616. It was more the case not very long ago, was it not, between the London County Council, as formerly constituted, and the borough councils; there was a good

Possibility of friction between L.C.C. and various Borough Councils.

Undesirability of multiplying administering authorities.

deal of friction then, was there not?—I should be sorry to say that there was serious friction. I have never been conscious of it. There have been disagreements, as probably there always are between young people who are growing up together.

97617. But you do want a controlling authority?—(Mr. Pilditch.) There are questions arising now occasionally between the county council and the borough councils, whilst their political colour is the same; but they are susceptible of settlement, and there is no difficulty about settlement. At the present moment there is a question between one of the borough councils and the county council which has not been settled and which will go to the Local Government Board; it arises under one of the provisions of the Public Health Act of 1891.

97618. You would not go so far as to say it is the same position at the present moment between the London County Council and the borough councils that it was a few years ago, would you?—I do not think there were any serious or very vital differences.

97619. There were a good many borough councils in former days before the present London County Council, that rather resented suggestions from the London County Council, I think?—(Mr. Gray.) Yes, and they do now, no doubt. (Mr. Pilditch.) Yes, they do.

97620. I would ask, is that a desirable thing with regard to this great Poor Law question?—(Mr. Gray.) We may resent many of the regulations that are laid down by the Board of Education, but then we meet them in friendly conference; they waive some of their requirements and we agree to comply with others, and an agreement is found between the two. I really have no fear whatever. These things may appear very harsh upon paper, but when you bring into it the common sense which characterises mankind generally you get over these difficulties.

97621. In one of your answers you said the London County Council had drawn up this scheme assuming that a central authority was necessary. May I take it that you had assumed that? When you say "assuming" you do not mean that the London County Council does not desire it, but simply that they had in their mind the possibility of a central authority being necessary, and therefore they drew up this scheme?—I wish to put no restriction there. I believe the county council feel that they are duties which they must take over and ought to take over for the benefit and advantage of London.

97622. May I take as the second of your principles the avoidance in carrying out the details of setting up any fresh authorities?—Yes.

97623. That is what you are very strong about?—Yes.

97624. You think the great thing to avoid in London is a fresh set of authorities?—Yes. We feel very strongly indeed that the more you can concentrate interest the greater will be that interest on the whole.

97625. You would get the same thing, would you not, supposing the London County Council was the central authority and worked by committees throughout London—committees that had co-opted members and other people like the representatives of the Charitable Organisation Society, working in the various localities. You would not have any fresh authorities there, would you?—What would be the separate committees?

97626. They would be committees under the county council in that sense, but they would be local committees?—Working within the borough council area?

97627. Yes, but directly responsible to the London County Council?—I do not think that would improve our relationships with the borough councils.

97628. You might almost take it in the same way that under the old London School Board there were committees up and down London; there was a member in charge, so to speak, and there was the work done by local committees up and down London. By what I have suggested they would be the same—still only one authority, but working by sub-committees?—I am afraid that is going to make local work very complex and troublesome, when I have in mind the existence of our groups of school managers where the borough council and the county council are already represented. You have practically skimmed the supply of milk there, and

taken the cream for the formation of those boards of managers, and I do not know how you are going easily to constitute another committee.

97629. Is there no cream to be got out of people who will not stand at elections, for instance?—Yes; we have got those. (Mr. Pilditch.) By co-option.

97630. Are there no good local residents?—(Mr. Gray.) We have got them on our school committees.

97631. I meant you might still get them on your committees under a scheme whereby the London County Council was the authority, and worked by means of sub-committees up and down London?—The statement I commenced with this morning that this section of the community ought to come under the observation of a borough council and influence the borough council in its work of administration, is completely lost then. I do myself feel very strong on it, because, like Mr. Pilditch, I had six years' work in Battersea before the borough councils were formed. We never thought of the poor. When we were dealing with sanitation and other branches of local administration that section of the community was clean cut away from our observation. We neither saw the sources of the trouble nor the consequences of the trouble. It was completely outside our purview. I think that if you are going to perpetuate that segregation of labours that borough councils will still wander on always legislating, as it were, locally for an average which they have mentally constructed, that average not being a true average, as a section of the community will not have entered into the calculation in constituting that average. (Mr. Pilditch.) The analogy drawn by the Commissioner who has just been speaking with regard to the county council's administration of the education work of London is rather an apposite one at the moment, because if there is one weak point in connection with that it is the inadequacy of the powers and responsibilities of the local managers. At this very moment there is a scheme before the council for giving more and further powers to the local managers—less centralisation and more local responsibility in fact.

97632. But there is not any suggestion on the part of the County Council to give that particular work over to the borough councils, is there?—No, it would not be appropriate on the system as it stands.

97633. Then the third principle is that the borough councils are to be responsible for all the administrative details?—(Mr. Gray.) Yes.

97634. Are you satisfied that the quality, if I may say so, of the borough councils as compared with the boards of guardians, is sufficient to warrant that power being vested in them?—I am quite satisfied that the more work you give them to do the better will be the class of men who will be attracted to the work, and that probably the addition of this branch of public work would induce some of the very best of the guardians to become members of borough councils, as indeed they are at present—just as the addition of education to the county council drew a fresh class of member there.

97635. Some people think that the borough councils are not so very much improved from the old vestries as I think you consider they are. Is it not the fact that in a very large number of cases members of the old vestries were returned to the borough councils?—(Mr. Pilditch.) There may be some cases where they were, but I know several cases where, whilst the most prominent members of the old vestries were returned generally the main body of the members had no chance whatever under the different system of election. The broader publicity given to the whole affair and the greater difficulty of getting a seat at all on the council has induced a very much better type of men from the public point of view to come on to the borough councils.

97636. I suppose your argument is that gradually the type of membership is improving?—Yes, I think so.

97637. And that what used to be designated as the old gang has nothing the same power that it had in the first few years of borough councils' life?—Well, an old gang may have had some power in some borough councils in the first few years of their life, but I do not think it was general even then, and I think that anything of that sort has now practically died out as far as I know. There are no complaints made so far as I know that borough councils are not doing their work with efficiency and with a single eye to the public interest.

Undesirability of multiplying administering authorities.

Status of persons of Borough Councils.

and
nel of
th
llors.

97638. Your judgment of borough councils is founded on a knowledge both east and west, I think?—Yes, both north-east and west, and south-west, and east. I would not say they were all up to the same standard, but I say they are all improving, and as Mr. Gray has just said, if you make the mayor of each borough council more and more an important person, and if you make the borough councillor himself more and more an important person, you ought to be able, and I think you do gradually, to get a better and more able class of man for the work.

97639. The proof of that would rest, would it not, after you have taken away the old vestries and given the new borough councils very much more dignity and more power, and so on, upon whether really on the whole there has been a thorough improvement in the *personnel* and the work?—Within my experience, which extends over perhaps five or six borough councils, I should say there is not the slightest question that such improvement has taken place.

acy of
ing
or
law
stra-

97640. (Mr. Lansbury.) Has the council taken any account of the areas outside London—the extra Metropolitan areas I mean?—(Mr. Gray.) No.

97641. Do you think that a real scheme of Poor Law reform could be put through Parliament without taking into account such areas as Tottenham and West Ham, and the areas of the South and West of London?—Speaking as a former Parliamentary representative of the division of West Ham for ten years, I am afraid that the controversy which has been talked about this morning would be as nothing as compared with an attempt to bring West Ham under the Poor Law administration of London.

97642. Are you of opinion that the proper way to reform is to still leave them outside whatever new authority is set up?—I think a county borough with a population of nearly 300,000, still growing, is capable of managing its own affairs, and will do it better than coming into London.

97643. Despite the fact that its poor rate and its Poor Law problems are so heavy?—Yes.

97644. You do not hold that view so far as education is concerned, do you?—That I would keep West Ham out?

97645. You rather think that places like West Ham should have extra help from the education point of view, do you not?—I do not put it quite that way. I say that where a district has had to incur the expense of buildings within one quarter of a century, and has no help, while other districts which started earlier had help, that is not fair to the district which came into existence at the later date.

97646. Cannot the argument also be used that if a district because of its conditions has an extra amount of poor relief to give, it, too, should have some exceptional treatment?—That may be, and such relief might come from national sources.

97647. You do not think we would gain anything by getting one uniform system for the whole of the Metropolitan, taking the police area instead of the County Council area?—I think there are limits beyond which you cannot carry the question of central control with advantage. The difficulty of grasping the divergencies would necessarily become greater the wider the area over which you range.

97648. I notice that the County Council in the last resort apparently are relying, as has been the case up to the present, on the Local Government Board which has had to deal with a very much larger area; I mean it has had to deal with three kingdoms from the point of view of laying down principles, and the rest of it. Judging from your Paragraph 1 (k) you are leaning on them in the same way?—Yes, we are looking to the Local Government Board to exercise some general direction over the country. But if you will allow me to say so my mind was rather dwelling upon your previous question while you were putting the second. Speaking as one who knows West Ham thoroughly well after fifteen years of work there, who is yet a Londoner now serving upon the council, having formerly occupied myself upon London municipal work. I say that the problems which we are facing in West Ham differ very considerably

from the problems which we have to face in London as a County Council. The conditions of life are different. If you were to attempt to bring a great county borough like West Ham within the London area you would either have to struggle to bring conditions which differ largely from London into line with the London conditions, or you would have to keep, as it were, a separate compartment in your brain which would be brought into operation every time you directed your attention towards West Ham. There is a distinction between dealing with a comparatively settled population and a population which is always flowing through, as it is in West Ham; there is a difference between dealing with London and the greatest industrial centre south of Birmingham which you have in West Ham, because of the circumstances that arise from dock life and so forth. You have an entirely different set of conditions there, and I think it would be most unwise to attempt to bring an area like that within the area of the Metropolitan for Poor Law administration.

97649. Would you say the same for Tottenham and Edmonton?—Not to the same extent; nor could I be as fully convinced with regard to Tottenham because I do not know the district so well.

97650. I understand that the point of your evidence is that the County Council should be the authority in London, and you want that for the purpose of establishing uniformity. Would not a good deal of what you said just now with regard to West Ham apply to districts like Poplar, Bermondsey, Southwark, and other parts of South-East London?—No. I fought Limehouse—

97651. Limehouse is a part of Stepney?—Yes.

97652. I am rather ruling Stepney out, because we may admit straight off that the conditions there are altogether exceptional owing to the alien population?—Then take Hoxton, for which I sit on the council.

97653. Would you mind taking Poplar, Bermondsey, and South-East London?—Certainly I will.

97654. I understood that you said just now that you would require to have a compartment in your brain especially to deal with West Ham, because of the exceptional conditions there; I am suggesting to you that to a large extent those same kind of conditions prevail even within your own area?—I doubt it, and I doubt it very much indeed. There is growing up a separate municipal life in West Ham, which in a few years will separate it even more distinctly from London than it is separated at the present time.

97655. That is something different. What we were just now speaking of was the population and the conditions which create poverty, and that kind of thing. I am suggesting to you that those same kind of conditions prevail within the area that you are proposing to administer?—I do not agree.

97656. I understand that you propose that so far as workhouses and the general administration of the Poor Law are concerned, the borough councils should take these in hand?—Yes.

97657. That is the essence of your scheme. They would be really independent of the County Council, would they not?—Not quite.

97658. But you will have no more control over them than the Local Government Board has at present?—I should take it that we would exercise more control than the Local Government Board now exercises.

97659. Would you mind developing that?—I should think that where charges are very widely different—

97660. Which charges are you thinking of?—Expenditure,

97661. On what—because expenditure comes under various heads; there is in-maintenance, out-maintenance, salaries, and all that sort of thing?—As I understand, although there may be very wide divergence in the charges in respect of the service to which you have referred, the Local Government Board take no action so long as they are satisfied that the accounts are accurate; but I fancy that if the wide difference continued such as is shown in the Return which I have here, the London County Council would want to enquire into its causes, and would insist on the avoidance of anything which approached extravagance,

Comparative conditions of various areas.

Effect on finance of control of Poor Law by L.C.C.

Mr. Ernest Gray, M.A. ; Mr. Philip E. Pilditch, L.C.C. ; Sir Shirley F. Murphy, M.D. ; Mr. Edgar J. Harper.

23 Mar. 1908.

97662. Yes; only the Local Government Board at present control the Metropolitan Common Poor Fund, and they also in a way control the number of inmates of certain institutions on which we can get the other grants. Can you tell me in what other way you would have any control? Every officer who goes on the Common Poor Fund has to be sanctioned by the Local Government Board, and every dietary scale has to be sanctioned by the Local Government Board finally; what I want to get at is where you would come in, in any different way?—I think that all these cases of wide difference in cost would have to be investigated by the council's Poor Law committee, and an explanation must exist of this difference of cost. A difference may be unavoidable or it may be avoidable, and if avoidable I assume that, failing the control which would be consequent upon representation and advice, the council would withdraw payment or would insist that the excessive charges should be borne locally. (*Mr. Pilditch.*) Or should be reduced for the future.

Financial alterations in Poor Law and administration of Metropolitan Common Poor Fund by L.C.C.

97663. Are you going to make one rate for all Poor Law purposes for London?—(*Mr. Gray.*) Speaking without the knowledge which Mr. Harper has, I may say that I see no reason why we should not.

97664. For all the maintenance, indoor and outdoor, levying the rate right over?—No, I must not say that, because that is a question upon which the council distinctly decided it would not express an opinion.

97665. Perhaps Mr. Harper could tell us; is it proposed to make in-maintenance a general charge, that is, a county charge and not a local charge?—(*Mr. Harper.*) Not under this scheme.

97666. Under this scheme would the locality have to bear the cost of its workhouses and its infirmaries, except for the ordinary grants that we have now?—It is not proposed by this scheme to alter the financial relations in that respect. What experience might dictate hereafter under the new régime, is another question.

97667. (*Mr. Gardiner.*) Do I understand that the local authority, the minor authority as we might call it, is to defray the cost of the in-maintenance of paupers which are now chargeable to other unions?—No.

97668. I understand workhouses are to be classified under this scheme, and that you might have one able-bodied workhouse in Kensington to which a man from Southwark might be sent. In that case does the Southwark poor rate pay the cost of maintaining its own pauper in the Kensington able-bodied house, or does the Kensington poor rate pay it?—That is a detail which has not been considered at all, either by the county council or its committee. Obviously some steps would have to be taken to spread the burden equitably, certain portions over the whole county and certain other portions over the areas to which the various individuals belonged.

97669. But then practically the Metropolitan Common Poor Fund, as it now is, is to be abolished?—The proposal is that the administration of it should be taken over by the London County Council. (*Mr. Gray.*) Hear, hear.

97670. Is the basis under which it is collected to continue?—(*Mr. Harper.*) For the present, certainly. (*Mr. Pilditch.*) It is quite possible, of course, to realise that under any system of classification it would be necessary that some part of the charge which is now locally met would have to become central. If you take from the workhouses and classify in a certain way and deal with a certain class of paupers independently of the locality, in all probability, though the county council has not considered it, the charges for such paupers would, I take it, have to become centralised in some form. (*As to this the Witness subsequently sent the following note:*)—

Classification of paupers.

"On the question of classification of paupers under the scheme providing different treatment for those who are—

- (a) Worthy but unfortunate;
- (b) Worthless and lazy;
- (c) Of low type physically or mentally;

I think that such a local body as that proposed would have a wide range of knowledge of the poor in its district, and would be well qualified to discriminate as to the category in which each individual should be placed: and I think that each borough represents an area large enough

to permit of its providing separate establishments for the different classes. Take the case of three London of paupers, Boroughs:—

- (1) The City of Westminster of whose council I am a member;
- (2) The Borough of Islington, one of the Divisions of which I represent on the London County Council;
- (3) The Borough of Bermondsey.

Westminster is a typical rich district, though as a matter of fact 24 per cent. of its inhabitants live in tenements of four rooms or less. Islington is a typical middle and working class residential district. Bermondsey is a typical poor district. In Westminster there are four workhouses and one infirmary for its 3,306 paupers and 658 infirmary inmates. Islington has two workhouses, and one infirmary for its 2,489 inmates, and 789 infirmary inmates, and 138 paupers are lodged in the workhouses of other districts. Bermondsey has three workhouses and one infirmary for its 1,543 paupers and 590 infirmary inmates. None of these boroughs present any difficulty as to classification on the ground of want of buildings, quite apart from the possibility of treating the able-bodied loafer in central penal workhouses or adult reformatories."

97671. (*Mr. Lansbury.*) The point of my question is just here: If the present official arrangements are to remain I cannot see where your power is coming in, at any rate, I cannot see where it is logically coming in, to deal with such questions as whether one board should feed its people on margarine instead of butter, or butter instead of margarine and so run up the cost, or whether that would be purely a matter for the ratepayers; each particular borough should decide for themselves whether they will do that or not. I do not see why, having control of the Metropolitan Common Poor Fund, which deals not with that, but with other matters, you should say that you could withhold a grant for some other purpose because the ratepayers were using their money in some other way. I cannot for the life of me see how you could logically do that?—Surely if the laying down of principles of general expenditure were followed that would involve a sufficient amount of control over operations of that kind in the different localities?

97672. I want to suggest to you that the Local Government Board at present has certain powers and exercises certain powers through the Common Poor Fund, and I understand from your evidence this morning that you are hoping that the County Council can remedy what may be considered defects in administration by holding or withholding portions of that grant?—And by providing rules and regulations which must be followed.

97673. I am suggesting to you that you can only provide rules and regulations for the purpose of administering the money that you are going to grant?—(*Mr. Gray.*) Hear, hear.

97674. And that that does not touch the questions of vital administration which I understand you want to remedy, such as getting uniformity of administration in dealing with various classes of people?—(*Mr. Pilditch.*) I do not quite think that follows. You say that we should only be able to regulate the expenditure of the money that we provide; as a matter of fact, by far the larger portion of Poor Law expenditure is already equalised and provided from central funds. I think it is 70 per cent. (*Mr. Harper.*) It is 68 per cent. (*Mr. Pilditch.*) If you deduct from the balance the cost of outdoor relief which, in all probability, would remain a local charge, there will be a very small sum left which will be outside your power of control.

97675. I am only pointing out that the portion which you would have to control would be that portion which dealt with the particular thing that you wanted to control?—(*Mr. Gray.*) That is assuming that these various funds remain associated with particular services?

97676. Yes?—But that is not the assumption that we have entered into.

97677. They are at present; that is the point?—Yes.

97678. (*Chairman.*) I have got a list of them here. My figures are a little different, but anyhow we will say a little more than 30 per cent. is borne by the local rate, this 40 per cent. is charged on the Metropolitan Common Poor Fund, the expenditure on the asylums' districts is

only 7 per cent., whilst on the exchequer it is 6·5 per cent. Then there is the expenditure made out of the Indoor Pauper Grant, which is about 8 per cent. That money is allocated to specific purposes, and as I understand Mr. Lansbury's point it is this: Are you going to withhold money which has been collected for specific purposes and decline to give it to the guardians unless they do something in connection with the expenditure of their own out-relief which they do not want to do?—We are not proceeding on the assumption that this grant will remain associated with particular services. (*Mr. Harper.*) May I bring in here rather an important fact? Some of the grants for specific purposes are received by the guardians twice over. There are certain indoor paupers included within the definition of an indoor pauper given by the Local Government Act of 1888, namely, children outside the workhouse, pauper patients in sick asylums and imbeciles in sick asylums. They are all included among the indoor paupers in respect of which the London County Council has to pay a grant of 4d. per head; nevertheless, the whole of the expenses of those indoor paupers—the balance which has not been met in any other way—is already thrown upon the Common Poor Fund; so that in respect of those services the guardians receive more money than they pay. It is obvious that in any new system of administration things like that must be done away with. The system of the centralisation of charges requires complete overhauling. (*Mr. Gray.*) Hear, hear. (*Mr. Harper.*) The council have not entered upon that matter at the present stage, because they felt that the financial details must be worked out after the principles of administration had been settled.

97679. (*Mr. Lansbury.*) Only do you not see that outdoor relief is another matter? Outdoor relief does not come in there at all. It is not a central charge but a local charge, and some people want to get a uniform system for dealing with all applicants for relief throughout London. They do not want it to be possible that in one place a woman in precisely the same conditions as a woman in another shall be treated in an entirely different fashion. I understand, or I think I understand, from Mr. Gray that you would meet that kind of thing by withholding your grants for indoor maintenance; I am suggesting to you that you could not logically do that because the cost of giving the outdoor relief in both places comes out of the local rates, and has nothing whatever to do with you at all?—(*Mr. Gray.*) One might say, taking the analogy that I have referred to more than once this morning, that although certain work is accomplished locally by education committees out of the local rates, the Board of Education cannot exercise any control because they are making Parliamentary grants. Nevertheless, they do it because they say: "If you continue to spend this money out of the local rate contrary to our direction, we can withhold a portion of your Parliamentary grant."

97680. (*Mr. Lock.*) Surely this is hardly an answer to Mr. Lansbury, because in the case of education you are dealing with one purpose right through, and Mr. Lansbury puts before you quite a different case—two purposes, one an in-door relief purpose largely supplemented from the centre, the other an out-door relief purpose borne by the local rate, and not in your direct or indirect control, except so far as you are an administrative body?—Must I really assume that there is no connection between outdoor and indoor relief?

97681. I think you must assume it financially from the aspect of the control that at present exists?—I should be very reluctant to take that view that there is no connection between the two.

97682. (*Mr. Lock.*) This is hardly a question of reluctance; it is a question of what you put into the scheme. Your scheme throws no light on this question.

97683. (*Mr. Lansbury.*) Would you not have to get it in the Act of Parliament that you had power to do this? Yes. I should exercise a greater liberty if I were answering for myself alone in answering your questions; but I am here to give the views of the council as expressed in their scheme, and I cannot do that if you carry me into financial details beyond that scheme. (*Mr. Pilditch.*) You say that throwing local responsibility for the payment of out-door relief upon the ratepayers who have to elect the local representative bodies would not be sufficient; is that what I understand your point is?

97684. I only point out that London and West Ham and a lot of other places are standing evidence that there are a good many people in the country who still believe in out-door relief?—You can do it in either of two ways; you can either throw it on the responsibility of the local ratepayer who has to elect the borough councillors, and as one factor will consider whether his borough councillor has been properly allocating the money to out-door relief or not; or, in the other way, you can have rules and regulations which presumably might be enforced by the local authority with some such powers of enforcing them financially as you suggest. We have not ventured to offer a solution of the methods by which this local control can be best effected.

97685. I suggest to you that you have certainly left the biggest difficulty without touching it at all?—The Commission will be quite capable of dealing with that difficulty I am sure.

97686. Are you going to leave the question of contracts?—I think Mr. Gray has already answered that rather fully.

97687. That was before I came in then?—(*Mr. Gray.*) Yes.

97688. Is that to be a local business or a central business?—There was no definite decision pronounced by the council on the subject, but I did mention myself in introducing the scheme that that was one of the objects which many of us had in mind; and no one demurred to that suggestion.

97689. You at least are in favour of centralising the supplies to these various institutions throughout London?—Personally, yes, and I thought, although not specifically mentioned, that it would be covered by one of the clauses.

97690. Then as to the ability of borough councillor? Comparative merits of Poor Law Guardians, —(*Mr. Pilditch*) I personally have not actually been a Poor Law Guardian, although I have been in touch with the administration of Poor Law Guardians in a number of districts.

97691. You are aware that it does take a considerable amount of time, I suppose?—Yes.

97692. Do you think that the present borough councils are better manned to do that work than are the boards of guardians who are elected for the purpose?—I do not wish to make an invidious distinction as to persons, but I say that they are elected in such a way that they are, I think, better fitted to bear the financial responsibility of dealing with the Poor Law so far as it is local. (*Mr. Gray.*) May I add that some of the best members of the boards of guardians are borough councillors and are discharging the two duties at the present time, attending two different sets of committees, and doubling their work instead of concentrating their work. I look forward with certainty to the best of the guardians taking seats upon the borough councils along with those who are already there. (*Mr. Pilditch*) Either directly elected or co-opted, for which purpose suggestions are made.

97693. You are suggesting that you might have borough councillors and other people co-opted to form the Poor Law committee?—(*Mr. Gray.*) Yes.

97694. That committee of course would have to be split up again, would it not, into various other committees?—Yes, probably it would have to be split up into sub-committees.

97695. A board of guardians now has to have a workhouse committee, a children's committee, and, if it is in a large district, a number of relief committees?—Yes.

97696. In your experience of local bodies how many people is it that really do the work?—The number of people who do the work is, I know, comparatively small. The greater is the argument against the continuation of the dual system and the greater is the argument in favour of concentrating on the borough council.

97697. Is that not a greater argument to leave no committee to it at all but to appoint officers in the various districts to take the applications and adjudicate on them?—No, I should be very sorry indeed—and I think in this I should be expressing the view of the Council—to see the whole of this work put into the hands of officials who would themselves be bound to carry out regulations and

Question of Poor Law expenditure and finance under proposed scheme.

Comparative merits of Poor Law guardians and Borough Councillors, and possibility of men holding dual positions.

Mr. Ernest Gray,
M.A.,
Mr. Philip E. Pilditch,
L.C.C.;
Sir Shirley F. Murphy
M.D.;
Mr. Edgar J. Harper.

23 Mar. 1908.

Comparative merits of Poor Law Guardians and Borough Councillors, and possibility of men holding dual positions.

proceed very largely as automatic machines without that freedom and without that human sympathy which a councillor, because he knows he has the power, can afford to give effect to. I say this without any slight upon the officials, who must necessarily take that attitude.

97698. Do you think that a change of name from "Poor Law Guardian" to "borough councillor" will make them more wisely administer the Poor Law in the district which are just now coming in for a good deal of censure for the manner in which they do administer the Poor Law?—No. I do not suggest that it is a change of name at all. I suggest that it is bringing within the purview of the borough council a section of the community which they have hitherto disregarded; and that by having a single authority instead of two authorities I can get one authority well manned instead of two authorities indifferently manned.

97699. You said just now that a good many of the best guardians were on the borough councils; is it not a fact that in most places the active men in the borough are on both bodies, and what you are arguing for is in effect being done now?—No; because they have to run from the town hall to the office of the board of guardians; they have to split up their time instead of having the whole of their work done at the borough town hall.

97700. I am only suggesting that they are doing the work, anyhow?—Some of them are.

97701. And the best of them are?—Possibly.

97702. And the result of their doing it is that we are all in favour of some change being made?—Yes, I suppose, because we all see the great demands that are made upon the single individual's time under the present arrangement, and from the fact that when he is sitting at the town hall he has to regard the question from a borough council point of view, and when he goes away to the office of the board of guardians he has to take a totally different point of view. He has to try and separate his one identity into two individuals.

97703. Surely when he is on the Poor Law committee that would be exactly the same; the problem that will be presented surely will not alter because he happened to have altered his name?—He will then have a different *entourage*; he will have different colleagues to work with.

97704. He may not, for I understand you are hoping the best of the guardians will be on the borough council and on the committee?—No; there I am saying what exists now, not what I hope. (Mr. Pilditch) I do not think it is at all the fact that the best men on the borough councils are on the board of guardians throughout London.

97705. Take it the other way if you like?—It is more the other way, that the best men on the guardians are very often on the borough councils; but that leaves a considerable number of men who are on the borough councils—and the most prominent of them—who are not at present on the boards of guardians.

97706. Do you think they have got more time to give to the public than at present?—I do not quite follow you.

97707. Do you think they have got more leisure time that they can put at the disposal of the public?—Some of the leading men on the borough councils, do you mean?

97708. Yes?—When a keen man is a busy man you never know the limit of his activities till you try him. (Mr. Gray.) I would add that the more responsible work you give them the less will they fritter away their time in profitless chatter, because they will realise that there is stern work to be done.

97709. Do you not find that more and more it results in putting the work into the hands of competent officials, and that the committees are merely registering arrangements?—No. The whole drift of our work at the London County Council is in an entirely opposite direction at this moment.

97710. It is rather early days, is it not, to speak of that; you have only had just over a year of it?—Yes, but much has already been accomplished in that direction.

97711. Of course, a turn of the pendulum again may accomplish it the other way on?—I do not think any council would revert to the old system again. I could give you illustrations, if it were at all necessary—actual

illustrations of large schemes which are in process of passing at this present moment, under which committees are re-taking the power which was given to them and which they had handed over to officials.

97712. (Mr. Lock.) Does that not already to a certain extent confirm what Mr. Lansbury has suggested, at any rate up to the present moment—for of course the pendulum may swing the other way—that hitherto the tendency has been towards the committees being less and the officials more?—That that has been the tendency at Spring Gardens?

97713. (Mr. Lansbury.) I want to suggest to you that this work of administering the Poor Law in London is one which if men are to do it thoroughly means men giving up quite as much time as being a county councillor, which I understand is considered to mean three days a week; I do not mean three days right off, but tantamount to three days in the week?—Possibly.

97714. Do you think that borough councillors are the sort of men who will sit down and do that work more efficiently than it is being done now from the point of view of deciding the principles on which relief shall be given?—Yes. I heard all this on the abolition of the London School Board, and I heard it day and night for months; I heard the whole of this argument with regard to the time that would be occupied and the pressure which would be borne and so forth by the one individual when he had two duties to perform. But I find that the one individual does the duties, and does them very well. I have not the slightest doubt, looking to the borough council of, say, Shoreditch, that if they had this other work put into their hands they would feel the time had gone by for much of the wasted time which occupies their hours and their attention, and that they would settle down to the work and do it well. (Mr. Pilditch.) A large number of good minds in every district which have not been at present directed to Poor Law matters would become so directed.

97715. But I understand there are some good minds even now on both authorities?—Yes. I never doubted nor said so.

97716. I suggest to you that there would be no change?—(Mr. Gray.) In what?

97717. In administration?—(Mr. Pilditch.) And in personnel?

97718. Yes, and in administration, which after all is the important point, for I take it that there is no reason why you should do this except to get the work better done. The question between us is that you think the borough councils would do it better than the present board of guardians, and I cannot see where the advantage lies?—There is another big question outside that of the persons administering and the administration; that is the question of financial responsibility.

97719. You are leaving that for the locality still, are you not?—So far as it is left to the locality it now rests upon a body which is a small body, comparatively unimportant, a body elected by a very small number of persons, very often elected without a contest at all, and it is to be given to a body which is larger, I think you will probably agree more fully representative, and elected more in the light of day, whose proceedings are more subject to public attention and criticism. (Mr. Gray.) May I ask, apart from the *personnel* of the various authorities, having regard to the efficiency of the work, ought not the question of the fact of an insanitary area and a knowledge of the effect of that insanitary area on the poor and the treatment of those poor to be within the purview of one authority, and not of two; and ought not the people who are dealing with insanitary areas and infirmaries to be one single authority working within the area and not two; or should the efforts to prevent disease be separated altogether from the observation of whether that prevention has been successful or not?

97720. I agree with you, only I want the county council to be the authority in deed as well as in word?—If my argument is admitted—well—

97721. The only other question I want to ask you is, are you contemplating a continuance of the central unemployed body?—If you ask me whether the Council are contemplating that, I say the Council have expressed no opinion upon it.

Comparative merits of Poor Law Guardians and Borough Councillors, and possibility of men holding dual positions.

97722. (*Mr. Bentham.*) The suggestion that you have made to make the borough councils responsible for the local work which is now performed by the boards of guardians still leaves what has been pointed to us to be a difficulty in local committees being directly elected for relief purposes. It is true they would not be directly elected for Poor Law purposes but for municipal purposes generally; yet the questions for them would be matters which crop up at election times, and probably influence people who become members of the borough council on the particular policy of granting or refusing relief in a certain form. Do you attach importance to that?—No, I assume it is in operation now.

97723. That is one of the objections to the present system that has been urged?—I see no risk of trouble there.

97724. You would admit that the policy that has been pursued by the persons who are granting relief should be one which would be on rather higher grounds than the mere local necessities—I mean the local requirements of a particular sect in any constituency?—Yes.

97725. That it should be on sound principles which are all apt to go by the board at election times, are they not? Borough councils come out altogether after three years, do they not?—Yes.

97726. There may be a complete reversal of the Poor Law policy as there is in municipal matters if the borough councils have this work placed on them? Do you see no objection to that?—There is that possibility; but one has to bear in mind the direction and control of the central authority.

97727. The direction and control is somewhat ambiguous, is it not, in your scheme? We cannot get quite what the control is to be. In one place in the explanatory notes you say it is probable that “a larger measure of independence might be accorded to them than is possible under the present system”; if they have a larger measure of independence, I do not see how they are to be under more strict control?—As I said this morning, I anticipate beneficial results from the composite committee, which would give effect to the direction and control—the combination of a borough council and a county council working on the same committee, and I think that would over-ride any violent change in the *personnel* of the borough council.

97728. I take it the object of the County Council is, as far as possible, the control of the administration of Poor Law over the whole area?—Generally the view of the council, as expressed in their scheme and in the debate, was that they would direct, and that the borough councils would furnish the local information and the local action.

97729. Furnish local information—really there is more than that, is there not, it means the whole local administration?—Local administration?

97730. If I understand the object of the County Council right, it is that they should have more control over the local administration than is obtained to-day through the separate boards of guardians under the control of the Local Government Board; and if not, there is very little reason for change; is that not so?—We see some difficulty in justifying the position of the Local Government Board *vis-a-vis* the boards of guardians in London. Practically it makes the Local Government Board a rating authority within the London area. We think there should be one rating authority. We want to take the power, and we think we ought to take the power, in that respect now exercised by the Local Government Board.

97731. If you agree the London County Council should be the one rating authority, and that local administrative bodies in the shape of the borough councils should not rate for Poor Law purposes—is that what I understand you mean?—Not quite that; when I said the one rating authority, I had rather in mind the one authority which should supervise the imposition of rates for these purposes, and which should deal with the whole of the equalisation charges; we would not merely have the equalisation funds which we now possess, but the further equalisation funds which we do not now control.

97732. I suppose you look upon the different forms of administration of the various unions in London within one area, to be somewhat of an anomaly?—Yes.

97733. The object of the London County Council would be to get better uniformity of administration all over the area in one form and another?—Yes, that particularly appears where boards of guardians are discharging municipal functions, as, for example, in assessment. I take it the fact is quite beyond all dispute that these municipal functions would have to go to municipal bodies.

97734. So far as registration, assessment, and vaccination are concerned, I propose to leave them entirely out of the question. On Poor Law matters, if we could get a common system over the whole London area, I take it you would approve of that as a very desirable achievement—over the whole County Council area?—I said this morning that I should be sorry to wed myself to the idea of rigidity of treatment throughout London. When one speaks of uniformity of treatment, of course, one means within limits. Uniformity should not be absolute. I do not think, without inflicting very serious injustice and hardship upon groups of people in different directions, that you could secure absolute uniformity.

97735. Where conditions were different there should be room for a little latitude?—Certainly. That is one reason why one wants to bring in an authority with local knowledge.

97736. Would not your object be achieved better by having in each of these districts, call the local district what you may, a committee which would be more or less under the direct control of the London County Council, made up partly of representatives of the borough councils. They would be less tied to the local whims and fancies of the borough council itself, and at the same time get all the advantages of local knowledge?—No, I should not have thought so, nor do I think that is the view of the council. We have had before our minds not merely: How shall we secure the administration of the Poor Laws, but also: How shall we strengthen municipal government in London; and we believe that we are not only carrying out the object you have in view, viz: better administration of the Poor Laws, but we are also carrying out the object which we have in view, viz: the improvement of municipal life, the strengthening of the borough councils, if I may put it in that way. These new duties and responsibilities, this more direct contact with the whole area of local government, would strengthen them, and to set up the committees that you are suggesting, and which were referred to earlier this morning, would, I should think, tend to weaken the administration of the local authority.

97737. Really, the principle of Poor Law administration would take a secondary place, as you say in Paragraph 3; “in other words the council’s views have been arrived at not merely in regard to the improvement of Poor Law administration, but also, and chiefly, in regard to the place which Poor Law administration shall occupy in the general scheme of London local government”?—That passage that you have quoted accurately represents our view. (*Mr. Pilditch.*) Might I say a word with regard to a point you have raised: it is with regard to your question whether you would not have under the borough councils elections turning on questions of relief having been given or not having been given. Our point there, I think, would be this, that under the borough councils you would have elections which turn on a greater variety and a broader class of issues, and would have elections which are more fought in the light of day than the guardian elections ever have been fought, and therefore you would not have that personal element brought into the matter as influencing the persons elected as you have under the present system.

97738. But, of course, a person’s vote may be brought in question at election times; it is known he voted for a certain thing which on the face of it was an apparent hardship, and that comes up and turns out your best men on the borough council merely on a question of relief, which very often occurs now on boards of guardians, and would occur exactly the same on the borough councils.—Of course, on boards of guardians now you sometimes do have persons seeking re-election on the ground that they have provided outdoor relief very fully, but you

Care of sick
children
under
L.C.C.'s
scheme.

would have it less so on a body which was elected not for that specific purpose only, but for general municipal purposes.

97739. It would be one stage removed from that?—Yes, it would be a decided stage removed, both as regards the breadth of the purpose for which the election takes place and also as regards the greater publicity of the election, and the greater light thrown on it, and everything connected with it.

97740. In this scheme it is proposed that children should take a different place altogether to all other kinds of applicants for relief; practically the duties of the sick asylum committee would be delegated to the education committee, that is so far as children are concerned?—(Mr. Gray.) The children are not responsible for their poverty, parents very often are.

97741. (Mrs. Webb.) The sick children would go to the sick authority, would they not?—Yes.

97742. (Mr. Bentham.) That is not so under the scheme as stated in (i) unless I misunderstand it?—When you speak of sick that is a very wide phrase indeed, but perhaps you are referring to a special class.

97743. (Mrs. Webb.) No; we generally mean by sick a person requiring medical treatment, being in bed?—Quite so.

97744. Those children would not be under the education committee?—No.

97745. (Chairman.) Who would they be under?—I should say that the child who is suffering from temporary sickness would probably go into the infirmary, and would in that case come under the control of the local council.

97746. You have taken him away from the local council and put him under your education committee of the London County Council?—The sick child?

97747. Yes; the child (I am assuming it is a pauper child) who is sick you have taken away from the control of the borough council and you have dealt with him by the education committee of the County Council?—Yes.

97748. Supposing he was ill?—He would have to go into the local infirmary or into the sick room which would be associated with the cottage homes.

97749. You would have access to the infirmary belonging to the local authority?—Yes, and I should think you would have to have access to your infectious diseases hospital in the event of infectious disease breaking out.

97750. But that is under the County Council?—Yes.

97751. (Mr. Bentham.) This is not so under the scheme; your scheme is not in accordance with the answer you have given just now.—I do not think the scheme refers to it.

97752. I thought it did in (c), "that to the City Corporation and the Metropolitan borough councils should be transferred (i) The powers and duties of the guardians of the poor and sick asylum district managers with respect to all local Poor Law services, including the maintenance of workhouses, infirmaries, and casual wards and outdoor relief, except such relief as shall take the form of providing wholly or partially for the children." Therefore, children are exempted altogether from that clause; that means they must be dealt with by some other authority, and later on you suggest what authority. That means that sick children would have to be provided for by the education authority?—Yes, but that was not contemplated in drafting these words. These words were, as I tried to explain this morning, intended to refer to those cases in which parents receive outdoor relief consequent upon the burden of children who are in good health.

97753. That is dealt with later on?—Yes, it is referred to here, "and outdoor relief except such relief as shall take the form of providing wholly or partially for the children."

97754. Then it means that sick children would be provided for as they are provided for to-day?—Yes, I should say on the whole that is the case.

97755. Then this is a mistake here?—No, not a mistake, it is incomplete, I will put it in that way; it has not made an exception with regard to the children who are sick.

97756. Healthy children do not come at the present time under the sick asylum management, and it is proposed here that all those duties coming under the sick asylum district work should be performed by the City Corporation and the borough councils with the exception of providing for children wholly or partially. It is incomplete in the sense that it does not say who shall provide for them?—That is so.

97757. With regard to the children being exempt who are in receipt of outdoor relief, you gave an instance this morning of a widow with two or three children, where the children might be dealt with quite easily under a plan of this kind, but all sorts of difficulties come up with regard to families which would make it very, very inconvenient to deal with under the scheme you have outlined. Take a woman who has four children, her husband has deserted her, she wants to make application for relief, I take it she would apply in the first instance to the relieving officer, as you suggested in the other case this morning?—Yes.

97758. Who would take action with regard to the husband who has deserted her?—The local Poor Law authority.

97759. You would not transfer any of those duties?—No.

97760. Either of repayment, of chargeability, or the other duties which now fall upon boards of guardians for dealing with parents and grand-parents?—No.

97761. Would not your object be easier achieved in this way; that all children which come wholly under the maintenance of guardians and having to be provided for by educational institutions, should be sent to institutions provided by the education authority?—Many of those children would no doubt be sent to a day industrial school.

97762. Still living with their parents, of course?—Going home at night, but the school would be under the control of the education committee.

97763. Taking the permanent children first, those who are wholly chargeable to the guardians, either because of the desertion of both parents, or because they are undesirable parents, those children should be cared for by the education authority, and institutions provided for them?—Quite so. We think it is a great pity that there should be special schools managed by two authorities as is the case now.

97764. You say those should not be charged entirely to the cost of education, but may be paid for by the board of guardians who are sending them?—They might pay, or the cost of those children could be divided, and the charges in respect of housing, clothing, and food, be thrown on the general rate apart from education, and the cost for education remain a portion of the education rate, but I stated this morning that that was only a concession to public weakness on the ground that if you continue to enlarge your education rate by charges of this character, you are placing in jeopardy the whole education of the country.

97765. What objection is there to this coming under the poor rate; the children are properly provided for; they are removed entirely from the environment of pauperism; what objection is there to their being charged to the poor rate in the usual way?—And charged for education as well?

97766. Education might be separated and charged to the education committee; some part of the duty might be allocated to the cost of education, but the maintenance of the child might be charged on the poor rate?—Yes.

97767. The difficulty comes here, that when a family is to be dealt with, probably by several authorities, if one member of the family is discharged from one institution before the rest, there is no authority which has complete control over the whole family?—True.

97768. That would be very, very inconvenient, if any system were set up which would not keep together the connection between the whole of the family?—I do not anticipate any trouble of that sort in respect to these children to whom outdoor relief is granted. I should say that where the child is handed over bodily to be kept day and night, that that would be for a set period, and so long as the mother were working and living in the district in which she found herself when

Education
and are of
paup
children of
widows.

the child first came under the care of the education authority, that the child would remain in the institution, but if she changed, and she went into another part of the world, and wanted to take her family with her, she could withdraw them and take them away; and those who went into the day industrial school would be returning at night to the home.

97769. Can you always depend on the parents to withdraw the children themselves? They might go away without them, and you cannot get at them; some authority must keep in touch with those parents to enforce the responsibility they have over those children?—Yes, I should say that would be the duty of the education authority. They have the care of the child, and would be in touch with the parents.

97770. Where a mother has gone into a hospital and left her children chargeable, and the relieving officer has made application to the education committee to take charge of those children, and they do so, by and by the mother comes out of the hospital, she makes application I suppose straight away to the education committee, would you let that be the process, or would you say she must go to the guardians who first took the child in hand, and they would be responsible for getting the family together again—there may be furniture that had been stored by the relieving authority?—I have in contemplation the probability that the education authority, being charged with the care of these children, would establish little groups of Scattered Homes; would have houses in their possession with foster-parents in existence, and the child, who is the one to whom you now refer, would be transferred during the whole period that the mother is in the hospital, to one of these homes where such child would be cared for by the education authority, and would attend one of the council schools and receive education during the day, and be under the care of the foster-parents during the night. When the parent left the infirmary, having recovered her health, and able to undertake the support of her own child, the local agencies of the education authority would be so informed, and the two authorities would ascertain whether the mother was then in a position to maintain the child, and transfer the child to her, if her ability to maintain were sufficient.

Ent of
tutions of
Children's
Care
Committee.

97771. You bring the two authorities in there; that means enlarging very considerably the discriminating function of the education authority, does it not?—Probably it does, but I really do not see any difficulty in that, having regard to what we are now doing with the Children's Care Committees.

97772. The Children's Care Committees do not go into the whole circumstances of the family with regard to all the members of the family, and the possibility of members of the family at a distance being brought in to assist in their livelihood, and in the case of desertion they do not do anything, that would all be new, and it is a very large addition to the amount of machinery?—I do not gainsay that for a moment. I quite realise it is a large additional work. I am prepared to admit it was not in our original scheme. May I say this, because it gives force to the argument; it was not in our original scheme, but when our scheme was prepared by the Local Government Committee it was sent to all the other committees of the council likely to be affected by any of these proposals, and this particular clause was put in at the unanimous wish of the members of the education committee, who realised that they were experiencing serious difficulty in the education of these children, and the view of the education committee was adopted by the council without a word of dissent from any quarter. It was the right view, in the opinion of the council, to take.

97773. Have you thought of Sundays and how you would deal with holidays if you were relieving children and widows?—That is one of the difficulties we experience now with the Children's Care Committee, and a difficulty which would be largely overcome if we could put these children into Scattered Homes.

97774. Would you put in a Scattered Home the child of a widow who is taken into a Poor Law Infirmary and who might regain her health, and take it out again very soon; you would be doing practically what the guardians are doing now with regard to children; you think the function should be transferred to the education committee; it is a very large order?—

We should keep the education of the child, and we should keep the bodily care of the child—the care of the child physical as well as mental.

97775. Take the case of a man who is temporarily out of work, and his child is relieved in that way because he is out of work, immediately he starts work somebody has to discover the fact and acquaint the education authority, so that the responsibility of maintaining the child is thrown on the father; all that is an extraordinary amount of work, which is done now by the guardians?—Yes.

97776. There would be really two sets of officers doing the same thing; one set dealing with the parents and one set with the children, and the overlapping would be far greater than it is to-day?—I cannot follow that suggestion, that the overlapping would be greater. I understand that certain strictly Poor Law duties would continue to be discharged by the Poor Law authority, and that, with respect to these children, there would be constant interchange of reference between the officers of the two authorities.

97777. I can quite see how the education authority might be asked to feed certain children whose parents were in receipt of outdoor relief, in order to ensure that the children should be properly fed, that is a very simple system at the present time and is already acted on in a good many towns. In the case of all children of widows in receipt of relief, tickets are sent to the school, the children are fed and the guardians repay the amount to the education authority. I can understand that, but I cannot understand the relief authority referring the matter to the education authority who may feed the children or not. Nobody is responsible for the family. That is not simplifying matters?—I am afraid some misunderstanding has arisen. I gather from that question that you have understood from me that the education committee would decide whether or not relief should be granted or not?

97778. Yes?—I thought I had made it clear this morning that, on the application being made to the local authority and the facts being brought before the local authority, that is the Poor Law authority, they having decided that relief should be given in respect of those children, instead of giving it in money, they would simply transfer the care of the child, so far as food and clothing and possibly housing, to the education authority, they would not actually give the relief in money, they would transfer the duty of giving this relief to the education authority who would take charge of the child.

97779. I think you said the education authority would then investigate the case, and be decided on by an officer whose function it should be to ascertain whether the case needed relief. Why should there be this further investigation?—For this reason, the officer of the education committee, the school attendance officer, who has probably visited the family week in, week out, for some years past, would be able if the case was transferred to him to decide by an interview with the parent the form in which the education committee should give that relief. If the child, for example, is transferred entirely to their care, shall they take the child and put him into a scattered home, or shall they simply put the child into an industrial school for the day? You admitted just now that there might be a strong argument in favour of the education authority supplying the food for the child. We find within many of the poorer districts of London that the demand for shoes and adequate clothing is quite as keen with some of these children as the demand for food; indeed, they can often beg food where they cannot beg clothing and, although the law does not at present allow us to supply them with clothing, yet if there were not voluntary agencies the demand on the State would be so great that the power to grant would be brought into existence. That is all work that is being done by the attendance officer, which I think would necessitate a sort of second, I will not say inquiry, into the poverty of the parent or into the question of the chargeability or the question of the desertion of the husband and things of that character, but would take the form of an agreement with the mother as to the simple way of helping her with her children, in what way can the education committee discharge its duties to the State in regard to these children? It might be that in some cases the industrial school would be the

best, and very much would depend too upon the ages of the children, the period at which they would be going out to work, and the age particularly of very, very young children.

97780. After the education committee has decided how to deal with the children in such a case, the whole circumstances of the family may alter, that is, a son may come home who has been abroad and has good wages and who is quite willing to maintain them all. Do you rely on that knowledge being known to the education authority as well as to the Poor Law authority?—Yes.

97781. In what way would it come to the knowledge of the education authority, it would be to the interest of these people not to let you know it. Unless you have all the duties of the Poor Law authorities, you could not possibly ascertain that, but you would have to be so closely in touch with the Poor Law authorities that it might as well be one machinery?—If they are receiving the relief in the way of money at the present time, is it not equally their interest to prevent the Poor Law authority knowing it? They do not tell the Poor Law authority that the son has come home and is bringing in a couple of pounds a week, they will merely go on and take the outdoor relief as well.

97782. That is my point; it is the duty of the relieving officer to visit these cases periodically, and to know the circumstances and report to the guardians; if you are going to say it shall be the duty of the education authority to do the self-same thing, you are getting two sets of officers doing precisely the same kind of work, it is duplicating it, which I think is wholly unnecessary and overlapping merely for the sake of a sentiment?—I have tried to say throughout that when the child is handed over to the attendance officer as the representative of the education authority, he will then continue to discharge those duties which, under the existing system, the Poor Law officer would discharge; he would maintain the connection with the family and would have the same means of ascertaining whether prosperity had come back to the family or not.

97783. (Chairman.) I cannot understand in the least how the thing is to work, even with your explanation. What is the education committee that is to deal with this case? How is it composed?—The Education Committee of London.

97784. Take the case of a child in Bermondsey; who would deal with that child in Bermondsey?—The children's care committee.

97785. Of?—The London County Council.

97786. Where does it sit?—In connection with the local school.

97787. In Bermondsey?—Yes, in connection with the school which the child is now attending, and where the child would be fed to-day if the parent did not go to the Poor Law authority.

97788. What power has that committee to feed children? Have they any power to make charges on the rates?—By the Act of 1906 the local authorities are empowered to spend money in providing appliances and machinery for feeding children, and they may also impose a rate not exceeding $\frac{1}{4}$ d. in the £ on obtaining the approval of the Board of Education for the scheme, and on satisfying themselves that voluntary agencies are not sufficient for the purpose. In some towns this is in operation, in London it is not. In London we are now providing the machinery, but we are not paying for the food. That is being met, as you know, from voluntary sources, but these children's care committees are distributing that money, whether it comes from voluntary sources or from the rates. In distributing the means for providing for necessitous children, they are now weekly making themselves acquainted more or less completely, not yet sufficiently, but more or less completely, with some 45,000 children per week in London. Many of these children are the subjects of outdoor relief. There is a committee which is in close touch with the education committee of the council acting under the directions of a specially appointed under-fed committee, which is dealing with the wants of these little children. They do provide them with food; they are in effect the managers of the school also, and are providing them with education, and they add the third supply, that of clothing by means of voluntary agencies, in a very large number of cases.

97789. Then the resources of London at the disposal of these committees are voluntary resources at present? London's—In respect of food, but not in respect of machinery and poor appliances; we are paying for those out of the rates. children.

97790. If they have nothing but voluntary money to deal with, what it comes to is, that they would supplement the relief given by the Poor Law in connection with these children with moneys out of voluntary funds?—They would.

97791. They must, is it not?—But the suggestion I have made is, that this is the machinery which could be utilised for the commencement of this work, but there would be obviously a development along those lines, that is instead of trying to discharge this duty from voluntary funds it would be discharged from a rate-aided fund.

97792. But surely the simple plan would be, if you want to look after these children, for the local authority who deals with them when they give out-relief, knowing the school board, to ask the attendance officer to look after them; it would be simpler?—That brings me back to where I was the first thing this morning; when they give this money to the parents the children do not get it.

97793. (Mr. Bentham.) But they would give orders for them to be fed at the school?—They might give an order for the child to be fed at school and an order for the child to be clothed at school. Proposal as to education and relief of children.

97794. They can clothe it themselves; there is no need for that?—The Poor Law authority can?

97795. Yes, all the school managers have to say is that it is desirable these children should be better clothed, and let the relief authority deal with it; they can deal with it; it is quite a simple matter and would throw no extra expense on the education authority?—Then that necessitates the children remaining in the neighbourhood of their home, and within the purview of the local Poor Law authority, whereas some of us conceive that it would be a great advantage if the child could be taken away altogether.

97796. Not necessarily; we assume they can be taken away altogether; you admit they can be taken away altogether, but if the parent will not let them go, some one is responsible for seeing those children are fed: you cannot punish them by saying the children shall not be fed if the parents do not let them go?—No. If you suggest that you may have the two authorities discharging the work with regard to this one child, the one authority being responsible for the clothing and giving an order on the education authority for the food and paying for that food, I have no serious objection to find to that, excepting that you are maintaining what I understood a few moments ago was a criticism of my plan, namely, two authorities who would be dealing with the same child.

97797. The functions are quite distinct. Here all the guardians having to make sure that these children are properly cared for; they grant relief with that object, they say there is one form of relief here which is available, we will make sure that the child gets that relief, and they make an order on the education committee of a particular school to give food to that child. The directing is entirely with the relief authority, not the other. The education authority have no power to say "No," so long as the guardians give orders that they are to be fed at their expense; then you make sure that the child is properly cared for?—Let me carry that a step further. You are dealing with a child of twelve years of age, the mother is out at work all day, there is no father, and it is the eldest child. You have to look at the up-bringing of that boy; the local education authority would say without hesitation, If we can induce the parent to part with this child and put him into an industrial school, or send him into one of our cottage homes where, during the next three years he can be learning a trade as well as carrying on his ordinary educational work inside the school, there will be a very great advantage to the State; but unless you are going to give your education authority some such power they may attempt to give the child just such instruction as the local school affords, and that instruction may be totally unfitted for the boy who is attending the school. You ought to get that child out of that to another type of school so that he can take another type of training.

Feeding of London's poor children.

97798. I take it the local authority would be neglecting its duty if because the local authority was providing the food it should neglect the child with regard to education; it would come from the education authority what was the best way of relieving the child educationally?—You have no power now to go to the parent and say, "Will you part with the child altogether and send him down outside London into a cottage home?"

97799. You would not have power under the scheme you propose, you do not propose having powers of compulsion. You would only have powers of persuasion, and they can be exercised now through your school attendance officer?—I should say to the parent, we will grant you outdoor relief if you like, but it must take the form of handing over your child to the education authority so that they may put him into a cottage home outside the London area, where he will get the advantage of a proper treatment.

97800. You cannot enforce that, and if you cannot enforce it, it all comes back to the same point that some authority must be responsible for the relief of the child. If the parent is not willing to give it relief in the way you suggest, someone must be responsible for the child's welfare?

97801. (*Mr. Loch.*) Has the council accepted what you say as to taking away the child, if there is a question of out-door relief, as a compulsory arrangement?—The council have accepted what is here on this paper. That is all; they exempted these children from the operations of the Poor Law and transferred them to the education authority. I am repeating, as nearly as my memory will carry me, the arguments which were brought forward by the sub-committee of the education committee when this amendment to the general scheme was being drafted, because I am a member of the education committee, and of several of its sub-committees.

97802. It is not here, is it?—No.

97803. (*Mr. Bentham.*) It would involve the education authority providing meals every day of the week and all the year round?—We are in fear of that now.

97804. On Sundays?—We are getting seriously apprehensive of what is going to happen.

97805. (*Mr. Loch.*) The council have not adopted the system yet of paying for all this out of the rates?—No.

97806. That is to say they have to come to a further decision before what you say could follow?

97807. (*Chairman.*) It is purely voluntary at present?—Yes, it is obvious the council had something of this in mind when they put in the further clause that these charges which were consequent upon taking over the children should not be allowed to fall upon the education rate, that they did realise that there was going to be a charge on the rates in taking over this work, and a charge which the council would bear.

97808. (*Mr. Loch.*) Did that not come from the education committee?—Yes.

97809. They would naturally, would they not?—Of course, they would; they would protect the integrity of their own rate if they could.

97810. (*Mr. Bentham.*) It is not clear what it is to be charged to, whether to drainage or to some other account; it must be charged to some account.

97811. (*Miss Hill.*) It is not really here in the scheme at all, is it?—(*Mr. Pilditch*) I think the idea was that it should neither be charged to the education rates, nor on the local Poor rate; that it is desirable to bring the children outside the scheme of the local Poor Law, but it should in some form or other not described, become a central charge, as the other Poor Law charge is central.

97812. (*Mrs. Webb.*) As the Poor Law Committee is of the central body?—Yes, I think that was the idea. I do not think we were so strongly concerned with the point. It was rather outside our view for the administration of the Poor Law for London. May I say one word with regard to a question which was raised by the Commissioner who has last been asking questions at an early stage of his examination, and that is I think he addressed some kind of criticism to a part of the arguments which we advance in Paragraph 41 of our statement, when he dealt with our statement that it was probable a larger measure of independence might be accorded to the local

authorities than is given under the present system. A little further on we say it would be necessary to make provision for some co-ordination by the central Poor Law authority. I should like to say in particular if the wording of that clause gives rise to the impression that we think on big questions and questions of principle it would be wise to give much greater independence to local authorities, or if it gives rise to the impression that full co-ordination and a proper measure of control was not necessary on the part of the central authority, I would refer the Commissioners to the actual wording of the resolution, which is more definite than the wording of that particular clause in the arguments which substantiate the resolutions, and, where I think we make it quite clear on both those points our idea is that there should be a full measure of co-ordination and control. I think what was in the mind of the Council as regards the question of greater independence to local authorities was greater independence in regard to the innumerable mass of small matters, where now the Local Government Board has, by the duties cast upon it, to supervise the actions of the boards of guardians, and which I think are admitted not to cover the ground altogether. The kind of co-ordination and control that one central authority would get, I take it, would be more full than it has been in the past, and is a broader kind of control, more on questions of principle than questions of small expenditures.

97813. (*Mr. Bentham.*) These restrictions on small matters by the Local Government Board would be better stated by guardians who are suffering from them, would they not?—I daresay you have had some guardians here.

97814. (*Mrs. Webb.*) I gather that you do not think the condition of the children under the Poor Law satisfactory?—(*Mr. Gray*) Far from it.

97815. There are 20,000 children in the workhouses, are there not?—Yes.

97816. They are in workhouses in which there are all other kinds of inmates, imbeciles, defectives, aged and able-bodied?—Yes.

97817. You do not consider that is satisfactory?—No, we want to get the children away from contact with Poor Law administration altogether.

97818. Has your attention been called to the condition of the children on out-relief?—Yes.

97819. There are 170,000 of those children, are there not? I cannot answer for the number.

97820. That you may take from me. You do not consider their condition as satisfactory?—I regard it as most unsatisfactory indeed. To use the words of Miss Susan Lawrence, who is keen on this subject, there is no child in London so badly off as the child on whose behalf out-door relief is granted.

97821. It is possible that the bad condition of those in the workhouse, and also the bad condition of the children on out-door relief, is just because they are managed by authorities who are managing all the other classes of destitute persons?—I think there is probably something in that—much in it.

97822. In one sense we must divide up a destitute family, so that each person of that destitute family should be treated by an authority who understands that particular form of service?—Yes.

97823. That is your object?—That is our object

97824. With regard to these children on outdoor relief, the school attendance officers are already in constant communication with these children and their mothers, are they not?—They know every little one by name.

97825. You could hardly say that of an ordinary relieving officer?—I cannot answer for him. I have not been in such close contact with him for twenty-five years as I have with the school attendance officer.

97826. The school attendance officer really does understand the home?—Well; and, more than that, he is regarded as a friend by the mother, and not as an inquisitor.

97827. Therefore supposing the outdoor relief was awarded by the Poor Law authority for the moment, as under your scheme, it would be the school attendance officer who would distribute that outdoor relief, and see that it was not misused?—Yes.

Mr. Ernest Gray,
M.A.;
Mr. Philip E. Pilditch,
L.C.C.;
Sr Shirley F. Murphy,
M.D.;
Mr. Edgar J. Harper.

23 Mar. 1908.

Extent to which Central Authority would control local Poor Law authorities.

Unsatisfactory condition of children under present Poor Law system.

Attitude of mothers to school attendance officer.

Mr. Ernest Gray, M.A. ; Mr. Philip E. Pilditch, L.C.C. ; Sir Shirley F. Murphy, M.D. ; Mr. Edgar J. Harper.

97828. That would be a great advantage?—Yes, I think so.

97829. Would there be any real practical difficulty in the education committee going to the authority, whether it was a local committee or a judicial officer, leaving that point unsolved, and asking that outdoor relief should be given in respect of a particular family?—I not only think there would be no serious difficulty, but I am hoping that some local authority, or some agent of the central authority, will quickly realise that there is a duty imposed upon them of looking after these children, a duty which everybody must recognise, that anxious though the parents may be to discharge it, they cannot in every case fulfil that duty.

Need of classification of pauper children in schools.

97830. Hitherto leaving those children under the mixed authority dealing with all destitute persons has not resulted in their being looked after?—It has not.

97831. To go to another point, to the question of the Poor Law schools, has it been brought to your notice that even in the best Poor Law schools you will find sitting side by side a mentally defective child, a physically defective child, and an extremely sharp child?—I believe that is the case.

97832. (*Mr. Bentham.*) Do you visit those schools?—I have visited them.

97833. (*Mrs. Webb.*) One of the advantages in taking over those schools would be that you could re-distribute the children according to their natural faculties and their natural peculiarities?—Yes, and you would also bring into touch with these children officials who have been specially trained to properly classify these children, and to detect signs of weakness in early life, and apply remedial treatment before the defect has advanced so far as to make these children a permanent charge upon the Poor Law of the community.

97834. The category of destitute children having no relation to the natural characteristics of the children, destitution does not afford an index to the proper treatment of the child?—No.

97835. And this one accidental fact of destitution has formed the index under the Poor Law to the treatment of the child by the Poor Law authority?—Yes.

97836. To go off that question to the relation of the Poor Law Committee of the county council to the county council, I understand you do not wish to make it independent of the county council?—No.

Appointment of Poor Law Committee of L.C.C. to be analogous to Education Committee.

97837. You do not wish it to have the same relationship to the county council that the Asylums Committee has?—Certainly not.

97838. You object to that relationship?—Personally, yes. I think it should be the relationship which the education committee occupies to the council.

97839. Do you think that any other relationship would be resented on the part of the county council?—Yes.

97840. You think, for instance, if a statutory Poor Law committee was set up with completely independent powers even to the extent of incurring capital expenditure, you would object to that?—I am perfectly certain that the London County Council would object to it. I cannot answer for other county councils, but where the desire is so keen to have complete control over London finance, as it is at the present moment, they would desire to have whatever committee might be constituted dealing with large municipal funds under the control of the council.

97841. You do not contemplate that the Local Government Board should be called in to arbitrate between the committee and the council on questions of expenditure?—No, it ought to be our own committee appointed as our education committee is to-day.

Powers of L.C.C. as to institutional relief.

97842. Would you suggest, if we gave increased powers to the Asylums Committee, that the Asylums Committee should be put into the same relationship as the education committee?—There I am in a difficulty. My committee drafted a scheme, and we submitted it to the council, and the council accepted an amendment; and the view of the council is expressed by that amendment.

97843. That amendment is what?—That amendment is to the effect that the asylums now under the control of the Metropolitan Asylums Board, which are workhouses under the Lunacy Act, 1890, should be transferred

as county asylums to the council; and that the asylums committee should continue to be the visiting committee of L.C.C. under the Lunacy Acts, but with power to co-opt members, only to such extent as shall conserve the control of expenditure to elected members. As I read that amendment, that does not give the council the control over the finances of that Committee.

97844. I was at the debate, and I rather gathered there was an undertaking from the Chairman that he would consent to a change in the relationship between the finance committee and the London county Council making it more in the nature of the education committee?—So did I.

97845. You think that would be the general feeling of the Council?—I think it was the feeling of the Council when this amendment was carried.

97846. Therefore, far from desiring another committee to be set up with independent powers, they would like to reduce all their present committees to the relationship of the education committee?—I am not quite clear there; I think that there was a general view in the Council that the pauper lunatics should not be dealt with by the Poor Law Committee.

97847. That they should be dealt with by the asylums committee?—Yes, I think they did subscribe to the doctrine that lunacy should not result in the subjection of the unfortunate persons to ordinary Poor Law control; that they were contemplating a separate committee; but I think they were contemplating a committee under financial control.

97848. Can we find out why it was that the infirmaries were not handed over to the asylums committee?—Yes, I think that the idea that the Council had with regard to the infirmaries was that they were closely associated with the work of sanitation, as conducted by the local borough councils.

Dissolution of control of infirmaries from Poor Law.

97849. It was their desire to connect the infirmary with domiciliary sanitation that made them keep it with the local sanitary committee?—I think so.

97850. It was not their desire to connect it with the Poor Law?—No.

97851. I think I am right in assuming that it was their desire to link it up to the medical officer of health of the borough council?—Yes.

97852. So you anticipate that those infirmaries would be transferred to the sanitary committee of the borough council?—Personally, I should say they would be.

97853. (*Mr. Loch.*) Is it part of the scheme as put down here?—The scheme provides for the formation of a local committee to deal with Poor Law matters. I do not for the moment recollect whether it distinctly follows that infirmaries should go to that particular Poor Law Committee.

97854. Is it or not part of the scheme; it makes a great deal of difference.—You will see in Paragraph (c) (i.) it says the power and duties of the guardians of the poor, the sick asylums district managers with respect to all local Poor Law services, including the maintenance of workhouses, infirmaries and casual wards and outdoor relief will go to the borough councils, and the borough councils will discharge their ordinary Poor Law duties through a Poor Law Committee, but I do not think that precludes the borough council from transferring to such of its other committees portions of the work which may be more appropriately dealt with there. I do not think this proposal of ours is Medo-Persian with regard to the borough councils any more than it is with regard to the county councils, and the Commission will observe where we had our own personality or that of our council more completely under observation, an object nearer to us than the borough council, we preserve distinctly in phraseology our freedom to distribute these duties to various committees as circumstances might best direct, and I have no doubt that they would leave similar latitude to the borough councils in distributing the duties which would be allotted to them.

97855. (*Mrs. Webb.*) I only wanted to find out really whether it was a desire to keep the infirmaries connected with the sanitary part of the borough council's work, or a desire to keep them back in the Poor Law?—It was quite clear that we were anxious the infirmaries should remain under local control, because we frequently dis-

on cussed the desirability of the one local authority engaged in the sanitary work of the district being able to watch the effects of it, to seek for information which would lead to further treatment of the whole district.

97856. For instance, when a man went out of the infirmary you would like him to be followed up by the health visitor or the medical officer of health for the district?—Yes, although Sir Shirley Murphy has far more information on that subject than I have.

97857. (*Mr. Loch.*) The council has neither directly nor indirectly pledged themselves to place the infirmaries under the sanitary authority of the borough council or district?—No.

97858. Neither directly or indirectly?—No.

97859. (*Mrs. Webb.*) It is a question of what it has in its mind.

97860. (*Mr. Loch.*) Is there any sufficient reason that you can put forward, such as you would in a letter to *The Times*, for instance, that the council has so far gone in its mind that if this question had been put to the vote, they would say that the infirmaries should be under the sanitary authority of the borough councils—that you could affirm as a matter of fact that it would be so voted?—No, I could not.

97861. Therefore it is not clear?—I think the words here “the administration of other transferred duties should be amalgamated with the administration of the existing duties of those authorities,” were intended to cover local authorities according to local needs.

97862. (*Mrs. Webb.*) To go back to the Poor Law Committee of the London County Council, what exactly is the Poor Law committee going to do? The children would be under the education committee.

97863. (*Chairman.*) I do not quite understand what position this Poor Law committee is to occupy. I thought it was to be of much the same composition as the education committee?—Yes.

97864. The education committee is a statutory committee, is it not? I understood you to say you did not want to set up any more statutory committees?—(*Mr. Pilditch.*) The words we have used about the committees are those used in the Education Act. We either refer, or delegate powers to them, except the power of borrowing money or raising a rate. (*Mr. Gray.*) That phrase “statutory committee” does not always mean the same thing. Under the Education Acts of 1902 and 1903 we are bound by Statute to set up that committee, but we may not delegate to that committee the power of borrowing or of raising a rate, and we are not bound to delegate our duties, although we are bound to take its advice; but the asylums committee is in a totally different position, that is a statutory committee set up under the Lunacy Acts, and in that sense it is a statutory committee, but they are in a totally different position.

97865. (*Prebendary Russell Wakefield.*) That is not the position you wish this new committee to have?—No, the analogy we have taken throughout is the education committee.

97866. (*Chairman.*) Have the education committee's estimates to be passed by the finance committee?—Yes.

97867. Since they have been in existence has any item been sent back?—Sent back by the council.

97868. Has the council ever interfered with the expenditure of the education committee?—(*Mr. Pilditch.*) Over and over again. (*Mr. Gray.*) The finance committee I am afraid exercises a very benevolent jurisdiction over it.

97869. So that the education committee is controlled not merely as regards borrowing money, but as regards its current expenditure?—Yes, not only in gross but in detail. When you send up the estimates, as we are in process of doing now at this moment, the finance committee would point out that you might have a closer estimating on various items, or that it is undesirable that you should expend in certain directions as largely as you are proposing to do. They would revise the estimates, and can, on necessity, report to the council thereon. Indeed I do not think we can submit the estimates of our own motion.

97870. (*Mr. Loch.*) Does your statutory lunacy committee send up estimates?—No, the difference there is that as to the asylums committee at the present time, we do exercise a financial control when it comes to a matter of erecting a new building, but no control over maintenance expenditure.

97871. And you do not by arrangement have any estimates sent to you?—No, and we have no control over the appointment of their officials; indeed, I believe the clerk is appointed annually, because of the committee going out of power annually.

97872. You would not like that in the department we are now discussing?—No.

97873. (*Mrs. Webb.*) The education committee is under no less financial control than any other committee of the council, is it?—Excepting that the process of delegation to the education committee is very much larger than to other committees, and that the education committee is relieved of the obligation to report on many small details to the council.

97874. Is that by Standing Order or by Statute?—That is entirely by Standing Order.

97875. The council could have the same Standing Orders about any other committee?—Naturally.

97876. Therefore, broadly speaking, the education committee stand in no other financial relation to the London County Council than any of its other committees, barring the asylum committee?—Quite so.

97877. You want the Poor Law committee to be completely under the financial control of the London County Council?—Yes.

97878. (*Mr. Nunn.*) I think you said in answer to the last Commissioner that destitution was no indication of treatment for the children of destitute persons?—Yes.

97879. The assumption underlying that was that the Poor Law simply dealt with destitution, was it not?—I do not know what was the assumption in the mind of the querist.

97880. In your mind, in your answer, I meant?—What I wanted to say, and was expecting a second question in order that I might say it, was this: that having these children of various types in one school, under Poor Law control, many of us would be very anxious to take some of them out, and treat them on totally different lines to those that are found in our schools for the destitute children.

97881. Is not that a process which has been going on during the last ten or fifteen years very rapidly?—It has been.

97882. Under the present Poor Law?—Yes, but still I believe we are a very long way off from recognising that many of the children now classified as mentally defective, are not naturally mentally defective, they are simply physically underfed.

97883. I have no doubt?—And that their proper treatment is not in a mentally defective school, but in a school such as the education committee is now providing in the open air.

97884. But the mere fact that children are being taken up by the Poor Law and their distress in after life practically prevented by this more modern treatment in stricter classification such as you suggest, suggests the further point that the Poor Law relief is rather changing its aspect and is dealing with something more than mere destitution at present, does it not?—Yes, it does suggest that; I think it is changing its aspect.

97885. If that is the case, the fact that destitution is no indication of the treatment of the children, if the Poor Law is being improved, it does not really settle the question of how you are going to treat the children at all, does it; the fact that it goes beyond treatment and deals with prevention does not allow it to be any criticism of our system to say that destitution is no indication of their treatment. Supposing that the Poor Law is undertaking prevention of destitution in a certain large number of children, it is not criticism of the Poor Law to say that destitution is no indication of the treatment of the children, is it?—I am afraid that that is more a question of opinion than of fact.

97886. I should have thought it was a question of deduction. Of course, it is quite possible that a Poor

Relation between L.C.C. and its various committees.

Attitude of Poor Law towards destitute children.

Mr. Ernest Gray, M.A. ; Mr. Philip E. Pilditch, L.C.C. ; Sir Shirley F. Murphy, M.D. ; Mr. Edgar J. Harper.

Law, supposing one is reconstructing a Poor Law altogether, might deal with something quite different to mere destitution, might it not ?—Yes.

97887. Has that been contemplated at all in the considerations of the County Council ?—I think it has ; in trying to cut off the children, for example.

97888. That is purely preventive, is it not ?—Yes.

97889. That is not simply relieving destitution, as you find it, but preventing destitution in the future ?—Quite so.

23 Mar. 1908.

Dissociation of pauperisation from destitution.

97890. Is it not possible to take into consideration in dealing with the poor, not merely whether they are at present destitute, but taking them on a more scientific basis, analysing what the cause of their distress may be, making inquiries which will indicate what the treatment should be and judging, therefore, by means of the treatment the inquiry suggests, remove the cause of distress in each case ?—That is one of the reasons why we propose to bring them under the control of the municipal body, which has the environment of the pauper in mind as well as the pauper himself.

97891. If one looks at municipal life, that is really the dominant factor in your consideration of the Poor Law, is it not, that you want to develop municipal life, and you cannot develop municipal life sufficiently without really dealing with the mass of poverty which hitherto has laid outside the scope of the borough council ?—Of that in my mind I have no shadow of doubt ; I believe that was the dominating factor with the council.

97892. Therefore you propose to hand over to them in the meantime the question of the relief of distress ?—Yes.

Co-ordination of Charitable and Municipal relief.

97893. You give certain figures as to the relief of distress in the Metropolis ; you make it something over four and a half millions of annual expenditure of the guardians upon relief of the poor, do you not ?—Yes, by the guardians and other authorities for the year 1904-05.

97894. You are aware, of course, that quite outside the Poor Law guardians, voluntary and endowed effort distributes something like one and a half millions more than that annually ?—It must be a very, very large sum.

97895. It approaches seven millions, I understand. In developing municipal life, therefore, you have to consider not merely those who distribute your four and a half millions, but those who distribute your six and a half millions ?—Yes.

97896. It remains a question to consider in what way you are going to draw those people into your scheme ?—There is no person they go to more readily when they are anxious to raise money than to the mayor of the borough, to get him to preside at the meeting or to open the list of subscriptions, or take some active part, in order to set the stamp of municipal approval upon the private effort which is being undertaken.

97897. You are aware also, of course, that this six and a half millions, although a good deal of it is administered fairly and profitably to the community, is to a very large extent really manufacturing pauperism ?—That is so, I believe.

97898. You cordially agree with that ?—I do myself.

97899. If, therefore, we are to prevent destitution in the future as well as merely relieving it in the present, we shall have to deal with the administration of the six and a half millions ?—Yes.

97900. Is it not desirable ; I do not know whether you have come across it very much in local life, but has it not occurred to you that there is a very great deal of friction between the legal authorities and the voluntary authorities, a great deal of overlapping, a good deal of supplementation, and a good deal of friction as to policy ?—I cannot give an illustration from London, but I went through what was known as the distress period in West Ham, and anything more objectionable I have never met with in my life in the relief of the poor, where you had a supposed co-operation between a voluntary and a municipal effort without any municipal control.

97901. You are really in despair of co-ordinating charitable and municipal relief ?—No, I am not in despair of that ; I believe if it were generally recognised that there should be that co-operation, and if those who are

actually engaged in promoting the charitable organisations were encouraged to look to the municipal authorities as their centre and as their directing force, very, very much might be done. What I am objecting to is this sudden uprising of some voluntary philanthropic effort without direction from the municipal authority, without any regard whatever to poor relief, with the result that public money is distributed without regard to the needs of the recipients and indeed, as we had in West Ham, where relief tickets were sold outside public-house doors.

97902. Perhaps I should make myself more clear if I were to ask you in what way you thought you could organically connect public relief and voluntary and endowed relief ?—There again I am afraid I must say that that was a phase of the subject the council have not considered, and I am a council's witness to-day, not an individual witness.

97903. What I was coming to was the constitution of your committee of the borough council : whether it is not desirable, in view of the fact that so much pauperism is created and so much pauperism might be prevented by purely charitable effort, to make the local body, whatever it is, very largely consist of the charitable persons of the neighbourhood ?—There we are on safe ground. We have suggested that borough councils in carrying out their work should form a competent committee very much on the lines of the central committee, and no doubt it existed in our minds that the borough council would certainly co-opt these very persons who had been in the habit of administering relief through charitable organisations of this kind : thus they would know what the municipality were doing, and the municipality would know what they were accomplishing by private means : the two agencies would be in active co-operation working into each others hands.

97904. The selection by the county council of members, for the managers and members of such committees as you are now proposing is rather arbitrary, is it not ? Would you welcome any scheme such as Mr. Pilditch has suggested, by which you could have an organic representative body for charity in the district. Supposing, for instance, you had such a system as we have in Hampstead by which every agency in the district sends representatives to a council, the municipal bodies, the friendly societies, the trade unions, the clergy of all denominations, and the various voluntary and endowed associations whose nomination is affirmed, would that be a method of appointing a portion of your municipal committee ?—That is a subject that I have not carefully considered, and I should hardly like to pronounce an opinion without an opportunity of looking at it more thoroughly than one can at the moment.

97905. A great deal of what you said with regard to the care committees I suppose suggested that you meant really that they would undergo a considerable development from what they are now ?—Yes, I think they must.

97906. At present I think they are at first nominated by the managers, then they co-opt whom they like ?—Yes.

97907. They have no paid officer ?—No, not directly.

97908. Except they get the use of the attendance officer ?—Yes.

97909. So that obviously you intend there must be a much more elaborate committee to undertake the medical care of your children ?—That has been in the minds of a great many people for some time, that apart altogether from our Poor Law service these local committees would come into much closer contact with parents and would, as many of them do now, seek to find employment for the children and so forth : indeed justify their name of children's care committee.

97910. Do you anticipate including in the scheme the subject of medical inspection ?—It has not been out of our minds, although it is not expressed on paper. I may say we have had this before us, that as the law now stands you may have a child examined by the medical officer of the education committee, and the law permits treatment, and treatment will no doubt necessarily follow examination in some cases, and as that medical treatment will be given by the medical officer for education, there is the prospect that he will come into contact in the home with the borough council medical officer ; he may come into contact with the medical officer associated with the board of guardians, and I think it is just possible that

the three of them may meet a fourth officer, the representative of Sir Shirley Murphy in the one tenement, and the prospect of four medical officers giving advice to the parent is alarming.

97911. You want to find a solution of that problem?—We want a reduction of the number and concentration of the work.

97912. If you have a body of special representatives on your municipal body, whatever it is, you might get over that difficulty, might you not?—We thought we could.

97913. One could get over it?—The Poor Law medical work and the borough council medical work would probably coalesce.

97914. Might I ask you with regard to the question of lunacy, is it the case that the County Council contemplates a receiving house for all lunatics in the Metropolitan area?—I cannot say. (*Mr. Pilditch*) Might I say with regard to one question asked as to were we or were we not rather in despair of co-ordinating charitable and municipal relief, I think Mr. Nunn used the term "organically connecting" them. We know that the problem has been the despair of philanthropic people in London for a very long time, but in our consideration of this subject it is because the principle of municipalisation appears to provide such a means of co-ordinating municipal and charitable relief in each district of London that we support it so strongly as we do. The great difficulty up to the present has been that in all the districts of London you have no well organised centre in connection with which such a policy could be carried out.

97915. Except at Hampstead; perhaps you do not know that?—I will deal with the particular circumstances at Hampstead.

97916. May I suggest for your consideration whether there may not be considerable friction in two parallel bodies that would be overcome if those bodies were united?—Do you mean uniting municipal and charitable work?

97917. Supposing your charitable body, some representative body, formed a policy with regard to the outdoor relief, and supposing your municipal body formed another policy, they would be constantly at loggerheads, would they not?—They would be more likely to agree on some common policy if they were together under the presidency of some one man and brought in contact with one another, and able to see the difficulty each was trying to deal with than if they were, as they are at present, absolutely out of contact one with the other.

97918. If one body actually fed the other, you would reduce it to a minimum?—With funds do you mean?

97919. No, with persons?—Persons to carry out the policy do you mean?

97920. Yes.—You mean to say if the municipal authority and the charitable committee were the same people?

97921. Yes.—I am not prepared to say whether that would or would not be a suitable solution of the difficulty.

97922. They would be a little nearer than if they were parallel bodies?—They would, indeed. It would be rather too much to expect that such absolute cohesion between the two bodies would exist, but no doubt a number of responsible local persons would be members of both bodies, and so would co-ordinate the policy of both bodies.

97923. And the more co-operation you would be able to enforce?—That is so.

97924. (*Mr. Gardner.*) I do not quite understand under this scheme how the work of medical outdoor relief is to be carried on. Would that be under the same system as the present?—(*Mr. Gray.*) It would be undertaken by medical officers under the control of the borough council, I presume.

97925. By the sanitary committee of the borough council, or the Poor Law committee of the borough council?—I cannot say which the borough councils would say; whether the sanitary committee of the borough council might not develop into the public health committee of the borough council.

97926. Is that your idea, that the domiciliary treatment of the poor, medically considered, should be under the sanitary committee, or under the Poor Law committee? It is a rather important question, is it not?—Speaking personally, I think this was the view held by our committee, if not by the council, that it was to be a public health matter—sanitary committee.

97927. Therefore coming under the medical officer of health?—Yes. I think that as far as one could gather from the discussions which took place in the preparation of the scheme, what we had before our minds was that eventually the local sanitary committee would not be a committee looking after bricks and mortar alone, but looking at individuals as well, and it would become a public health committee with very close co-ordination with the public health work of the county council.

97928. Therefore, the borough council medical officer of health would have something to do with the visiting and domiciliary treatment of the sick poor?—Yes.

97929. What would be the relationship of your borough council medical officer, that is to say, your district medical officer, with the officers responsible for the inspection of school children?—They practically come into touch now, and usually co-operate very closely, but the medical officer for education is naturally restricted within the school ages of the children; he does not touch them under the age of three or four, and he does not go beyond the age of fourteen or fifteen, the years the children are at school. So far he has not followed them home, but the day will come, without doubt, when the contact between these two officers will be very much closer than at present. The moment we begin the work of examination it will necessarily be so.

97930. He must follow them home, must he not, or hand them over to another doctor?—At present he will confer with the parent on the school building. At present we are undertaking examination and not treatment. At present we will advise the parents: "Have your child treated," and the parent will have to make her own arrangements for getting the child medically treated, probably by taking the child to the hospital. Take for example such a case as a child found by examination to be suffering from adenoids. The school medical officer will advise the parent where to take that child, and how to get that child treated. The child will be taken there, and then there will come into review the condition of the child's home. Certain of the diseases from which the child appears to be suffering may possibly arise from the condition of the home, and the school medical officer will therefore be brought at once into touch with the local medical officer.

97931. That is to say with the Poor Law officer, or the medical officer of health?—The borough council officer.

97932. The medical officer of health?—Yes, the two will co-operate, the one in improving the home, and the other in treating the child.

97933. That is to say, the district medical officer will look after this case of adenoids on the suggestion of the school medical officer?—That is a possible solution.

97934. Was that your solution?—I had thought, taking the case of the adenoids, that the child would be sent to the local hospital under the advice of the school education officer; the fact that the child is suffering from various maladies will induce the school medical officer to draw the attention of the medical officer of health of the borough to the home.

97935. That ought to be done now, ought it not, in ordinary Poor Law administration?—It is being done very largely now, but if our scheme were adopted, we should eliminate one of these sources of conflict, the further authority which is coming along with medical relief.

97936. (*Mr. Lock.*) In the case of the children?—Yes.

97937. The Poor Law medical officer would go out?—He would go out of the scheme.

97938. By your new arrangement you would exclude him from all child work?—Yes; and we should have, as it were, the pulse of the home exhibited in the condition of the child. What is found in the child at school very often will tell you what to expect in the home.

Mr. Ernest Gray,
M.A.;
Mr. Philip E. Pilditch,
L.C.C.;
Sir Shirley F. Murphy,
M.D.;
Mr. Edgar J. Harper.

23 Mar. 1908.

Medical inspection and treatment of school children.

- Mr. Ernest Gray, M.A.; Mr. Philip E. Pilditch, L.G.; Sir Shirley F. Murphy, M.D.; Mr. Edgar J. Harper.
97939. (Mr. Gardiner.) So practically you would eliminate the district medical officer altogether?—Yes.
97940. I do not quite understand one answer you gave this morning as regards the enlargement of the county area of London. Did I understand you to say in your own opinion, or the opinion of the county council, that the County of London for Poor Law purposes should be kept as it is at present, that you could not face the possibility of including in the Poor Law area of London places like Tottenham?—What I gave was my personal view founded on my knowledge of one of the districts which was specifically mentioned in the question; but there is a difference of view amongst members of the council, I know, with regard to the desirability of enlarging the area not for Poor Law purposes simply, but for many other purposes of municipal government.
97941. Have you followed it out as regards classification by institution that if you leave West Ham by itself it is very difficult for West Ham to classify by institutions?—That is probably true, that it would be more difficult for West Ham.
97942. Under your scheme West Ham would be bound to move in one direction or the other, would it not, either towards London or away from London?—It is part of a union at the present moment; but I doubt whether it would move towards London.
97943. Would you have it moved towards Essex?—It might.
97944. At any rate, as far as you are concerned, you would keep it outside London?—I think I would. I think that is the general desire there now.
97945. (Miss Hill.) May I gather from the general trend of all the evidence that you are of opinion that the London County Council has as yet so assimilated its various duties that it is ready to undertake a large amount of new work?—Yes.
97946. Do you consider that the body best qualified to deal with the poor, and which would be interested in them, would be secured by the members standing an election to bodies like the county council and the borough councils, which have many other and different duties such as paving, lighting and rating? Do you think you would get the sort of men who would be interested in the poor?—Yes; I am quite sure that although the council is elected on a large number of issues, that the work of education is being as efficiently accomplished now as it was under the school board.
97947. You consider that is so?—As a member of the education committee, I do.
97948. And that the people will have time for these various duties?—Yes, they departmentalise very largely.
97949. You are distinctly prepared to commit the Poor Law work to the borough councils?—Yes.
97950. In speaking about the classification, of which so great a point is made, I gathered from your answers to Mrs. Sidney Webb you would consider it so important for a crippled child to be amongst cripples that it would quite take away the importance of its being in its own home?—No, I did not wish you to gather that.
97951. I think it rather pointed that way?—I hardly wish you to gather that.
97952. It is a point to be carefully observed, is it not, in all the arrangements?—Quite.
97953. I was also rather struck by what you said about the removal of the child necessarily from a mother who cannot support it. Many mothers who go out to work, surely within your knowledge, make very satisfactory arrangements for their children. Should not the primary object of the Poor Law authority be to keep the home together rather than to drive the mother to part with her child?—There are many parents in London who fully believe that they have made satisfactory arrangements for the care of their children during their absence from home; but if you will make close enquiries you will find that a large number of those children are being systematically drugged, and are being debarred from all possibility of becoming useful members of the community.
97954. Granted, but are you so wholly satisfied with your schools and institutions and scattered homes and so on that you would to a very large extent remove the children from their parents?—No, I take the view that with a very young child, when the mother is competent for children and has the time, the best place for the child is at home of mother with the parent.
97955. You limit it to the very young?—I think I must discriminate between the very young and those who are of school age, because the parent has no choice with a child of school age, the law requires her to send that child to school.
97956. During school hours?—Yes, and that makes it essential that she should differently treat the child of school age to the child under school age. For example, she can send the child at the age of two to a minder or a crèche at an early hour of the morning till she returns from labour in the evening, but she is under statutory obligation to send the child of school age to school at the hour of nine and find some means of housing that child when he comes out at the hours of 12 and 4.30; therefore, she cannot make quite the same arrangement with regard to children of school age as she can with regard to a child under school age. Then, where I think discrimination also arises is from the desirability of the mother nursing her own child when the child is very very young, but that same necessity does not occur with the child of more mature years.
97957. You would lean very much more to the advantage of removing the child than many people would, or so I gathered from you, because there are many mothers who make satisfactory arrangements even for children of school age?—I wish I could bring myself to be satisfied of that, but while I know that a great many of them send their children to crèches, yet those children are not under any public inspection by local authorities—
97958. I was not thinking of crèches?—Then when they send them to minders and pay for them, those minders are not under any control, and the lives of those children are by no means satisfactory from a State point of view, and I feel that in those cases the nursery school would be probably the best place for the child. (Mr. Pilditch.) May I say one word with regard to the question which really goes to the root of whatever difficulty there may be in the proposals of the council, and that is the question as to whether the members of the London County Council and of the borough councils would have sufficient time to do the work. Of course, the London County Council is a very busy body indeed; and it was only after examining all other alternatives that we decided to suggest it should be the central body on the ground of the desirability of having one central rate raising body only. I am not prepared to say that all the borough councils are so busy, or have anything like the same amount of work laid upon them as the members of the London County Council have, and we realise that this would mean a good deal more work. According to the scheme put forward the work which would come on to the county council, if it was made the central authority, would be of two characters: first, the administrative work, the administration of additional lunatic asylums, which would come from the asylums board and would go to the asylums committee and, secondly, the question of co-ordinating and controlling expenditure and so on, two very different kinds of thing. With regard to both those matters, we fully realise it means a good deal more work upon the present members of the council, and we faced the fact that there might have to be some increase of membership. We thought we saw a way of doing this by giving fuller representation to some ten or a dozen big districts in London, which are very inadequately represented now, I mean districts of nearly 50,000 voters having only two members, while other districts with 7,000 or 8,000 voters have two members. We saw a way of returning something like twenty or twenty-five new members who could be placed on the council without affecting its character seriously, and who would provide just the requisite number to fulfil these fresh duties. At the present moment the asylums committee of the council has a membership of thirty-five to look after the asylums and so on. We quite see that we should have to have some more members, and we think that about twenty-five would probably give the necessary increase of membership.
97959. (Chairman.) Of course, your Asylums Committee has done, so far as institutional supervision is concerned,

Provision for children of mothers who go out to work.

Capability of L.C.C. to act as Central Poor Law Authority.

Classification of children.

Provision for children of mothers who go out to work.

very much the same sort of work that it would have to do hereafter?—That is so.

97960. Your real difficulty is supervising and controlling?—Yes, I think that an increased number, say, of twenty to twenty-five given to the present divisions by an all-round suitable scheme, would provide us with an extra number which would enable us to do this work.

97961. What addition did you contemplate for that. Would that be from persons nominated from outside of special experience?—You will see from the scheme that we did suggest there should be a certain number of representatives from the borough councils themselves; not necessarily one from each borough council, but, possibly, if so many were not needed from grouped districts, or something of that sort, and that in addition there might be some co-opted members whose names might be suggested by the Local Government Board. We thought the class of member who might come on as a co-opted member is the man who is now on the Metropolitan Asylums Board to some extent.

97962. Surely there would be some difficulty about nominating the borough members?—They would be representative.

97963. Unless you take one from each?—That would be a detail we have not worked out. It might be necessary to take one from each.

97964. What is your experience on the county council, do you find big committees work well?—You must have them of a certain size. I think they work very well. You see a big committee like the asylums committee must be big because it has so many institutions to look after, therefore, it must have a sufficient membership to give sufficient members to look after the different institutions.

97965. What portion of the members of the council are members of the education committee?—There are thirty-eight members of the education committee, and there are twelve now, there used to be five co-opted members. (*Mr. Gray.*) We are recommending another seven. We have only five ladies co-opted at the present time.

97966. And no more?—No more co-opted at all.

97967. The experience of co-opted members is satisfactory, is it not?—We are increasing the number, and the practice of co-option has been adopted pretty well throughout the country. (*Mr. Pilditch.*) There was raised the same point with regard to the borough councils. In the borough councils I do not think the same difficulty would arise as might arise with the London County Council; they are not so busy or full of work that I think we should anticipate any difficulty in getting sufficient numbers to attend the meetings of the local body.

97968. (*Miss Hill.*) Have you found that the members who are members both of the borough council and the guardians work very much on the guardians?—Yes, that is exactly what I have found, that some of the men who have worked the hardest on the borough council have also worked hardest on the guardians.

97969. That is your experience, is it?—Yes, so far as it has gone; it is the hard worker does it wherever he is put. With regard to the borough council. I must point out this, under the statute by which they are constituted there may be seventy, the maximum number is seventy; I think a certain number of them have never yet taken their maximum number; they have found they could do their work with less, and it would be quite possible to increase their numbers, so far as may be necessary, to carry this scheme out.

97970. (*Mr. Loch.*) The question of the number of borough councillors who are also members of the guardians was raised. I have a return here which is not official, but I think can be trusted. It seems to show that those who are both councillors and guardians are very few comparatively. The number of borough councillors stands at 1,583, there are, I understand, 839 guardians and 132 were both councillors and guardians, showing that at present there is not a very large strength of guardians amongst borough councillors. Does that return surprise you?—Yes. (*Mr. Gray.*) I think it does. I thought the proportion was larger.

97971. So that practically one is making it apply to a new set of people to do some new work, at least that is suggested?—Yes.

97972. With regard to what was said about the guardians and their election, when one looks at your abstract, one sees that the year before the election time comes, there is a very large increase in the parochial elector—evidently he is very much looked up, the consequence is that one concludes that the political element in the election is a very strong force in screwing up the number of political electors. If you consider the guardians on the other hand, do you think the guardians ever have honours paid to them such as being chairman or vice-chairman or aldermen or anything of that sort, or receive any public honour for their work?—They never have so far as I know purely for Poor Law service, as members of the Poor Law authorities.

97973. While on the one hand in the borough councils there are many things that make honours for men, on the other hand, for the Poor Law guardians there is nothing such as men would really covet from the point of view of public honours?—No.

97974. Under those circumstances do you not think it is very natural that there should be less keenness both to stand, and less keenness to vote?—Yes.

97975. Does not that lead to this, that possibly if the guardians were treated with equal honour and respect as borough councillors, or as members of the London County Council, and had anything like the same opportunities there, the relation of the public to the guardians would be different to what it now is?—It may be that the candidates would whip up more of their personal friends and that there would be a greater interest, but I do not think that alone would carry it to the extent that we desire.

97976. I am only trying to put the other side of the question which, I think, has been rather overlooked. Even so, is it not very desirable to detach all this Poor Law work, or whatever you choose to call it, from political strife?—I am sure I do not know. The party system does prevent us getting rusty, and I doubt whether there is any greater incentive to exertion than the criticism of your political opponent.

97977. But it might cut both ways: it might, and one sees it does indeed, cut in this way, that a man who would stand firm if he was dealing with a business and not exposed to political torment would yield altogether when it came to facing a crowd; and these questions of out-relief, and so on, are questions on which you must face a crowd; they are popular questions and must remain so?—I think that the same argument might be applied to a very large number of the duties discharged both by Parliament and by county councils. There are many of these questions, in fact, I think it is an argument which is very largely used in favour of one legislative assembly which is not popularly elected, some of the questions which come before the House of Commons, and some which come before the county council, might from the individual point of view be better dealt with entirely outside all party considerations, but nevertheless, although party considerations are brought to bear on them, you get through.

97978. Of course, it all turns upon what you mean by getting through. I should have thought that a survey of Parliament in the last ten or fifteen years, if that be taken as a test, would show that questions in which private benefits were under discussion, essentially the case in the Poor Law, were questions on which it was most difficult to withstand a wide public appeal?—There is no doubt something in that. It is difficult to stand firm in a hotly contested election which is fought on party lines, but then that very difficulty brings about its own remedy. The difficulties of the individual are not restricted to one person alone, they are experienced by many, and the end of it is that the view which is taken by the individual becomes the view of the party, and instead of his having to fight his position alone, his party have endorsed his view, and I think that in a rough way you get a sort of compensation very rapidly.

97979. It is on that that you would rely?—Yes. I have been through a good many political fights, but I do find that where, perhaps, your hottest struggle is, and where hostile criticism is directed against you, those

Mr. Ernest Gray, M.A.; Mr. Philip E. Pilditch, L.C.C.; Sir Shirley F. Murphy, M.D.; Mr. Edgar J. Harper.

23 Mar. 1908.

Efficiency of Guardians and Borough Councillors, and number of men holding dual office.

Political influence on elections.

Co-option of members of L.C.C. Committees.

Mr. Ernest Gray, M.A. ; Mr. Philip E. Pilditch, L.C.C. ; Sir Shirley F. Murphy, M.D. ; Mr. Edgar J. Harper.

are the very factors upon which you get the largest support from your political friends, that you are not standing alone.

97980. Can one understand that one of the co-options that now take place in regard to, say, education, as a matter that you have referred to, or any other branch of county council work, are political: that they are all done, so to speak, on the merits of the person?—No, I cannot say they are not political because I believe our policy at the present time is to give to the political parties on the council their proportion of co-opted persons, but then each party secures people of recognised competence in the world of education, and if the same principle were followed here, while the proportion of parties would be maintained, the co-option would be that of persons acquainted with Poor Law, and indeed, such a provision could be laid down by Statute, as it is laid down by the Education Acts. You are not to co-opt all and sundry under the Education Act, there is a scheme under which each local authority has to submit to the Board of Education; you must make provision for the due representation of various educational interests amongst the co-opted persons, and in the same way I can well understand, that although the council has not pronounced an opinion upon this phase of the question, these committees will have to be constituted in accordance with a scheme which probably will have to be submitted to the Local Government Board for approval, and that we should, therefore have to follow exactly the same lines for Poor Law as we follow now for education. Mr. Harper has just put the Act into my hand, and it provides that the persons co-opted shall be persons of experience of education, and persons acquainted with the needs of the various kinds of schools in the area in which the council acts; so I can imagine persons of experience in the administration of the Poor Law, and persons acquainted with the needs of the poor in the district over which the council acts.

Question of pauperising effect of L.C.C.'s scheme.

97981. I quite clearly understand that in educational matters you are dealing with much more precise issues than you are dealing with when you deal with relief, and the question that one asks naturally after your answer is: What do you mean by your principles here? Without that this would mean little or nothing. Are the principles of relief the same as those you mentioned with regard to education, or what are they; indeed it is on that the whole issue turns. The Poor Law turns on the acceptance of certain principles. You propose to make certain very great changes. Are those principles to go forward, or what is to go forward? Judging from your statement, two of which you are in favour are not going forward; you are proposing many things which I think other people would call very pauperising?—The only proposal that I recognise as open to that criticism is the proposal I make with regard to a very very small section of persons who receive relief, that is the children who are in receipt of outdoor relief, and whether the present principle would be maintained, or better adapted is largely dependent on a careful study of the question, which the great authorities might give to it. I cannot conceive it possible that the interests of the poor, or the interests of the ratepayer in London could be worsened (if I may use a word which is not unknown) by such interests being placed under the careful and steady consideration of a great committee constituted in the form that I have suggested. There is no authority now which sits down to carefully consider whether the methods adopted yesterday are the wisest, or whether they could be improved upon to-morrow. Our boards of guardians find sufficient at hand to occupy the whole of their time, and one would like to have some sort of committee, such as this Committee of the Council, which would have power for a little scientific study, as well as for administration.

97982. Granted the utility of science by those who know how to handle it, do you think a system of administration that is not invoked by the ordinances, we will say, of a central governing body like the Local Government Board, we will say, is easy of general application all over England?—Yes; because I think that these authorities such as we have referred to in the scheme ought not to be engaged in simply relieving the poor but in striving to prevent poverty.

97983. Granted absolutely; but the question is, when we get to principles which have to be applied all through the country, whether in making this proposition to us you

have any statement to make with regard to these principles, because on that the whole thing will turn?—No, we are not prepared to say the conditions under which outdoor relief against indoor relief should be granted.

97984. Or any other proposition as to the right way of handling cases?—No, we have dealt with this from the point of view of municipal machinery; and we have set up what we considered to be a machine which would consider those principles, and reform them where necessary.

97985. That is to say, you start the machine, and you let the new aggregation of people, whatever they may be, settle the methods; does it not come to that?—You may say the same thing of every statute that has altered the constitution of the local authority dealing with a certain subject.

97986. I think this is hardly to be dealt with like that, because surely in this case it is a question whether you carry forward procedure already known, or whether you do not. That is open to anybody to judge. If you make a change in the law, you consider what the present law is, and make a change from that present law. So here with method and method. What one feels about this is one does not know where you would strand us—I am speaking for myself, of course. I cannot make out from this where we should be; certainly there would be a great shuffling of authorities?—Yes.

97987. And certainly, also, there would be possibly new methods; but what new methods, or what the new principles are to be, I think we get no idea of; upon that after all is based the constitution of your local authority because you may use it in the one way or the other according to what its purpose and constitution would be?—May I with all respect suggest that when the Technical Education Board for London and the School Board for London were abolished, and the duties of both were transferred to a committee of the County Council, no one attempted to lay down the rule to the effect that the procedure of the old school board should be adopted or should be changed, or suggested that the procedure of the technical education board should be adopted or changed. The committee was constituted. Care was taken to see that it was a fully informed committee; care was taken to secure some continuity by requiring the council to co-opt during the first year of its life some of the members of the abolished authority. Then that authority so constituted was left free to develop. One may argue from that it perpetuated all which was best in principle which had been followed by its predecessors, and improved where they found improvement was necessary. No one will gainsay the statement that the work of the old technical education board has been greatly improved upon. Parliament did not think it necessary to lay down any express opinion with regard to the principles which were to be followed; and I apply that quite recent experience, and one that is vivid in my mind, to the proposals which I have before me, if I constitute an authority which is strong and comprehensive, and give them power to discriminate the duties they are called upon to fulfil. There are certain members of the public health committee, and certain of the other committees, they have a remainder which cannot be allotted to the existing committees, and they allot that to the Poor Law committee. Then that Poor Law committee would naturally perpetuate what is in existence for the moment, it could not change in twenty-four hours; but I could not by any means guarantee that on consideration of the subject it would not bring about, not only within its own immediate range of operations, but also in the local authorities it is directing and controlling, considerable changes in their methods of treatment. They might, on a study of the question, draw lines which are not existent at the present time between outdoor and indoor relief.

97988. You would recognise the fact that the present and future of an educational development is very different from the present and future of the relief development; in the one case you can have schemes as widely apart as possible from the present administration, but in the educational development, generally speaking, in the very process of its movement, it goes from one point to another?—I do not press them as an exact parallel, but I think the one does illustrate the other.

97989. One would have wished for a little more light on that issue, that is what I should say?—Then I should be

for afraid, if I were to try to give that light, I might be expressing my private views and go far beyond the scheme that the council placed on paper.

97990. Principles are referred to by your paper and by the council, so it is natural for one to ask what are the principles—the principles of administration.

97991. (*Mr. Bentham.*) It is more necessary to lay down a principle upon which people shall be eligible to receive relief at the hands of the community rather than education, for this reason: That we expect people to provide a livelihood for themselves; that any scheme of public provision should tend towards ultimate self-support rather than to public support. The question of education is altogether different, it is on a different basis; it is impossible for people to make provision for their own education in the sense that we should expect people to provide their own livelihood and the livelihood of their children, so principles are necessary to be laid down as to what shall constitute eligibility for relief. It is no remedy merely to divide the dependent classes amongst different bodies, we must see where it is going to land us, or multitudes of people may be living upon public funds under disguise?—Surely that is a fear which we need not seriously entertain, because the people who would be administering this scheme are keenly interested in preventing the pauperisation of London.

97992. I am not so sure of that at all. They are not keen to prevent pauperism?—(*Mr. Pilditch.*) Not the central body proposed?

97993. (*Mr. Bentham.*) Not that I know of so far.

97994. (*Mr. Loch.*) You put before us very clearly, so far as possible, how the various doctors would come together in one house somewhere, but besides the doctors there are visitors, and the visitors are becoming more and more numerous. There is your education visitor and Sir Shirley Murphy's visitor and the relieving officers and so on, and by the scheme of dividing the relief work up between the education and the Poor Law, it seems to me to run yet another risk of having this duplication of work. You already have, undoubtedly, the attendance officer, and if all the work is in his hands you make of him an inquiry officer like a Poor Law relief inquiry officer. Are you not afraid that with these various visitors attached all of them to different bodies you will not make the work of relief, at any rate for the Poor Law body that has to do all this central work of relief (the main work locally), such that they will be in a very great plight, because no sooner do they come to a decision on a case than it goes to the education committee or rather the children's care committee; they may or may not entirely reject what the Poor Law people have done, then you would have two opposite views, and the people will not understand you at all. The one chance as far as my experience goes with regard to relief is to have quite a clear statement of what you will do and not do. Let that be generalised and different people will understand what your policy is. It seems to me here you have two concurrent policies which may easily mislead one, the guardians taking quite a different view to the children's committee?—Yes, but I am afraid you have not appreciated the fact that the view of the one authority would pass to the other committee *via* the central controlling force.

97995. I did not know there was any system that would affect his question?—Supposing, for example, we were working through a Poor Law committee and an education committee, the Poor Law committee would never send an imperative instruction across to the education committee; to act in that manner would certainly lead to trouble. We should probably work with this committee exactly as we are working now in the various committees of the council; we exchange memoranda as to the methods which shall be adopted in the treatment of various classes of work, and if the two committees agree, well and good; we report to the council that we agree, but if we cannot agree, if there is a difference of opinion between the two committees, then we have a special machinery in existence to which the difficulties which have arisen may be brought for consideration.

97996. You propose to have the same system locally; the borough council is to act as master settler of any question upon which these two committees differ?—

Naturally, they are the committees of the council and if those committees cannot agree without reference to their parent authority, they would go to the parent authority for instruction. This occurs now: We, as a Local Government committee, have for some time been dealing with a question of special courts for the hearing of school attendance cases; we have been in constant correspondence with the education committee on this subject with a view to coming to a closer agreement. If we had reached an agreement (the subject-matter fell through owing to the action taken in Parliament) we should have simply reported to the council that we had agreed, and the council would have authorised us to go forward through the proper committee. If conflict had arisen and we had not proceeded in that way, the subject would have been referred to the general purposes committee of the council and an attempt would have been made to bring about a reconciliation between the conflicting parties.

97997. I can quite understand this on general views, and I can quite understand it on matters on which they shall decide what shall be done, but my special difficulty is that someone must be made responsible for the family; it is the Poor Law authority at present, and it seems difficult to divide that up between two authorities in the running daily work of the two bodies; I think it is impossible. It is possible to departmentalise all work absolutely, but I do think it is extremely difficult to departmentalise a case in halves, which I think is what you are attempting; is it not so?—We have not apprehended any difficulty of that character; you perhaps will allow me to say that notwithstanding the criticism expressed in the questions to-day I do not apprehend any serious difficulty, as I believe we have overcome the other phase of London life to which I have referred so markedly to-day; all this kind of difficulty was foreshadowed when the Act of 1902 was on the stocks. I used to hear all this constantly then, and I thought there might be something in it, but these apprehended difficulties have been overcome by an exercise of common sense.

97998. You are surely referring to what is quite different from what we ever have in the relief work in individual families, there is no precedent for what you are proposing—none?—I do not apprehend any serious difficulty.

97999. One may fairly ask for a precedent when you are making such a tremendous change as you propose?—(*Mr. Pilditch.*) Would it not be an equally tremendous change if you adopt any of the other alternatives that presumably have been before this Commission.

98000. I think not. I have known of all the propositions that have been made to us, and I do not remember anywhere there has been a proposal to divide the family up? You are thinking of the children question?

98001. Yes, in relation to the Poor Law, not otherwise?—I see we have not been speaking of the same thing; I think the point to think of is the principle of the working of the main proposal.

98002. You say this Poor Law, if I may call education Poor Law, which you practically propose to create is based really on Section 3 of this Act of 1906 which is purely an Act for the provision of funds out of the rates for the feeding of the children. We have no other basis for this Poor Law unless it be the section of the Education Act, which is a very broad section, and about which there has been a recent circular. As a matter of fact, therefore, can you fairly build up on any existing statutory law what you suggest as a division between Poor Law and education?—(*Mr. Gray.*) I am not sure, but I am certain of this, that our scheme will stand without this line referring to the out-door relief of the children, and I hope the scheme as a whole will not be judged by the predominance which has been given to-day to what is really an incident in the scheme, but it is not essential to the scheme. This question of the care of a certain number of the children has throughout the day been treated as though it were essential to the main lines of the scheme. It is not. It is a reform which we would gladly accomplish in connection with the scheme, but if serious practical difficulties are considered by the Commission to stand in the way, that recommendation if dropped from the scheme, leaves the scheme without serious injury. The merit of county council central control and borough council

local control remain intact, whether you treat all out-door relief of the children as a Poor Law matter or an educational matter. (Mr. Pilditch.) I should like, if I may, to emphasise what has just fallen from Mr. Gray, because as a matter of fact, personally, I was opposed to the introduction of what I considered this extraneous matter in our report, though I do not say I am opposed to it in principle. As we disentangled it in our mind, it ought to be disentangled in the Commissioners' minds, if I may so suggest, from the main principle, the point we want to advocate. It is quite outside, and a subsidiary matter. (Mr. Gray.) I have taken the questions to-day as meaning that the Commissioners saw no difficulty with regard to the remainder of the scheme, but had found a difficulty with this detail. I have directed my replies to attempting to remove their difficulties on the details, assuming there was no need to enter into a justification of the main principles as they were apparently not in conflict.

98003. To refer to Paragraph 12, as a matter of fact have you found a division of service between several local authorities has led to much overlapping in London?—I think there is no doubt about that.

98004. What would you quote as instances?—In the matter of the asylums, there is the London County Council and the Metropolitan Asylums Board.

98005. Putting aside the asylums and the lunatics?—The county council educate children, the guardians educate children, the district managers educate children, and the Metropolitan Asylums Board are educating children.

98006. The Metropolitan Asylums Board deal with one class of child?—Yes.

98007. Can it be said that there is overlapping. There are four authorities, but they are not seriously overlapping?—We have favus schools; they have ringworm schools. I think the two are the same, and economy and efficiency would probably be secured by bringing the two sets of patients under the one control.

98008. In that case one authority might take both?—We are dealing with a wide range of special classes, and obtaining the finest advice which the world can offer in the treatment of children mentally and physically defective.

98009. Has any proposition been made by the Metropolitan Asylums Board, or the Local Government Board to make this transfer?—Not to my knowledge.

98010. Why should not it be made, because then the overlapping would stop?—In that particular instance, yes.

98011. What other instances have you?—The London County Council is said to be the central health authority for London, and if I may in Sir Shirley Murphy's presence quote the illustration, I presume that the most complete arrangements which were ever made in London for dealing with infectious diseases, were the arrangements made by Sir Shirley Murphy, in connection with the bubonic plague and the prospect of London being devastated by that.

98012. That is to say by the council's plan you would wish Sir Shirley's department to take over the health part of the Metropolitan Asylums Board?—The Metropolitan Asylums Board are dealing with these infectious diseases hospitals, and I cannot help feeling that it would be far preferable for London, if the treatment of infectious diseases were in the hands of a central authority.

98013. With regard to the Poor Law proper, these of course, are extraneous things which have been started to meet some special purpose, and naturally all kinds of things have been put under one board historically, and it is quite understandable; but with the Poor Law proper, where is the overlapping there?—I am not quite sure how far our definition of what is Poor Law services would agree. I have before my eyes here the idea of the industrial schools. The London County Councils has a number of industrial schools, and the Metropolitan Asylums Board are dealing with remand homes.

98014. Could not your remand homes be by arrangement transferred?—That does not in itself necessitate an alteration of system?—Yes.

98015. You are the prison authority, therefore the Overlapping remand home might go to you. That is surely no objection?—If the four alterations which I have already quoted were to be met by a transfer, we are getting along to the accomplishment of my scheme.

98016. Instead of asking for a great alteration you by pure administrative arrangement as between two authorities, with the consent of the Local Government Board, can carry it out; but it does not touch the main problem of the Poor Law.—I find here that notification is sent to the Metropolitan Asylums Board by the borough medical officers—that is notification of diseases.

98017. Not normal diseases?—And the hospitals are under the charge of the Poor Law unions, at the cost of the Poor Law unions.

98018. Would you in sequence say that all infirmaries must be moved from the Poor Law unions?—No, not the infirmaries.

98019. Why should not this be treated as it has been treated, as an appendage of the infirmaries?—I was not aware that it had been.

98020. It is a Poor Law institution, and to it Poor Law cases are sent?—Yes.

98021. Is there any other thing that causes confusion and unnecessary expenditure? Where should the expenditure be reduced?—I think you would find it if you tried in Eltham.

98022. What have you in Eltham?—Some considerable difficulty in determining the proper assessment of property. You have the guardians in several instances still appointing assessment committees. In others, the borough councils are making assessment committees. I should be very glad if you would let Mr. Harper tell you what does exist in Eltham at the present time.

98023. That is the question of assessment?—Yes.

98024. Most of the boards of guardians have given it up?—Most have given it up.

98025. Six or seven remain?—Some remain.

98026. Is it not practically an influence almost disappearing?—An element almost removed, true; but it is one of the things that is influencing our steps.

98027. That is, like vaccination, a kind of additional task of the Poor Law; it does not refer to the main issue of Poor Law administration?—That may be. Again I say if all these instances to which I have referred are to be admitted as difficulties which ought to be removed, and if I am to understand that the whole of the municipal services of the boards of guardians are to be transferred to the borough councils, then we are getting a long way along with our scheme; but it would be just as well to have on record the trouble with regard to this Eltham case; and unless it is somebody who is thoroughly familiar with it, with the map in front of him, I do not believe any human being can keep it in his mind for twenty-four hours. (Mr. Harper.) I might say as regards that that Eltham is part of the borough of Woolwich and of the union of Lewisham. The borough council of Woolwich makes the valuation list for Eltham, and the board of guardians for the Lewisham union appoints the assessment committee which revises that valuation list. The borough council of Woolwich takes one view of an important decision of the House of Lords on rating, and the assessment committee of the Lewisham Union takes an opposite view; the consequence is that the rating in Eltham in that respect is neither on a level with the rating of the rest of the borough of Woolwich, nor on a level with that of the rest of the union of Lewisham. You have three areas: Eltham, and on the other hand the balance of the borough of Woolwich, and the balance of the union of Lewisham, all three of which ought to be subject to the same practice of valuation law; and there are practically three sets of decisions being given every quarter on this point.

98028. Eltham, of course, has been the maximum anomaly of the Metropolitan district organisations?—Greenwich district is even worse. Charlton and Kidbrook are in the Greenwich borough and the Woolwich union. The Woolwich union appoints the assessment committee, and the Greenwich Borough Council makes the valuation list.

Overlapping of various agencies for relief and education.

98029. Take the question of what is called Poor Law expenditure proper, is there any conflict of jurisdiction that makes unnecessary expenditure? These are assessment questions with regard to which I should have thought most people were in agreement. What one is anxious to have pointed out is what is ordinary unnecessary expenditure by reason of our Poor Law expenditure or Poor Law workhouses and the administration of relief?—(Mr. Gray.) I think it would be because there would be a very strong inducement brought to bear upon the borough councils to try and stop the spread in the increase of the number of cases chargeable to the Poor Law.

98030. One way of doing that would be to organise the charities?—Yes.

98031. I understand there is some feeling in favour of it?—Yes.

98032. Would it be wrong to say that hitherto the official bodies of the Metropolis have not been very much inclined to use voluntary institutions?—Let me put an illustration that occurs to my mind. It is quite a common thing for parents to send the children who are going out to work at haphazard into industries where some small wage may be found at once. There is the possibility in certain of those industries that when the child reaches the age of nineteen or twenty, and is seeking men's wages, he may be told there is no further need for him. He has learned some portion of the trade, nothing more; he has no industry at his disposal and no employment in the district. He must travel out and get where he can, wander into some other district in search of work; and far too many of them, even under the age of thirty, become registered as unemployed at the various employment bureaux. Why cannot some care be taken by a local authority to direct parents, and the lads who are going out to work, as to the chance of permanent employment in certain industries in order that they shall not jeopardise their future by getting the few shillings a week that are offered in the immediate present? I have referred two or three times to-day to these children's care committees, some of them, voluntary associations, are known as after-care committees; many of them now are doing this very work, they are trying to advise the parents and these young people so that they may look forward with some reasonable probability to some period of continued employment, instead of snatching at what they can get now, and swelling the ranks of the unemployed a little later on. I really do not see why the Poor Law authority, whatever it may be, should not direct some of its energies to methods of which what I have just referred to is a type or illustration; methods by which people could be kept out of the range of Poor Law assistance; and I should have thought if we could have secured close co-operation between the borough council, the charity organisations of the district, and the central authority, that something could be done to assist those who have no means of acquiring this information direct themselves, and thus reducing ultimately the expenditure upon the unemployed.

98033. That question has been, I may say, before us, and it may or may not be successful; but you quote that really as an instance of one point upon which you think public authorities would be willing to co-operate with private persons?—Yes.

98034. And you think that as a matter of fact that co-operation would now be willingly forthcoming which I think one would admit ten years ago was not?—Yes.

98035. In fact you think there has been a great change of opinion?—I do.

98036. May I put this question which Mr. Pilditch referred to? Would you not have to come to something like a very systematic and recognised arrangement with voluntary societies if they are to do their share on this matter? Will you not, in fact, have to throw definite responsibility upon them?—(Mr. Pilditch.) I think so absolutely. I think it is because this proposal does set up in a definite way in each district a definite Poor Law authority at the town hall, in connection with which charitable agencies might work, that constitutes one of its greatest recommendations, at any rate to my mind.

98037. What is it in your mind to propose? Would you say that there would be any standard required, or any condition to be fulfilled by charities, or would you believe in a registration of charities?—I do not know that I am in a position to formulate a scheme upon which

the various different charities and charitable institutions should work together. Of course their objects and aims are not altogether quite the same, although ultimately, perhaps, they are; and I think that that would have to be left to the various organisations themselves when such a scheme had been set on foot.

98038. That is to say, that though you cannot see your way to the details of an organisation of this kind, you think that if it could be carried out in any way, a kind of nexus between the two, the feeling of the time and the feeling of the County Council is in favour of it?—It certainly is growing that way. We know, of course, that something of the sort obtains in Germany at the present time, where the town hall, or the equivalent of the town hall, is made the centre for the charitable undertakings of the kind, where those agencies are brought into touch with their equivalent for our Poor Law; we know that that is done now in Germany; and one hopes to see, on lines more suitable to our idiosyncrasies, something of the same sort carried out here.

98039. The German relation to all kinds of associations is very different from that which prevails in our law as regards charities?—You mean it is more official there?

98040. Yes, and if I remember aright you have to say of whom your committee consists; what its purpose is; and it has to absolutely receive the approval of the Government and the municipality?—I anticipate greater freedom of action on the part of the societies in regard to anything carried out in this country, as being more in accordance with our particular individualistic way of looking at things.

98041. Quite so?—From those who have to give relief down to those who have to receive it.

98042. On the other hand, you must have a working understanding which is quite effective and responsible?—Yes. I should like to answer one or two points raised by Mr. Loch. First of all, I understand he directs some criticism towards the scheme of the Council on the grounds that it does not deal with general broad principles, or any alterations necessary in the broad principles, upon which poor relief should be given throughout the country. That is simply because we have not looked upon those matters as being within the scope of our duties. We set out first of all to consider, as a Local Government committee, of the Council, and next as the Council itself, one thing and one thing only: the question of the administration of the Poor Law in London, because that only did we think came within our proper purview. May I suggest that we rather looked upon it as being more the duty of this commission, having regard to its Reference, to deal with the question of the definition of these general principles and what alterations were required in these principles, than that we should offer an opinion to the Commission with regard to that particular point. Further, whatever these principles are, or whatever changes may be necessary in them, they would apply, one would imagine, with equal force to whatever central or other administration you set up to administer them. I do not know if I have fully understood the class of principle which Mr. Loch has in mind, but the general broad principles of Poor Law administration, the way money is to be raised for the Poor Law, and in a great measure the principles upon which it is to be given out are matter which are general to the whole country, and which would not be within the scope of what we have set ourselves out to do. I am afraid the general lines of our scheme have not received as much attention as, perhaps, a very important point, but, after all, a side issue in this scheme, namely, the question brought forward as to the Poor Law children. There was one other point; I think Mr. Loch anticipated some practical difficulties in regard to the working of the borough councils, as parent bodies, with their Poor Law committees.

98043. And the education committees?—He said if the Poor Law committee in the Borough had decided on certain things, it would be extremely difficult for the parent body to exercise control over them. I think our view was that on simple questions of detail of administration, such committees as might be set up would really be in a great measure independent of the borough councils, who would exercise their influence more over the question of finance, exactly in the same way as the London County Council would exercise its influence over the finance of its central Poor Law committee.

Mr. Edgar J. Harper.

23 Mar. 1908.

Advantages of political feeling entering administrative bodies.

98044. That is rather applying to a committee like the asylums committee or the education committee?—Hardly so with regard to asylums, because over its Asylums Committee the London County Council has exceedingly little, if any, financial control at the present moment. Another point is this: I think Mr. Loch rather deprecated the idea of changing from one body, namely, the board of guardians, which are looked upon as a non-party, non-political body, to a borough council, which he thought was more in the nature of a political body, as the unit for local Poor Law administration. With regard to that, I should like to say that in my experience a great many guardians' elections are fought upon purely political grounds; and, more than that, when they are not fought on political grounds they are very often fought on much worse and lower grounds namely by small cliques and sections in districts; and that as a matter of fact I think you get in elections for borough councils elections fought on a much higher plane as a general rule than the elections which are fought, in many districts at any rate, for the present boards of guardians. I should be far from deprecating altogether the introduction of political issues in borough council elections—altogether, I say. As Mr. Gray has said in other words, there is a merit in the party system. I have in my mind at the present moment a borough council which until a year ago consisted of two parties, two-thirds of one party and one-third of the other. It now consists almost entirely of one party. One stray alderman remains behind to represent the minority. I have not the slightest hesitation in saying that the late borough council was the better one of the two; there was more criticism; there was more discussion; and everything was brought out and threshed out more thoroughly than it is at the present moment, so I think the amount of political feeling which is brought into the work of the borough council is not altogether a disadvantage. If you do not have it worked on party lines to a certain extent you will have it worked on some other lines. I am inclined to think that party lines provide the cleanest, openest, and best way of dealing with matters of that kind. I merely wish to point out that I think the principle of getting the work done by a body elected in a fair and open, though it may be partisan way, is perhaps better on the whole than if it is elected in a more hole-and-corner way. (*As to the relations between the Borough Council and the Poor Law Committee the Witness subsequently sent in the following note*):—

Proposed relations between Poor Law committee and Borough Council.

"The relations between the Borough Council and this Committee would, I imagine, be similar to that between a Borough Council and one of its present spending committees, most of the detail work of which is done without reference to the Council except as regards matters of principle and matters involving expenditure above a certain amount, which are settled by the Council, being placed on its Agenda in accordance with certain rules laid down. In the case of the Poor Law committees these might provide for the

A.—Reference to it of certain matters subject to confirmation by the Council, as

(a) Changes of method.

(b) The annual budget of expenditure.

(c) Supplemental estimates involving periodical examination of expenditure on broad lines.

B.—Delegation to it of either matters not subject to confirmation by the Council, except by desire of the Poor Law Committee, or by requisition of a certain number of members of it and of the Council, as

(a) All detail matters of administration."

98045. The particular committee which would have the management of this would be political up to a point and for the rest would have a fresh, largely identical body introduced bodily into it?—If you mean by political, consisting altogether of the members of one political party, I should very much doubt that. I should think it would be like the various committees of the London County Council, for instance; each party there has its proper proportion of members on each committee. The chairman is always of the dominant party, which is undoubtedly of advantage, but the membership is divided up in that way. There is nothing to lead us to believe that either the central Poor Law Committee or the local Poor Law Committees would be constituted on any

other lines. (*Mr. Gray.*) You asked me a question about a saving of expenditure and economical administration. I suggest that the present system of keeping the accounts in connection with the Poor Law is excessively cumbrous and wasteful. That is expressed in our paper. I do not want to follow it in detail without your invitation. I want to have upon the record that that particular phase of the question I had forgotten in giving you the illustrations.

98046. (*Sir Samuel Provis.*) With regard to the Metropolitan Common Poor Fund, I think I understood you to say you thought the administration of that fund might be a means of exercising control over the borough council?—Yes.

98047. What had you quite in mind?—I think that we are meeting the costs in London to some extent by grants made from the County Council; there is this Common Poor Fund not now under our control, but it would be under our control; I cannot conceive that the present system of making grants for certain objects, and making others a charge upon the Common Poor Fund could remain. I can see that we shall have to make a large grant towards the local expenditure, and a grant which would be simplified; not ear-marked for special services.

98048. That is to say, you would practically alter the Metropolitan Common Poor Fund altogether?—Yes.

98049. Practically abolish it?—Practically abolish it.

98050. Therefore, the present method by which particular expenditure is practically charged on the Metropolis would cease?—Yes. I should not imagine for a moment that after a short experience the council would maintain these separate several grants in respect of separate services.

98051. That, of course, would require legislation?—Yes.

98052. If that was so, would you have in mind a grant which was administered at the discretion of the county council. The present grants, of course, are not at all at their discretion, they have to pay them. Would you contemplate one that would be administered in their discretion?—Not at their entire discretion. I should think they would have to comply with some statutory regulation, or conceivably some instruction from the Local Government Board—preferably statutory; but that they should have a certain freedom of treatment within assigned limits.

98053. That is to say, that the general conditions being laid down by statute or order, the administration of the grant would be in the hands of the County Council, who would be, perhaps, required to satisfy themselves that the conditions were complied with; and in that sense they would have a discretion?—Yes, I feel that that must be the case, because the question of the equalisation of rate charges throughout London could not be left to the council alone, that would have to be laid down by statute; but I should think the council might be empowered to withdraw certain sums where instructions and regulations were not carried out.

98054. Is it not there that you might anticipate some friction with the borough councils?—Yes, if they had refused to carry out the instructions there would be friction before we began to withhold the money.

98055. And the anticipation of that friction might lead to opposition to the scheme, might it not?—I do not know. "A strong man armed keepeth his house."

98056. The City of London would be likely to object, would they not, to control on the part of the London County Council which would enable them to withhold the grant?—Yes.

98057. Would you not anticipate something of the kind from other borough councils?—Not to the same extent as I should expect it from the City.

98058. Still, to some extent?—The city has such a long tradition of self-government that naturally the feeling would arise much more strongly there than in other portions of London. Then, too, I think that a poor district of London, which is receiving a substantial grant through the medium of the County Council from the richer portions of London, would be more readily disposed to accept direction and advice; but the district which is having more, as it thinks, taken away from it which ought

Abolition of Metropolitan Common Poor Fund and legislative measures therefor.

not to be taken, and is at the same time being asked to comply with regulations of which it disapproves, would probably be a little disinclined; but I should hope with the exercise of some tact and care that, what indeed we had hoped, the City would come voluntarily into co-operation with us in this scheme. We expressly refrained from bringing in the City under compulsion in order that we might have the opportunity of securing them by invitation.

98059. (*Mr. Bentham.*) Was this submitted to them?—No, but we have representatives of the City on the council; and we have generally found that with the City that is far the better line of treatment. They recognise the general good of London; and they are willing to co-operate if you do not attempt to exercise direction and control. (*Mr. Pilditch.*) The City representatives raised no objection on the debates in the council to the proposals here, both central and local. May I say this with regard to the general question, the difficulty arising between the central body and the new proposed local bodies: I think it has been within the scope of our views that possibly the way out of any serious difficulty of the kind might arise by means of a reference to the Local Government Board on the lines of the sanitary references which are provided for under the Sanitary Act.

98060. (*Sir Samuel Provis.*) Under the Orders, do you mean?—About the local or county councils their acting in default of the borough councils and matters of that kind under Sections 101 and 107 of the Public Health Act of 1901, I think.

98061. Those cases do not often come?—There is one now, as a matter of fact.

98062. They are very rare?—Yes; and no doubt after one or two had been settled under a scheme of this kind they would be rare, if they were ever otherwise.

98063. You gave the reason why you thought there would be considerable difficulty in bringing a county borough, like West Ham, into London. Would you have the same feeling with regard to other places outside London in which people who are employed in London live—Tottenham, and other places of that kind?—(*Mr. Gray.*) Not so strong a feeling, although I ought to say at once I do not know Tottenham, Edmonton, Enfield, and districts like that anything like so well as I know West Ham. But there is a considerable distinction between the urban district of a non-county borough on the one hand and a district which has reached the position of a county borough on the other. West Ham, of course, is a county borough, and the eighth largest county borough in the Kingdom; and I should not have quite so strong a feeling with regard to Enfield and Tottenham.

98064. You would agree, probably, that supposing it were done at all, it ought not to be only for Poor Law purposes, but general purposes as well?—There again, I think you have even a stronger argument on other purposes than you have on Poor Law. It is possible the argument in favour of Willesden coming into London in connection with a scheme of drainage is stronger than it would be on Poor Law.

98065. The great reason for Poor Law would be that the poorer districts would get the benefit of the richer district of London, that would be the argument?—Yes, I know; and much of my position is based upon the limits which one is bound to recognise are imposed upon your power of government.

98066. Still, supposing anything of the sort were done, it would be very undesirable you should have the County of London one for some purposes and not one for other purposes?—That is so.

98066a. (*Chairman.*) Is there anything further that you would like to add?—(*Mr. Pilditch.*) Perhaps I might be permitted to send you a letter containing a few remarks on the feasibility of the main proposal of the London County Council. (*The Witness subsequently sent the following letter.*)

March 31st, 1908.

MY DEAR LORD,—I fear that on the 23rd instant, the case for the municipal administration of the Poor Law in London was, to some extent, overshadowed by the prominence given to the one point of the education and maintenance of Poor Law children.

This is admittedly an important point, and the transference of all such children to the care of the central education authority, the cost of their maintenance, apart from education, to fall upon central Poor Law funds, deserves the fullest consideration.

The time, however, that was devoted to it precluded full attention being given to the question of the feasibility and the principal difficulties of the main proposal of the London County Council. The existence of these difficulties has not been lost sight of, but I think there are solutions of them.

As to the advantages of a single authority in each district for all branches of municipal work, more need not be said than was then said, assuming it to be an axiom that it is a good principle, if it can be carried out, and that the ideal system, for such a great city as London, would be one under which each of its thirty cities and boroughs fulfilled the duties of local administration, under the full control of a central body for the expenditure of centralised funds, and working according to general rules and regulations, as far as locally raised funds are concerned.

The principal difficulties to be faced in working such a scheme are:—

(1) The provision of an efficient local committee of the borough council, and the setting up of an effective working relationship between it and its parent body, securing financial control of all locally raised expenditure to the latter.

(2) The possibility of carrying out, under a system by which each Borough Council Poor Law Committee had the management of its own workhouses and infirmaries, a system of classification of inmates, and of variety in their treatment according as to whether they were:—

(a) Worthy but unfortunate.

(b) Worthless and lazy.

(c) Of low type, physically or mentally.

(3) The working out of an effective scheme of central co-ordination and control.

(a) Co-ordination of methods of treatment.

(b) Control of expenditure met out of centralised funds.

As to (1).—This is the least difficult of the three, for I believe that a committee formed of:—(a) Members of the borough council; (b) of the most effective members of the present boards of guardians; and (c) of members nominated by the Local Government Board or the central body, or both, probably including representatives of local societies, would form a more effective body for dealing with the actual management of the poor in London than any that has yet existed in this country, or than any other possible alternative not yet tried here, including a great central or localised bureaucratic system of paid officials—even if working with the aid of committees appointed in the localities. The relations between this committee and the borough council would, I imagine, be similar to that between say a borough electric lighting or works committee and the council. All of these committees are spending committees and most of their detail work is done without reference to the council except as regards matters involving expenditure above a certain amount or matters of principle, which are placed upon the agenda of the council and settled by it in accordance with certain rules laid down.

In the case of the Poor Law Committee these might provide for the:—

A.—Reference to it of certain matters subject to confirmation by the council. Such matters would include:—

(a) Changes of method.

(b) The annual budget of expenditure.

(c) Supplemental estimates.

B.—Delegation to it of other matters not subject to confirmation by the council, except by desire of the Poor Law Committee, or by requisition of a certain number of members of it and of the council. These would include:—

(a) All detail matters of administration.

Such a system, which is very briefly outlined here may I think from my experience of borough council work and what I have seen of guardians' work be satisfactorily developed.

Mr. Ernest Gray,
M.A.;
Mr. Philip E. Pilditch,
L.C.C.;
Sir Shirley F. Murphy,
M.D.;
Mr. Edgar J. Harper.

23 Mar. 1908.

Principal difficulties in carrying out L.C.C. scheme.

Relation of Poor Law Committees to Borough Councils.

Functions and duties of Poor Law Committees.

Mr. Ernest Gray, M.A. The second difficulty is a greater, but I do not think an insuperable one.

Mr. Philip E. Pilditch, L.C. In the first place, I think a body, constituted as proposed, of persons having a wide range of knowledge of the poor in its district, would be well qualified to discriminate as to the category in which each individual should be placed.

Mr. Shirley F. Murphy, M.D. In the second place I think such a body better fitted than any other yet devised to act as the nucleus through which the charitable and prevention of pauperism agencies in each district might be brought into useful contact with those administering the Poor Laws and working in connection with them.

Mr. Edgar J. Harper. And in the third place, I think that each borough represents an area large enough to permit of its providing separate establishments for each of the three before-mentioned classes of paupers.

I take the cases of three London boroughs:—

(1) The City of Westminster, of whose council I am a member.

(2) The borough of Islington, one of the divisions of which I represent on the London County Council.

(3) The borough of Bermondsey.

Westminster is a typical rich district, though as a matter of fact, 24 per cent. of its inhabitants live in tenements of four rooms or less.

Islington is a typical lower middle and working class residential district.

Bermondsey is a typical poor district.

In Westminster there are four workhouses and one infirmary under three unions and boards of guardians.

In Islington there are two workhouses and one infirmary under one board of guardians.

In Bermondsey there are three workhouses and one infirmary under one board of guardians.

The following table gives the figures:—

Borough.	Workhouses.			Infirmarys.		
	No.	Certified accommodation.	Inmates.	No.	Certified accommodation.	Inmates.
Bermondsey - - - - -	3	1,642	1,543	1	640	590
Islington - - - - -	2	2,129	(*) 2,489	1	800	789
Westminster (St. George's) - -	2	2,027	1,663	1	776	658
Strand - - - - -	1	1,166	(‡) 1,188	—	—	—
Westminster - - - - -	1	573	(†) 455	—	—	—
	4	3,766	3,306	1	776	658

It seems clear that, with the existing buildings, there should be no serious difficulty in classifying and treating differently.

In the case of smaller boroughs, each having only one workhouse, it might be possible by grouping (which has its disadvantages in a disconnection of the control of the borough council) to overcome the difficulty which would probably be of only a temporary character pending the provision of suitable accommodation in each borough.

And it appears desirable that penal workhouses for the third category, viz., the worthless and lazy might be set up and managed centrally. Not large institutions, lest the disadvantages suffered by the Belgian and some other penal workhouses be repeated here.

As to the third difficulty, that of provisions for adequate control and co-ordination by the central body, it appears certain that if the remainder of the proposal is satisfactorily arranged there will not be any difficulty in elaborating this.

The suggestion of giving this work to the London County Council and to a Poor Law Committee working in connection with it was only adopted after considering all other alternatives that could be thought of, and because of the desirability of providing that, in regard to the expenditure of money raised by an equal rate throughout the county, the body responsible for raising it should

expend it, where it was expended for county purposes, and control its expenditure, where it was expended by local bodies.

These other alternatives were:—

The guardians, or similar *ad hoc* local bodies, to be the local administrative or spending bodies with greater control by the Local Government Board or from an *ad hoc* central body.

An *ad hoc* elective central body working with and through local committees appointed by it or by the Local Government Board.

A paid central board appointed by the Local Government Board or otherwise and working as before with local bodies.

Neither system appeared to be so likely to be accepted or so suitable for various reasons as that of municipalisation.

To name the reasons would be merely to go over the whole ground again.

I remain,

Yours very truly,

PHILIP E. PILDITCH.

2, Pall Mall East, S.W.

The Right Hon. Lord George Hamilton.

* In addition 138 paupers belonging to Islington were housed in workhouses belonging to Kensington, Lewisham, and North Witchford.

† Including thirty-four patients chargeable to other unions.

Miss OCTAVIA HILL.
Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. Henry
A. Harben.
24 Mar. 1908.

Mr. HENRY A. HARBEN, called; and Examined.

98037. (*Chairman*.) You have been good enough to send us in a paper in answer to certain questions, and there is with it a Report of the Central Hospital Council; if you will kindly hand them in we will treat them as your Evidence-in-chief?—Certainly.

(*The Witness handed in the following Statement.*)

The following answers are to be taken as expressing the opinion of the council as a whole and not as necessarily representing the views of its constituent hospitals.

1. *To what extent are voluntary hospitals (in-door and out-door) used by persons able to make payment for the treatment which they receive, and do you think that methods should be adopted with a view to some part or all of the cost of treatment being provided by the patient or his friends, either at the hospital or through part-pay hospitals?*

The circumstances affecting the different hospitals of London vary so greatly that the council feels that the only way to obtain an approximately accurate answer to this question is by referring it to each hospital.

The council, in so far as the hospitals represented on it are concerned, is of opinion that there is no evidence of any general abuse of hospitals, and that there is a good deal of evidence to the contrary.

The council is, however, of opinion that if there were more provident dispensaries in London and if effective co-operation were established between them and the hospitals, the number of out-patients attending the hospitals could be considerably reduced. A scheme for such co-operation, drawn up by the council in 1905, is annexed to this Statement.*

2. *Considering the patients both from the medical and from the social point of view, to what extent is there any co-operation or overlapping between voluntary hospitals and the Poor Law in regard to in-door or out-door patients, and what suggestions would you make towards a scheme of co-operation?*

The question of medical relief in London has been considerably complicated by the establishment of the Poor Law infirmaries, consequent upon the passing of the Act of 1867. Inasmuch as the use of Poor Law infirmaries is not now accompanied by the disabilities attached to other forms of Poor Law relief, it is to be feared that they do compete with the voluntary hospitals in their work and that their tendency is probably to pauperise the poor by accustoming them to the idea of accepting relief of this kind. In some districts attempts are made at co-operation between the hospitals and the Poor Law by means of the almoners of the hospitals working in conjunction with the Charity Organisation Society and the Poor Law officers; but in the absence of any organised body working in this direction over the whole of London, it is evident that such efforts can meet with but limited success. There is, as a matter of fact, often great difficulty in getting cases of a chronic character, unsuitable for treatment in a hospital, transferred from the hospitals to a Poor Law infirmary.

It is too often forgotten that there is a very real distinction between the functions of voluntary charity properly exercised and the Poor Law, and this distinction applies equally to medical as to other forms of relief. It cannot be too often asserted that the function of the Poor Law is the relief of destitution, while that of voluntary charity is its prevention.

So long as a person is not destitute, and so long as it is possible to preserve him from destitution and restore him to independence, so long is he a fit object for voluntary charity. If illness is occasioned or is increased by want of the actual necessities of life and there is no reasonable prospect of the patient being able to obtain these for himself, then it may be desirable that he should be handed over to the Poor Law authorities to be supplied with suitable food and attendance in the infirmary. But if there is a reasonable prospect of the patient being able, when cured, to maintain himself by his own exertions, it is far better that he should be relieved temporarily by voluntary charity than that he should be forced to seek medical relief from the Poor Law. Voluntary charity, including hospital relief, is, after all, temporary in its character; State or rate-aided relief is permanent; it is always there inviting the recipient to rely on it and to recur to it, and thus to lose self-reliance and independence. It is essential, therefore, that the granting of Poor Law medical relief should be curtailed within the strictest limits, and that any extension of its operations should be regarded with grave suspicion. To this end it is desirable that a complete and organised system of co-operation should exist between the hospitals and the Poor Law authorities, so that their several functions may be clearly recognised and respected.

This object might be attained by the establishment throughout London of district relief committees, the size of the district being in all cases strictly limited, so that the members of the committee might be able to keep in touch with the poor whom they undertook to visit, and might acquire an intimate knowledge of their circumstances.

The information thus obtained, being of a trustworthy character, would be carefully registered and tabulated, and could be readily available for use and reference by Poor Law officials and hospitals as well as by other charitable agencies.

Beyond this social and economic distinction between patients suitable for charitable and Poor Law assistance respectively, the council recognises a medical distinction which should be maintained in securing co-operation between the voluntary hospitals and Poor Law infirmaries. The present attachment to the voluntary hospitals of physicians, surgeons and specialists interested in the advancement of science and in medical education makes it desirable that cases requiring the highest medical and surgical skill, and cases the study of which is likely to promote medical knowledge, should be selected for treatment in the voluntary hospitals, whilst the Poor

* For copy of the scheme see Appendix No. XVII. (B) handed in by the Hon. Sydney Holland and Mr. E. W. Morris, p. 617 of Vol. III.

Mr. Henry
A. Harben.

24 Mar. 1908.

Law infirmaries should deal with the simpler and more chronic cases. This is not only to be desired in the interests of science and of medical education, but in the opinion of the council such a course is likely to be attended with the greatest degree of benefit to the patients themselves. By care in the selection of cases for admission to the two classes of institution, and by arranging for an easy method of transfer, it should be possible to secure thorough co-operation, each institution dealing with the work for which it is most suited.

3. *What would be the effect on voluntary hospitals of a State-provided or rate-provided system of gratuitous medical relief either for indoor patients or for outdoor patients or for both?*

Effect of free
medical relief
on voluntary
hospitals.

There seems little doubt that the establishment of a State-provided or rate-provided system of gratuitous medical relief for indoor and outdoor patients would result eventually in the extinction of the voluntary hospitals.

If the well-to-do classes were called upon to provide such relief either by taxation or through the rates, it is almost inevitable that they would ultimately withdraw their subscriptions and donations from the hospitals. In some cases there would be unwillingness and, in many cases, inability to contribute to both classes of institutions*.

To the poorer classes it would be disastrous, for though a certain proportion of them might in this way be compelled to contribute to institutions for medical relief, the use made of them would probably be altogether out of proportion to the amount of their contributions, and they would thus be taught to look to the State or to the municipality for the provision of another of the necessities of life for which they ought to provide by their own thrift and forethought.

Need for
State subsidy
to provident
dispensaries.

A State subsidy to provident dispensaries on a scale proportionate to the total sum received from patients' payments, which would make the work of these institutions actually remunerative to medical men, would do much to meet the needs of outdoor patients without fear of pauperisation.

4. *What would be the effect on voluntary hospitals of State-provided aid towards building or management expenses, and if such a system were adopted, what conditions do you suggest should be attached to such grants?*

Question of
State aid to
voluntary
hospitals.

A majority of the council are opposed to State-provided aid towards either building or management expenses on the ground that it would tend to check voluntary support as stated in answer to Question 3.

A majority of the council are of opinion that if such aid were given it should depend upon the existence of voluntary subscriptions and bear some proportion thereto.

Proposal to
exempt
voluntary
hospitals
from local
rates and
from legacy
duty on
bequests.

A valuable and justifiable form of subvention to hospitals would be the relief from local rates (including water rate) and legacy duty. In the case of relief from rates in the county of London, which in 1888-9 amounted to £21,300 (not including charges for water), the unequal distribution of hospitals over the county would render it necessary that the burden should be borne by the county fund and not by the separate boroughs.

In 1900 a Select Committee was appointed by the House of Commons to consider the subject of exempting hospitals from local rates, and after taking evidence the Committee reported on 13th July, 1900, strongly in favour of the relief. Several Bills founded on this Report have been brought in but none have gone to a Second Reading. The latest Bill was presented by Mr. Hayes Fisher in 1905 and ordered to be printed (Bill 139).

Legacy duty on bequests to charities is not payable in Ireland provided the donor was domiciled there.

The relief from rates and legacy duty need not, in the opinion of the council, be subject to any condition except that the hospital should not be carried on for private gain.

98068. (*Chairman.*) I should like to supplement this statement by some questions. You have come here officially on behalf of the hospital council, I understand?—Yes.

98069. I daresay questions will be put to you by members which have, perhaps, not been in the cognizance of

the council; if you wish at all to guard yourself in those cases, perhaps you will state when they are your own individual opinions, otherwise you might find it a little difficult?—Quite so, one feels that. I do not know whether you know what the constitution of the council is? It does not represent all the hospitals in London, but twenty of the largest hospitals. It represents the twelve hospitals having medical schools, and eight other hospitals, having 100 beds and upwards, which are recognised by the Conjoint Board of the Royal Colleges of Physicians and Surgeons, or by the University of London as places for medical study.

98070. The Central Hospital Council has nothing whatever to do with the King Edward Fund?—Nothing at all.

98071. They are quite separate institutions?—Yes; it has no control, it is merely an advisory body which consists of delegates from the different hospitals. I could hand in a list of the hospitals represented.

98072. Is the chairman annually elected?—Yes.

98073. Is it the practice to change the chairman?—Not very frequently; I have been chairman, I should think, for about three years. Lord Methuen was chairman before me.

98074. To our first question as to what extent the voluntary hospitals are used by persons able to make payment, and practically whether there was any abuse connected with it, the council reply that they are of opinion, in so far as the hospitals represented on it are concerned, there is no evidence of any general abuse of hospitals, and there is a good deal of evidence to the contrary. Have you statistics as to the number of persons who are treated in each hospital?—Yes, but the statistics are not of very great value, that is to say as positive figures they are not of great value; in comparing one year with another in the same hospital they may be of some value. I have drawn up an account of the total number of out-patients treated since 1894 by these twenty constituent hospitals, and I find that they increased from 870,550 in 1894 to 1,148,190 in 1906. I have the intermediate figures also.

Statistics of
out-patients
at certain
London
hospitals.

98075. (*Mr. Lock.*) Is that in and out?—Out-patients only. I should like to say that these figures are quite untrustworthy as regards the total number of persons treated, that they must only be looked upon as partially trustworthy as regards a comparison of dates, and for this reason, that no uniform practice exists among the hospitals of London as to registering out-patients. The practice of hospitals varies as to how often a patient shall be registered. In some hospitals you used to find the attendance of patients confused with the registration of new patients. Now-a-days, I think every hospital registers new patients apart from attendances, or almost every hospital; but the practice in different hospitals varies as to what shall be considered a new patient. In some hospitals a patient has to be re-registered if he has been in attendance for a certain time. In almost all hospitals patients going from one department to another will be registered afresh. That is to say, a patient will present himself in some general medical or surgical department, and the doctor after seeing him will say: You ought to go to the eye department; then he is registered afresh as a new patient in the eye department.

98076. (*Chairman.*) Whether he has been treated or not?—Yes. No uniform practice exists; and the practice of hospitals has varied from time to time. It is getting more stringent; but until some definite system is adopted it is impossible to say these figures represent the actual number of out-patients treated. In fact they are considerably in excess of the number of new patients attending those hospitals in one year.

98077. May I put it in my own way to see that I understand? These figures show the total number of persons treated in the separate departments. If a person is treated for a long time in one department I understand that is only one case?—Not in all cases.

98078. I will put it the other way: if a person is treated for a long time in certain hospitals that counts as a double case, we may say?—Yes, according to the regulations of the hospital.

98079. Assuming the same person was to come back at an interval of say a month or so, would that be a fresh case?—It might or might not, that depends upon the

* Some evidence already exists that subscribers who are employers of labour are withdrawing their subscriptions in consequence of the obligations imposed upon them by the Employers' Liability Acts.

practice of the hospital. There is no uniform practice at all. I am merely giving you these facts to show that the statistics are not trustworthy as to positive figures.

98080. Though I suppose we can assume there has been a general increase?—I think they are fairly trustworthy as regards the increase. In fact, if anything, I should think they would under-rate the increase because there has been a tendency of late years for a more strict system of registration, and therefore the chances are in the later years of this period the numbers would be underestimated as compared with the earlier years. [*Note by Witness.*—Since the year 1906, in compliance with suggestions from the King Edward's Fund, a more uniform practice of registering out-patients has been introduced.]

98081. Now as to the in-patients, what sort of number of in-patients have you?—I have not any figures of those.

98182. They are very small compared with the out-patients?—Very small indeed. A hospital which will have several hundred thousand out-patients a year will, perhaps, only have 200 or 300 beds occupied at a time. I have brought no figures as regards in-patients because they are hardly in point. Every hospital is practically full, and therefore there is no substantial increase possible unless it increases its accommodation.

98083. Assuming that this class which gets this out-relief gets it gratuitously, there would in addition to that be all the gratuitous relief given by the free dispensaries?—Undoubtedly.

98084. And also all the gratuitous relief given by the medical Poor Law?—Certainly.

98085. So if you add all those figures together you would in the aggregate, I suppose, get a very large number?—Undoubtedly.

98086. Therefore, the assumption rather would be that there was in this huge aggregate who get this gratuitous relief a considerable number of persons who might be able to pay for it?—It is possible; it is certain there are some. There is a good deal of difference of opinion as to how many. May I say after I understood that my council was unable to answer this question in detail (the first reply is that the only way of obtaining an approximately accurate answer to this question is by referring to each hospital; and it was felt that there was no time to do that before the answers were sent in) when I received a letter from the secretary to the Commission asking me to give evidence here I immediately sent out a series of questions to the secretaries of the twenty constituent hospitals, and I have tabulated their answers, and tried to get a little more definite information, but I find that statistically I cannot add very much to what we say. Opinions differ very considerably upon the subject. In some hospitals the impression is that there are no unsuitable cases treated, or that the number of unsuitable cases treated is a negligible quantity. Where the figures are available they have been stated by the secretaries as from 39 per cent. to 20 per cent. Then, again, the statistics furnished me are statistics furnished by enquiry officers or almoners. It has been the practice since about 1898 or a little earlier, to appoint almoners or enquiry officers, but some of the hospitals have only recently done so. The almoners work on different lines. In some cases the circumstances of all patients presenting themselves for admission are enquired into, in other cases only a certain percentage; in other cases only those who from their personal appearance, or the address they give seem *prima facie* to be unsuitable.

98087. There is a system in some hospitals of small payments?—Yes, in one or two hospitals. Are you referring to the payments for medicine?

98088. I was thinking of the London hospital?—The London and Guy's make a small payment for medicines, and bottles and dressings I think, a trifling payment.

98089. Have your council any opinion upon that?—The council has expressed no opinion upon that at all.

98090. Is opinion much divided?—I think very considerably. Only two or three hospitals have started it. It is very much opposed by the medical profession on the ground that patients by paying a trifling sum, wholly inadequate to the benefit they receive, go away

with the impression that they have done all that can be demanded of them; and that, therefore, such a practice, so far from encouraging thrift, has the exactly contrary effect.

98091. That is to say, they have got medical attendance for 3d. at the hospital, and I suppose that is rather the standard of payment they think they ought to make outside the hospital?—Outside the hospital they would have had to pay the 3d. whether they were well or ill, inside the hospital they have paid the 3d. for each attendance.

98092. You mean if they belonged to a provident dispensary?—Yes; I pronounce no opinion upon it. That is the argument; they think they have satisfied all the demands that can reasonably be made upon them.

98093. Your council think that if more provident Need for and dispensaries were established in London that that would advantages tend to diminish the number of out-patients?—With of more a more efficient system of co-operation between the provident dispensaries and the hospitals. provident dispensaries in London.

98094. What should you say was the inducement for a man to belong to a provident dispensary if he was in the neighbourhood of a hospital like the London hospital?—The only inducement would be the fact that he could not get treatment at the London hospital. If every hospital refused to treat a patient who in their opinion was in a position to subscribe to a provident dispensary he would be forced into the dispensary.

98095. Do you assume that the dispensary would make domiciliary visits?—No, not the provident dispensaries.

98096. Not?—I imagine not.

98097. (*Mr. Loch.*) On the part of the medical men?—Certainly, in certain cases.

98098. (*Chairman.*) It would seem to be an attraction on the part of the provident dispensary that, assuming a certain payment was made, the person who made it would be able in certain cases to secure the attendance at his home. That would be an attraction, I should think?—That would be one attraction certainly.

98099. Is it a great attraction to this particular class of if they can select their own doctor?—Yes, they attach Advantage of allowing poor persons to select their own doctor. a great deal of importance to that, even in the largest hospitals. They will tramp a long way to come to one of the big London hospitals because they know that somebody who has cured a relative is one of the physicians there.

98100. Would you consider it an essential part of any large scheme of provident dispensaries that you should Conditions and difficulties of a scheme of provident dispensaries in London. if possible, draw in the local practitioners?—Undoubtedly, and in great quantities. In the scheme that we drew up, which I think is before you, we insist that no provident dispensary should be considered as such which did not contain at least three local practitioners.

98101. This is the scheme based largely on the conclusions arrived at by the committee of which Sir Spencer Wells was chairman?—It is not based on that, it is an independent attempt to deal with the problem. The council were approached by the Metropolitan Provident Association to discuss the question, and we formed a joint committee, consisting of members of our council and several members of that association; and we drew up that report. We found it practically ineffective, because it is so difficult to get all the hospitals to work together in such matters; one of the chief difficulties is the fact that the provident dispensaries are scattered about London, and are wholly inadequate to the supply of the whole of London; and you cannot have a complete system of co-operation unless London is properly furnished with provident dispensaries.

98102. The provident dispensaries are allocated in a sort of haphazard way?—Quite.

98103. In addition to that there are the free dispensaries of the Poor Law, and I understand there are certain voluntary dispensaries?—Yes, free dispensaries.

98104. Both, I suppose you would say, act against the provident dispensaries?—Undoubtedly, very strongly.

Mr. Henry
A. Harben.
24 Mar. 1908.

Mr. Henry
A. Harben.

24 Mar. 1908.

Need for
co-operation
between
Poor Law
infirmaries
and
voluntary
hospitals.

98105. Coming to the second question, your answer is you do not think there is sufficient co-operation?—That is so. Many of the members of the council, notably the medical members of our council, felt very strongly on that point. They consider there is a great difficulty in getting patients who have been treated in the hospitals, and have had done all that can be done for them in the hospitals, taken away by the Poor Law authorities. The hospital, of course, is not in a position to look after the general well-being of patients after their acuter symptoms have been dealt with; the beds are wanted for other people who are also in an acute stage; and they find difficulty very often in getting Poor Law infirmaries to take them over. May I read what the Secretary of one of the hospitals writes to me on that subject: "There is, indeed, a great need for some system of co-operation. At the present time the idea of the guardians and their relieving officers appears to be very often one of antagonism; and great difficulty arises in getting destitute patients admitted to Poor Law infirmaries after they have received all the treatment which is possible in the voluntary hospital, especially cases which have been under operation and have no proper homes where they can rest." That was very strongly the feeling of the members of our council.

98106. (*Miss Hill.*) Does that apply to parishioners, or people who have been brought into the district in order to enter the hospital?—No, to the parishioners themselves.

98107. (*Mr. Gardiner.*) Those that are settled in the union; the patients whose settlement, say, is in Southwark, in the case of Guy's?—As I understand. It is *a fortiori* in the case of outside patients.

98108. I did not know whether the difficulty was because they were not chargeable to the Southwark Union?—I believe not.

98109. (*Dr. Downes.*) Are you aware that the difficulty arose in Southwark owing to the authorities of Guy's sending the patients to an able-bodied workhouse?—No.

98110. (*Mr. Loch.*) These people who leave the hospital are destitute, are they?—Not necessarily destitute. I was not referring to cases of absolute destitution, but to cases of persons who require some after treatment; who require good food and healthy surroundings after an operation or treatment for an acute disease.

98111. You suggest it has not really to do with destitution as a Poor Law matter, but something different to that?—Not only with destitution.

98112. It is not a Poor Law question from that point of view? You use the word "destitution" in your Statement. I understand these cases are not suitable for the Poor Law from the point of view of destitution?—Some of them are, some of them are not; we are dealing with both cases.

98113. (*Chairman.*) You are looking at it more from the medical point of view?—Yes.

98114. You said there is a difficulty about moving patients from a voluntary hospital and ensuring their reception in a Poor Law hospital; I suppose the patient as a rule objects to removal?—Possibly, I do not know.

98115. He would, would he not, if in the one case he was not a pauper and in the other case he became a pauper?—Possibly.

98116. You lay down here some very sound principles, it seems to me, in regard to the distinction between the functions of the Poor Law and voluntary charity. Assume that you could start a system of voluntary dispensaries, I will take the case of a man who had made reasonable provision for the insurance of his health by joining a medical provident institution of that kind, and it becomes necessary for him to go into hospital, he would have to be relieved either in a Poor Law infirmary or in a general hospital. Would you see any objection in such a case, where the man had made reasonable provision, to the medical officer who attends him giving him an order for either one hospital or the other?—No, I see no objection to that.

98117. Because it is obvious that the cost of treatment in hospital would be, if it was prolonged, beyond the means of any workman?—Undoubtedly.

98118. When you talk of provident dispensaries, and so on, I suppose you have in your mind the idea that if the ailment was one the doctor could not deal with, which wanted special treatment, there should be facilities given to the man who insured himself?—Precisely; that is what we think is the true function of the hospital.

98119. Assuming that you want to get greater co-operation between the general hospitals and the Poor Law for that class of case, you must remove any sense of inferiority or pauperism which might be attached to a man being taken into a Poor Law infirmary?—Do you mean co-operation as to persons not destitute?

98120. At present a man becomes a pauper if he goes into an infirmary?—Yes.

98121. Assuming he had made reasonable provision against sickness, assuming that he could not be taken into a general hospital, and assuming he went into an infirmary, some principle would have to be established by which from the mere accident of not being able to get into the general hospital he would not become a pauper, or be put in the same state as a pauper, because he went into an infirmary?—Certainly, I agree to that.

98122. Your proposal is that the more acute and the more difficult cases should be dealt with by the voluntary hospitals, and the Poor Law infirmaries should take only the simpler and chronic cases. Is that not a little hard upon the Poor Law infirmaries from a medical point of view?—In what sense?

98123. Would not the service attached to the Poor Law infirmaries necessarily be an inferior service; would not their service be less valuable than that of officers in the voluntary hospitals?—Undoubtedly. As I have already told you I represent the twenty hospitals who are more or less interested in medical education, therefore I cannot help looking at it more or less from that point of view: from the fact that these hospitals ought to be provided with medical skill of the very highest character and the most difficult cases of disease; and it is necessary, if that is so, that the other hospitals, the Poor Law hospitals, should be officered by persons of not perhaps equal standing to that of our physicians and surgeons. In fact, I may say that there is a complaint that there is a growing tendency in the Poor Law infirmaries for the medical officers to take cases which we consider hospital cases, because they are interesting.

98124. But take the case of Camberwell. I dare say you know the Camberwell infirmary, which is exceptionally well-fitted?—Yes.

98125. It is practically the general hospital for that district, that is unavoidable?—Yes, it is at present, because the hospitals have hitherto been concentrated in the centre of London.

98126. Looking at it from the medical and scientific point of view, do you see any difficulty in there being medical schools in certain Poor Law centres?—That is a very large question.

98127. Your council have not considered that?—They have not considered that question. I think you may take it that the medical members of our council at least would be very much against it.

98128. The British Medical Association, as you know, are in favour of it?—Very likely. One of the great difficulties in all these matters is the peculiar relations subsisting in London between the general practitioners and the consulting physicians or surgeons, who are looked upon as a class apart, and from whom all the staffs of the London hospitals are drawn.

98129. Coming to Question 3, assuming that medical relief was made gratuitous, and supported out of State or rate funds, you think that such a system would have a very detrimental effect on the future of voluntary hospitals?—I think so undoubtedly. There can be no question about that. We should practically lose all our subscriptions.

98130. On Question 4 you also give expression to the opinion that you are not in favour of State-provided aid towards the building or management expenses of the hospitals you represent?—Yes. There was a good deal of difference of opinion on the council, but the majority were of that opinion.

Preferential treatment in Poor Law infirmaries of the fifty.

Poor Law infirmaries as Medical Schools

Effect on medical relief on Voluntary Hospitals

Effect on State provided aid on building expenses of Voluntary Hospitals

Economic and medical condition of persons whom hospital authorities desire transferred to Poor Law.

Institutional treatment for members of Provident Dispensaries.

98131. I suppose you would object to have anything like payment by result in consequence of cases treated?—Do you mean successfully treated?

98132. No, I simply take the cost of maintenance. I am thinking perhaps more of outside London than inside London; but supposing the Poor Law authorities made arrangements with the voluntary hospitals that they should take a certain number of cases—that, I suppose, is not likely to arise in London?—I do not think it is likely to arise in London.

98133. It is not a question you have very carefully considered?—No. Personally I see no objection to State-provided aid towards building expenses; that is to say the great difficulty in a hospital is in raising money for enlargement and equipment according to modern needs. I think we could accept State-aid for that without doing the hospitals any harm. I think directly you begin to subscribe towards management expenses you come to the difficulty that we have mentioned in answer to Question 3 that the ordinary subscriptions would be withdrawn. That is only my own opinion.

98134. What you would recommend, then, in order to put the various different methods of medicine into co-operation with one another, is that we should try to build up a general system on the basis of provident dispensaries?—Undoubtedly.

98135. Assuming that was done, you would have to bring some pressure or some inducement to bear upon people to join these provident dispensaries?—Yes.

98136. The difficulty in London seems to me the out-patient treatment of the hospitals?—Undoubtedly.

98137. Is that the part of the treatment which subscribers to the hospitals and the public attach most importance to, do you think?—They attach a very great deal of importance to it, especially the hospitals in the West End, where they get their own servants treated.

98138. It is a form of medical relief which is more visible to the public eye?—Yes.

98139. If that is so, there would be a great fight would there not, or a great opposition on the part of the hospitals to reducing or abolishing their system?—To abolish it certainly, but not to reduce it.

98140. What do you propose in the way of reduction, a more elaborate examination into the conditions of the individual?—Yes, I think that there ought to be a complete and uniform system of inquiries by almoners at the hospitals; that patients coming from provident dispensaries for consultative purposes, or any purpose for which the authorities of the dispensary should choose to send them, should be given, as far as may be, priority of treatment, and that other cases should be inquired into. I think every case should be treated on its first visit, otherwise some terrible disaster might happen.

98141. You would lay down this principle as regards all forms of medical relief; you would be disposed to treat first and inquire afterwards?—On the first visit, because you never know but that a patient may die on the door-step going out. It is not safe to leave the refusal of a patient entirely to a lay almoner.

98142. Have the hospitals power to recover the expenses from a patient, if they choose to press it?—I believe not. I never heard of such a thing, and I do not see how they could have.

98143. The result of the inquiry would only be that you would have to refuse further treatment?—Yes, and some hospitals do that. They treat them on the first occasion, and say: You must not come again.

98144. Would that be at all deterrent, do you think?—It is undoubtedly deterrent. The lady almoner of one of the hospitals says: "The result of more thorough inquiry and visiting in the homes of these out-patients has shown very forcibly how abuse must always tend to increase where there is not supervision. Statistics of seven years go to prove that 10 per cent. of the out-patients could afford to pay for their own medical treatment, and another 10 per cent. on their own showing demonstrate that they could easily have provided for their time of need." I should like to say that those proportions are very much in excess of the estimates of most of the other hospitals.

98145. (*Mr. Loch.*) Including hospitals where there are almoners?—The hospitals without almoners or enquiry officers can have no statistics upon which to form an opinion.

98146. Has the almoner of the hospital to which you refer had seven or eight years' experience?—There has been experience of that time in the hospital. I do not know whether this particular lady has been there all the time.

98147. Have the others had long experience?—Yes, some of them have had long experience, too.

98148. May we have what the others say?—This is a note I have made of the replies. In one or two hospitals no statistics are available for the purpose; in one or two others the proportion is said to be a negligible quantity.

98149. That is only a statement, not a statistic?—No, it is a statement by the secretaries. Where figures are available the proportion varies from 39 per cent. to 20 per cent.

98150. Are the hospitals similar?—Yes, roughly similar.

98151. General hospitals all of them?—Yes, I think about seventeen of our twenty may be considered as general hospitals.

98152. Are they all almoners who have been trained and who are of equal ability?—I should not like to say that. Eight of the hospitals employ almoners, and eight employ an enquiry officer.

98153. Do you include the enquiry officers' enquiries?—Yes.

98154. So there are two different systems practically put together: there is not one system?—Two systems put together.

98155. You have not compared the trained almoners' returns with one another?—No, I think the trained almoners' returns would probably give you a higher percentage of unsuitable cases than the enquiry officers'.

98156. It was a trained almoner who gave that 20 per cent.?—Yes, a very highly trained almoner.

98157. (*Miss Hill.*) I think the percentage might depend a good deal on the training?—Yes.

98158. We heard about one hospital that it was the porter, or the man who put down the names, who visited afterwards. One does not call that an enquiry?—No.

98159. (*Chairman.*) Assuming that the question of Remuneration of starting provident dispensaries was seriously taken up is it not necessary to try and get some standard in regard to the fee which is to be paid to the medical profession and which the medical profession of the locality will accept?—The subscription?

98160. Yes?—I think so, certainly.

98161. That is an almost necessary foundation, is it not?—I think so. That is a matter upon which the British Medical Association will be able to give you help.

98162. We have had a good deal of information upon it, but you would agree that that is almost a necessary foundation?—I think so. There is a tendency, of course, for the fee to be too low. The medical profession complain that they are practically starved.

98163. On the other hand the fee must not be put so high as to be outside the means or beyond the scope of the classes?—No, but there might be a scale according to the means of the subscriber. Some dispensaries have one or two scales, I believe, according to the means.

98164. (*Miss Hill.*) According to the wages earned?—Yes, that is a matter which requires very careful enquiry.

98165. (*Chairman.*) A system of anything like general provident dispensaries rather necessitates carrying with it the feeling of the general practitioners?—Undoubtedly.

98166. (*Mr. Loch.*) How many of the general hospitals have trained almoners?—I could not tell you. I assume the eight who replied to me that they have almoners have trained almoners. I assume by almoners they mean trained almoners.

98167. Have your council considered at all the conditions under which almoners should be appointed?—No.

Mr. Henry A. Harben.
24 Mar. 1908.

Abuse of out-patients' department at voluntary hospitals.

Mr. Henry
A. Harben.

Almoners at
voluntary
hospitals.

Daily
number of
cases at
out-patients'
department.

Extent of
inquiry by
almoners.

Effect of
investigation
in out-
patients'
department.

Need for
almoners at
voluntary
hospitals.

98168. Have you made any representations on the subject to the King's Fund?—No, we have never made any representation to the King's Fund upon the subject.

98169. You have never considered the matter in detail perhaps?—Not by the council.

98170. Is the council, if I may ask, favourable to the appointment of almoners?—I could not say that, one way or the other; the question has never arisen.

98171. There is in the statement you have submitted to us a reference to almoners?—Would you mind showing me where.

98172. It says: "In some districts attempts are made at co-operation between the hospitals and the Poor Law by means of the almoners of the hospitals."—Yes.

98173. You assume the almoners were recognised in a manner as a standing institution?—Yes, that is merely a statement of fact.

98174. Have you ever seen the working of an almoner in an out-patients department?—Not in my own hospital. I am more or less familiar with it by conversation with various almoners and as to reports.

98175. What should you say was the general attendance of out-patient cases of a large general hospital?—I could not tell you.

98176. What would it amount to—several thousands in a week?—A hundred or two a day of new cases.

98177. How many cases do you think that an almoner can deal with, doing her best as they come through, making the necessary enquiries and notes, and be able to report about them subsequently to the medical men in charge?—I cannot express any opinion as to that.

98178. That must affect very closely this paragraph; you will see I think, at once an almoner can only do a limited number of cases, say twenty-five to thirty?—I should have thought more.

98179. Rather more, but if the cases rise to hundreds a week, it is quite clear the almoner can only follow up a certain number of cases altogether, or else scamp her work?—In one hospital there are two lady almoners.

98180. St. Thomas'?—The Royal Free.

98181. One for the in-hospital particularly in connection with that gift, and the other out-patients?—I believe so.

98182. But the casualty cases are not taken?—No, I think not.

98183. That is to say all casualty cases go free?—Yes.

98184. Generally speaking, would you not say that was equally so elsewhere?—I think so.

98185. The consequence is, whatever the benefits of this system may be, some of the cases must be left aside; that the almoner is only dealing with one small portion of the difficulty?—I do not agree to that; several of the replies show that all the cases are enquired into. I do not know how it is done.

98186. No casualty cases are enquired into?—No, casualty cases are cases that must be dealt with.

98187. Have you ever come across cases in which where care has been taken in the out-patient department the casualty cases run up?—Yes, undoubtedly.

98188. That is to say they come in by the other door?—That is the case in some hospitals.

98189. Have you ever come across a case where care has been taken in one hospital and the numbers at another hospital near have run up?—I do not know statistically, but I know it is the fact, considerably.

98190. Practically the only method of guarding a hospital against abuse is the one now adopted in quite an inefficient way, though the system has proved it is efficient so far as it has gone?—I think so.

98191. Do you suppose at all that the various hospitals would be in favour of the adoption of trained almoners right through?—I do not think they would be adverse to it.

98192. Of course, if I remember aright, the out-patient department is taken as a very cheap department?—Cheap in what sense?

98193. In this sense, they only cost 2s. 6d. a patient—that is what the calculation is, is it not?—1s. 6d., I think.

98194. If you have almoners, clearly it must become a more expensive department?—Only by the salary of the almoner.

98195. True, but if you take it that thirty or forty Extra cases is all that an almoner can do in a day?—I do not agree with that, I think she can do a great deal more than that. One or two almoners I have spoken to say they do virtually all the cases, or 80 per cent. of the cases.

98196. Are those trained almoners?—I believe so.

98197. Could you mention any hospital?—At Charing Cross there is an almoner.

98198. That is not a case to quote, I think.—Why not?

98199. The almoner has quite recently gone there?—Yes. 80 per cent. of the cases are enquired into. At St. Thomas' 30 per cent. of the out-patients are enquired into.

98200. That is nearer what I had in my mind?—At the Royal Free there are two almoners and 75 per cent. are enquired into.

98201. That is to say in-door to a certain extent and to a certain extent out-door, but none of the casualties?—Probably not.

98202. As to this system you put forward, may I not say that unless it is made very much more perfect you cannot expect co-operation to arise out of it?—No, I think not.

98203. Take a comparatively small hospital like the Royal Free, they have, as you say, two almoners, but have also assistant visitors?—Yes, that is essential to the system.

98204. Practically you would have at the Royal Free sometimes as many as five persons?—Yes, but I do not think, so far as I understand, that the assistants are required so much for enquiry as for the purpose of following the patients to their homes and looking after them. The functions of an almoner are something beyond mere enquiry.

98205. The persons at the Royal Free who are doing voluntary work are almost trained almoners?—Yes.

98206. Can you say at any other hospital that even from the voluntary point of view that is forthcoming?—Yes, several lady almoners have told me they have quite an army of voluntary assistants.

98207. At what hospital would those be?—I think Westminster and St. George's.

98208. Generally speaking it would not apply, would it?—I think wherever there is an almoner she is in touch with a number of voluntary agencies.

98209. Therefore you think that these hospitals have a sufficient supply of almoners?—No.

98210. I think it is very important, because here is a proposal made for bringing about co-operation. It seems to me, on the reading of your paper, that it would be much more expensive than is generally thought if you are dealing with 600 or 700 out-patients in the course of a week, including casualties, or not including them; you must have a strong body of enquirers to do the work properly, it would mean 250, 300 or 400 reports on those cases?—I should not have thought it would amount to that. In the case of patients who had been to the hospital before it would generally be only necessary to turn up the name in the register.

98211. Have you ever considered out-patient cases in connection with the homes of the patients?—The almoners consider them.

98212. True. Have you considered what it means to have the case dealt with on that side as well as the other, in the way of expense and time?—It is done in those hospitals, where it is done, by voluntary agencies. It is a question how far the hospital would be justified in spending money for the purpose of following patients to their homes.

98213. Am I not justified in saying on behalf of many medical men that they say unless the home life is attended to properly the relief they get at the out-patient department would be of very little value?—I think it is probably true.

98214. Unless the home life is somehow brought more in connection with the hospital through the almoners or in some other way, their work is a failure more or less?—I will not say it is a failure: I think you put it too strongly when you say a failure.

98215. More or less, that is the problem?—Undoubtedly the relief would be much more efficient if you could follow the patients to their homes.

98216. Therefore a hospital, to be of its perfect use, should be connected somehow with the local agencies?—Certainly.

98217. You refer here to co-operation and so on. What is your scheme, for uniting the hospitals, if I may say so, with the local agencies?—Through the almoners principally, and district committees if possible.

98218. I thought you would say district relief committees. That seems to me a possible method, but do you think that the hospitals would be prepared to associate themselves very closely with district relief committees as set down here?—Of course, I may say the managing bodies of hospitals have quite enough to do to manage their hospital without going into these questions very closely. They will not go into these questions very closely unless they are almost forced to it.

98219. Would it not be a fair criticism to say unless there is someone going into this question closely the hospital can hardly serve its true purpose as far as out-patients are concerned?—That is my opinion.

98220. With regard to these hospitals, it is suggested there should be some arrangement between them and the Poor Law. Do you think that there is any way of binding a hospital to accept a certain policy?—No, not at present.

98221. Is it possible to talk really of any organisation at all amongst them if they will not accept a common policy on any point?—It is possible to talk about it.

98222. That is to say, all this about statistics and their want of common form statistics and all other arrangements being different is practically the habitual state of them, which must go on habitually?—Which I hope will soon cease. For example, take the question of accounts, their accounts have already been brought into a uniform system by the pressure brought upon them by the Funds. I do not see why the same should not apply to other things.

98223. The question of funds brought them to uniformity on the one point which is absolutely essential because so much of the effort of a hospital secretary has to do with funds. If that point is not clear, naturally it will affect their whole finance, but these other points do not affect finance?—No.

98224. There has been no improvement made except in so far as the finances have come in?—Oh, yes.

98225. When you come to deal with Poor Law authorities and have, as is suggested, a common arrangement with them for the cases that should leave the hospital, is it not necessary that on the side of the hospitals themselves there should be some uniformity?—Undoubtedly.

98226. How is that to be won?—Only by a central body, I think.

98227. With regard to that central body, do you think the King's Fund is that central body?—It is not an ideal central body, because it is not representative.

98228. You know the question was raised in a most absolute form of having a representative central body?—Yes, Lord Sandhurst's Committee.

98229. And that was rejected practically?—Yes, practically rejected.

98230. Your council has never expressed itself in favour of it publicly, has it?—The Central Hospital Council?

98231. Yes.—No, the Central Hospital Council arose when the other scheme was rejected, as a sort of make-shift.

98232. It rejected this very scheme of representation which is referred to?—Oh, no.

98233. Undoubtedly, because that was the key to the proposal that Lord Sandhurst's Committee and the subsequent committee made?—Our council have never objected to those.

98234. Since Lord Sandhurst's Committee and the other committee reported and made that scheme, your council has never said a word in favour of a representative system?—Our council did not exist at that time.

98235. It was formed immediately after, I know.—Yes.

98236. The issue is alive now, as you yourself say?—To my mind.

98237. But they have never suggested anything about it?—No, it would be rather to magnify their own office; they thought they would do what good they could by consultative work.

98238. If we are to have a central body, as you suggest, is there room for a central body as against the King's Fund?—I think so. I think there are a large number of powers that, as you have just pointed out yourself, cannot properly be dealt with by the three Funds.

98239. Do you think that a central body might be established which would take account of both Poor Law medical relief and voluntary medical relief?—Yes, but I do not care to give an opinion upon such a question off-hand.

98240. You see the question is raised of a central body, and the question turns on the formation of it.—Undoubtedly.

98241. Have you at all tried to get a uniform system of dealing with out-patients, so far as the regulations go. Take the Northern Central regulations or any of those, have you tried to get them accepted in common?—No, my council has never taken up that question.

98242. There is nobody doing that in London at all?—No, I think questions of registration statistics might properly be dealt with by the King's Fund.

98243. But they have not done it yet?—No, not yet.

98244. Nor has your council?—No.

98245. With regard to these provident dispensaries, does it not seem that very interesting statements are made in this, and have been made in many reports, but the movement as a movement ancillary to the hospitals simply goes drifting along?—Yes.

98246. Therefore, so far as that goes, all this is really walking on sand, is it not?—I hope not.

98247. Where is your point of progress, that is what I cannot see. It is quite easy to recognise dispensaries as to such points as a letter coming from the secretary, and so on, but do letters come from the secretary or dispensary doctor referring to the out-patient department at all on the lines you have suggested?—It is not so at present, undoubtedly, some of us are trying to make it so and put forward these reports and recommendations in the hope that in time something will be done. There is a body called the London Provident Dispensary Council, which was founded a year or two ago with the object of drawing the provident dispensaries together and that council meets frequently, and nearly every provident dispensary in London sends representatives to it. We are trying to get a little co-operation among them.

98248. This report is dated April, 1905, and whatever movement there has been among provident dispensaries is quite recent, and there does not surely seem to be very much propagandist work done by hospitals to promote provident dispensaries?—Absolutely none.

98249. Does it not come to this, that we have a very large income in Poor Law relief, and a very large amount of money and many patients dealt with by dispensaries of the Poor Law, and a very large amount of charitable income and all this is now simply in so many heaps without any real organisation?—Yes.

98250. Is it possible on a basis like that, if we are to accept it, to find lines of progress unless some very powerful central body uses its influence?—No, I think not.

98251. That body you say should be representative?—I think so.

98252. It would not necessarily be the King's Fund? Not necessarily. If it were the King's Fund, the constitution of the King's Fund would have to be amended so as to make it partially representative.

98253. The King's Fund's objects are chiefly, if not entirely, connected with the holding of funds, the possession of securities and so on; their function is that of a big trustee and collector?—Yes.

Mr. Henry A. Harben.

24 Mar. 1908.

Need for Central body of management for Voluntary Hospitals.

Need of Provident Dispensaries to be ancillary to Voluntary Hospitals.

Mr. Henry A. Harben. 98254. It is also definitely under the care of the president?—Yes.

24 Mar. 1908. 98255. It is not in any way a hospital body?—No.

98256. (*Miss Hill.*) I was very much interested to read this report, which is dated April, 1905. I had not seen it before, and I was not aware of any actual co-operation which had resulted from it. I suppose one difficulty about it has been that the basis of it is the idea that the provident dispensaries shall have certain advantages for its members when they come up for special consultation?—Yes.

Preferential treatment for Provident Dispensary members.

98257. I gather that the hospitals, or many of them, receive such a recommendation from a dispensary if it comes from the secretary or medical man connected with it?—Yes, I think so.

98258. If they have no special facilities, owing to the whole body of the people really coming in free, which is what they do in the out-patient department, of course, it does not help a provident dispensary or a subscriber to it. If you give everything free to everybody the member of a provident dispensary has no advantages?—No.

98259. Therefore it seems rather as if you need not only to give the provident dispensary people a nominal advantage, but you must curtail your others, must you not?—Undoubtedly.

98260. And that has hardly been done at all?—It is being done more or less; that lady who says that she sends away 10 per cent. as being unsuitable is doing something in that direction.

98261. As Mr. Loch remarked, that is done so little. I was astonished to hear what you thought was the number of enquiries a person could make in a day. Do you think a person really could make more than thirty a day?—It depends on what you mean; I rather meant she could set more than that on foot by means of her voluntary assistants.

98262. As you say there are hundreds coming?—Undoubtedly.

98263. It depends a great deal on what you mean by enquiry. If hundreds are dealt with in a day it cannot possibly mean what we are accustomed to think of as enquiry.—We recognised that in drawing up the memorandum, and we point out that hospital enquiries should only be made in cases where the result of other enquiries is not available. We thought we could economise labour by receiving reports on the subject from other people.

98264. I see somewhere you say "Cases of poverty as evidenced by letters from the clergy, district visitors or other charitable agencies." Do you think there is much discrimination among the clergy and district visitors?—I am afraid not.

98265. You would not be astonished to hear that some of them give letters to their servants to give away at the door?—It certainly would not surprise me.

98266. You know that sort of thing is done?—I did not know it was done, but it would not surprise me. I am afraid I am not very familiar with this branch of the question.

98267. It is such an admirable paper one would like to see some results from it, but there have been three years idle?—It fell very flat; it is only fair to tell you that.

Effect of Employers Liability Act on Voluntary Hospitals. 98268. (*Mr. Gardiner.*) In the footnote to your statement with regard to Question 3 you say that subscriptions are falling off in consequence of the Employers' Liability Act. What evidence is there of that?—That is not intended to go very far.

98269. It says: "Some evidence exists"?—I have seen letters myself in the case of my own hospital from local tradesmen who have said they were withdrawing their subscriptions because now they had to insure their employees against accidents.

98270. Previously they regarded their subscription in the light of insurance against their employees' accidents?—A very large number of subscribers to hospitals do, especially the wealthier classes.

98271. Therefore to that extent they expect to have their servants or employees treated free?—Not only treated free, but to have exceptional treatment.

98272. Would you like the law altered so that hospitals might recover the cost of treatment?—I do not see any objection to it. It would be an extremely difficult thing to put in force.

98273. In consequence of what you said to Mr. Loch, I thought it was essential you should have the power?—It would be an extremely difficult thing to put in force. I do not think you would get any hospital board to put it in force and bring an action against a patient.

98274. Then it seems to me, unless you have that as a last resource, all contributory schemes will break down?—You could never prove means.

98275. You cannot prove means?—Not so as to satisfy a court of law; it would be impossible.

98276. If they signed a contract to pay so much a week, you could enforce that?—Yes, you could enforce that.

98277. (*Dr. Downes.*) There was a conference in 1906, I think. I have a print of the *British Medical Journal* of February 15th, and it is headed: "Proposals as to Administration and Management of Hospitals and Kindred Institutions, drawn up in 1906 by a Joint Medical and Non-Medical Committee, with a Note of Proposed Amendments of a Committee appointed by the United Kingdom Hospitals Conference, December, 1906." Then follows a long list of proposals?—I think that was the proposal of the conference at University College.

98278. That is so. Was there any subsequent meeting with regard to those proposals?—I thought there was a meeting last year. There is going to be one shortly I know—next month.

98279. Have any of those proposals been definitely adopted?—No, I think it is still under consideration. The whole thing was referred back to them. They were very crude proposals, and it was referred back to a committee; I believe they are now reporting. I do not know what stage it is in.

98280. I observe that in this preface to the Hospitals Year Book (*Burdett*) it is said: "A practical scheme should be forthcoming in the course of the present year." That is last year. I may take it that anticipation has not been yet realised?—No.

98281. Is there any probability of an early conclusion being come to by this conference?—The conference is a conference promoted mainly by the British Medical Association. I do not think the lay element is very strongly or enthusiastically represented on it. The proposals are mainly in the direction of the interests of the medical profession, but it will all help.

98282. Will these proposals come before the conference this year?—I think they are new proposals formulated by the committee. I believe all these proposals were sent back to a committee and that committee was to bring up fresh proposals, which I think it is going to do now.

98283. Should you consider that the future policy to be adopted will largely depend upon what the conclusions of the Conference may be?—I should not like to say that they will have any more effect than anything else has had.

98284. The British Medical Association is a very powerful representative body, is it not?—Undoubtedly, but it is not represented on the London hospitals in any way. The staff of the London hospitals consists of a body of gentlemen who have no particular interest in the British Medical Association.

98285. At the same time, you cannot very well get along without the medical profession?—We are not dependent upon the general practitioner.

98286. The views of the general practitioner and of the medical profession must have a considerable influence on the future policy of hospitals?—In the provinces probably more than in London.

98287. Coming to the relations between the voluntary hospitals and the Poor Law, you speak of cases of difficulty; there is often great difficulty in getting cases of a chronic character unsuitable for treatment in a hospital transferred from the hospital to a Poor Law infirmary. Do you know the circumstances of such cases?—No, I cannot say that I do myself.

Payment by patients in Voluntary Hospitals.

Medical Conference at University College, 1906.

Representation of London hospitals in the British Medical Association.

Transfer of cases from Voluntary Hospitals to Poor Law Infirmary.

98288. You cannot say what the particular difficulty is ?
—No, I do not know.

98289. Are you aware that in some cases the relations between the hospitals and the infirmaries are quite satisfactory ?—So I have heard ; I have heard they are in some cases.

98290. We have heard evidence from the London hospital that that is so, that they are satisfactory ?—Yes.

98291. You are not prepared to dispute that ?—Oh dear no.

98292. If you do not know the difficulties, you are not in a position to give us any suggestion as to how to remove them ?—Not on that branch of the question. I am not very familiar with it.

98293. Have you considered what the effect would be on the education both of the medical students and of the nurses if the classification suggested in your statement were carried out to its extreme limit ?—What classification ?

98294. That the simpler and more chronic cases should all be relegated to the Poor Law infirmary ?—Yes.

98295. Would that not leave the students of the hospital and the nurses of the hospitals with experience of acute cases only ?—Undoubtedly.

98296. And would not that be a disadvantage ?—I do not think so. The student life is so short, so very little time is available for clinical instruction, that I think it must be devoted mainly to the acute cases.

98297. Most of us have the misfortune to suffer from chronic diseases, so what is the newly fledged doctor to do if he has only seen acute cases at the hospital ?—In comparing the two the other is more important.

98298. The acute ?—Undoubtedly. I do not say it would not be very desirable if he could spend four or five years in receiving clinical instruction.

98299. And then a very large number of people hope to die of old age, and an increasing number of people are dying of old age. Where are the nurses experienced in nursing old age ?—In these infirmaries, undoubtedly.

98300. Then they would be old age nurses only ?—Undoubtedly they would. May I say that if the hospitals were filled, as they easily could be in a week, with chronic cases there would be no room for any acute cases upon which this part of medical education has to be maintained.

98301. The point I am putting to you is, if there is too complete a classification, unless some alteration in our system of education follows it, we should have persons specialising and having no general knowledge ?—Yes, that is so.

98302. I think I understood you to say in answer to the Chairman that some of the medical members of your council might object to the utilisation of the Poor Law infirmaries for the purpose of medical education ?—I do not think I put it in that way ; I think that the class of consultants would rather object to medical education being handed over to a general practitioner or a person who takes rank with a general practitioner.

98303. I do not quite follow you. What do you mean by "a person who takes rank with a general practitioner ?"—I take it an infirmary doctor takes rank rather with the general practitioner than with the consultant ?

98304. Do you know anything of the work of the infirmary doctors ?—No, I do not, I believe it is improving, as I say.

98305. Are you aware that considerable advances of medical science have been made in the Poor Law infirmaries in this country and elsewhere ; are you aware that Charcot in France did most of his work in institutions equivalent to our Poor Law infirmaries ?—Do not think I am objecting to any such advance ; I only tell you the difficulty we find in London in the matter.

98306. You speak of a State subsidy to provident dispensaries ?—Yes.

98307. Do you consider that a necessary condition to the success of provident dispensaries ?—At present, as I think Mr. Loch pointed out, the provident dispensary movement is almost at a standstill. I think

it is most desirable it should progress, but I do not see how it can progress without a State subsidy. *Mr. Henry A. Harben.*

98308. If a State subsidy were given, what representation of the State should there be ?—Some, undoubtedly. 24 Mar. 1908.

98309. There should be, I take it ?—I think so. I do not see any objection to it. State subsidised provident dispensaries and effect thereof on Poor Law Dispensaries.

98310. In what form do you suggest it should come in ?—Probably in the direction of some kind of control.

98311. As to the audit of the accounts of such dispensaries, would you have any State control there ?—Yes, I see no objection, except that State audits are generally not so efficient as private audits.

98312. What would be your recommendation with regard to the Poor Law dispensaries, in such an event ; would you still leave them in their present organisation ?—In what sense ?

98313. If you are giving a subsidy to provident dispensaries and you are promoting the growth of provident dispensaries, you may have to consider another class of dispensary which is giving gratuitous relief, which would be in a sense competing with the provident dispensary, namely the Poor Law dispensary ?—Yes.

98314. I am asking you what would be your view with regard to the position of those dispensaries ?—I would give them less to do, by the establishment of more provident dispensaries, and forcing the people into the provident dispensaries. The Poor Law dispensaries should refuse, as the hospitals should refuse, to treat patients who are in a position to provide for themselves. Need of increasing provident dispensaries

98315. Would you attach any disability to people going to a Poor Law dispensary ?—Yes, I am inclined to think so. Preferential treatment for thrifty people.

98316. If a man had not made provision in the provident dispensary and went to the Poor Law dispensary, do you consider that he should be entitled to vote ?—No, I do not myself ; that is only my opinion.

98317. Would you give a man in a Poor Law dispensary the same choice of doctor that you would in a provident dispensary ?—No, I do not think so.

98318. So you would give the man in the provident dispensary a better choice ?—Certainly.

98319. On the question of rates, I see you say that the form of subvention to hospitals might be a relief from local rates ?—Yes. Effect of subvention to hospitals.

98320. I suppose you are aware that some of the local authorities contend that the presence of a large hospital increases their rates ?—No, I did not know that.

98321. And increases the number of cases chargeable to them ?—I did not know that, but I would not make it local. The relief would not be local, as I point out in the statement, it would have to be a relief which would have to be borne from the County Fund.

98322. (*Mr. Lansbury.*) Do you know if there is any dispensary that really gives the whole medical relief that a person requires ?—I think not. Quite few dispensaries are equipped with special appliances for eye and ear cases, and so forth. Extent of medical relief provided by dispensaries.

98323. So a man gets partially relieved from his burden by the organisations that are subsidised by charity in other ways ?—Yes.

98324. Of course, he is partially a pauper in a sense, is he not ?—Yes, if you like to put it in that way.

98325. So it depends really upon how far a person is ill or how much medical attendance he gets whether he pays for it himself or whether he does not ?—Undoubtedly. I think that almoners and enquiry officers take that into consideration. The enquiry can never be purely one of means in the positive sense, it must be relatively to what he is suffering from.

98326. I suppose also relatively to his ability to pay ?—Yes, relatively to his ability to pay for treatment for that particular disease.

98327. Would you say that all the persons who get relieved in an infirmary are people who might have made provision for themselves, or that in a Poor Law dispensary they are people who might have made provision for themselves ?—Oh dear no, I should not think so. Extent to which relief should be deterrent.

98328. Why should they be disfranchised ?—I do not say they should be.

Mr. Henry
A. Harben.

24 Mar. 1908.

Extent to
which
gratuitous
relief should
be deterrent.

98329. Would you discriminate between those who are to be disfranchised and those who are not?—I am afraid I did not quite follow your question. I see what you mean now, because otherwise I do not see how you are to keep them out.

98330. Why should you keep them out, if a person is ill and has not means to provide for that illness?—I might ask why a pauper in receipt of indoor relief in the ordinary sense should not have a vote.

98331. Except that sickness is another matter, is it not; it is a matter to do with the community; we do not want sick people roaming about, in case we catch their diseases ourselves?—Only a comparatively few diseases are infectious. I do not think that is the ground.

98332. I am not a doctor, only one hears from some doctors that all diseases are infectious?—I am not a doctor either.

98333. The only point I want to clear up is this point of disfranchisement. A person gets part of his relief by charitable assistance from someone or the other because his means are limited; another person whose means are more limited still has to get it at the cost of the community, and you think he should be disfranchised?—I think you must put some kind of pressure on them to keep them out of the infirmary just as you put some kind of pressure on them to keep them out of the work-house.

98334. You think the pressure ought to be disfranchisement?—I do not commit myself to that; any other pressure would be equally agreeable to me, or more so.

98335. You would agree that a person must be medically treated by the community, would you not?—Undoubtedly; and he must be fed. }

98336. And, of course, when it is medical treatment it has to be the best, on purpose to get him well quickest.—Yes.

98337. So that you cannot punish him that way?—No, you cannot punish him by giving him ineffective medical treatment.

98338. So in the end, because you want to punish him he must lose his vote?—No, I do not want to punish him? I want to keep him out.

98339. It is punishment?—By way of punishment.

98340. It is the penalty he pays?—Yes.

Organisation
of Central
Hospital
Council.

98341. (*Prebendary Russell Wakefield.*) Are there many hospitals not represented on your council?—Yes.

98342. Of any standing in London?—Yes, there are a few; I should think perhaps half a dozen or a dozen large hospitals.

98343. Did they stand out themselves purposely?—No, the council was originally started for the representation of those hospitals having medical schools, the twelve; and then subsequently eight other hospitals were added to them.

98344. Were those eight hospitals asked to join?—Yes, I believe so.

98345. Would it be wrong to ask the reason of the exclusion and not asking the others?—I do not know at all. Personally I am in favour of enlarging the council, and I hope to take steps to do so.

98346. In order to get the full judgment of the whole of the hospitals of London, there ought to be rather an enlargement, ought there not?—Undoubtedly. The difficulty would be in that case as to the representation of very small hospitals; they would overweight the large ones.

98347. It does make those that are excluded naturally rather antagonistic to the judgment of the council; if they themselves are out of it there is a prejudice?—I do not know whether there is such a prejudice or not.

98348. Is there any co-operation between the Central Council and King Edward's Fund?—No, I think not.

98349. You are a body that is advisory, but has no authority?—Absolutely no authority.

98350. That will account to some extent for the ideas which you set forth not having received any general acceptance by the hospitals, would it not: the fact that you have no power to enforce them?—We have no power to enforce.

98351. That would make you desire all the more a central hospital body?—Undoubtedly.

98352. When you say that should be representative, might I ask whether you have thought, or whether your council have thought, over what the representation should be on the central hospital body?—It should represent all the hospitals. Need re-
presen-
tative
Centr
Hospit
body.

98353. What I rather want to know is whether it should represent anybody outside the area of the hospitals?—I do not think we have ever considered that.

98354. The hospitals are a little inclined to desire to keep the power in regard to themselves in their own hands, are they not?—Very much so.

98355. But they do not refuse the money of the public at large?—No.

98356. Does that even to some extent affect the hospital doctor? He is a specialist rather, is he not?—Yes, in the modern sense of the term.

98357. And his touch is not very close, very often, with the ordinary medical practitioner?—No in one sense it is very close in that he depends largely upon the recommendation of the medical practitioner for his private practice.

98358. But the view and judgment of the ordinary practitioner on such matters as come before your hospital council would not necessarily be in close association of agreement with the views of the hospital doctors?—No, they would have a tendency to be in antagonism.

98359. It was suggested to you that there might be propaganda work done by the hospitals with regard to provident dispensaries. I should like to ask: Is it not the fact that at the present time the boards of ordinary hospitals have really almost more than they can do with their ordinary work?—Undoubtedly. Provident
propaganda
work done by
Voluntary
Hospitals.

98360. And that their great difficulty is how they shall live from year to year, almost from month to month?—Undoubtedly.

98361. And unless they were relieved of some part of that pressure it is very difficult for them to go outside their own immediate necessities?—It is difficult.

98362. It would be very desirable if they were able to take a broader view?—I think it is almost essential.

98363. (*Mr. Loch.*) The almoners often are, I think, the propaganda body, in so far as they often tell the people, as far I as know, at the hospital that they should go to some dispensary?—In my hospitals we have no almoner, but an enquiry officer, and his enquiries are reported to an enquiry committee which sends the patients to provident dispensaries, or declines to treat them further unless they go to provident dispensaries.

98364. (*Prebendary Russell Wakefield.*) You said that one of the inducements which might be offered to people in regard to joining a provident dispensary would be that they would be visited at their homes from a provident dispensary. You are aware that that is now done by some of the free dispensaries?—Yes, I think that is very undesirable. Undesir-
ability
domestic
visiting
Free
dispensary
doctor

98365. It is done?—Yes. Any objections that may be made to free treatment in hospitals appear to me to have double force with regard to free dispensaries. I should abolish all free dispensaries absolutely, speaking for myself. Abolition
of free
Dispensaries.

ONE HUNDRED AND FIFTY-FIFTH DAY.

Monday, 30th March, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM,
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.

The Rev. Prebendary H. RUSSELL WAKEFIELD.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.

*The Rev.
Peregrine
S. G. Propert.*

30 Mar. 1908.

Mr. R. H. A. G. DUFF (*Secretary*).Mr. J. JEFFREY (*Assistant Secretary*).

The Rev. PEREGRINE SYDNEY GOLDWIN PROPERT, called; and Examined.

98366. (*Chairman*.) You are, I understand, Chairman of the Fulham Board of Guardians and you are appearing here on behalf of the Metropolitan Committee of the Poor Law Unions Association?—Yes.

98367. You have prepared for us a paper which, I think is of a very interesting character and which we may take as your Evidence-in-chief if you will hand it in?—Very good.

(*The Witness handed in the following Statement.*)

1. Scheme outlined by London County Council.
2. The general effect of the municipalisation of the Poor Laws.
3. Importance of local Poor Law authority.
4. The multifarious duties of Boards of Guardians.
5. The effect of transfer of the duties and powers of the Metropolitan Asylums Board to the London County Council.
6. Effect of proposed transfer upon records of cases.
7. Centralisation possible within present metropolitan Poor Law parishes and unions.
8. Recovery of cost of relief to paupers from relatives made more difficult.
9. Difficulties arising in connection with guardianship and control of children as a result of transfer.
10. Advantages of the laws of settlement and removal.
11. Control by London County Council involves equalisation of rates.
12. Principles more important than machinery.
13. Proposed change necessitates the limitation of power of control of the Local Government Board.

1.—THE SCHEME OUTLINED BY THE LONDON COUNTY COUNCIL PROPOSES TO MERGE THE POWERS AND FUNCTIONS NOW EXERCISED BY BOARDS OF GUARDIANS IN THE GENERAL MUNICIPAL GOVERNMENT.

If effect be given to this proposal, it would involve—

- (a) The transfer to Borough Councils of the local duties at present exercised by Boards of Guardians, with the exception of the administration of institutions for children.
- (b) The transfer of all institutions at present administered by the Metropolitan Asylums Board to the London County Council.
- (c) The transfer of all institutions for the reception of Poor Law children to the Education Committee of the London County Council.
- (d) The assumption on the part of the London County Council of the control of Poor Law administration in London.
- (e) The necessary and corresponding limitation of the functions of the Local Government Board.

2.—MUNICIPALISATION OF POOR LAW.

To merge the administration of the Poor Laws in effect on the general municipal government is, I submit, a pauperism retrograde step. It is, in principle, a return to the unreformed Poor Law prior to 1834, when the distinction between pauperism and independence was practically non-existent.

I believe if this proposal is carried out pauperism will increase. In support of this argument I would point out the effect of what may be regarded as a partial transfer of functions. In Fulham, during the winter of 1904-5, the work of receiving applications from unemployed workmen under Mr. Long's scheme was performed at the offices of the Guardians; the number registered was 667.

The following winter this work was transferred to the Town Hall; the number registered rose to 2,479.

In the same manner, if the work of general relief now performed by an *ad hoc* body were transferred to the Borough Councils, it would encourage an increasingly large class to apply for relief. Borough Councils would not be able to resist the pressure of applications so well as the present authorities. Party political considerations would be more influential.

3.—IMPORTANCE OF LOCAL POOR-LAW AUTHORITY.

I submit that the authority which in the first instance receives applications for and determines what form poor relief shall take is necessarily the most important body; it is the sieve or net through which applicants have to pass, and the meshes of this would be wider in the case of the Borough Council—*e.g.*, if the Poor Law infirmaries were detached from the workhouse, as proposed, they would rapidly tend to become general hospitals, and very largely-increased accommodation would be required. Any proposal to weaken or lessen the importance of this first authority or to reduce its sense of responsibility ought not, in my judgment, to have the support of the Royal Commission. The London County Council suggests that this highly-important authority should be a committee composed partly of borough councillors and partly of a number of co-opted or appointed members.

Experience shows that in consequence of the introduction of party politics co-option offers no guarantee that the persons best qualified to do special work will be appointed. Political services or a reputation for philanthropy, rather than experience, coupled with sound judgment, has been the determining factor in electing aldermen or members of distress committees. Committees appointed by methods such as these will not be efficient substitutes for authorities elected for specific purposes, such as the present boards of guardians.

Political influence on co-option of Poor Law administrators.

4.—WORK OF A BOARD OF GUARDIANS.

It is almost impossible in a brief statement to give any adequate idea of the amount of work imposed upon a Metropolitan Board of Guardians in the course of a year.

[The Rev.
Peregrine
S. G. Propert.]

30 Mar. 1908.

Onerous
duties of
boards of
guardians.

The work in connection with a number of large institutions is extremely onerous, and demands constant attention and supervision, but more important is the work in connection with the individual cases which are presented for consideration. Unlike other authorities a Board of Guardians cannot dispose of large sections of its work by a few general orders. On the contrary, so changeful and complicated are the affairs of human life, and so varied the different cases which have to be adjudicated, that each case must be dealt with independently by itself, and often necessitates the expenditure of a considerable amount of time.

In Fulham 7,553 such cases were heard and decided upon during the year 1905. If an average of five

minutes per case only were allowed, this would alone entail 210 sittings of three hours each.

The appointment of officers to fill vacancies which occurred during the year required much time and attention. Allowing but half an hour for each appointment would have required 15 sittings, each also of three hours' duration.

MEETINGS AND ATTENDANCES.

The number of meetings and attendances of guardians, excluding rota committees, are shown in the following table:—

Year ended	No. of Board Meetings.	Committee Meetings.	Total.	Total Attendances.			Average Attendances of Guardians.
				Board Meetings.	Committee.	Total.	
15th April, 1902 -	25	226	251	495	1,623	2,118	88
15th April, 1903 -	26	328	354	493	2,013	2,506	104
15th April, 1904 -	24	365	389	371	1,965	2,336	97
15th April, 1905 -	27	375	402	526	2,010	2,536	106
15th April, 1906 -	23	365	388	406	1,875	2,281	95
15th April, 1907 -	26	390	416	445	1,751	2,196	91

To add this work to that of the already-overburdened borough councils would lead to inefficiency, maladministration, and therefore increased expenditure. I need say no more upon this head.

5.—EFFECT OF TRANSFER OF METROPOLITAN ASYLUMS BOARD, ETC.

Effect on government of extension of functions of London County Council.

In taking over the work of the Metropolitan Asylums Board and the supervision of the Institutions and Homes for Children now administered by Boards of Guardians, the members of the London County Council would be confronted by a physical impossibility. To add to this the function of central control and co-ordination would involve such a mass of work that the elected members could do no more than initial the reports presented by officials. Sound and healthy government would be replaced by bureaucracy.

6.—RECORDS OF CASES.

Confusion of case-paper-system under suggested London County Council scheme.

The effect of a general transfer must now be considered in relation to the records of cases.

It is becoming increasingly clear that efficient administration of the Poor Law depends upon permanent and complete records of cases being preserved. These records are commonly called case papers.

To distribute the relief of the poor among and between a number of different authorities would lead to great confusion and a possible breakup of the present case-paper system.

7.—CENTRALISATION WITHIN POOR-LAW AREA.

Need of centralisation within present Poor Law areas.

We would urge that centralisation within the present Poor-Law areas is more promising, and would more certainly be productive of efficiency than the splitting up which would follow the adoption of the council's proposals.

This centralisation is now being largely secured by means of case papers, and wherever complete centralisation has been secured, as at Fulham, where all officers using the system are located at one centre, it is difficult to see how the machinery can be radically improved.

8.—RECOVERY OF RELIEF GIVEN TO PAUPERS.

Difficulty as to recovery of relief under London County Council scheme.

This is one of the most important branches of the work of guardians. The moral effect upon relatives is impossible to estimate. If some paupers go to the Asylums Committee, others to the Education Authority, others to a local committee, each responsible for its own particular class, the work of Poor Law will become more complicated, rather than simplified—e.g., if an inmate in the workhouse absconds,

leaving his children with the Education Authority, who will proceed against him? I assume that this work would be undertaken by the council.

9.—GUARDIANSHIP AND CONTROL OF CHILDREN.

If the institutions and homes for children are transferred to the London County Council, it is assumed that the guardianship, control, apprenticeship, boarding out, emigration, and placing out in service would as a natural consequence pass to the Council. The amount of work in this connection is so onerous that it requires personal attention and supervision—such a supervision as no London County Councillor, if he performs his present duties, has time to give. The evils and difficulties which would follow as a result of transfer would be far more serious than those which now exist.

10.—THE EFFECT UPON SETTLEMENT AND REMOVAL OF PAUPERS.

Large numbers of poor persons drift into London by a process of gravitation. The laws of settlement, although unnecessarily complicated, provide an outlet. The Asylums Committee of the London County Council have made a proposal to split the work up, giving themselves a share in it. If effect be given to this proposal it would tend to close this outlet. For purposes of irremovability the unit of area would be extended for the Poor Law area to that of the county. This would enable poor persons to become irremovable more easily in London than in any part of the country. The settlement and removal laws lead to searching investigations into the circumstances of paupers, and these should not be allowed to lapse.

11.—CONTROL BY THE LONDON COUNTY COUNCIL.

The Council, while asking for powers of general control, does not suggest that Poor Law expenditure should be distributed equally over the area for which it acts. In this connection the proposals are nebulous and hazy. Equal distribution of expenditure would necessarily involve such control as the Council suggests, and it is submitted that it would be opposed to all accepted and established principles of local government to give to an elected authority, such as the Council, control without at the same time adding financial responsibility. The body I represent does not advocate this distribution of expenditure, neither does it advocate the relieving of distinct localities from their plain responsibilities.

The Board of Guardians should be retained as the local authority for the administration of the Poor Laws, and the present manageable areas should also

Capability of London County Council to provide for pauper children

Importance of recognition of settlement laws.

Financial responsibility should accompany control of elected authorities

be retained. Experience shows that an extension of the area of administration involves a loss of local interest, and a consequent indifference to increasing expenditure.

12.—It is difficult, in the absence of knowledge of the changes likely to be recommended by the Royal Commission in the fundamental principles laid down in 1834, to speak of the machinery by which the relief of the poor is to be administered, but on behalf of the Poor Law Unions Association I would strongly urge that the Royal Commission should not expect too much as a result of mere changes in machinery, but that it should point out where error has crept into the present system, and set forth in unmistakable terms the fundamental principles upon which the authorities now charged with relief of the poor should act.

13.—LIMITING THE CONTROL OF THE L.G.B.

It is not my intention to deal with this at length. Experience and history both show that continuity of policy can only be assured by elimination of party-political considerations. The Local Government Board as a controlling force would be far more effective than the ever-changing character and policy of a directly-elected authority such as the London County Council. The Poor Law Unions Association is therefore opposed to the scheme outlined in the proposals of the Council.

98368. (*Chairman.*) We have taken so much evidence about London, and we know so much now about all the details of the administration not only of the Poor Law, but I think we may say generally of local government in London, that I do not think it is necessary to go into that subject?—I have no desire to speak upon details in the least and I am sure you have all the details before you. I am chiefly here to deal with the proposals of the London County Council from a general point of view.

98369. Taking your Statement in the order in which it stands I see you think that the Poor Law authority should be a separate authority?—Yes, very strongly; that is, that it should not be handed over to the municipal authorities. I hold very strong opinions upon that point, and I also represent that very strongly from the Metropolitan Committee of the Poor Law Unions Association. We met last Wednesday and we thoroughly discussed the proposals of the London County Council and passed two resolutions expressing that view very strongly. Our first disapproved of the proposals of the county council—that was our unanimous opinion; and the next was that we felt that the local government of London was so very complex that before any drastic changes were made in the Poor Law another inquiry should be held specially for London; we felt the Metropolitan problem was one by itself.

98370. Our reference is to report on the system of Poor Law administration?—We met as a special body on Wednesday, and we met as the Metropolitan Committee of the Poor Law Unions Association, looking at it therefore only from the Metropolitan point of view. We were not really regarding Poor Law from the rural point of view, but we discussed it as Metropolitan guardians, and that is our view as Metropolitan Guardians.

98371. Taking the present system, you are in favour of an *ad hoc* authority for the Poor Law?—I suppose it would come to that. I should personally be in favour of a specialised *ad hoc* authority for dealing with the Poor Law.

98372. Are you in favour of that *ad hoc* authority being an elected authority?—That raises, of course, a very important question. Looking at the administration of the Poor Law in London I cannot help feeling personally that popular election has not somehow or another secured a perfect Board of Guardians. There is no doubt about that; popular election has to some extent failed. But I think that you have to take another point into consideration, namely, why it has failed? I think the Boards have been allowed to drift, and I think that the control of those Boards has not been, in my humble opinion sufficiently definite and strict.

98373. That is rather a question of administration, is it not? The objections that have been urged against the directly elected system is that the class of person, the specialist, that you want to get interested in this sort of work, is very often not the person who is necessarily popular?—I can only speak from my own experience,

which has been gained in Fulham. I have been a guardian of Fulham for many years, and in Fulham popular election has secured a very good board of guardians, judging by results. I do not want to blow the trumpet of the Fulham Guardians, but I think there the law has been administered with a due regard to principles, and of course that board has been secured through popular election.

98374. Do you find that there is much interest taken in the guardians' election as shown by the number of votes recorded?—The number of votes recorded does not show a very deep interest. I may say that I have had to fight every time, and to fight very severely for my seat, because I have taken a definite view of the Poor Law; I have tried to take the legal view, and I have been opposed on each occasion. The last time I was opposed by the Socialist Party, who think my views are somewhat severe. My election has secured great interest in the ward which I represent. But I would say this—that in the wards where the guardians have not been opposed some of those elected have been the best guardians. I can safely say that they were regarded as so good that I think the people had confidence in them.

98375. It has been represented to us by a good many witnesses that in Poor Law administration, if a strong man, or a set of resolute men—a limited number of them—get on a board, they can to a very large extent dominate the policy of that board; I assume that perhaps Fulham has been fortunate in that respect?—I think a group of men may dominate it either way—either away from the law, so to speak, or in accordance with legal relief. But then I think there is a corrective to that, and that is the Local Government Board; there is a corrective to departure from the law in the central control. The very function of that board is to control, and it is imposed upon them by Act of Parliament.

98376. What has struck me, coming in with quite an unbiassed mind as regards the Poor Law administration in London, is the extraordinary difference in the ideas of a administration shown by the various Poor Law guardians of London; that you admit, do you not?—Undoubtedly the want of uniformity in London is very glaring. It is an evil, I think.

98377. What is felt, I think, by those who wish to reform the Poor Law is that one ought to be prepared to sacrifice a good deal if one could establish something like uniformity of principle in the administration throughout London?—I do not exactly see the reason for what I should call sacrifice. Surely the guardians can be informed by a superior authority when they do depart from the strict principles. For instance, there is the power of order, there is the power of inspection, there is the power of audit, and there is the power of dismissal; those are very strong powers, and if they are exercised I should not call that a sacrifice.

98378. I was putting it rather from a personal point of view, and meaning that those who perhaps hold strongly value of to direct election might be disposed to sacrifice some of popular their ideas upon the subject, provided they could get election. uniformity of administration?—I see the point, but I must say that one rather clings to the idea of popular election, because I think it is so educational. I think it is in harmony with the genius of our people that they should elect those who represent them, and I do not think we are nationally bureaucratic. A popularly elected authority kept on the lines for which it was created is to my mind something which we should not lightly give up. I am in rather a difficult position. I am representing the views of the Poor Law Unions Association, and I do not like to express my own views, or I could say a good deal on that point. For instance, personally I think a stipendiary guardian might be very useful. But I am representing the Poor Law Unions Association, and I am instructed on their behalf to say that they strongly oppose the transfer of the work of the guardians to the municipal authorities, and that they are in favour of the retention of the present areas of authorities. That is their view, which I am here to represent.

98379. Going to another point, the sub-division of London into so many districts, is an impediment to an effective system of classification, is it not?—Do you mean classification by institutions or in institutions? Pros and cons of classification of paupers by institutions.

98380. By institutions?—Classification by institutions has been very extensively adopted, I think, and is going

Pros and cons
of classifica-
tion of
paupers by
institutions.

on now in London ; but of course such a classification has its limitations. To aggregate in one building a large number of infirm men would necessitate a considerable expenditure in attendance and nursing, while, on the other hand, to bring together in another building a similar number of women capable of work, but without sufficient employment, would involve a corresponding loss and would have a bad moral effect. The proposal to classify by institutions regardless of the localities to which families belong may be scientific, but it would inflict hardships upon many poor people, and would in many cases result in the total estrangement and dispersion of the family without any possibility of re-union. Such a proposal is, I think, ethically bad.

98381. Of course, the facilities of communication in London are very much increased, and people can now almost get from one end of London to the other as easily as they can get from one part of their union to another ?—The facilities are no doubt improving, but there is a humanitarian and human point of view. Supposing an institution at one end of London is selected because it may be in a nice situation, or, for some other reason, it is selected for a definite class, say the old and infirm people, I doubt whether the old and infirm woman, for instance, would not resist a proposal to be dragged from one end of London to the other, and to have her relations compelled to come all that distance to visit her. You see these people are working-class people, and they cannot afford the time off that we can. We are very apt to look at it from our point of view, but these people cannot afford the time to travel from one end of London to the other, and they cannot afford to give up a day, even where the facilities are so improved. I feel that.

98382. Of course, if you could have something like a general service throughout London with promotion it would tend to bring a good class of servant into the Poor Law service ?—The *personnel* perhaps of the service might be raised that way ; but there are other methods, for instance, if boards of guardians were not to be too local in their view of the appointment of officers and would always try and look at the applicant from the point of view of the work he has to do. In Fulham, we have examinations of a minor character for them. We ask them what their experience is, and, if possible, we encourage them to get certificates ; in fact, most of our relieving officers hold certificates for knowledge in various branches of the work which they have to do. In that way I think we have secured a very good type of man there ; and I think that might be done generally.

98383. You are well satisfied with your officers then ?—I think the proof of the pudding, if I may use a very homely phrase, is in the eating, and our results at Fulham are satisfactory. I have here, which I shall be glad to hand in,* the latest Return of the Local Government Board, showing the weekly cost of the maintenance of paupers in the various workhouses of No. 1 District for the year ending Michaelmas, 1907, and the classification of the inmates in such workhouses. I find that we are 10d. below the average for the whole of London per week for provisions, clothing and necessaries ; but while we are 10d. below the average for the whole of London we are not the lowest in any particular item, that is to say, we have got a good low average. Some go as much as 22d. above it, and 17d. above it. That is due, I think, to our securing good officials and administering strictly.

98384. Now passing on to what you say about relief committees, your view is based on experience that it is the relief committees really, who, more or less, supply the principles of the policy of Poor Law administration in the areas ?—I think the first body is very important ; it acts as a net ; it receives the applications and hears them. I think that is a very important body indeed. It does not matter much when the body has received it whom it hands it on to ; but there is the body which receives the applications and determines what relief shall be given.

98385. That being so it seems to me that it is essential that whatever may be the authority which is connected with the relief committees it should carefully consider its decisions, otherwise the relief committee's views will dominate the people above them ?—Yes, I see that point. That is why I think the first authority is the more important ; practically the first authority decides how the case shall be adjudicated upon.

* Not printed.

98386. Taking that part of the London County Council's scheme, assuming that you turned over to thirty-one borough councils the work of the relief committees, is there any reason to think that there would be any more uniformity under that plan than there is now ?—No.

98387. Unless the London County Council were to strictly nominate them ?—I think that a borough council would not be so efficient an authority for receiving and hearing applications for relief and adjudicating upon them. Only persons familiar with the work can do that well. Then there is the strict supervision of the relief lists and admission lists, and the consideration of the circumstances under which the relief is obtained. That is, to my mind, most important work. When I look at the borough councils, I think that their attention would be divided and they would not be able to give, as guardians do at present, undivided attention to that particular work. The borough councils have become more or less trading concerns ; and in addition they have public health, the management of the streets, and the sewers, and other things. We have some borough councillors on our board of guardians, and from what I hear from them, it seems to me that their borough council work occupies a great deal of their attention. To do that, together with the receiving of applications such as the guardians receive now, I think, would be beyond their capacity.

98388. I have attended several of those relief committees, and I have been struck by the time that is required to consider the cases. In Paragraph 4 you give a list of your board meetings ; assuming that a guardian at Fulham properly attends to his duties, how many hours in the week should you say he would occupy ? His work would take a considerable portion of the week, would it not ?—That is rather a difficult question to answer. I give statistics in that Paragraph which I think I should prefer to stand by than to give another opinion now. This is based upon actual work in Fulham. There were 7,553 cases heard and decided upon in the year 1905 ; allowing an average of five minutes per case only, that would alone entail 210 sittings of three hours each. (*The witness subsequently added the following note*). The work requires more time in winter than in summer. In winter the Committees sit at 2.30 p.m. and frequently continue sitting until 8 p.m.—in summer till 6.30 p.m. There are three Committees which sit independently. If the whole of the work were done by one committee this alone would occupy about twelve and a half hours per week. In addition the following meetings are held fortnightly: Board Meetings, two and a half hours ; Children's Committee, two hours ; Stores and Contracts Committee, one and a half hours ; Sub-Committees, three hours. If, therefore, all this work was done by one Committee it would take thirty-four hours each fortnight. This does not include the Visitation of Institutions.

98389. (*Mr. Lansbury.*) Would they be all new cases ?—They all had to be heard.

98390. Would they be all new cases ? Would not there be a good many of them review cases ?—That is the number according to the census of cases that we actually heard.

98391. Were they new, I mean ? It makes a great difference whether those were cases where you had simply a report or whether they were fresh cases ?—I could not say whether they were all absolutely new applications, but those were all cases in which the circumstances had to be laid before the relief committees, and had to be considered. We are very careful in Fulham not to accept old cases always as remaining in *statu quo*. The circumstances may alter, and we are very careful to inquire whether the circumstances have altered. Allowing for those cases which we have actually heard you will see that that would work out at nearly four days a week.

98392. I would like to ask you whether you could give us an analysis showing how many of these cases were only reviewed and how many were new cases, because that does affect the whole question ?—Yes, I think we could.

98393. (*Chairman.*) How many committees have you sitting ?—We have three relief committees. We have just had a discussion on the board on the subject, as some of us feel that we are not giving sufficient time to the work of relief. I feel that that is really the important

administra-
tion.

Importance
of relief
committees.

Multiplicity
of duties of
borough
councils.

Time given
by Fulham's
guardians
to duties

work. There was a discussion as to whether we could not devote another afternoon to other committees, such as the finance, workhouse and infirmary committees, and then we should have a fuller afternoon for the relief.

98394. (*Mr. Lansbury.*) Do you enter the time a committee rises?—We have a definite time. The other committees are not supposed to begin until the relief committees close; but I must confess myself that if I am sitting on a relief committee I do not allow any rule of that sort to interfere with my work; I think the case must be heard and not hurried over.

98395. If you have got a record of the time your committees sit, instead of having an average like this in Paragraph 4 you might let us have a return showing the actual time?—Yes, I think we could provide you with pretty well what you ask for. I could also provide the Commission with the figures you have asked for with regard to the number of cases that were new and the number that were old. (*The witness subsequently added the following note.*) The number includes all cases, both new and old, requiring consideration. The fact that some require a longer time than others has been taken into consideration in fixing the average at five minutes. (*See reply 98388.*)

98396. (*Chairman.*) Do the cases come up for review before the board? I suppose as a rule the board accepts the decisions of the committees?—As a rule, yes. There are sometimes guardians who may be interested in particular cases and may not quite agree with the decision of the committee; but that is not a common occurrence at all. As a rule the decisions of the relief committees are accepted by the board.

98397. It has been represented strongly to us as regards this relief work that it is undesirable that persons who are directly elected by constituents in a certain area should have the power of giving relief to those resident in that area; what do you say upon that point?—In principle, I do not see anything against it; in practice sometimes it might work out badly, but I think in principle it is not objectionable.

98398. As far as I know we are the only nation in the world who have directly elected bodies for relief of this kind?—A good many of the Continental people come and visit us at Fulham; and they seem to think that our Poor Laws are on the whole very good, I think. At any rate they do not find fault with us very much.

98399. Now going on to the asylums or institutions, I see you think it would be difficult for the London County Council to take over the work of the Asylums Board plus the institutions and homes for children?—Yes. We are opposed to that.

98400. We have had very strong evidence from the Metropolitan Asylums Board to the effect that they are ready to undertake any amount of duties in connection with institutions and asylums, and they contend that there is very little difficulty in it; I do not see they propose to take over children, but the other institutions?—I am not quite sure that I have caught your meaning. Do you mean that the County Council should take over the work of the Metropolitan Asylums Board, or that the Metropolitan Asylums Board should have part of the work of the County Council transferred to them?

98401. The Metropolitan Asylums Board were prepared to largely add to their existing duties; therefore, I suppose, we may infer from that that the London County Council might make use of the same argument and say that their asylums board is also ready to increase the number of institutions?—Yes; but I think the evidence is against the County Council taking more work. I think the Metropolitan Asylums Board, for instance, might possibly take over the administration of lunacy. The administration of the London County Council has, to my mind, been extravagant, judging by the increase in the cost of maintenance. They do not seem to have kept a good grip of the work. I notice, for instance, that the cost per head to the guardians is gradually rising, which shows, to my mind, that the county councillors are not keeping that tight hand over maintenance which they should do, and rather points to them being overworked. In 1889, for instance, the cost per head for maintenance was 9s. 0½d.; it rose in 1890 to 9s. 4d.; in 1891 to 9s. 11d.; in 1893 to 10s. 2½d.; in 1901 to 10s. 9½d.; and in 1902 to 11s. 8d. Now that represents,

on the numbers, an increase on the cost of maintenance of over £100,000 per annum.

98402. (*Mr. Lansbury.*) What are you including in the cost of maintenance?—I have a memorandum here, to the effect that the cost per head represents the maintenance, salaries, and maintenance of officers, but excludes the cost of housing; it is the maintenance of the inmates, I presume, and the salaries and maintenance of the officers. But buildings are excluded, and that shows to my mind that there is rather a want of grip of administration there. If the London County Council undertook further work I think that figure would be likely to still further rise; it shows want of attention to that particular point. I believe it will be found that the present work of the council is beyond its capacity to grip. I have here an agenda of the county council (*producing same*);* I think it is quite impossible for any busy man to really even read it, it is so long, let alone to administer upon it. I may say that I attended the debate of the county council—I think this is evidence—upon these proposals, and I made notes on the margin of this agenda. As they were very important proposals I expected to see a very full council. I counted never less than fifty vacant seats, and the number of vacant seats during the greater part of the afternoon rose to as many as eighty. The Councillors were not there—they were too busy; they were not listening, at any rate, to those very important proposals, and those who were there, I submit, might have given more attention. That is only evidence of the immense amount of time that is imposed upon them. I do not mean to say that they had not come to the building, because the division list in the evening showed that they were not far away. On this question of the transfer of further work to the council I think the evidence is all against it, and I think also that sound and healthy Government would be replaced by a bureaucracy. It must be so, because the county councillors would simply have to initial the work that is placed before them; they could not go through it. Here is the agenda showing the immense amount of work and the variety of it which county councillors have to do. I should unload the county council rather than load it.

98403. (*Chairman.*) I will come back in one minute to that point, but now I will just go on with your statement. Admitting, as I think everybody will do, the great advantage of the case-paper system, I do not see why transferring the work to the borough councils, or to any other authority, would break up the system of case-papers, because that would still remain in each locality available for whatever is the authority?—In thinking about the record of cases to which I refer in Paragraph 6, I had in my mind the whole proposals of the county council, which mean the dismembering, so to speak, of the work of Boards of Guardians, and handing over portions of it to other authorities. It would mean that the children would go to the education authority among other things, and they would want a record. Suppose we keep the family together, then we have a complete record centralised within the area, but if you have the father, we will say, in one institution, the mother in another, and the child in another, each of those authorities would have to keep an independent record, and the correspondence relating to the transfer of information from one authority to the other would be enormous. I think the system would break down.

98404. You were thinking then of the proposals to transfer all the children—both the children who are in institutions as well as the children whose parents are on out-door relief—to the education committee of the county council?—I am thinking that the general result of the transfer would be that each authority would have to keep a record, and I think that that would mean a multiplicity of work—it would mean overlapping and great confusion, and I think you would lose your cases.

98405. There were no other cases which would be transferred to the central authority. I understood that the work was to be transferred bodily to the borough councils except the work relating to the children. Do you believe it would be practicable to transfer the control of the children to the education authority, leaving the maintenance of the parents to another authority?—I think it would be almost impossible to carry it out in practice and to administer it; that is what I feel. As an academic proposal it may be very good.

Confusion of
case-paper
system under
proposed
London
County
Council
scheme.

98406. Are you thinking of out-relief?—I am thinking of the breaking up of the family, and the transfer of it to the various authorities. I think that that would lead to great confusion and to greater expenditure. You must remember that these pauper families are a type, and if you transfer the children to the education authority and the man is in the workhouse, we will say, and the wife in the infirmary, the man might come before the committee and, as they very often do, wish to have a day out in order to look for work; we should have to get information as to where the children were, but it is possible that we might forget, as they would not be under our authority, and perhaps we should be anxious to let that man out to look for work and we should do so. Many of the guardians, I believe, would under certain circumstances wish him to go. The children would be under the care of another authority; he would go out and he would feel himself free, and he might abscond—quite possibly he would. It would be a direct encouragement to him to do so. Which authority would proceed against him? The present system of keeping the family together under one authority I think is better. I am strong on that. I think we want one specialised authority for the relief of the destitute; I am very strong on that, and so is the Association.

98407. Taking the case of the children—because we heard a good deal about that last week—you think it is hardly practicable for the education authority to deal with the children, and another authority to deal with the parents who are in receipt, say of outdoor relief?—Yes. It is overlapping, it means confusion, and I think, it would lead to a great evil.

98408. Going on to another point, which raises a question of principle, you think it would be contrary to all precedent to give an elected authority, such as the London County Council, control over the Poor Law administration in London, unless it was financially responsible for the results of that administration?—Yes, I feel that. It seems to me that the proposals of the county council on this point are very hazy; they are not clear. Each borough council will become the local relief authority providing out of the rates for indoor and outdoor relief. The London County Council, I presume, is to have the power to make or refuse grants-in-aid in place of the Local Government Board and the Common Poor Fund; if it has not this power there will be the same lack of uniformity in administration as now and I think that seeing the borough council was paying for its own relief, it would probably wish to decide upon its policy. I think if the county council is to claim a controlling power it must go on to equalisation of the rates, and the county council does not propose that.

98409. Do you think it is practicable to regulate and control expenditure simply by refusing certain grants?—I have something to say on that, although I am not instructed by the Association.

98410. I should like your opinion on that, because you have had a great deal of experience?—It would be outside my instructions.

98411. It is your own personal opinion?—It is my own personal opinion, and therefore I hope you will not take it to be representing the opinion of the Poor Law unions Association. They are considering it as I brought it up before them. I feel strongly that the entire system of grants in aid of Poor Law expenditure both Imperial and county, should be revised and take the form of block grants distributed in proportion to the needs of each locality. These should be conditional upon the Local Government Board issuing certificates based upon statutory declarations made by the guardians (and inspection by the board itself that the provisions of the law had been carried into effect, the orders of the board applicable to the district observed, and the union efficiently and economically administered, I think that there is a weapon which might be used to bring about uniformity.

98412. That is to say, the grant should be a general grant, not applied to any one particular and specific purpose?—It should be a grant made conditional upon the efficiency of the administration; but I do not think the county council should be the authority for exercising that power.

98413. It would be very difficult, would it not, to refuse those grants in times of emergency?—Yes, it would perhaps be difficult, but then, as I think, that is just

where you have the weapon. Supposing they spend more than the central authority was supposed to give them, then the local ratepayers would be called upon to make up the deficiency, and they would very soon exercise some discipline upon the board of guardians, and want to know why they were called upon to pay more. It would have a disciplinary effect.

98414. One of the difficulties is that as a rule the parishes that get the most are the poorest, and it probably would be there that if there was any distress that the pinch would be most acute?—That is a very difficult point. One speaks of a parish being the poorest, but I think that a parish may be made poor. I speak now for my own district, which I know very well. I am quite sure that Fulham could be very easily pauperised; but after ten years of hard work the people have been taught that there are higher methods of help, namely self-help, than merely receiving help from statutory authority. That has stimulated a great deal of thrift in the district. I helped, with working men, to establish in a very poor district there, a co-operative society, and we are now doing a turnover in that poor district of £50,000 a year; it has some branches outside, so perhaps the whole of the turnover is not there. We have got £13,000 of capital subscribed by the working classes there, and we are paying 5 per cent. on that capital, we are paying a dividend of 10d., and we are paying 2½ per cent. towards the educational fund. That has all been organised by the people themselves.

98415. But that is outside the Poor Law?—That is outside the Poor Law entirely; but it shows that you can, I think, alter the character of a district through your Poor Law. The Poor Law used in the right way may be a most useful weapon for raising the people if the destitute are relieved in accordance with the fundamental principles of the Poor Law; but if you go outside those principles I think you may make the parish poor and pauperise it. I think those grants-in-aid, both Imperial and county, might be a weapon for securing sound administration in the district.

98416. Coming back to London, if it is represented very strongly to us that there is a great want of uniformity in the administration, and that certain evils ensue, what is the remedy? You think the London County Council is overworked, and could not undertake fresh duties?—I feel almost certain of it.

98417. I will put an alternative. Would you like the idea of a directly elected authority for the whole of London to administer the Poor Law?—That would involve so much. That would involve equalisation of rates; I think Professor Smith has something to say on that point. I think it would lead to extravagance. I think that the present system—I am instructed to give evidence on these lines—gives you areas of comparison. We can compare one district with another. We can point to a parish of a similar character with the same industrial conditions and we can say: "Here is a parish which spends so much, and there are so many paupers per 1,000 of the population there." We can compare it with another parish. If you centralise it and have a central authority, all that useful comparison will go and you will simply have a great big bog, so to speak, and whichever way it goes it will go altogether. Expenditure will rise, and it will go together in one mass. At present you have a corrective.

98418. I do not know that it necessarily follows that the expenditure will rise?—Experience shows that it does. *(The Witness subsequently added the following note.)* Take for example the case of the Metropolitan Asylums Board. From 1870 to 1904 the average number of persons maintained in reased about 60 per cent. whilst the expenditure increased by 250 per cent.

98419. You are evidently strongly of opinion that whatever system of Poor Law administration is adopted of local in London it is essential that the relief committees should be composed of persons who have an intimate knowledge of the locality?—I quite agree with you there. That is really the important authority—the first authority for hearing and receiving applications. That is the important point, and I feel strongly about that.

98420. That is knowledge of a necessary kind?—Yes.

98421. I suppose you also attach great importance to persons having what I might call a judicial temperament?—Yes. I do not want to mention Fulham too much, but

we have taken a great deal of trouble there in getting up our knowledge of the Poor Law; we have lectures on it, and we take an interest in it. I think that if that could be done generally guardians are quite capable of doing work well.

98422. What is the result of the lectures? We are told that only 28 per cent. of the electorate in London voted at the last Poor Law guardian elections; was the percentage higher in Fulham?—I could not give you the exact percentage. As you know, the elections are triennial, and they come after the others, and interest has to some extent been absorbed by the others. I must confess from my experience of Party politics and so on, that the interest shown by the voter is in exact proportion to the interest shown by the Party wirepullers and the money put into the election; interest is created by those.

98423. (*Prebendary Russell Wakefield.*) Was it in that way that the interest was created in Fulham?—I do not think our percentage is anything like what we ought to have had.

98424. (*Chairman.*) It has been represented rather strongly to us that this multiplicity of elections is a misfortune?—Yes, it is. If I may be allowed to repeat what I said just now, some of our very best guardians come from wards in which there was no contest.

98425. (*Prebendary Russell Wakefield.*) When you were present at the London County Council, that was at the consideration of something that had been threshed out very carefully in committee before it reached the full Council, was it not?—No doubt those proposals were threshed out in committee, and therefore the other members of the Council ought to have been interested in knowing what that committee had sent up.

98426. You sometimes go to the House of Commons, I suppose?—Very seldom.

9 427. Is it not the case there that people are away until the Division is about to take place very constantly?—Yes, I think that is quite true.

98428. A great deal of the work that the London County Council has done, must be done in committee, must it not?—Yes, I think that.

98429. And the people on the committees are, generally speaking, those who are closely interested in the particular subject which is before that committee?—Yes, there is no doubt about that; but as they were representatives of localities that had Boards of Guardians, and many of them were guardians no doubt, I was very surprised at the number of vacant seats.

98430. Would you at all be reconciled to the idea of the London County Council as the authority for the Poor Law if there was an increase of numbers in that Council?—No. I am against the municipalisation of the Poor Law; I am dead against that.

98431. It is rather to that you object?—The old Poor Law, prior to 1834 was administered by vestries, that is, borough councils under another name, and it was not until the Poor Law was placed under special authorities elected for the purpose, that is, authorities away from the vestries and separate from them, that real reform took place. Then there was a Poor Law Board created which was a special Board for the purpose of assisting the reform, beginning with just a triumvirate of three. It exercised controlling authority over these Poor Law authorities, and I venture to say that when the Poor Law Board which was specially charged with looking after the administration of the Poor Laws was merged in the Local Government Board in 1871 and became part of the Local Government Board, that the control has weakened since then. So that you have an example there of municipalisation. Prior to 1834 it was practically municipalised Poor Law and then it was separated and the Poor Law improved under that change, in other words, reform took place.

98432. Practically, you are in favor of local administration and of a very tight hold on the part of the central authority?—Yes, I am; and that central authority I regard as the Local Government Board.

98433. I was interested in your statement with regard to these block grants. May I take it that to some extent the kind of grant you mean is to be administered in the same way as the Exchequer grant has been administered

under the Unemployed Workmen Act, and that it is to be specially given to districts where there is special poverty?—No; I should think more like the education grants. *The Rev. Peregrine S. G. Frobert.*

98434. There has been an attempt in the case of the Exchequer grant to discriminate between places that were really badly off and others?—Yes, there has. In the case I put forward, grants would be made conditional upon a statutory declaration being made by either the chairman or the clerk or some representative that the law and the Orders had been carried out. *30 Mar. 1908.*

98435. The only difficulty I see is that you do not bring the ratepayer directly in as a responsible individual until the pressure has become very heavy, do you? If the grants are made from the centre, the ratepayer would naturally go on spending as much as he could and getting as much as he could until the moment came when you said he would have to pay out of his own pocket?—Supposing a board of guardians is very generous and goes in for indiscriminate relief, and it is found upon examination by the controlling authority that the administration has been lax, and that a certificate could not be produced showing efficient administration, then you withhold the grant. Of course the money would have to be paid, but it would have to be paid by the ratepayers; they would have to make up for the loss of the grant, and this would exercise a great check upon the guardians—it would have a disciplinary effect upon them like a school losing its grant.

98436. It would make the central authority rather an unpopular body in that locality, would it not?—The central authority you see, is so separated, as it were, from local considerations that it would not mind its unpopularity.

98437. Is that really the case with regard to the central authority that it does not mind what the locality thinks about it?—The central authority is independent. The dissatisfaction of course might be expressed at the next Parliamentary election.

98438. Or even before that by a series of questions in the House addressed to the then President of the Local Government Board?—Yes, I think you take rather an extreme view.

98439. You say that the fact of there being a variety of authorities is really a corrective, and that if one authority spends a very great deal more money than another, people might reasonably be expected to object, because they would see what has been done in other localities. That is rather one of your points, is it not?—The variety of authorities supplies a standard of comparison. *Corrective value of various authorities.*

98440. Is it not just possible that instead of that, it might be an encouragement sometimes to an extravagant authority, and that they might say: "See what they are doing in a particular district; why should we not do the same?"—I think it would be the other way about. Here is a very useful method I should say, of getting uniformity. If the Local Government Board, for instance would select one of these unions which they, after inquiry, found to be spending a fair amount under these particular headings and then would issue an order pointing out that they require such a standard to be observed, I think you would get a very fair uniformity in that way. I should say Fulham is rather low—we are economical, no doubt; we have had very good officers, and we have had a very good workhouse master, from the economy point of view. So Fulham might be considered too low, but at any rate they might select one Board, and in that way might very well secure uniformity through administration by selecting what they regard as a fair Board, spending a fair amount of money and requiring the others to work to it.

98441. (*Mr. Lansbury.*) You said you believed in a specialised *ad hoc* authority?—Yes, I do, for Poor Law. *Need of specialised ad-hoc authority.*

98442. Would you tell us exactly what you mean by a specialised *ad hoc* authority? You want it directly for Poor Law elected, I understand?—I am giving evidence for the administration of Poor Law Unions Association, and they want it directly elected. *Need of specialised ad-hoc authority.*

98443. I must again ask you how you can get it specialised, because our ideas of specialists vary considerably?—I used that word, perhaps, in rather a loose sense. I mean

*The Rev.
Peregrine
S. G. Probert.*

30 Mar. 1908.

that this authority should be elected for the definite purpose of relieving a particular class in the area. That is what I mean by a special authority—an authority that does not have its attention divided like a borough council would—which can give undivided attention rather should I say.

98444. You have some men on your board of guardians who are borough councillors, have you not?—Yes.

98445. Are they good guardians?—I would rather not answer that question. I think that would be making invidious distinctions. I think we are all good guardians.

98446. I really wanted to know whether they did their work; that is all?—May I say on that point that I have a little bit of evidence which might be useful? There was a conference held in London some time ago of representatives of the City and Metropolitan borough councils, convened by the Paddington Borough Council, as to precepts. The document I have before me says: "We beg to state that we have now received a report from this council's delegates containing the following resolutions passed at the conference: Resolved that in the opinion of this conference the administration of the Poor Law should be in the hands of borough councils who are called upon to levy the rates for this purpose." That came up as a motion at the Fulham Borough Council, on which there are guardians, and the guardians were against the transfer—in fact the resolution was lost on the question of the transfer. The motion was: "That this council concurs in the resolution set out above, and that authority be given to its representatives to support the views contained therein at the next meeting of the conference"—that is, that the work of the guardians be transferred. That was lost. The councillors who are on our board of guardians feel that it would be a mistake to transfer the work of the Poor Law guardians to the council, on the ground that they could not do it—that the work would be too much.

98447. But supposing it is agreed that the borough councils should not be a new board of guardians, as it were, is there any objection to the setting-up of a composite committee on which some members of the borough council as now, and other people outside, should sit with them and form the committee to which you attach so much importance, that is, the committee which investigates the cases? They would then all be people with local knowledge and would know the local circumstances. Is there any great objection to a proposal of that kind?—Only on the general grounds which I have stated.

98448. They are very general, are they not?—No. I think I have given in my Statement very special reasons.

98449. They are really that you object to the mixing-up?—Yes. I do not think the distress committees, for instance, have been a success.

98450. Excuse me, this committee would not be specially called into being to do any other work, as I understand it, but the work of receiving applications for relief?—As evidence I put forward this fact that such composite committees were called into existence by the Unemployed Workmen Act, and their duty was to hear applications and adjudicate upon them. I do not wish to be in any way unfair, but I think I should be supported by the experience of those who have sat upon distress committees that the borough councillors found the work very uninteresting and were very poor attendants in London, thus showing I think that the mixed composite committee of borough councillors and guardians is not altogether a success.

98451. Have you any evidence as to the last winter's work on those committees?—Only the evidence which my personal experience of those that I know gave me. I think most of the borough councillors resigned. (*The Witness subsequently added the following note.*) In Fulham, of the ten councillors elected to the Distress Committees in November, 1903, six have since resigned, whilst of the six guardians elected to the Committee in April, 1907 not one has resigned.

98452. That is rather beside the point that we are on just at the moment. Do you know for a fact whether the work of those committees—it was purely a novel experiment you know—has improved or got worse?—I do not know from experience, because I am not on the Distress Committees.

98453. So you are only giving us a pure opinion on the matter, and an opinion not based upon very much knowledge of the circumstances?—It is an opinion based upon the general observations which I have heard from those who have been on the committees. Capability of borough councillors to act as guardians.

98454. It is not an opinion based on first-hand knowledge?—I suppose you would hardly call it first-class evidence, but still I hold that opinion very strongly.

98455. What I want to get you down to is that a committee selected in the way I have just proposed would not have any other duty as a committee but the duty of receiving applications for relief?—Exactly.

98456. I have not heard yet any reason put forward why such a committee should not be as efficient an instrument as the present committees of boards of guardians?—The committee, *qua* committee, would have no other duty, but the members of that committee would have other duties.

98457. And so they have now?—Those who represent the guardians would have only one duty to perform, namely, the hearing of applications and adjudicating thereupon. But the representative from a borough council would have a dual duty—not as a committee man, of course, but his attention would be divided, although *qua* committee, they would only hear applications.

98458. Certainly; but what you are really arguing, if there is anything in your argument, is that a public man, if he wants to interfere in Poor Law work should have no other public office, except under the Poor Law. That is what you drive yourself back on, is it not?—That is a deduction which I think is a fair deduction, and I base it upon my own experience as a guardian. I have been for many years a guardian, and, although I give a great deal of attention to the work, I find that I could give far more. For instance, there is the hearing of cases, the sitting on the board, the administration through the board meetings, the sitting on committees hearing relief, the inspection of buildings, the inspection of institutions—I really could spend the whole week on the work.

98459. As a matter of fact, it is just like what is sometimes said about paupers—it is said that you can have as many paupers as you like, and so you can give as much time to this as you please?—Yes; and I feel that I should not be giving too much.

98460. How many institutions has Fulham?—In Fulham we have the workhouse with 727 inmates, I suppose; then there are the infirmary (with 500 beds), the casual wards, and the Nurses Home. Then there is the Children's Home at Parsons Green with about eighty children. Those make altogether five institutions. Say that you pay a visit once a week to each of them— Amount of attention required on guardians.

98461. Do you consider that on any board of guardians each member is called upon to inspect every institution once a week?—I am on the house committee of the workhouse; there is a visiting committee at once. That necessitates once a fortnight a formal committee meeting. Then I am on the Rotal Committee for visiting. Then I should like to be on the Children's Committee, which meets at the Children's Home once a week; but I cannot afford the time.

98462. Are you going to seriously argue that a member of a board of guardians must be on every committee?—No.

98463. Then there is not much in it, is there, in piling up the work on paper in the way you do?—I think the reason the Poor Law has got into this need for inquiry—as a proof, this Royal Commission on the Poor Law—is perhaps the fact that members of boards of guardians have been public men, and have not had the time, or have not given the attention to the Poor Law which I think they ought to have done. Where you have instances in which members of boards of guardians do give almost their whole time to the work, at any rate the whole of the time that they can give, there you do get excellent results.

98464. But they are only excellent results according to certain people's opinions, are they not?—No. The results, as published by the Local Government Board, are what I go by. I will give you one instance. Take the work of recovering the cost of relief from relatives legally liable. I look upon the recovery of the cost of relief as most important work, because the moral effect it has is enormous. We have given a good deal of attention to that at Fulham; and the result is that the amount

Transference of Poor Law work to borough councils.

Capability of borough councillors to act as guardians.

recovered from the relatives has doubled in a few years, because we had a special committee to give attention to that work. In the year 1900, we got £1,053 from relatives—I must tell you that in 1899 we were separated from Hammersmith and became a separate union, and so we tried to begin well by starting on this work. In 1901 it rose to £1,528, in 1902 to £1,542, in 1903 to £1,982, in 1904 to £2,045, in 1905 to £2,249, and in 1906 to £2,581. That is the work of that committee, simply in the recovery from relatives of relief given to paupers. Supposing we had all been so busy as to say: We will not bother about this. That would mean that it would have gone the other way.

98465. But you employ an officer surely to make your inquiries?—Yes, but we look after the officer.

98466. But the whole of the investigations of those cases had to be made for you?—On our instructions and orders.

98467. Certainly; it was on your instructions to the collector. I suppose you are aware that most unions in London, certainly within the last ten years, have appointed collectors especially for this work?—Yes.

98468. I suppose every union in London would be able to show an increase in the amount they collected?—All the well-administered unions would.

98469. We differ, do we not, as to what is well-administered?—Yes.

98470. I put it to you whether it is not a fact that the whole of the Metropolitan unions show an increase in the amount that they get *pro rata* from the relatives of the cost of maintenance?—I think that recent inquiries and the general feeling about Poor Law is that guardians are beginning to feel that they are under the public eye, and that they must do their work better, otherwise they will go. That is the feeling we have had.

98471. That is the feeling which has hustled you up?—I quite agree. I do not wish the Commission to misinterpret that remark of mine; it is the same in everything—it is the general law.

98472. There is the fear of votes in our minds?—It does not mean that boards of guardians have been bad; it means that they have been badly administered. I think the system is excellent, but what is best is the best administered.

98473. I do not want to enter into an argument with you whether you ought to recover or whether you ought not—that is a question I will leave?—I only gave that as an answer to your question as to the amount of time for the work.

98474. I am only suggesting to you that the bulk of that work is done by a paid official. When you were joined with Hammersmith, did you have a man specially to do that work?—No. It was done by a clerk, and it was very badly done.

98475. Of course, you appointed a new officer?—We appointed a collector. We found that the orders of the guardians were not carried out.

98476. Under the old system?—Under the old system.

98477. But they were when you appointed a man specially to do it?—Yes; and we see that they are carried out.

98478. Still you appointed a man whose sole business was to do that?—That is so.

98479. Surely that makes all the difference, whether the job is going to be properly done, or not?—It is better administration, of course. (*The Witness subsequently added the following note.*) An officer cannot do all that is necessary. The guardians must devote a considerable amount of time to the work. The amount of the contributions have frequently to be varied, as the circumstances of the contributor change. This cannot be left to the discretion of an official.

98480. On this question of separating the family, I take it that Fulham occasionally sends children to the Metropolitan Asylums Board?—Yes.

98481. You have no control over the children there, have you?—No, but we have the case paper.

98482. I think you said a very true thing a little while ago, namely, that so long as you had one committee making the inquiries at the beginning, it did not matter where the people went to afterwards, because there you had a complete record?—Yes.

98483. What I want to find out is what is the objection when the children or the parents of the children have gone before your committee to handing the children over to the education authority, any more than handing them over to the Metropolitan Asylums Board to be dealt with?—Because we do not lose our authority over them now; they are still our children and we can withdraw them.

98484. You would not lose it then. If the parent wants to leave the workhouse, and the child is in a fit condition to leave the institution of the Metropolitan Asylums Board, the child is got out on your order and joins the parent?—Yes.

98485. You have to decide whether the parent can go out or not without his child?—Yes.

98486. I suggest to you that supposing a child is taken to one of the institutions under the education authority, the same thing would happen that happens now when you bring a child to the Metropolitan Asylums Board?—I do not think it is quite the same thing, because I think the proposal of the county council is much more drastic than that. The education authority becomes the authority for the child, and in the case of the Metropolitan Asylums Board, it is not. The Metropolitan Asylums Board has only to receive the children under certain physical conditions, and in fact, we do not lose the child at all, and we do not give up the child.

98487. You give up the child for the time being?—Only so long as it is in a certain physical condition.

98488. I understood the point was that you could not collect the children together when the parent took his or her discharge?—Should we have power to get the child discharged? The proposals of the County Council are so hazy that I do not know what the power would be.

98489. Let us put it the other way on then. Supposing you had authority to ask for the child to be returned to the parent, is there any valid objection to a scheme of that kind as impracticable?—I think there is. I think it would lead to great confusion and great difficulty.

98490. It does not do so now with the Metropolitan Asylums Board, does it?—No.

98491. Nor with the Catholic Schools, and all those institutions?—We do not transfer the child there.

98492. You surely transfer it to the institution?—To the institution, but we do not concede any authority over it whatever.

98493. You would lose your authority over the child in this sense, that you have nothing to do with the administration of the institution to which the child goes?—Yes; we visit it, and we make a point of visiting it.

98494. But you have no control over the administration, have you?—Yes, we make reports upon it. We have had several on those institutions, and the reports have considerable influence.

98495. On the institutions of the Metropolitan Asylums Board?—Not the Metropolitan Asylums Board, but you mentioned other homes.

98496. Stick to the Metropolitan Asylums Board for the moment?—You mentioned the other homes.

98497. All right; probably I ought not to have mentioned them for the purposes of my argument. The Metropolitan Asylums Board, after all, is a public authority and does stand very much in the same relation as it is proposed the county council should in regard to education; I am not suggesting to you that you have no control over the administration of its institutions?—We visit the homes for children of the Metropolitan Asylums Board, and we report upon them to our guardians. If we find anything in the nature of the circumstances which we think requires attention, we should report it to the Metropolitan Asylums Board, and I presume we should also ask our representative on the Metropolitan Asylums Board to move in the matter. Therefore, we do indirectly control the Metropolitan Asylums Board.

98498. I am suggesting to you that you should do exactly the same thing with the county council, by asking your representatives on the county council to inquire into anything that you think is wrong with the administration?—No. The county council is so distinct an authority, and has such powers of its own, that I do not think we should have any *locus standi*. The Metropolitan Asylums Board is composed of guardians and

*The Rev.
Peregrine
S. G. Probert.*

30 Mar. 1908.

Advisability
of placing
pauper chil-
dren under
education
authority.

The Rev Peregrine S. G. Probert. nominated members, and therefore the Metropolitan Asylums Board, is, so to speak, an extension of the Poor Law.

30 Mar. 1908.

Advisability of placing pauper children under education authority.

98499. Do you seriously argue that you have control over the children who go to the Metropolitan Asylums Board?—I certainly claim that we have control through our representatives. We are dealing now with the county council's proposals, not our own proposals.

98500. I put the other things to you as being somewhat different?—I am here, of course, to more or less deal with the proposals as set out by the county council, and you are putting a suppositious case to me which might put me into a difficulty, I quite admit, without time and notice. These are very difficult questions, and one has to consider them. The county council suggests that the homes and the Poor Law schools should be managed, I presume by the local school managers. They say nothing as to the cost, and they do not indicate to whom this cost is to be charged. By implication the school managers are to be responsible for the relief of school children. If so, then there are two authorities responsible for the relief of the same family, and in that way you get overlapping and confusion. This is my note upon the general proposal of the county council:—The education and care of children in Poor Law schools and institutions is satisfactorily carried on. The results are excellent and very few fall back into the ranks of pauperism. It should be borne in mind that the parents of those children frequently belong to the in-and-out class. I do not think guardians would object to the provision of schools by the education authority—now this is your point—if the guardians were free to send children or order their discharge, paying only for the maintenance while under the care of the education authority.

98501. It seems to me that that is the whole point?—But the proposals of the county council are quite indefinite upon that.

98502. (*Prebendary Russell Wakefield.*) Is that purely your own note?—That is purely my own note.

98503. That has not been considered by the Association?—No.

Attitude of Poor Law Unions Association to equalisation of Poor Law rate for London.

98504. (*Mr. Lansbury.*) I understand you are against—and there again I do not want to labour the point—the equalisation of Poor Law charges for London?—Yes.

98505. Is the Poor Law Unions Association against it?—I presume by implication they would be, because they unanimously opposed the proposals of the county council which seemed to them to involve equalisation.

98506. There have been conferences in London, have there not, which have carried resolutions in favour of equalisation over and over again?—Yes.

98507. So perhaps your council is not really representative?—I am speaking for the Metropolitan Committee of the Poor Law Unions Association.

98508. How many are there on that committee?—I could not tell you how many.

98509. Did you have a big meeting the other day?—We had a representative meeting of guardians, and they appointed two of us to come here.

98510. You could not tell us how many there were present, could you? It was summoned rather hurriedly, was it not?—Yes; it was summoned rather hurriedly.

Danger of multiplicity of authorities administering Poor Law.

98511. I put it to you that the public authorities in London have over and over again carried resolutions at conferences called for the purpose, in favour of the equalisation of rates and the central control of Poor Law expenditure?—You are more familiar probably than I am with them, but I believe such resolutions have been carried. I do not want to detain the Commission, but on the point of the education authority being a relieving authority, we have considered the question at the Fulham Board of Guardians. It was in relation to the feeding of children that we considered it, but this will show the confusion just the same. The effect of the proposal generally, so far as boards of guardians are principally concerned, is to establish new relieving authorities acting not in co-operation with the board of guardians, but with over-lapping powers. Within the area of the Edmonton Union, for instance, there would be no less than twelve authorities with statutory powers and

public funds at their command engaged in the relief of the poor—namely, one board of guardians, eight education authorities, and three distress committees. This number would be further increased if the recommendation of the Vagrancy Committee to make the police the authority for the relief of the casual poor is adopted; but even without that, there would be no less than twelve authorities.

98512. Of course, the redeeming thing about the county council's proposal was that it did want to get rid of one authority?—Yes. But it is a purely academic proposal, and I think that those who proposed it were unfamiliar with the technical difficulties in the way of it.

98513. Still, everybody agrees, do they not, that we have too many authorities at present dealing with the matter?—I do not know that everybody agrees.

98514. You agree, surely—what you have read out just now is not good, is it?—I certainly would say that it is an evil to multiply authorities doing the same thing, and therefore overlapping.

98515. You are face to face with this, that public opinion, wisely or unwisely, has said that certain children shall not be treated as paupers if they are fed; it has also said that certain people who get what you would call relief through relief works, etc., shall not be treated as paupers. Therefore, you are driven back, it seems to me, on to the municipal authority as the authority to do this kind of work. We may not like it, or you may not like it, but you have either got to have this multiplicity of authorities or you have to merge it all into one as is suggested?—I do not quite follow your reasoning on that point. I come here to give evidence on the question of the transfer of the work of guardians to the municipalities, and I strongly support the idea of one specialised authority for Poor Law administration.

98516. (*Mr. Bentham.*) I understand that you do not consider the administration of the Poor Law over the whole London area to be quite satisfactory?—No. There is one very important point which has not been touched upon, namely, the effect that that would have on settlement; I am against it on that ground.

98517. I do not mean one area now; I am taking the administration in the various unions. There is a great difference in that respect between one and another, is there not?—Yes.

98518. They are all supposed to be elected in the same way, and yet you get different results in different localities?—Yes.

98519. Do you consider that desirable?—In itself it is undesirable, but I think that to have one uniformly badly administered area would be worse.

98520. Probably; but it would probably soon be remedied, too?—It is the lesser of the two evils, I mean.

98521. You no doubt feel as some other guardians feel who are connected with other unions, that the particular union you are connected with is well administered; but upon the present system of selecting guardians do you feel that it is permanent? Might you not all be swept away some day, and another set put in that will change the policy? Has that not been the rule?—Of course, that is always one of the great disadvantages of a popular election; but still, there is something healthy to my mind in what I call local government.

98522. Of course, it is always healthy when it is going one's own way?—It is a principle worth preserving if you can protect it from these unhealthy signs. If you make London one area it would make it very much easier to get a settlement. If the county council were the controlling authority then, of course, you would get one area.

98523. It would make it easier to get a settlement?—Much easier, because plenty of people come to live in London for five or six years, but do not live in one parish for one year. I think I might provide the Commission with statistics showing that for every one pauper settled in London we might move two out. So you have an outlet, and a healthy outlet now, which would be closed if you made London one area.

98524. Suppose we abolish settlement altogether?—That is a very big question. I think it would lead to great changes indeed in the Poor Law, in fact it might lead to the nationalisation entirely of the Poor Law.

Need to recognise laws of settlement.

Danger of multiplicity of authorities administering Poor Law.

of 98525. Do you see any reason to oppose the abolition of settlement? What would be the net gain of it, taking the country as a whole?—Just what I have been saying. You get administration now within areas, and you are able to check any bad tendency. You can see a danger taking place in another area, and you are able by a standard of comparison to check what you believe to be a wrong tendency. Once you have nationalised it, I think that the whole thing will go together, and you will not be able to correct a wrong tendency. The question was placed before the Commission in 1834, and I think they reported very strongly against nationalisation.

98526. I do not think nationalisation was suggested in my question?—No, but it led to it, I think. In my opinion settlement is a kind of legal right; a man has a right to say he is a parishioner, and that right would be abolished entirely; and that I think would be bad for the poor.

98527. You do not usually agree with all legal rights, do you?—I do not want to be taken off into controversy, but I am rather an individualist; I do believe in individual rights, and I do believe in individual responsibility and individual freedom.

98528. Suppose the right to relief is maintained as it is at the present time, it is immaterial whether the person is relieved from one parish or another, is it not? If in one area the Poor Law is administered in such a way as to attract people to it, of course they would suffer the penalty, as they would not be able to remove them; so that it would correct itself in many ways, would it not, that way in particular?—The strongest argument against the abolition of settlement, I think will be found in the Report of 1834. I wish I was able to give you the reference, but there is a long detailed argument there which I agree with.

98529. You have more faith in an elected body for Poor Law purposes than in a selected body, have you not?—I think it would be better if you could get a combination of the two. To abolish the elective principle altogether I think is a very drastic change. I think there are the same objections to co-option that there are to election; I think that an elected authority generally co-opts people of the same kind, and who have the same views. I think if you could in some way nominate members of boards of guardians that would give it stability.

98530. Who should nominate them if the body itself does not do it?—I should think the Local Government Board.

98531. All over the country?—Of course it is a difficult question. I do not feel that I am here to construct theories or practical schemes this morning. I am here more or less to give evidence upon the proposals of the county council. Whatever I should say upon the point you put to me, I should have to say with some reservation.

98532. You say that in your experience the consequences of co-option do not offer any guarantee that the persons best qualified to do the special work will be appointed; that means really that you object to co-option altogether, does it not?—Experience shows that in consequence of the introduction of party politics, co-option offers no guarantee that the persons best qualified to do special work will be appointed. Political services, or a reputation for philanthropy, rather than experience coupled with sound judgment, has been the determining factor in electing aldermen or members of a distress committee. Committees appointed by members such as these will not be efficient substitutes for authorities elected for specific purposes, such as the present board of guardians.

98533. That means that you adhere entirely to an elected body for this purpose?—That is my evidence for the Metropolitan Committee of the Poor Law Unions Association. My personal opinion is that that perhaps might be modified by nominating members, or even in some instances by appointing a stipendiary; but I am not asked to give evidence upon that point.

98534. The number of people who take part in an election in London particularly is very small, is it not?—Yes, the proportion is small.

98535. Can it be said that the elected representatives are really representatives of the feeling of the locality?—Yes.

98536. On the ground, I suppose, that those who have any interest at all have voted?—Yes.

98537. On the other hand, if any particular section of the community are aggrieved, as possibly it might be on some points other than of Poor Law administration, a very small section of the community can organise themselves together, run their own candidates and win—with a poll of 20 or 30 per cent. only, it takes very few to turn an election?—Yes.

98538. So that upsets altogether the balance, as it were, of fair representation when the election attracts only so small a percentage of voters?—As I said before, those who do not go to the poll, I take it, are willing that those who are elected should represent them. I do not think it is fair to say that because a man does not go to the poll, therefore he takes no interest whatever in the candidate; he may say: "I am content with this candidate," and the ward may be content with the candidate. As I say, I am quite sure that some of our best guardians come from wards where there was no contest: the ward was content to accept them. Looking at our boards of guardians, it is no exaggeration to say that in the case of some of the best, their election was not contested.

98539. (*Chairman.*) I assume that they had proved their merit before, and that the electors therefore elected them without contest?—Yes, they were known.

98540. (*Mr. Benthams.*) It seems as though the different boards of guardians in London, if they remain as separate Poor Law authorities, will continue to be representative as it were in one locality of one class of thought, in another locality of another, and probably one electoral area will oscillate between one and the other?—Yes.

98541. So that the present lack of uniformity between one area and another in London may continue for all time?—Yes. I presume what we are now discussing is the method of election—that is what it comes to. I do not believe myself that machinery will make much difference, although you may alter your machinery as much as you like. What you want is principles in the administration of the Poor Law. We are merely discussing new methods of election, and I do not believe that changes of machinery are going to make such great difference.

98542. Let us examine that for a moment. Whatever sort of machinery you have got, I suppose human beings have got to carry it out and to administer the law?—Exactly.

98543. The point is, how best can we get the suitable persons to administer this particular law?—Yes.

98544. Principles may be laid down in the law and in the orders of the local Government Board, but if in one locality they are interpreted and administered differently to another, how are you going to get over that?—As I say, statute made authority does not work automatically; it is composed of men and women, and if they are ignorant of the principles, no amount of legislative machinery will prevent or remedy it. We want a clear understanding of principles. If this Royal Commission can lay down the principles in clear and unmistakable language, there will be hope of reform. We cannot get reform through mere changes in machinery.

98545. (*Mr. Lansbury.*) Do we not all disagree on principles?—I think the Royal Commission will probably agree on principles—let us hope that they will.

98546. (*Mr. Benthams.*) However carefully principles may be laid down in the future, it will be most difficult to get bodies in all the various localities of London to administer it in the same way throughout London; London being a large area, is it advisable there should be this difference of administration between one locality and another?—Supposing the principles are laid down very clearly, and on the evidence you have before you no doubt you will be able to deduce principles—such a mass of evidence will enable you to do so—if these principles are clearly laid down, it will then become the duty of the authorities to issue orders embodying those principles clearly, and using the necessary amount of control to see that they are carried out. That is where the whole question of the Poor Law depends on its administration.

98547. As a guardian of experience, you know that if you lay down a principle like this, for instance, that only destitute persons shall be eligible for relief, although the

guardians on the different boards may agree that the principle is right, what they understand to be destitution is, in each case, totally different; and it is a very difficult thing to get them to administer alike, although they may be attempting to do it on the same principle. That is really the main cause of the differences between the administration of one board and another when they pretend to have principles. But in some localities they do not pretend to have any principles, and then there is the difficulty of getting an elected board to see what principles they are working on. They say they represent the ratepayers, and it is rather difficult to get them to toe the line, as it were, to any orders laid down by the Local Government Board. If the Local Government Board lay down principles as carefully as possible, you are face to face again with the point that it is more difficult to get the principles of the central body carried out by an elected body than by a selected body?—I quite follow that, and if I may be allowed to say so, I represent to-day the British Constitution Association which has just formed a special Poor Law Committee including Sir William Chance, Mr. W. A. Bailward, Sir Arthur Clay, Mr. S. Hutchinson Harris, Mr. Mark H. Judge, Mr. Thomas Mackay, Mr. W. V. Cooper, and myself. They concur in the general evidence which I have given to-day, and we are having a meeting this week. If we might make a written statement and send that in, I will take into consideration this very important point as to elected authorities which is now being put to me.

98548. (*Mr. Lansbury.*) We have heard Sir William Chance and Mr. Mackay?—But we are meeting as a committee, and I should be grateful if you would allow us to send in a written statement. We do not ask to give evidence. My colleague of this morning has definite opinions on this question of elected authorities, but as the witness of the Poor Law Unions Association, I am not prepared to give my own opinion on this question fearing it might to some extent be found that it was not quite in harmony with that of some of the members of the association. I believe the British Constitution Association would be in favour of the present elected authorities. I think such a written statement would be of value to the Commission, because they are men of authority.

98549. (*Chairman.*) Will you send it in?—Thank you I will do so with pleasure. (For copy of Statement see Appendix No. XX. (A).)

98550. (*Mr. Bentham.*) I wish to ask you one or two questions with regard to the children. As you point out there would be very great difficulty in dealing with cases of relief by separate authorities?—Yes.

98551. Particularly where the areas are not the same?—Where the areas are not coterminous.

98552. With regard to the recovery of costs in a family there would be possibly recovery on behalf of the children and recovery on behalf of other members of the family which would have to be dealt with, and if they were under different authorities it would mean duplicating the same machinery?—I entirely agree with your view that there would be great confusion and difficulty in the recovery of the cost of relief.

98553. With regard to keeping records of the cases, a record really of a case is the record of the family and not one single individual member of it, particularly minors?—Exactly.

98554. With regard to the recovery of costs, do you get separate accounts as to the recovery for lunacy cases and for ordinary relief. Have you them separately indoor, outdoor, and for lunacy?—Yes, we have a case paper in each case.

98555. You have given us here the total amount that you have received in the respective years from 1900 to 1906, amounting in 1906 to £2,581. Could you say out of the £2,581 how much is recovery for lunacy cases, how much for indoor cases, and how much for outdoor cases?—I could not give you those figures now, but I can supply them. *The witness subsequently supplied the following figures:—*

	£
Lunatics	1,410
Indoor	1,066
Out-Relief	40
Other Expenses	65
	2,581

98556. The increase in lunacy will have added to it considerably, paying cases that cannot pay the full amount in a private asylum, are more largely dealt with under the Poor Law, and that has increased the amount enormously in different unions.—I could give you the figures as I gave them in our report, but they are not broken up in the way you suggest; they are simply the total figures for the recovery.

98557. (*Dr. Downes.*) I think it was suggested to you that statements of comparative expenditure as between different authorities might have the tendency to encourage extravagance. I believe such statements have been circulated amongst the guardians?—It is the other way, I think.

98558. I think that was suggested to you?—Yes.

98559. Such statements have been circulated amongst the guardians?—Yes.

98560. As a matter of fact is it within your experience that the guardians have rather looked into their expenditure and tended to reduce it than to increase it?—On my particular board?

98561. We will take your particular board.—We have been looking into the matter for some time, and I think that such a comparative statement as I have here is most valuable in the direction of producing uniformity and care in administration.

98562. And in your experience would the tendency be to reduce expenditure rather than to increase it?—The tendency of such a statement as this I think would be to increase efficiency. I regard this as a most valuable statement.

98563. I take it you would welcome statements of that sort if issued from a central authority?—I should welcome them and we should find them very valuable, in fact as the result of a visit I made some time ago to the Local Government Board I saw some statements in the room of an inspector there, I thought them so valuable that I mentioned them to my board, and they are now keeping, for the purpose of giving the guardians an opportunity of seeing how the relief is given and so on, charts marked up, and they create great interest.

98564. In your statement as to the work of a board of guardians you do not suggest you exhaust the whole of the work?—No.

98565. You do not tell us the time you spend in supervision of cases and call-overs?—No, that is in addition. This is what I should regard as the official minimum required; it does not mention inspection of institutions, for instance.

98566. With regard to the question of old cases, some old cases must give you a good deal of trouble from time to time?—They do.

98567. And would it not be a dangerous thing to pass an old case as a matter of routine without special investigation?—I should regard that as improper administration. Each case should be considered as it comes up.

98568. The question of the guardians' control over children in the Asylums Board institutions was referred to. You send those children in those institutions essentially to receive special treatment?—As soon as that special treatment is efficacious we have the children returned.

98569. The whole time the question of their chargeability remains in your hands?—Entirely, they are our

98570. You could at any time cease to relieve them?—Yes.

98571. So that the essential relief control remains in the hands of the guardians the whole time?—Yes, the Metropolitan Asylums Board charge us for the maintenance of the child, which we pay of course.

98572. If the general administrative control over guardians were assumed by the county council would there not be a danger that the county council standard would not be that of the whole country. There would be a tendency for the county council to set up its own standard?—I think that would be a danger.

98573. As compared with the Local Government Board the London County Council would not range over such a wide area?—By no means. I think we have a sort of parallel in the transfer of the education to the county

educational

council. One sees there what has happened. I think although not on all fours it does give one kind of hint as to what would occur in the case of the transfer of the Poor Law guardians to them.

98574. (*Mrs. Webb.*) What has happened about education under the London County Council?—So far as I am able to judge (I was a school manager) as a manager of schools there is far greater separation now between the county councillor and the school master and the county councillor and the children than there appeared to me between them and the old school-board member. There is a less human touch, the county councillors seem to me to act more officially and the whole working is more official than it was under the old school board, and to be less human if I may say so. That is what I think has happened.

98575. It was suggested at the time that that particular interest which the local member took in his own school did not on the whole lend itself to efficiency, especially in the appointment of teachers?—That I am not prepared to answer, but what has happened I think I have indicated.

98576. There is more efficiency, an official usually is more efficient than a representative?—In some cases there may be more efficiency, but he is not so interested for instance in some of the human questions that come up, and which are very important, which form, I consider probably the most important part of education. Education is not a question of machinery, it is a question of forming the character of the child, and I think that a member of a board charged with the care, that being the only care, of the educational development of the child, is more likely to do it than if his attention is drawn off by tramways, sewers, bridges and rivers.

98577. As I understand, the member is not responsible for the teaching of the child, it is the teacher. The system would be best which got the best teachers?—The teacher has to teach according to the code, and the member practically draws up the code, therefore if a member is out of touch with his children, he is not so able to draw up a code suitable to those children as a member who is in touch with them.

98578. (*Mrs. Bosanquet.*) I gather you attach great importance to the control of the Local Government Board?—Yes.

98579. Would you wish to give it increased powers?—I should certainly. I think the Local Government Board needs strengthening in its controlling powers. I think under the Act it must have power. I think it wants to exercise it more strongly. I very strongly support that view.

98580. Would you suggest any modification in the constitution of the Local Government Board to enable it to exercise those powers?—I indicated in the earlier part of my evidence that the old Poor Law Board when it was composed of three experts appeared to me stronger in its control than when the centre was merged in local government practically in 1871. It seems to me that the control of the Local Government Board has rather weakened since 1871. That is since its attention has been more or less divided between Poor Law and other things.

98581. Do you attach any importance to the fact that the appointment of President is a political one?—I cannot help feeling that that does influence the position. I am rather a careful reader of the circulars issued by the Local Government Board, and I cannot help feeling that sometimes that influence is indicated in some of the circulars—the political side.

98582. You would prefer that the power of control should rest with the Local Government Board rather than with the county council?—Decidedly.

98583. You think it would be more effective?—I think it would be more effective.

98584. (*Miss Hill.*) The field of Poor Law duties is very special, I think?—I feel it is very special.

98585. And the borough councils have too much to do to execute these duties satisfactorily?—I feel that strongly.

98586. And a body specially elected for the purpose would be more interested in the work?—I feel that to be true.

98587. I gather that you do not consider that uncontested elections for guardians are necessarily unsatisfactory, because in many cases there is no contest because the guardian is known and trusted?—That is my own experience in my own borough.

98588. Would you say that if those who are interested in the election have an opportunity of voting there is no reason to regret the abstention of those who are not interested; in short, the small number who vote at guardians elections is not necessarily an evil?—Yes, I can put it in that way. I regret for their own sake that they do not take a greater interest, but I do not think the evil reacts so much upon the guardians.

98589. You regret it for the electors?—Yes, more for the sake of the electors.

98590. A good deal has been said about uniformity, but its desirability, I suppose, would depend upon whether it was a uniformity having brought up or lowered the standard of efficient work?—Exactly.

98591. We might have uniformity which is rather more disastrous than the present state of things?—Yes, which would be a greater evil than the present want of uniformity.

98592. You think it would be impossible to get that sort of work from a body already so busy as the county council or the borough council?—I feel sure it would be wholly impossible.

98593. Would you feel it would be very important to direct the attention of all concerned rather to the efficiency of the work than to the machinery by which it is executed. Are we rather apt in trying perpetually to reconstruct the machinery to divert attention from securing better work?—I have made this note on that point. It is difficult, in the absence of knowledge of the changes likely to be recommended by the Royal Commission in the fundamental principles laid down in 1834, to speak of the machinery by which the relief of the poor is to be administered, but on behalf of the Poor Law Unions Association I would strongly urge that the Royal Commission should not expect too much as a result of mere changes in machinery, but that it should point out where error has crept into the present system, and set forth in unmistakable terms the fundamental principles upon which the authorities now charged with relief of the poor should act.

98594. Would you agree that it was very regrettable that so many of the paupers who come under the control of the guardians more or less are not regenerated or influenced for good by their action at present?—Yes.

98595. The influence of the present Poor Law is not a regenerating influence except, say, to the children or the sick?—That is unfortunately my experience. I find that once a man comes into the workhouse he is disposed to remain there.

98596. We have not been successful in bringing such influences to bear upon him as to improve him?—No.

98597. You would rather see attention drawn to that fact?—Yes. I find that once people come within the influence of the Poor Law they tend to remain there.

98598. And a change of the machinery does not necessarily alter that?—No.

98599. (*Sir Samuel Provis.*) You told us that you recover a considerable amount of relief in Fulham?—Yes.

98600. In respect of what particular class of pauper do you find you recover most, lunatics?—Mr. Bentham asked me that question, and I will give the figures upon that, because an answer now might not be quite absolutely correct. (*See Appendix No. XX. (B).*)

98601. Do you recover any medical relief?—Yes, sometimes we make a charge of so much per head.

98602. Do you ever take proceedings for the recovery of medical relief?—May I put that in my reply to Mr. Bentham? I should like to put in some evidence on the question of medical relief which I think would interest you. I have a comparative statement of outdoor medical arrangements in the years ended 25th December, 1899, 1900, 1901, 1902, 1903 and 1904. We will take the North Relief District. In 1899 the number of orders for medical attendance received by the district medical officer was 1,828, in 1900 it fell to 1,147, in 1901 it fell to 634, in 1902 it rose a little to 661. Now in 1903 and

Effect of
investigation
of applicants
on medical
orders.

1904 there is a slight rise, 1903 was 615, 1904, 705. As to the south district, which is a poor district including the gas works, in 1899 there were 958 orders, in 1900 676; 1901, 536; 1902, 532; 1903, 451; and 1904, 562, a slight rise there, so that the total number of orders in 1899 for these two districts was 2,786 and they fell to 1,267 in 1904. Of course, we are somewhat strict in our administration.

98603. (*Dr. Downes.*) Do you attribute that fall to your administration?—Yes, they were exactly the same people. We were separated from Hammersmith in 1899, and became a separate unit for Poor Law administration.

98604. What has become of the people who used to come to you for medical relief?—They go to doctors and hospitals, I presume. Then as to midwifery orders, which require watching (they are really included in the above, but this is a section which will show you what happened), there were fifty-two orders given in 1899, and they fell to sixteen in 1904. To show you again how the medical relief decreased under what I regard as correct and proper administration, these are the figures as to the prescriptions made up by the dispenser. In 1899 there were 3,126 prescriptions made up, in 1900 it fell to 2,244, in 1901 it fell to 1,849, in 1902 it fell to 1,592, in 1903 it rose again to 1,763, and in 1904 (I see there is an upward tendency) it rose to 1,910. I think that shows the administration of our outdoor medical relief.

98605. (*Sir Samuel Provis.*) Does that arise from the fact that on investigation of the applications you have refused them, or do they not apply to you?—We should not refuse them, we should investigate them and decide whether they were really Poor Law cases.

98606. Does the large fall mean that a large number of cases have been actually refused who have applied for medical relief, or does it mean you have had a smaller number of applications because you have been more rigorous?—The policy of the guardians has become well known, and we get very few speculative applications now. The people really know beforehand what our decision will be. We are very uniform in our administration, therefore people say it is no good coming.

Law of
Settlement
and effect of
its abolition.

98607. You spoke about settlement, and one reason you mentioned why you thought settlement was an advantage was that it was an investigation of the cases?—Yes, I have a note here on that. Large numbers of poor persons drift into London by a process of gravitation. If settlement is abolished London will become practically a sink for the whole country. London has attractive powers of its own, there are immense charities distributed in London, there are the head-quarters of the Salvation Army and the Church Army and various charitable institutions which would, I think, operate in attracting a large number of people. The laws of settlement, although unnecessarily complicated, provide an outlet for many of these people who come into London. The Asylums Committee of the London County Council have made a proposal to split the work up, giving themselves a share in it. If effect be given to this proposal it would tend to close this outlet. For purposes of irremovability the unit of area would be extended for the Poor Law area to that of the county. This would enable poor persons to become irremovable more easily in London than in any part of the country. The settlement and removal laws lead to searching investigations into the circumstances of paupers, and these should not be allowed to lapse. That is my note upon that question. I could supply the Commission with figures as to how many we remove. The clerk to the Fulham Guardians told me last week that he thought for every one that was settled we removed two, so that the balance of advantage is in favour of retaining the outlet.

98608. (*Mr. Bentham.*) Does that mean outside the London area?—Yes.

98609. (*Mrs. Webb.*) Not out of London?—Yes.

98610. When you say an outlet, it is not an outlet to the individual, you do not put him where he can maintain himself, do you?—My point is that now a man may come up to London, and he may live in London for perhaps five or ten years without securing a settlement, he may roam about from parish to parish, whereas if the law of settlement was abolished living in London for that period he would obtain a settlement more easily.

98611. I want to go back to your phrase "having an outlet," is the outlet in favour of the man relieved?—No, Settlement and effect of its abolition. the outlet is in favour of London.

98612. In favour of the London ratepayers?—Yes.

98613. Not in favour of the man?—Certainly not. The ratepayers as a whole deserve consideration more than the individual.

98614. You do not say you are removing the man to a place where he can earn his livelihood?—The outlet is certainly in favour of reducing the number of paupers in London.

98615. Let us follow the man, where do you remove him to?—His place of settlement.

98616. Is there any suggestion that that is the place where there is work?—That does not concern us.

98617. Quite so, I want to bring that out, the outlet is for particular ratepayers, not for the man?—That is so.

98618. (*Sir Samuel Provis.*) Would the difficulty necessarily be quite so great as you imagine, because in Ireland there is no settlement?—No, I understand that in Ireland the population is still decreasing.

98619. Yet we do not hear much question of difficulty between one union and another in Ireland?—That is so; but I think again there are very important questions involved in the abolition of the law of settlement other than the main question; it might lead to nationalisation of the Poor Law.

98620. It has not in Ireland.—Then you can retain the parochial area without settlement?

98621. Yes.—The abolition of settlement appears to me to carry with it the abolition of the local area, a man obtains relief wherever he happens to be.

98622. Are your expenses heavy in relation to removal?—Not very.

98623. Your law charges are not heavy?—We had one leading case the other day which went up to the House of Lords which I think will need an Act of Parliament to put it right. We have settled a very important point there as to settlement of an illegitimate child apart from its mother.

98624. (*Chairman.*) Who deals with these settlement cases?—The clerk.

98625. You say it does not come to much, but it must take up a great deal of his time, does it not?—Of course, it does take a great deal of his time, but he is quite an efficient clerk in other respects.

98626. (*Mr. Lansbury.*) What do you pay him for that?—Nothing.

98627. It is part of his duty as clerk?—Yes, in the olden days we used to pay a definite sum for it, but it was not better done.

98628. (*Mrs. Bosanquet.*) Does he actually remove paupers?—He gets an Order.

98629. Who goes with them?—I presume an official would. I am not sure of the technical part.

98630. Then there is his time?—Yes.

98631. (*Mr. Lansbury.*) Who goes to make the enquiries?—A general relieving officer or members of the staff.

98632. They are taken off their ordinary work to do these other things?—Yes, but I regard it as valuable.

98633. (*Mrs. Webb.*) Who benefits by it; if one ratepayer escapes another ratepayer gets the cost, and the man himself does not benefit?—As I said before, I think there is distinct value in settlement; I do not think you should take that away without consideration. I think the poor would lose a very valuable right; they would be simply moved about from post to pillar and pillar to post if it was not for the law of settlement. We only take a man in at Fulham because we know perfectly well that if he be not settled in Fulham he can be removed in a perfectly honest way.

98634. If a man had a right of relief he would have the right to relief where he stood if there was no law of settlement?—These are abstract legal questions which I do not think I can answer.

98635. Could you explain who benefits by it, because it costs money; who benefits by it?—So far as the union which I represent, Fulham, Fulham benefits by it.

98636. I mean from the larger point of view?—Take Hammersmith, next door, they have an immense Rowton House there, and they have a hospital. I think there that Hammersmith benefits very largely by the law of settlement; there are also common lodging-houses there. If they come there is Hammersmith to relieve them?

98637. Somebody has to relieve them?—Then there is Wormwood Scrubs Prison, are all those people to be saddled on the population of Hammersmith? I think it would be manifestly unfair; you disperse them by the law of settlement.

98638. The community has to keep them and yet it has the cost also of the removal of the paupers?—Which is very much less than the cost of maintenance for an indefinite period.

98639. But the community as a whole has to keep them anyhow—some ratepayer has to keep them?—We do not have to keep them, anyhow.

98640. But some ratepayer has?—They would not all go to one parish.

98641. Some ratepayer has to keep them?—They may come from all parts of the world.

98642. Still some ratepayer in England has to.

98643. (*Miss Hill.*) You do not want to attach them particularly to London?—I do not think any ratepayer necessarily has to keep them. For instance a man comes to Wormwood Scrubs Prison. If he is going to receive relief on the spot at Hammersmith he is going into the workhouse and stay there; Hammersmith will not have him, and rather than be removed to his place of settlement where he is known he prefers to earn his own living.

98644. (*Mrs. Webb.*) That is a supposition?—I think it is quite a justifiable deduction.

98645. (*Chairman.*) What your argument really comes to is you think the abolition of settlement would enable persons to get relief more easily than they do now?—I think so and it would take away the right of the poor to relief in their own parish.

98646. (*Mrs. Webb.*) No, it will not.—I will not say right to relief, but the law of settlement does convey to my mind, I think, a right.

98647. (*Chairman.*) He would have a sort of legal status?—It would take away his status.

98648. He would have a general status instead of a parochial status?—Yes.

98649. (*Sir Samuel Provis.*) You said that some of your relieving officers got certificates, I think; who grants those certificates?—The School of Sociology, which has its headquarters at Denison House. Professor Urwick is the head of that.

98650. Is there an examination for that?—Yes, and very good examiners indeed—excellent examiners.

98651. In general principles of Poor Law?—There is the general principles, and history and keeping Poor Law accounts and the law of settlement and removals. I regard that as really very valuable.

98652. Do they reckon that they should have any training before they go in for the examination, or do they simply present themselves for the examination?—At Fulham we encourage the relieving officers as much as possible to study principles, and we lend them books to read, and the clerk holds a sort of trial examination and trains and coaches them. They used to meet in the evenings and talk over questions and put problems. The result was that they passed, even our youngest relieving officer passed, and, from what I heard, very well. A theoretical knowledge helps them enormously in their practical work.

98653. Do you find those men who pass those examinations have been better relieving officers than others you have had?—I should say without hesitation that the old-fashioned relieving officer is quite out of it. The old-fashioned relieving officers seem to me to have no grip of principles. These young men who are taught history and a little economics get a grip of principles which is most useful to them.

98654. You are rather in favour of a bulk grant?—Yes.

98655. Would you apply that principle to the Metropolitan Common Poor Fund. You know quite well that the Metropolitan Common Poor Fund only charges a certain specific charge, which is 5d. a day for the indoor relief?—I concur in the evidence which Mr. Mott gave on that point. He gave evidence on the Metropolitan Common Poor Fund, I have a copy of it here. I think those conclusions of his are very much what I approve, and, generally speaking, I think the system upon which grants-in-aid are made, both Imperial and County, needs revision.

98656. The point of making a grant for a specific purpose has this advantage, has it not, that it enables you to encourage expenditure on a particular system of administration?—Yes.

98657. There is some advantage in that, is there not?—There would be distinctly.

98658. I suppose that the payment of 5d. a day has tended to encourage indoor relief?—I may say when we hear cases at our relief committees I do not think I ever remember a single instance in which any person seem to be influenced by the effect of grants. We adjudicate upon the cases, and upon the facts laid before the Committee, without reference to anything else, simply: Is it an indoor case? Is it an outdoor case?

98659. You do not think the fact that you get back 9d. makes any difference?—No, I do not think that that has come into our minds. It might do perhaps if we were discussing it at a Finance Committee, or from a financial point of view in order to save the money. I do not think that ever comes in; I frankly confess it never comes into my mind on relief work.

98660. Do you not think the 4s. grant for lunatics has induced boards of guardians to send more lunatics to asylums than otherwise would have been sent? I have heard that urged at conferences, but it has not come within my own knowledge in my work as a guardian.

98661. It would not be quite so strong in London, would it?—No, I should think not.

98662. Because of the Metropolitan Common Poor Law Fund?—Yes. I do not think it arises so much, but certainly it does not seem to influence us at all in our work.

98663. If you have a bulk grant it must be given at discretion I suppose to a certain extent, I mean the discretion of the Government Department?—I think it should be conditional upon its issuing certificates.

98664. Is there a difficulty there?—That certificate should be based upon a statutory declaration.

98665. Take the statutory declaration, you would say either the clerk or the chairman should make a declaration that the guardians have observed the law?—Yes.

98666. Is not that a little difficult for a clerk to do?—Yes, I think it would be difficult.

98667. It would even be difficult for the chairman, who is in a more independent position?—Yes.

98668. Would you not rather put it, not that the law has been observed, but that it might be considered that the discretion which the guardians had has been wisely exercised?—Yes.

98669. It is difficult to give a declaration that the board of guardians have not wisely exercised their discretion?—I see your point that it would be difficult to express an opinion.

98670. It would be rather invidious?—Yes, I see that is a difficulty, but at the same time, I take it that difficulty must be got over somehow. I think there is something in this proposal if such difficulties as you mention could be avoided. I really firmly believe that it is worth consideration.

98671. Did you read the Report of the Local Taxation Committee about that?—Lord Balfour of Burleigh's Committee?—Yes.

98672. They were against a bulk grant?—Were they against this proposal that I am indicating?

98673. Yes, the majority were. They say: "We have considered the relative merits of such a scheme of Poor Law grants as we have recommended, and we have selected certain items of expenditure in respect of which

Proposal for
Poor Law
grants-in-aid
to be given
in bulk on
certification
of efficiency.

we think the Government grant might be given, and the scheme of bulk grants to be given to boards of guardians not based on selected items of expenditure. We do not see how the latter scheme could be worked in connection with the Metropolitan Common Poor Fund or in such a manner as to encourage or reward good Poor Law administration. So they were against it. ?—I have read that report carefully, but that paragraph you have read is not very familiar to me. I felt rather strengthened on reading the whole of the report, in supporting my view. The general drift of that report I feel is not entirely against this proposal.

98674. (*Chairman.*) I am a little ignorant about this proposal with regard to a general grant; is it the people who are to receive who are to make the certificate, or the inspector? The board of guardians discharge certain functions, and they do so legally, are they to get the grant irrespective of other considerations?—The grant now is not conditional upon efficiency, but rather upon mere numbers.

98675. Your proposal would still make the grant dependent on numbers, would it not?—No, not entirely.

98676. There is to be a certificate, signed by whom?—The Local Government Board would issue the certificate that it is to be paid—empowering payment. They have inspectors, and they would be in a position to ascertain whether the Poor Laws had been administered in that locality and whether the orders had been carried out. They could find that out through their inspectors.

98677. (*Mrs. Webb.*) Would there not be a difficulty with regard to the different presidents? You might have Mr. Chaplin giving a certificate for the greatest amount paid to old people and the next president giving it to the least amount?—There might be.

98678. (*Chairman.*) Would it not be putting a very great deal of discriminating authority into the hands of the inspectors?—I quite appreciate the difficulties which are being put to me, but yet I feel that here is a weapon which might be used with good effect in securing good administration. I am not familiar with educational administration, but is there not some parallel to be drawn between this proposal and the principle upon which grants are made for education?

DR. WILLIAM ROBERT SMITH, called; and Examined.

*Dr. William
R. Smith.*

30 Mar. 1908.

Qualifications
of witness.

98686. (*Chairman.*) You are a doctor of medicine, a doctor of science, and a Justice of the Peace?—I am

98687. You are ex-mayor of the borough of Holborn, a member of the Metropolitan Asylums Board, and chairman of the guardians of the poor for St. Giles and Bloomsbury?—I am.

98688. I only propose to ask you a few questions in connection with the scheme of the London County Council. I understand that is the primary object of your evidence, is it not?—Yes. Would you allow me to say, first of all, what I think may be considered as qualifications why I should venture to give evidence before this Commission. I have been for nineteen years a member of the St. Giles Board of Guardians, of which board I am at present the chairman; I have also been their representative for the past fifteen years upon the Metropolitan Asylums Board, and I think for rather a longer period than that (I am not quite clear about the dates, but certainly for some nineteen or twenty years) I have been a member of the local authority for Holborn, and, since the incorporation of the borough, a member of the borough council; and, latterly, mayor of that borough. In addition to that, I have had executive duties of a nature which I think it will be admitted gives me some experience. For twelve years I was medical officer of the school board for London; for ten years I was medical officer of health for Woolwich; and I am at present principal of the Royal Institute of Public Health, a body which is very much interested in public health work, and is engaged in the training of medical officers of health and others for the diploma in public health.

98689. The scheme of the London County Council has been before us and we have had several witnesses upon it, and Mr. Propert has given rather exhaustive evidence on certain points, and we may, perhaps, cover

98679. (*Mrs. Webb.*) There is the police force. With the police it is the maximum amount of service that is rendered. The grant of the police depends on the efficiency of the police, and the amount of police that they have. How is it ascertained whether the police are efficient?—By the inspectors. They really base their judgment on the amount of service rendered. If you applied that to the Poor Law it might be awkward—if you got a grant according to the amount of medical relief that you give.

98680. (*Mr. Gardiner.*) Is not the result of the education grants a much closer parallel?—I think so; is not that by efficiency?

98681. Then you create a sort of undue influence by the grants?—I am not very familiar with education.

98682. (*Chairman.*) Of course there is a danger when you make a grant depend on an inspector's certificate. The tendency in human nature I think is to take rather a lenient view of things and only refuse where things are very bad?—Yes.

98683. (*Sir Samuel Provis.*) Is it not the case with regard to the police grant that the grant is only withheld when the Secretary of State certifies it has not been efficient? He does not certify that it has been, but that it has not?—Yes.

98684. (*Mrs. Webb.*) With regard to the police, and education, it is an increase in the service that is desired and not a diminution in the service, and all the grants-in-aid tend to increase the amount of service? That may be so. I am not putting this forward as an alternative to the abolition of the boards of guardians as proposed by the London County Council. I am putting this forward as a proposal which may be considered as a method for bringing about Poor Law reform.

98685. (*Chairman.*) What you mean is this, that you have an idea that the money which is granted might be made a more efficient instrument for efficiency, than it is under the present circumstances?—Exactly, although I have not sufficient knowledge to say in what way exactly.

the same ground. Do you agree with the last witness that a very important, if not the most important, work in connection with the Poor Law is the local investigation of cases by the relief committee?—I do. I cannot conceive anyone who has had a thorough acquaintance with the public work of London seeing any connection whatever between Poor Law work and so-called municipal work. The two departments of work are, in my opinion, totally distinct, and, as you have pointed out, very much of the importance and the successful result of Poor Law work depends upon the work of the local committees in connection with outdoor relief.

98690. The work done by the local committees really regulates the principle and the policy of Poor Law administration?—It is practically the basis, the rest of the Poor Law work is built upon the outdoor relief.

98691. Following that up, the scheme of the London County Council, by which the boards of guardians are to become the relief authority, would be unworkable unless the London County Council had control over its relief work?—Yes, but in a word, I venture to submit that the London County Council's proposal is absolutely bad from beginning to end. It would be most detrimental to the best interests of London government if adopted.

98692. Perhaps you would like to develop that statement?—I should. Let us take the London County Council, what is the London County Council? It is practically a political body made up of representatives of two political parties elected on a political basis. We know that every third year there is an election, and that the party organisations endeavour to obtain candidates, not necessarily because of their acquaintance with municipal work, but candidates purely and simply to fill seats in the various boroughs of London,

Work of

Poor Law
administra-
tion.

Reason why
London
County
Council
scheme
would be
detrimental
to the
interests of
London.

why and gentlemen are obtained and set forth as candidates, and seats are won; that is the main object of the political parties who govern the county council, and if you take the present county council, I do not know whether this Commission has thought it worth while to enquire, but I doubt whether twelve members of that county council have ever had any practical experience of Poor Law administration in London. Certainly, from my own knowledge, candidates are put forward for the county council irrespective of any knowledge of municipal work. Seriously looking at the matter, not as a politician (I am as strong a politician as anybody where politics are rightly concerned), but purely from a municipal point of view, I think it is not of advantage to the municipal life of London that persons should be introduced into boroughs with absolutely no knowledge or connection with the municipal life, or the wants and requirements of those boroughs, and returned as their representatives to the London County Council. It is common knowledge that that is the case, and I say it is not to the advantage of the municipal life of London as a whole.

98693. Should you say that there was a greater want of local connection between the London County Council candidates and the localities they represent than there is, say, in the borough councils?—Certainly there is a connection between the members of the borough councils and the districts they represent.

98694. There is more local connection, you would say?—There is always a local connection. I do not think the objection I have urged holds good at all so far as borough councils are concerned. There the members of the borough council certainly have a direct connection with the boroughs they represent, but the members of the London County Council may or may not have, and most frequently have not, any connection with, or any real interest in, the work of those boroughs, other than the mere accidental fact that they have been for the moment returned to represent it on the County Council. That is my fundamental objection to the London County Council. It is suggested that that body composed in that way should govern and take over this important work of Poor Law administration, dependent in the main on local knowledge. I know that the County Council has certain co-opted members as aldermen, but it is also common knowledge that those aldermanic vacancies are allotted in proportion to the strength of the political parties on the County Council; that is the main consideration in the selection.

98695. As you know, the London County Council have had educational functions imposed upon them for the whole of London?—I do, and I think it was a great mistake of the Legislature ever to give it to them. I think the London County Council ought not to have had education.

98696. Coming to the Poor Law, of course, it is not very difficult to frame objections against almost any scheme of reforming the Poor Law in London, but as to your own idea, would you leave the Poor Law guardians as they are?—May I, with your permission, finish what I had to say on the county council's proposals. These proposals further suggest that the Council shall have a statutory committee, that certain powers should be given to this statutory committee upon which they propose to co-opt certain persons who, it is suggested, should have experience in the Poor Law, that this Committee should have more or less the control of local institutions, and that the Poor Law locally should be administered by borough councils, and then that the borough councils in their turn should appoint committees, which would have duties allotted to them as outdoor relief committees of the borough council. So far as borough councils are concerned, I think the functions of a borough council are entirely different (the same argument applies to a county council) from those of a board of guardians, and their work is, I think, sufficiently onerous to occupy their time. Most of the men who are on borough councils are not men who have perfect leisure; they are men who have occupations, and they can only afford a certain amount of time for public work. They certainly have, speaking as far as my own knowledge of the Borough of Holborn is concerned, quite enough to do now, without additional work.

98697. Should you say that your borough councillors are of much the same stamp as the Poor Law guardians?—I can only speak of my own borough. They are, I think, very much of the same stamp. Several members of the borough council are also members of the guardians. The abolition of the qualification for guardians has not affected the composition or character of the guardians of which I am chairman, viz., St. Giles'.
Dr. William R. Smith.
 30 Mar. 1908.
 Guardians holding office as borough councillors.

98698. It has been suggested to us by various witnesses that persons become Poor Law guardians in order to make it a stepping stone to the borough council?—That is not my experience.

98699. You say that people come on from an innate love of the work, or a desire to participate in that work?—That is so far as my own knowledge is concerned of my own board of guardians; they are men who are very kindly disposed, humane, and charitable, who are taking an interest in the work and have done so for a great number of years, and many of those men to my own knowledge have been invited to become borough councillors, and have refused to do so.

98700. You think the London County Council could not undertake these central duties? What should you say as regards the proposal of making the borough councils the relieving committees. Do you think that unworkable?—I do. Of course, I object to the scheme altogether. I object to this scheme of the London County Council entirely. I cannot understand anyone with any knowledge of the subject suggesting such a scheme, therefore I object to the borough councils undertaking Poor Law work, it is only part of the scheme of general municipalisation.

98701. Do you see any advantage in having one uniform system of Poor Law for London?—I do see advantages in that.

98702. Perhaps you will go on with your other objections to the scheme?—I should like to say in reference to boards of guardians, that I think they have done their work extremely well in the past. I feel the country really ought to recognise a great debt of gratitude to the boards of guardians all over the country. The administration of the Poor Law is not very showy work; it requires a great deal of care and patience and kindness of disposition on the part of the individuals, and they have done this work in the past, I think, in a fairly creditable way and without any reward, because the State has never recognised, so far as I know, the Poor Law services of any guardian, or anyone connected with the Poor Law work. We know that the chairmen of district councils, urban and rural, and borough councils and the like, are *ex officio* magistrates. There is very much reason why the chairmen of the guardians should have had the same privilege extended to them. That has never been done, and I think it is only fair to say, so far as my experience goes, which is absolutely disinterested and of a somewhat varied nature, that I think the boards of guardians, speaking generally, deserve well of the country. So far as London is concerned, I know difficulties have arisen, but I submit that these difficulties are in the main attributable to the action of the Legislature by which they abolished the qualification of guardians. They, first of all, reduced the qualification from £40 to £5 a year in 1892, and then, two years afterwards, they abolished it altogether. The result of that has necessarily been that it has enabled persons to be elected to boards of guardians actuated strongly by sentiments which may or may not be in the right direction, and naturally they have given expression to those feelings in the discharge of the duties which they had to undertake. The abolition of the qualification and the exclusion from the boards of guardians of the *ex officio* guardians—the magistrates resident in the district—which all helped to raise the tone of the board, has done a very great deal to account for the difficulties which have arisen in connection with various districts in London.

98703. You would say, I understand, that the administration of the Poor Law has gone back since the qualification for guardians has been abolished?—Of course the board of guardians only act under instructions from the Local Government Board. If those instructions and the law had been rigidly enforced by the Local Government Board, possibly those troubles would not

Multiplicity
of duties
of London
County
Council.

have arisen, but the Local Government Board may have been aware of them, but it is extremely difficult, even for a Government Department, under the pressure of Parliament and the like, to give effect entirely to their views on a subject, but I think the reasons I have given are mainly those why there have been difficulties and the consequent necessity which everybody admits, of providing some proper system of classification and some scheme of uniformity in the Poor Law administration of London.

98704. If you have done with your objections to the scheme, I should like to ask you what suggestions you could make for the purpose of attaining this uniformity and improving the existing classification?—There is only one thing I should like to add to what I have said and that is with regard to the work of the London County Council. Everybody who knows anything about it knows that it is so enormous that it is extremely difficult to understand how they get through it. In my idea, knowing what the education work of London was and what it must be now with the addition of all the non-provided schools, it is a work which requires the attention of a proper and independent educational authority, but when this is added to the already numerous duties of the London County Council, in my judgment it would be impossible, apart from all other questions of the wisdom of the step, that such a body as the London County Council should be expected to undertake this additional work.

98705. (Mrs. Webb.) Have you ever served on the London County Council?—No.

98706. How do you know what the work is? You said just now only twelve members of the London County Council presumably had served on the guardians, therefore they could not judge of the work of the guardians. How can you judge of the work of the London County Council?—You have only to take the agenda paper of the London County Council to form a very clear idea of what their work is.

98707. The elaborations of the agenda paper may only show how admirably they do it. Perhaps your agenda paper does not show the work to be done so well?—I have a fairly good knowledge of the admirable way the London County Council does its work.

98708. How can you judge of the County Council work?—We generally judge by results.

98709. So do we by the results, the guardians administrations?—We know it by the rates going up in London and by other means.

98710. (Chairman.) You think the London County Council have quite as much as they can do?—Unquestionably.

Disadvantage
of multipli-
cation of
elections in
London.

98711. It has been represented very strongly to us that a multiplication of elections in London is generally disadvantageous, the people take less interest in them, and that there is difficulty often in getting proper candidates. What do you say on those points?—I think that is quite a right view of the matter. Of course I know a great point is made of the want of interest taken in guardians' elections. That election comes at the end of two other elections; there is the County Council election, the borough election, and then, within a few weeks, the guardians' election. For the County Council election, I have already indicated the cause of the enthusiasm which is created in the district and the manner in which it is brought about. To a less extent that is the case with the borough council, but with the election of guardians, for some reason or other the political parties have never thought it worth while to interfere in the same active manner, but the multiplication of elections is undoubtedly an evil. The people do not take the interest in these matters which theoretically it is suggested they should take.

98712. We are in this difficulty, are we not, we must either face what you believe to be a serious evil and leave the work to a certain number of bodies, or we must continue this multiplication of elections? I believe that the idea of the Legislature, or of the public, in recent years is that by setting up committees which are statutory and not necessarily elective and the appointment by them of persons of special knowledge, the amount of work which falls on the actual original authority gets largely diminished, and in that way the difficulty is overcome?—

Yes, I know that view, and I think there is a very great delusion in it. Of course, I am not now expressing the opinion of the association for which I have been asked to give evidence, and which sees no good reason for interference with the present boards of guardians. I think if there is anything like a central authority connected with the Poor Law in London, that you really have the nucleus already at hand in the other central board, the Metropolitan Asylums Board. That is a great central authority dealing with many important branches of Poor Law work in direct touch with the boards of guardians, and it might be possible to build up some scheme of centralisation upon it.

98713. The Metropolitan Asylums Board, as far as we could judge from the evidence before us, are willing to undertake any amount of extra work?—I think perhaps that might be explained. Of course, the work which they have to do is work which might be arranged in classes; it can quite conveniently be so arranged. It is not of such a varied nature as the work of the London County Council. They have certain asylums, they have the fever hospitals, certain kinds of schools, and they have the ambulance work. A certain amount of that work is carried out by sub-committees, which sub-committees are controlled by a committee for all special work, and their decisions are the subject of approval by the board. It is purely a question of machinery there, and I think they could take, with some increase in their membership, probably, work of an institutional character, but whether it is the Asylums Board, or whatever board it may be, I think the board should be solely and separately appointed for Poor Law administration.

98714. Just following that up; you see the Metropolitan Asylums Board is a central authority, but it is not really a controlling authority so far as the other boards of guardians are concerned. It is a central convenience so to say, for them?—That is so, created by order of the Local Government Board.

98715. Would you contemplate at all a central authority which should have any control over Poor Law guardians as regards matters other than institutional?—The simplest plan of all would be a central authority for London for Poor Law purposes, with the appointment of local committees for outdoor relief.

98716. Have you ever thought of a scheme of that kind at all?—Yes, I have.

98717. What do you think of that?—I think there is a great deal to be said in favour of it.

98718. That is to say, to have a central authority who would be able to establish uniformity, take charge of institutions and have local committees with thorough knowledge who can investigate the local cases, and do relief work?—Yes, in such a scheme I see no difficulty from the institution point of view; that is purely a question of arrangement and method, but the main difficulty of that scheme, or in fact, any scheme which is suggested for Poor Law work, is the outdoor relief, because it is the basis of all Poor Law work, and it wants inquiry made into every individual case by persons who are interested from every point of view in the circumstances and the local condition of things.

98719. I suppose you would go so far as to say that whatever the central authority is, it can never be efficient unless this local work is properly done?—Obviously, this local committee might be representative of local charitable interests, persons interested in the work, who are both judicious and tactful, there is no reason also why the borough council should not have representatives on such a committee; it is a pure matter of detail how this should be arranged, but you must have a local committee for outdoor relief.

98720. Your objection is not so much to the central authority, as that it should have time to attend to the Poor Law, and that you should have persons who have special knowledge of it?—It is not only time, but it should be the sole duty of the authority. The Poor Law work is of such importance, that it ought to be the only work of such a Board.

98721. You have special knowledge of the subject. Would you keep to the Metropolitan Asylums Board disease the health work that they do with regard to infectious hospitals?—That is, of course, a form of medical relief,

Disadvantage

hospitals.

and we know that medical relief under the Poor Law is available, and does not pauperise; the person not necessarily becoming a pauper. In my mind the only difficulty in the whole case is the question of the fever hospitals, because the fever hospital work is a very important branch of the machinery which is dealing with infectious disease in London, and you have the borough councils on the one hand dealing with some part of the work in connection with the prevention of disease, and the Asylums Board with another. It has been suggested that that part of this work should be handed over to the county council, but the county council has nothing to do with infectious disease in London at the present moment. The notifications are made to the medical officer of health; the necessary action which is taken is under the direction of the local authority, the borough council, viz., disinfection and enquiries into causation, etc., and all necessary steps for prevention. The case then goes to the Asylums Board hospital, and these hospitals, together with the ambulance service for the removal, are all under the control of the Asylums Board. At the present moment the London County Council have no active duties in connection with infectious disease in London. This medical treatment in hospital is, of course, a form of medical relief, and anyone from a peer to a pauper can get gratuitous treatment in those hospitals, and there is a question in the minds of a great many whether that is quite right; whether that exclusive privilege which is confined to London should not be looked into; whether it is a fair and a right thing that all those hospitals should be open for the gratuitous treatment of the infectious sick of London. It is a remarkable thing, and it perhaps may not have come to your knowledge, and it might be interesting if I told you, that of all the cases of infectious disease notified in London at the present moment, or up to the time that I got this return, something like 90 per cent. are admitted into the hospitals of the Metropolitan Asylums Board, so there is an enormous amount of work which is being done in this connection; these hospitals were erected under the impression that it was for the benefit of the public that these cases should be isolated, and that the public therefore ought to pay; and that is the reason why in London these hospitals have been thrown open to the public gratuitously. The money spent in the cost of building and equipment up to Michaelmas, 1906, comes to nearly £3,000,000, and in spite of the enormous accommodation the number of cases notified and the incidence of disease in London has not been diminished as was thought would have been the case; so really these hospitals are, in the strict sense of the term, a form of medical relief; it is therefore desirable that they should still continue under the Asylums Board.

98722. When you called attention to the large proportion of infectious cases which these hospitals deal with, did you infer from that there was a considerable number of persons went there who could afford to pay?—A large number.

98723. That was rather the point of your figures? Not altogether that point. It is within my knowledge that a very large number of persons, in fact perhaps the majority of persons, who obtain admission into the hospitals of the asylums board, are persons who do not get admission through the Poor Law machinery, and, therefore, presumably they are able to pay.

98724. What I gather is that your objection to a central scheme for London would be a great deal mitigated if that central scheme was not associated with the London County Council, and if a body so constituted gave up the whole of its time and attention to Poor Law work?—Yes.

98725. Of course, you have had a great deal of experience in a number of ways, and in all branches of local government. I suppose, as a medical man, you do feel there would be a considerable advantage if we could establish something more like uniformity under a better system of classification for London?—Undoubtedly those are the two great arguments in favour of such a board. It is more likely to get uniformity and a better classification.

98726. Taking your own profession, and the other branches of Poor Law service, if you had a uniform service you would be able to offer better attractions for entering into the Poor Law service which at present cannot be given?—I am afraid I cannot quite follow that question.

98727. If you had a uniform service there would be more chance of promotion and not the difficulty about superannuation which arises, and that kind of thing?—

The medical profession of the Poor Law is a district medical service and no salaries are ever given sufficiently high to command the full service of the medical practitioner, and the only appointments really open to the medical profession of an important character where the whole time could fairly be demanded, and where it is demanded is in connection with the medical superintendentship of large Poor Law infirmaries. Such a Board might tend to create a service, in the stricter sense of the term, than that which exists at the present time.

98728. I quite agree, I only wanted to get your general opinion about a central board. I think I understand you have only given what I call a very conditional assent to the proposition?—Yes. I should like to say I have heard suggestions made about the objections to these elections, and the difficulty is to find a means by which the *personnel* of such a board could be built up. It has occurred to me that that possibly might be got over by giving the borough councils representation on that board, because I think, although the majority of a borough council are not guardians, there are always some guardians on most borough councils, and certainly persons would be found who would be representative, and with a great interest in Poor Law work, and in the absence of any other suggestion short of a popular election that seems to me worthy of consideration, there is a precedent in the composition of the water board, such a Central Board might be made up in part by nominations from the borough council which would have the effect of bringing about a certain amount of touch on the part of the borough councils, and which, so far as fever hospitals are concerned, would I think also be desirable. Then I attach very great importance to the addition of outside members of the board. Personally, I object to the method of co-option; I think there is a fallacy involved in that principle altogether. The dominant party will, of course, put persons of their own way of thinking on the board, but judging from my experience now, which extends over some years of the work of the Asylums Board, I think it would be generally admitted that the nominations which have been made to that board by the Local Government Board have been in every sense satisfactory; they have never been of a political character. I have known Liberals nominated by a Conservative Government and the reverse. From first to last of my experience on that board the system of nomination has always worked most admirably. There has not been the slightest party feeling of any description whatever, and every member of that board has worked with every other member solely for the good of the work which has been entrusted to them. I think it is the best form of increasing the membership; you are much safer with a Government Department, and judging by the experience of the Asylums Board the system of nomination has always worked most admirably.

98729. Should you say that the nominated persons at all, in consequence of being nominated, lack influence on the board as compared with those elected?—Certainly not. I think the nominated members very frequently have a greater influence than the members elected.

98730. Carrying that idea a little further, assuming that the borough councils had a certain power of nomination on a central board, would you confine that power of nomination to their own body, or give them leave to nominate people outside?—I think I would give them a free hand. I think, probably, in practise they would elect their own members, but there could be no objection to giving them a free hand. I think there might be advantages in it.

98731. It might be open to the objection that they would nominate men of a certain party, but on the other hand it might enable them to nominate a special expert?—Yes. Speaking for my own borough council, once the borough council is elected party never comes in. I should think a borough council might quite well be trusted to elect the best men it could for a central authority like that.

98732. (Sir Samuel Provis.) You refer to a possible plan of having a body like the Asylums Board as the Poor Law authority for London, with local committees for the purpose of giving outdoor relief?—Yes.

98733. Did you contemplate a committee formed of members of the central board or that there should be committees of local representatives?—A committee composed of the local representative or representatives on the central authority, together with persons locally connected and interested in the poor with power for the Medical Officer of Health to attend.

Dr. William R. Smith.

30 Mar. 1908.

Pros and cons of a central Poor Law authority for London.

Danger of co-option of members on administrative boards.

Proposal to have an indirectly elected central body with a nominated local authority for Poor Law administration.

Dr. William R. Smith.

30 Mar. 1908.

Proposal to have an indirectly elected central body with a nominated local authority for Poor Law administration.

98734. Would the representative committee be an elected body, or would it not be an elected body?—It would be appointed presumably by the Central Authority.

98735. Not popularly elected?—No, not popularly elected.

98736. Do you think a difficulty might be raised to a body of that kind administering the rates?—It would be under the control of the central body.

98737. You would give the central body powers, would you, to revise the decisions of these committees?—Yes. I should have the central Poor Law authority supreme with power to lay down general principles for the guidance of these local committees. The Local Government Board's control being maintained as at present.

98738. As you are aware, the question of expense is a very material one?—I am quite aware. I quite recognise the importance of controlling it effectively.

98739. Would you contemplate that a committee of this kind would give outdoor relief at the cost of the whole Metropolis or would you make it a local charge?—It is now a local charge.

98740. Would you alter that if you had this Poor Law authority?—I do not contemplate any change in that direction, it is merely a difference in government.

98741. Therefore, you would contemplate that out-relief should be a local charge, but still, if the institutions were administered by one body, I suppose the expense of administering them would be a Metropolitan charge?—Yes.

98742. That would make a difference, would it not, because now also those are a local charge?—Yes. That is a detail which would have to be equitably dealt with, of course.

98743. You have not worked that out?—No, I have not.

98744. (*Mr. Bentham.*) Then your local committee would be not only a committee to deal with applications for out-relief, but would be a committee to hear applications for any kind of relief under the Poor Law?—Clearly.

98745. (*Mrs. Webb.*) As I understand, you would have an indirectly elected central body and a nominated local body?—If you want to get over the objection to popular elections. I do not see what other machinery you can create.

98746. (*Mrs. Bosanquet.*) I do not think you have dealt with the question of a Royal Commission. Why, if you consider municipal government and the Poor Law so distinct, do you wish to bring them under one Commission. I understand you want a Royal Commission?—That is a point which the association I represent had views upon, consequent upon the present overlapping in various directions in local government. One is the point to which I have alluded about the fever hospitals, another is the question of Poor Law administration. The County Council's connection with Poor Law is only direct so far as lunatics are concerned. They pay money over which they receive from the Treasury, but there is no good reason, so far as I can see, why the Treasury should not pay it direct through the Local Government Board as they used to do. Then there is the question of lunacy. The asylums should be in the hands of one Board, preferably the Asylums Board, and not under the control of two Boards, the County Council and the Asylums Board.

98747. This new Poor Law Commission is to allocate the work?—Dealing with the difficulties which are admitted to exist. These have grown up. Such as assessments, the registration of births and deaths and vaccinations. These were not originally the work of the Poor Law guardians; they have simply been added to them by the Legislature, because they had nobody else to give them to. I quite agree there is no reason why the guardians should have the assessment, and only a few have it now. That should be given to the borough council. I do not see why they should not have also the appointment of the registrars of births and deaths: all the boards of guardians do is to nominate a person for the appointment of registrar of births and deaths, subject to the approval of the Registrar-General: the whole of the work is carried out under the Registrar-General. Vaccination is, strictly speaking, a public health work. This should be given to the borough councils. Relieve the Poor Law authorities of work which does not rightly belong to them, but by all means keep them to do their own work: it is a distinct work, and should not be mixed up with municipal work in any form whatever.

98748. (*Dr. Downes.*) Would such a Commission as you contemplate be expected to deal with the relation of London to what I may call the fringe of London?—Certainly, which I can quite see in time will be a very difficult problem. Now that facilities have been given for transit, the poor of London are practically living outside the area in a great measure.

98749. That is a problem which comes under this proposal of the London County Council?—That is so.

98750. Have you any views as to the system of medical relief that would be advisable for London?—I believe it has been suggested to this Commission that there ought to be a more direct connection between the medical officers of health and the Poor Law officers, and that, in fact, is one reason why the local authorities should have more control. I speak as a former medical officer of health, and as one connected at the present moment with public health work, and I see no object whatever in that. The medical officer of health has specified duties laid down for him under the Orders of the Local Government Board and the terms of his appointment, which Orders and appointment direct him to systematically visit the whole of his district, not to wait till the Poor Law medical officer calls his attention to a lodging-house or an overcrowded tenement; it is his duty as medical officer of health, and it is the duty of his sanitary inspectors, to find out every insanitary condition in his district. The Poor Law medical officer is purely a man engaged in another department of medicine, not preventive medicine at all, but curative medicine, a totally distinct branch. You cannot have any two big systems like this at work unless they come in touch sometimes. Say they come together in a poor house, where there is a phthisical case, that is no reason why there should be a merging of these two important departments of work. The medical officer of health has his duties clearly and distinctly laid down. It is his duty, irrespective of information from any person, to find out every insanitary condition in his district, report to his authority, and do the best he can to bring about a remedy. On the other hand, it is the duty of the district medical officer of health to do everything he can from a curative point of view. It is laid down in the Local Government Board Orders that where any condition arises that it is desirable the medical officer of health's attention should be called to it, it is the duty of the officers of the Poor Law to draw his attention to it forthwith; and I find, from enquiries at my own board this morning, that the medical relief books are always open to the inspection of the medical officer of health. There is not the slightest difficulty in the medical officer of the sanitary authority, and the medical officer of the Poor Law working together under present conditions in the most perfect harmony. If any difficulty arises at all—no difficulty I see could arise—but if there is any difficulty in the way of information, it is rather more the fault of the medical officer of health than that of the Poor Law medical officer.

98751. The Order you refer to was passed by the Local Government Board as far back as 1879?—I believe so.

98752. You are quite right, there is full power for the machinery by which the Poor Law could communicate with the medical officer of health, and give information such as you have suggested. I gather from what you say, that you consider that sort of information should be sufficient for the purposes of the medical officers of health?—It is the duty of the medical officer of health to get it. He has no right to wait till somebody comes and tells him.

98753. Do you draw any distinction between medical relief and ordinary forms of relief?—Medical relief is given without the possibility of pauperism occurring to the individual. If you give kind, food and so on, it does carry with it, certain disabilities.

98754. It merges insensibly into tangible relief?—Yes.

98755. I want to ask a question with regard to the scope of the suggested Royal Commission for London; I want to ascertain your views as to the relation of voluntary hospitals to other kinds of relief; would you include in such a reference a consideration of the position of the voluntary hospitals?—I think you must, and that is an enormous problem. That is a subject which has occupied the attention and criticism of the medical profession for years past.

98756. Is it not difficult to separate it from any full consideration of the question of the medical relief?—It is absolutely impossible.

Guardians' duties should not include municipal work in any form.

Need coordination of preventive and curative measures in medical aid.

Extent of medical relief pauper recipient

Position of voluntary hospitals under proposed scheme London County Council

Guardians' duties should not include municipal work in any form.

98757. Take the position of the fever hospitals. It is said to be unanimously felt that the fever hospitals should be under the management of a Poor Law authority, but if they were transferred to the London County Council, the council, as such, has no representation of the sanitary authorities upon it at all?—No; the London County Council at this present moment has nothing to do with infectious diseases of London, and if these hospitals were transferred the borough councils would be in the same position as now.

98758. Assuming there was set up in the county, relief authorities who provided hospital treatment for sick people, is there any reason why fever hospitals should not come under the management of such relief authorities?—No reason at all.

98759. It is dealing with the sick at the public cost?—It is a form of medical relief, as I have shown in London, at public cost for all classes of the community.

98760. (Mr. Gardiner.) Do you share the views which the last witness expressed, that your association is opposed to one poor rate for London, an equalisation rate?—He possibly can speak with more experience on that than I can myself. I have no knowledge of what their views are on that subject.

98761. You have no views to give the Commission yourself?—I have given my views.

98762. As regards the equalisation of the poor rate?—No, I have not given any views on that. I have said that there are advantages in a central form of government.

98763. That would carry with it an equalised poor rate?—It might do.

98764. And, having regard to the poverty which obtains in certain parts of London, other parts being comparatively wealthy, you would rather welcome that?—I have personally a great deal of sympathy with the feeling that rich districts should bear the burden of the districts where the poor are found in greater numbers.

98765. (Mr. Bentham.) I understand that you suggest that, in order to get better classification and more uniformity of treatment, it would require larger areas than the present ones. For local purposes the present union area is not enough to classify all its inmates in separate institutions such as may be considered desirable. Is that your opinion?—Are you proposing to continue the union as a unit?

98766. With a central authority?—In my own area, we have no difficulty in classification.

98767. Take your own union. You have very good accommodation for children—a receiving home for children?—Yes.

98768. In the Holborn Union close by they have no accommodation?—No.

98769. They make use of yours?—They do.

98770. Therefore one receiving home there is quite enough for two unions?—Yes.

98771. In the same way with your other classes of inmates, they overlap a little; you have inmates in other classes of institution?—We are in connection with one of the London Sick Asylum Districts and send our sick there.

98772. That is a sick asylum district, is it?—Yes, the hospital is at Hendon.

98773. Are there any others which exchange one with the other?—We send some of our children to the institution of the Asylums Board when we have them—I mean any special class of child.

98774. There would probably be a distinct saving in the way of institutions by having one authority to deal with institutions, although there must be a local committee for hearing applications to determine what class of relief shall be given to each case, it seems that you cannot get that desirable classification without having one central body for institutional purposes?—There is a good deal to be said for it from the point of view of classification and uniformity.

98775. (Mrs. Webb.) What do you do with the women who are about to have babies, the mothers of illegitimate children—are they in the general workhouse?—We have a lying-in ward there.

98776. Before they go into the lying-in ward whom do they associate with? Are they with the ordinary able-bodied women?—Yes. I think they are kept as separate as they possibly can be.

98777. Are they kept separate?—I think so. We do not have very many of them. With a larger workhouse it would be more easy, of course.

98778. I find in the London workhouses that women who are about to have children are with the defectives?—I should have thought that is quite an exceptional condition of things.

98779. I am sorry to say it is not, they are with the defectives and deformed persons. —Would they not take the defectives to an asylum?

98780. I do not mean the lunatics.—Do you mean the children.

98781. I mean the women about to have children.—You say with defectives, of what age?

98782. With other women who are defectives.—Of course, you have experience of that; I have not.

98783. Do you think it is desirable?—I should think that is not desirable, but one must know accurately the local conditions about which you are speaking.

98784. One of the big complaints in going over these workhouses (we have been over a good many) is that you do have the women, both before and after child-bearing, with defectives and people who are deformed. —Such a suggestion as has been made would enable a better classification to take place.

98785. Do you really wish the present state of things to continue, or do you wish what you have outlined as a central body to be put in its place?—I do not wish anything to continue which is not desirable, but I can say that in the Poor Law Statutes, so far as I know them, there is not very much to take exception to. What you have been suggesting are questions of details and questions which can easily be rectified by measures quite apart from Statute.

98786. Part of the Poor Law Statutes is that the Poor Law should be administered by a board of guardians for a particular area. Do you wish them to continue or not? Do you wish the present board of guardians to remain in their present state or do you wish to have a body which you outlined just now, made up of borough councillors and nominated members to take the place of the board?—I think the board of guardians have been spoiled for the reasons which I have given, the abolition of the qualification and the exclusion of the *ex officio* members.

98787. Assuming you could go back on that, if it were politically possible, would you advise Parliament to go on with the present board of guardians, or to create a body such as you have outlined to the Chairman?—I have suggested to the Chairman that uniformity, better classification and probably economy in the way of contracts and in numbers of other directions would be effected by a central organisation.

98788. But is this central organisation to be made up of borough councillors plus nominated members, or are the boards of guardians still to continue, and the central body to be made up of their representatives?—I do not think you could have a workable scheme with the continuance of the boards of guardians plus a central authority.

98789. Then you think the abolition of the boards of guardians is desirable—What would your central authority have to do?—I assumed the basis of the question was that the central authority would deal with the whole question of the Poor Law in London, the management of institutions and the like.

98790. You think that involves that the boards of guardians would have to go?—I think it would involve that.

98791. It need not, you might keep the boards of guardians?—As your relief committees.

98792. And let them remain an elected body?—I must leave that to the wisdom of this Commission to develop whether they will keep on the board of guardians as the relief committee or not; from the experience they have gathered during the last two years they must know which is best.

98793. Do you suggest that the Poor Law authority should be made up of borough councillors?—I do not suggest that.

98794. Borough councils have no more knowledge of Poor Law than the county council?—You are speaking of them as a whole.

Dr. William R. Smith.

30 Mar. 1908.

Classification of unmarried mothers.

Question as to abolition of boards of guardians.

Transference of Poor Law work to London County Council and borough councils.

Dr. William
R. Smith.

30 Mar. 1908.

Transference
of Poor Law
work to
London
County
Council and
borough
councils.

98795. Yes, as now constituted?—I do not think that is quite fair. I venture to suggest, I have been connected for eighteen years with the Poor Law and twenty years with the municipal life of the borough, and I do not think my connection is a singular one.

98796. That is so with the London County Council, is it not?—The unfortunate thing is that the London County Council is not really connected with the boroughs. That is my great objection to the London County Council.

98797. You are aware of the argument that being connected with the borough sometimes leads to undesirable actions?—With all respect I am sure you know quite as much of the inner working of the London County Council as I do, perhaps more.

98798. I know quite as much and probably a great deal more?—Then do not let us say any more about it.

98799. I think I know more than you do about the County Council. I want a serious answer to a serious question. Do you really maintain that the members of the London County Council are not superior to the members of the borough councils in social status and integrity?—Absolutely not. As a most deliberate opinion, having given serious thought to this subject, and with a full knowledge of it, I venture to most respectfully submit it would be a calamity for the Local Government of London to hand over the Poor Law to the London County Council.

98800. Everybody also who knows anything about the borough councils would say it would be a calamity to extend their functions?—I am not anxious to extend their functions; I am not anxious they should be extended, I am only trying to suggest a workable scheme. I have represented to the Commission that I think the guardians deserve well of the country and of the public in connection with their work. Of course I know there have been suggestions made in various directions, perhaps with good reasons, but it is not the fault of the statute or the fault of the machinery.

98801. It is the fault of the bodies?—It is the fault of the persons owing to the unfortunate action, in my judgment, of the Legislature in removing the qualifications.

98802. It is the fault of the body concerned?—Not all bodies, one or two bodies, and you have got the Local Government Board behind them.

98803. You suggest it is the fault of the Local Government Board?—You say members of the London County Council have a better knowledge—I am surprised with your intimate knowledge of the London County Council making such a suggestion to me.

98804. (*Mr. Lansbury.*) Some members have said that one reason why the county council should not do this business is that they have not got time. I take it you agree about that, do you?—Yes.

98805. They might divide the work up amongst their committees, might they not?—Supposing they have the membership—you know what these big committees are, you can see it in reference to education. Quite frankly, is anybody with a deep interest in the educational work of London quite satisfied with the present condition of things?

98806. That is hardly what I want to put to you?—It is what you are coming to with the suggestion about the Poor Law.

98807. I rather wanted to ask whether it was not the fact that these committees split up into sub-committees and thus get through their work?—These persons on the London County Council, or whatever body you have, are not absolutely independent, with their whole time at their disposal, for any particular kind of work. It would be better if they were.

98808. Have you not rather given the case away by giving your own example. You have been an exceptionally busy kind of person. You have been connected with Vestry and the Local Board of Works and the Borough Council and Mayor of Holborn?—Not all at the same time.

98809. But you have been on the Metropolitan Asylums Board, I understood and the Mayor of Holborn, and, of course a Poor Law guardian all at one time. It seems to me that your own case proves up to the hilt that a public man can do a very considerable amount of work very efficiently?—I admit that I do not do the detail

work of the board of guardians now that I did previously, Transference of Poor Law work to London County Council and borough councils, but there are a great many men who do most actively of Poor Law work interest themselves in the work.

98810. Do we not all know too that we do our level best to get good officials and that they really do the most of the work?—If you want to argue whether this work should be handed over to officials, well and good. If you said what would you have as the best kind of work, I am not quite sure that I should not say do away with all elected bodies altogether and have paid officials, to do it, but that is not the question.

98811. That is one of the questions that we have to consider. Of course you have to consider the best way of doing it?—Are you going to consider the advisability of carrying out the Poor Law in London by paid officials?

98812. It is you who are the witness?—I know I am, and I have ventured therefore to put forward feasible ideas. I am quite certain that would not be an acceptable idea, however much I might agree with it.

98813. It might be as feasible as your proposal to set up a composite body made up of the borough councils as a central authority?—I have not suggested that, except in saying I do not see how you are going to get the membership in any other way if you are going to avoid an election directly by the ratepayers.

98814. (*Mrs. Webb.*) Supposing you had a judicial officer at £700 or £800 a year to administer the Poor Law?—You would want more than one.

98815. I mean a sufficient number of persons, a man from £700 a year to £800 a year to administer outdoor relief after hearing the enquiry agents?—I think there is a good deal to be considered with regard to that, and whether we could not get rid of the London County Council in the same way.

98816. (*Mr. Lansbury.*) You have a good many committees and sub-committees on the Metropolitan Asylums Board, I should imagine?—Yes, I could give you one of their agendas for this week.

98817. So far as I can gather there a good deal of it is done by the officials, is it not: you have a very competent staff of officials who carry out your work?—I should not say the officials did the work. We have certainly a competent staff.

98818. How long do your general meetings of the board last?—I should think they average from about one and a half to two hours.

98819. And you have reports from how many committees and sub-committees rolled into one?—I could not tell you exactly, but there are a number of central committees—about six central committees, and they embody the reports of their sub-committees.

98820. Do you not as a rule accept the report of the committees just as the County Council does?—We accept the reports in a great number of cases, perhaps the majority of cases.

98821. So that the size of an agenda is no criterion as to how much work there is for the body actually to do?—I do not agree with you.

98822. I suggest to you that it is not?—The size of the agenda paper for the Asylums Board bears no comparison with that of the London County Council.

98823. It is not a question of the size of your papers, but the principle upon which you deal with it, namely, that you have certain responsible committees, who in turn have sub-committees and they bring up their reports, and the business of the general committee is, as a rule, to accept the reports of the committees, therefore a few committees more or less does not very much matter?—Excuse me, it would matter. It is not only a question of committees, but a question of work; it is not a question of agenda papers, that is only an indication of the work. Take the work of the London County Council, take the main drainage, the streets and the public health work which they have to do, and the asylums; it is enormous.

98824. It is enormous, but if it is split up amongst a big number?—It is enormous, and it is done by officials. We all know that the education work of London now is practically in the hands of paid officials.

98825. And you say it is not being done so efficiently as previously?—In my judgment the education work in London is not on such a satisfactory basis as it was.

ONE HUNDRED AND FIFTY-SIXTH DAY.

Monday, 6th April, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, C.G.S.I.,
etc., etc., etc. (*Chairman*).

Sir SAMUEL B. PROVIS, K.C.B.

Mr. F. H. BENTHAM.

Dr. A. H. DOWNES.

The Rev. T. GAGE GARDINER.

The Rev. PREBENDARY H. RUSSELL WAKEFIELD.

Mrs. BERNARD BOSANQUET.

Mrs. SIDNEY WEBB.

Miss OCTAVIA HILL.

Mr. FRANCIS CHANDLER.

Mr. R. H. A. G. DUFF (*Secretary*).Mr. J. JEFFREY (*Assistant Secretary*).

Mr. ARTHUR WILSON FOX, C.B.; Mr. F. H. McLEOD; and Mr. W. HARBUTT DAWSON; called, and Examined.

*Mr. Arthur
Wilson Fox,
C.B.,
Mr. F. A.
McLeod,
and
Mr. W.
Harbutt
Dawson.*

98826. (*Chairman.*) (To *Mr. Wilson Fox.*) You are Comptroller-General of the Commercial, Labour, and Statistical Department of the Board of Trade, are you not?—(*Mr. Wilson Fox*) Yes, I am.

98832. And when you come to the blast furnaces, you get the number of furnaces in blast?—Yes.

98833. Taking the textile industries, do you get the number of hours there?—No; we get the number of people employed, and the amount paid during one week of the month.

98834. Taking that last case of the textile industries, what would be your index figure to test unemployment there? I take it you would assume that they work so many hours per week, and if that is so, I would like to know what is the index figure you start with?—First of all, we get the number of people employed, and then we get the amount of wages paid. That information gives us some indication of the variation in the employment during the month. The monthly figures are a very good indication of the variation in the employment when we know the numbers employed and the amount they earn.

6 April, 1908.

98827. The Board of Trade have been good enough to supply us with some very interesting papers. (*See Appendix No. XXI. (A-L)*). There are two series of them that we thought we should like to have supplemented by oral evidence, one, the papers relating to the statistics connected with unemployment, and the other, the papers relating to insurance against unemployment in foreign countries. I think we had better keep the two questions distinct, and deal with the statistics first. I assume that the two papers to which we had better confine our attention to chiefly, would be those headed "Method of Compilation of Board of Trade's Percentages of unemployed and the extent to which they may be taken as a measure of Unemployment" (*Appendix No. XXI. (A)*) and "Cyclical Trade Depressions" (*Appendix No. XXI. (B)*)?—Yes.

98828. Taking the paper I have first named, that relating to the method of compilation, I understand that you obtain your information from various quarters?—Yes. We obtain our information from employers, from trade correspondents who are the secretaries of employers' associations, from trade unions, and from local correspondents of ours who are mostly connected with trade unions. So we obtain the information both from the employers and from the workpeople.

98829. The information which you have thus obtained though it all relates to unemployment, is naturally of rather a differing character?—Yes. The various trades have got to be considered. Some trades go on the principle of working short time and in those trades, such as the textile trades and others—we get the number of men employed each month, and we get the total amount earned. Of course the total amount earned is not a good comparison over a long period, because rates of wages may change, but still it is the best indication we can get, and it shows the effect of short time—it illustrates whether short time or not is worked over short periods at any rate.

98830. The Returns that you get from the trade unions, I think, are fully explained; they relate to the actual persons connected with the trade unions who are receiving unemployed benefit?—Yes. That is substantially our test of an unemployed man; the best test that we can get statistically is whether a man is in receipt of unemployed benefit or signing the vacant book.

98831. When you come to the employers' Returns, you get from certain mining industries, from the coal industry, for instance, a statement of the number of days worked?—Yes, we get a statement of the number of days on which coal is got.

98835. Coming to the question of the unemployed, your figures might show a reduction in the number of hours working, for instance, but that would not mean necessarily that anybody was unemployed, would it? It might mean that the hours had been shortened?—Quite so. That is really the principle they go on. There is very little unemployment in the textile trade, except owing to accidents and stoppages for new machinery, fires, and so forth.

98836. (*Mrs. Webb.*) I think the Chairman was referring rather to a shortening of the hours deliberately; supposing the hours were shortened deliberately because they wanted a shorter day, would your statistics show that?—That would not be shown.

98837. (*Chairman.*) Perhaps I ought to make a little statement to you, in order to put the point clearly. We have had a great deal of information about not so much unemployment as the shortage of employment, and therefore, one is confronted always with this alternative when looking at the statistics of employment. Taking an extreme case, it may be that a certain number of persons are out of employment the whole of their time, or it may be that they are all employed, but though they are all employed, they are only employed for a shorter time each week?—Yes.

98838. Between those two extremes, one rather wants to find out what is the number of persons who are either actually out of employment at a given period, or who may have been what you might call under-employed through their hours having been cut down?—Our figures do not show that. That is an important point, and we are quite aware of it. The only indication at present that we can get in the trades that work short time other than those obtained for coal and the iron, &c., trade, is the number employed and their wages. Of course, the wages paid is some indication as to whether they are on short time or not. That is all we can give.

Mr. Arthur
Wilson Fox,
C.B.,
Mr. F. H.
McLeod,
and
Mr. W.
Harbutt
Dawson.

6 April, 1908.

Changes in
level of em-
ployment in
coal, iron and
steel trades.

98839. Turning now to page 2 of the paper showing the method of compilation, you give a table there headed "Percentage Changes in the Level of Employment in Certain Branches of the Coal, Iron, and Steel Trades," and in the last column you give the aggregate amount of employment in the coal, iron and steel trades; I assume that those figures in the last column are obtained by adding together and dividing the percentages of the preceding columns?—Yes, that is so.

98840. The coal mining industry, I think, affects something like 800,000 people?—That is so.

98841. But the iron mining, it seems to me, would affect a very small number of persons—comparatively speaking, only a few thousands?—Yes.

98842. I see your difficulty; but is it not a little misleading to aggregate these figures, and then divide them simply according to the number in the different occupations?—But Coal is given an equal weight with the mean of the other four columns in obtaining the last column. We do not publish those figures in the *Labour Gazette*. They illustrate one method of testing the level of employment.

98843. Perhaps you would not like them to be published?—We put in these figures as an illustration. There is no objection to their being published in your proceedings as a part of this paper.

Fluctuations
in engineer-
ing and
shipbuilding
trades.

98844. There is another point that has occurred to me. I think in your Paper headed "Cyclical Trade Depressions," you show that the fluctuations in the engineering and shipbuilding industry are very considerable?—They are.

Fluctuations
in moulders'
trade.

98845. Taking that industry, it includes a branch called the Moulders, I think?—Yes.

98846. That, comparatively speaking, employs a small number of persons?—Yes.

98847. But the percentages of fluctuation are very great with the Moulders?—Yes.

98848. On p. 8 of that Paper, under the heading of "Unemployment in the Several Groups," you print a table from the last column but one, of which you will see that there are very great fluctuations under the head of "Iron Moulders"?—Yes; they are very considerable.

98849. I was going to suggest that the fluctuations in this comparatively small trade would affect the percentage of unemployment of the whole of the steel and iron industry—at least of the skilled workers in it—and that the percentage of unemployment of the steel and iron workers would also affect very considerably the figures for the whole of the unemployed?—That is so. I think that the unions from which we have got these figures would be shown to be more sensitive to bad times than would be shown to be the case with the whole of the trade unions, if we could get these returns from them—at least, that is my opinion.

How far
Board of
Trade statis-
tics are a
measure of
unemploy-
ment gener-
ally.

98850. In this Paper you do not claim for these figures any more than that they show tendencies, I think?—No, I do not. If we could read into these figures something more than is there, namely, that they give a basis for calculating the total unemployment in the country, we should all be very glad; but I do not think we can do that, and I do not think it would be safe to try to do that. After all, we only get the figures for some 600,000 Trade Unionists, and I am somewhat sceptical about applying them to the 2,000,000 trade unionists. One reason is the point I have already stated, namely, that I think we have got figures from some trades which are particularly susceptible to changes in bad times, such as the shipbuilding, the building, and the engineering. Then another reason is that among the trade unions we leave out there are large bodies of men who are seldom out of employment at all, such as railway servants (80,000), textile workers (130,000), and coal miners (400,000). Therefore, I do not think it would be safe to apply our unemployed figures to the trade unions as a whole; and *a fortiori*, I do not think it is safe to apply them to the 11,000,000 of working people, and I do not think that anybody would suggest that one could apply the definite information which we have got as to the 600,000 to the 11,000,000. Each trade has got to be considered by

itself, and each trade has a history of its own. Even when you take the 11,000,000 people, you will find there are a large number who are not unemployed as a rule. There are the railway servants, the rest of the coal miners not included in our figures, and there are the textile workers. None of those people are unemployed much. On the other hand, there are a large number of people in certain trades who are at times very considerably unemployed. I should like to mention this as regards our own figures: We can only get the figures for the carpenters and plumbers in the building trade; although they show considerable unemployment at the present time, I should say that there are probably more unemployed among the bricklayers, the labourers and the masons, because theirs is outside work. Therefore, in that particular trade, our figures, which illustrate the position of the carpenters and plumbers, may not, I think, fairly represent the amount of unemployment in the building trade, in fact, I think they probably under-estimate it. Our figures may exaggerate in some particulars, and under-estimate in others, the amount of employment even in the case of the trade unions.

98851. On that point, are the trade unionists who receive a payment which is more perhaps in the nature of superannuation than an unemployed benefit kept out of your returns, or are they included?—If a man has run out of benefit and is on the books, we include him, because he is known to be unemployed. We should include in our figures anybody returned as unemployed. Of course, the great bulk of the men shown in these figures are actually in receipt of unemployed benefit but there are certain men who have run out of benefit and who are still on the books who would be included in these figures because they are known to be unemployed.

98852. (Mr. Bentham.) If there are any men who are unemployed in their trade, but who are working elsewhere, how could those be returned by the trade union secretary?—If a man has run out of benefit, and is on the books as not employed, he would not be working anywhere else.

98853. If he is out of benefit in connection with his trade union, he may be employed in some other way and yet be left on the books of his trade union with the option of returning back to his trade?—That would not be the case. It is to the highest interest of the trade unions not to pay men who are working elsewhere. That would be a very serious offence.

98854. (Mrs. Webb.) But you say that he has run out of benefit, so he would not be paid?—No, not in that case.

98855. How long do the trade unions keep a man who has run out of benefit on their books?—Of course, that varies according to the union.

98856. Eventually he runs out altogether, I suppose?—Yes.

98857. Therefore, you would not, as a matter of fact, have in your statistics all the men who have ever belonged to a trade union, and who have run out of it?—No; we should only have those who are still on the books, although they have run out of benefit.

98858. Is there any intermediate list?—In some cases the trade union will be looking for work for the man. He is on their books, they know he is unemployed, and some unions act as a sort of labour bureau. Take, for instance the boilermakers; they know the man is out of work and they are looking for work for him, although they are paying him. It is only when there is strict proof that the man is really unemployed that they return those figures to us at the end of the month, knowing that he is unemployed. The trade unions, knowing our system so well as they do, would never enter a man to us as unemployed if they knew he was employed in any other industry.

98859. (Mr. Bentham.) Seeing that they are not paying unemployed benefit in the case supposed, they may lose sight of the man and he may quite possibly be employed unknown to them?—There would be very few such cases, I believe. Of course, it would be all wrong. It would be wrong of the trade union secretary to report those cases to us, and it would be wrong of us to include them in our figures, if we had any idea that the men were employed elsewhere.

Inclusion in
Board of
Trade statistics
of men who
have run out
of benefit but
who are still
on the union
books.

98860. (*Chairman.*) Practically all the trade unions you deal with, I suppose, with scarcely an exception, relate to skilled industries?—Yes, mostly.

98861. I am taking the coal industry as a skilled industry?—Certainly.

98862. (*Mrs. Webb.*) Take these two classes, the men who have run out of benefit, and the men who have never joined a trade union for one reason or another; are not they very much more often unemployed than the trade unionists?—That depends on the different trades.

98863. Take engineering?—There, if a man has ceased to belong to the union, or he is a non-unionist, he may work at some place at a lower rate of wages than the trade union would allow him to work, if he were a member.

98864. He might do it, of course?—He is bound to exist. He cannot get unemployed benefit, and he is bound to feed his family, so he might get employment somewhere at a lower rate of wages.

98865. I know he might?—Therefore, that man would be in work when a unionist would not be in work.

98866. I admit that that is a theoretical possibility; but I was dealing merely with the question of fact. My experience in investigating trade unions is that the trade unionist has much more regular employment, and I rather want to ask you whether that is what you think?—I do not think I could express an opinion about that I think there are pros and cons. I do not think it is proved that a non-unionist is a worse or a better worker than a union man. He can take work anywhere he likes; he has got an open market for his labour, and if he chooses to take a low wage, he can. I do not think, therefore, I can answer you definitely; I do not think the point has been proved.

98867. Admitting that, I want your opinion?—I should not like to express an opinion about it. I think that there again different circumstances would apply to different trades.

98868. You do find at the distress committees that among the applicants there are more non-unionists out of work in a given trade than unionists; I do not know whether that is an indication?—Of course in some occupations the non-unionists greatly outnumber the unionists. There is another element, which would support your view, I think, namely, that the trade unionists find work for their people.

98869. Yes, that is another argument?—That would be a point which would support your contention. As I say, I think that there are pros and cons on both sides. I think it is a very arguable point.

98870. (*Chairman.*) Would you say that the return of unemployment as regards these skilled trades made by the trade unions was rather under or over?—Do you mean as regards the whole of the country?

98871. No, I mean as regards each particular trade. For instance, would you say that the return given by the trade unions relating to one skilled occupation was an index of the unemployment in their trade not only of their own members, but also of those persons who are not unionists?—That I do not think I could say; I do not think that has been proved.

98872. Now going outside trade unions and skilled occupations, the amount of unskilled labour dependent on skilled labour varies very much according to the different trades, of course?—Certainly.

98873. Take, for instance, shipbuilding, there would be a large number of unskilled persons dependent on that, I suppose?—Yes.

98874. But taking engineering other than shipbuilding, there would be a much lesser number, I suppose, dependent on that?—That is so.

98875. So that your figures do not pretend to be an index as regards the amount of casual unemployment or unskilled unemployment connected with the different trades?—That is so. I think that in bad times the unskilled are equally affected with the skilled. Of course, as you say, you have got to take each individual trade; but taking the problem as a whole, if you have the output of the country decreased, the dock labourers suffer, because they have less to take off and put on ships;

and it equally affects shipbuilding, because people want fewer ships, and there are fewer people making boilers; it also affects engineering. When harder times come, people put off buying new machinery, and they put off repairing their machinery. I think a time of depression affects all trades, and it is very difficult to say that it affects the unskilled more than the skilled. But I think you notice the unskilled man more because he goes down say to the docks and tries to get employment of the character which a man with strong arms and strong back can undertake; so the unskilled men drift down there, and they are therefore much more in evidence. The textile worker or the coal miner, if out of work, hangs about his own town with his hands in his pockets and waits till better times come. Coal miners in bad times sometimes do go on to the farms, if they can get work there.

98876. Coming to the regular occupations, such as railway employment and agriculture, of course, as their name implies, they are not subject so much to fluctuation?—That is so. Agriculture has not been subject to much fluctuation since 1894, indeed since then agriculture has not had any unemployment to speak of. Up to then, at any rate from 1890 to 1894, there was a lot of unemployment, and, in fact, I went in the winter of 1894 to try and count them.

98877. It was a bad winter then?—Yes.

98878. I suppose one may assume that as regards the regular occupations such as agriculture and railway employment, the reduction of employment in bad times is less than it would be in these other trades?—Yes, certainly.

98879. There is no doubt about that, I take it?—No, I have no doubt about that. It applies also to coal mining and cotton, but particularly to agriculture in recent years. I think the amount of labour employed in agriculture has probably reached the minimum. Twenty years ago, when farmers were doing their farms better, and were trimming the hedges and all that sort of thing, in order to make the farms look smart and to give them a good appearance, that was the sort of work that they knocked off in hard times; and then the men hung about the villages till the farmers could afford to do their farms better again. But those extra men have all gone now, and the men they have now got on their farms they want; in fact, in many districts they are afraid to give a man irregular work, because if they do he goes off and they do not get him back.

98880. Summing it up, would you think that the figures which are published by the Board of Trade tend to overstate or understate the amount of employment?—My own opinion is that we cannot get at the real facts until we count the unemployed in some way or another. I think we have got some trades in our figures which, on the whole, tend to accentuate the unemployment, particularly in bad times, and, therefore, we are on the high side. In the last year there has been some criticism upon why the unemployment has not gone down, seeing that our export trade has been so good. I find on going into the matter that the maintenance of the unemployment figure, is almost entirely due to building, shipbuilding, and the wood-working trades, which, of course, are dependent upon the building trade very largely. Those are the trades at present which are keeping our figures up; in the last three months, it has been due nearly entirely to the shipbuilding and the building, although, of course, the disputes in the engineering trade and the shipbuilding trades in the north have been responsible for a good deal of it.

98881. Taking foreign countries, I suppose you know something about the sources from which they get their statistics of information; do you think they get their figures on a unemployment-broader basis than we get ours?—No, I do not. I have got a memorandum here which we drew up some time ago, which at present the Board of Trade have not suggested we should put in, but I am sure you will not mind it if we do put it in. I should be very glad to put it in. (*See p. 521 of Cost of Living in German Towns [Cd. 4032, 1908].*)

98882. We should be very glad to receive it.—It is on the system of the collection of foreign statistics. We have gone into the whole question of the German statistics, comparing them with ours and trying to get at the relative value of them; the same with the French and Belgian statistics. Generally speaking, our percentages and the German percentages are not comparable at all.

German
trade unions
and unem-
ployed
statistics.

I cannot express any opinion as to whether the German figures of actual unemployment should be higher or lower than ours, but I do think, that ours are a much better indication than the German. There does not seem to be so strong an inducement for the German workman to give his name in to a trade union as unemployed as there is for our trade unionists. The German has to take longer to qualify, and he gets less benefit, and therefore, his name is on the books of his Union for a much shorter time. As the German unions have increased very largely, in fact enormously, in a short time, the consequence is that there is a very large number of men who belong to the trade unions who, though unemployed, are not qualified for benefit. Therefore the proportion of members of the German unions in regard to whom it is *certain* that they will report themselves, if unemployed, is probably considerably smaller than in the British unions. Moreover they have not got accustomed to going to their unions to the same extent as our people have. They travel in search of work elsewhere. The unions apparently have not so effective machinery for finding work for their members as have our British unions. Then the trade unions in this country are very kind-hearted, and there is no doubt, I think, that they do stretch a great many points in keeping the older men on their books. There are many men paid unemployed benefit in this country in certain unions out of kind-heartedness.

98883. They have got more like a superannuation allowance, or old-age pension, or that sort of thing?—Yes, they have. I should be very glad to put this paper in. It has never been shown outside our Department, and I think it is a valuable analysis. This is what the Imperial Statistical Office in Berlin have reported to us: "No comparison (between British and German figures), based on general percentages, can lead to any useful result, since the materials from which such percentages are constructed are different in the two cases"; and again "when it comes to international comparisons, general percentages are of no use whatever." A little further on in the paper we say, "The principal classes of persons who are likely to be omitted from the Returns owing to failure to report themselves are the following:—(a) Those who have not belonged to the union long enough to qualify for benefit; (b) those who have not been unemployed long enough to qualify for benefit; (c) those who have received the maximum amount of benefit to which they are entitled during the twelve months; and (d) those on travel in search of work, who do not happen to report themselves at one of the offices of the union on the day to which the returns relate." In Germany a larger number of the men travel as compared with our trade unionists. It shortly amounts to this, that the German Unions require a longer period for qualification, they give less benefit, and their unemployed are not so long on the books as our people are.

98884. Do the trade unionists who are travelling get allowances for travelling from their trade unions?—In some case, but they have got other systems for helping the men to get work in Germany.

98885. Is that one reason why the men do not report themselves?—Yes.

98886. We have had it in evidence that there is a method by which they get systematic help?—Yes, and that is one of the reasons why they do not report themselves. They have got other systems in Germany, perhaps better systems, and more organisation to enable the men to travel.

98887. Do the labour exchanges in Germany give material assistance as regards information about the unemployed to the German Government, do you know?—They do not provide figures for use in compiling percentages of unemployment.

98888. Going back to your paper on "Cyclical Trade Depressions," I see you have applied another test to these figures, and that is the test of the rise or fall of wholesale prices?—Yes, we have.

98889. That rather bears out, does it not, and coincides with, the figures that you have got as regards unemployment?—Yes.

98890. I assume that the Board of Trade are getting more and more information about unemployment; has the information which you have latterly received thrown

any doubt on your earlier sets of figures?—No. We are always trying to get more information, and we do get information from the great bulk of the unions who pay unemployed benefit. We have got, I think, recently about 40,000 more. Feeling the importance of the matter, in the last year or two we have dealt with individual trades not only on a statistical basis but by giving a general description, in fact in regard to all the leading trades we have an article in *The Board of Trade Labour Gazette* upon the state of employment in each trade, in which we give all the information that we can get. But we shall never really get at the bottom of this, unless we can give more inducement to the working man to register himself when he is unemployed. It is only a handful of men out of our industrial population who have got any inducement to go to any headquarters and register themselves as unemployed. If we can devise any scheme by which some inducement can be given to the unemployed, either through labour exchanges or through a system of insurance, to register themselves, then we can count the unemployed. But until we have that, it is a very difficult thing to define an unemployed man, apart from the man who gets unemployed benefit. That is a definite thing; he gets the unemployed benefit and he is registered as unemployed. But taking the 11,000,000, it is an extremely difficult thing to know what an unemployed man is. Cross the bridge to the Westminster Night Shelter, and see the men there. Every one of those men probably has earned something, or else he would not be there; he has got to pay 2d. for his bed, and 2d. for his supper, and 1½d. for his breakfast, and he has earned that or he has got it somehow. A large number of sandwich-men are in that Night Shelter; and they earn about 3s. 6d. or 4s. a week. Is such a man unemployed, or is he not? It is a very difficult question to say what an unemployed man is. The sandwich-man certainly is leading a very miserable existence, poor fellow, and he has not got the proper means to clothe himself and feed himself.

98891. (Mrs. Webb.) You mean to say that the unemployed figures are no index of the amount of under employment?—That is so.

98892. They are two quite separate things?—Yes.

98893. (Chairman.) In fact your figures are rather an attempt to define the quantity of employment that is available; would that be a correct way of putting it?—Our figures are an index of whether employment is going up or down, whether it is better or whether it is worse. One cannot say much more than that about our figures. I have never wished to put our figures forward on too high a plane. It is a very big business to get what we do monthly; some employers grumble now at giving us so much information, and it is also a considerable burden upon the trade unions to give these figures monthly.

98894. (Mrs. Webb.) Really these figures amount to nothing more than what the economists call a tendency?—That is so.

98895. (Chairman.) That is all you claim for them, in fact?—Yes, generally speaking.

98896. Have you got any statutory powers for obtaining information?—None, and I always hope that we shall not, unless it becomes absolutely necessary. I say that for the reason that we get an extraordinary amount of information from employers on every sort of statistical subject that we want. I have practically never known it refused. At the present moment we are doing a census of earnings, which is a very heavy burden upon the employers of this country. It is a voluntary matter, and there is only one trade in the whole country which is making any objection, and I think their objection will be overcome. By means of this census we shall get the individual earnings of over 3,000,000 workpeople in this country. That will all be given voluntarily. We get a great many other things besides. I may be wrong, but my own opinion is that if we once get compulsory Returns by Act of Parliament, the tendency of employers will be to say: "Now look here, we have got to do this, and we are not going to give you anything else." I think it may dry up the sources of a lot of voluntary information which we now get. Of course, if there arose some very serious reason why we ought to have compulsory returns of unemployment, we may have to risk it.

98897. Assuming that employment was very good, and that in fact anybody could get employment who was capable of giving a return to his employer for the wages paid, have you ever made a calculation of the percentage there would still be of unemployed?—I think probably about 2 per cent. There will always be men out of work between jobs, or on account of breakdown in machinery, or on account of bad weather, etc.

98898. You rather start, so to say, with an irreducible minimum?—Yes, and I think probably that is a fair figure—about 2 per cent.

98899. (*Mrs. Webb.*) To go back to the question of your returns being an index of the amount of unemployment in the skilled occupations, have you considered the question of the nondescript man, because that is the person that I have found unemployed; that is to say, the man who has not been apprenticed, but who in good times has been put on work which is usually done by a trade unionist, and directly the times are bad off he goes? Whether he remains in the category of skilled men or not is very difficult to tell; but he is a non-unionist always, he has seldom been apprenticed, and in good times he has been promoted to work ordinarily done by skilled trade unionists?—On that particular point of being employed on skilled work, of course in many places there would be a strong trade union objection.

98900. In engineering shops have they got power to prevent it?—If he had not got into the saddle as a skilled man, I suppose he would have to go back to his former employment. Do you mean if he had not joined the union?

98901. Yes. It seems to me that in the engineering trade, and perhaps to some extent in carpentering, joinery, and brick-laying, there are a great number of people who in good times are skilled men and who in bad times are thrown back into the ranks of the unskilled, and either lose work themselves or are the cause of other unskilled men losing work?—They may be employed in very busy times, but of course it does not pay an employer to put a man on to skilled work who is not suited for it; I mean, times have to be very busy for an employer to take much risk of that sort.

98902. Surely, what is constantly happening in an engineering shop is that these men are being promoted from being mere machine-minders in a semi-skilled occupation to more skilled machine-minding?—That is so at times, and I have heard trade union people grumble at it.

98903. You said that in the cotton trade the custom was to reduce the hours in times of bad trade?—Yes; they do, by agreement, as you know.

98904. Is it not the case in the other trades of which you have got figures, the shipbuilding and the building trades generally (but shipbuilding particularly) and the engineering trade, that bad times mean an increased amount of overtime to the good men, the other men, trade unionists and others, being thrown out altogether?—I do not think that is so, as a general rule. (*Mr. McLeod.*) In repairing they have a good deal of overtime. (*Mr. Wilson Fox.*) They cannot help themselves (*Mr. McLeod.*) Even when trade on the whole is bad they have to work overtime on repairing, because the job has to be done within a given number of hours. (*Mr. Wilson Fox.*) That is always the case with a ship-repairer. He is irregularly employed, but may be earning a fair amount taking the year all round.

98905. Further than that, when we were looking into the general history of trade unionism we discovered, or thought we discovered, that the amount of overtime worked by trade unionists actually went up in bad times—that the hours were longer in bad times than in good times?—I do not think we have got any general information of that character. Do you mean that they discharge their inferior men and keep their good men?

98906. They discharge the inferior men and keep the better men on for longer hours, and in that way make more unemployment?—I do not think I have got any evidence of that; but it may be so. I do not wish to contradict your investigations.

98907. Now to go to the question of under-employment; in your opinion your figures are in no way an index of the amount of chronic under-employment, I gather?—No.

98908. And there is no way of ascertaining that?—There is no way so far as I know of ascertaining that. Of course, you have here in these papers what we state about the amount of wages paid monthly in certain trades.

98909. I am not talking about organised unemployment; I am talking about the disorganised unemployment?—You are talking about the man who goes about from place to place, and earns, say, 17s. a week.

98910. Yes. Is it not the fact that there is very much less under-employment in those trades with which you deal, namely, the skilled organised trades, than there is in the unskilled disorganised trades?—Yes, I think there is no doubt about that.

98911. It has been suggested to us that the problem has been changed in the course of the last thirty years from the problem of specific unemployment during times of bad trade to the problem of chronic under-employment in all times, but which is accentuated in bad times?—I do not know whether it has changed, but I think public attention has been drawn very much more to these questions in the last few years. I do not know that under-employment really has increased.

98912. You have no opinion about that?—No, but I think public attention has been much more drawn to it. I have no evidence on the point.

98913. Do you regard under-employment as the greatest problem before us?—Yes, I do; I think it is quite as bad as unemployment, perhaps worse; indeed it is worse when it is the case that the man is chronically under-employed, and his children are deteriorating and he himself is deteriorating. If a man is unemployed he may be unemployed for a year off and on in bad times, and then his trade may be all right for the next three or four years. I regard chronic under-employment as much the greater evil of the two.

98914. Have you any suggestions to make as to how we could deal with under-employment?—The only way of dealing with under-employment is to find more work for under-employed people; that means to say, that you would have to increase the output of the country somehow, or else to decrease the amount of work other people are doing and give the under-employed a share of it. Those are the only two ways I know of of giving people who are at present under-employed more work—taking some of the work away from somebody else and giving it to them, or else obtaining more capital in order to secure more production and so to give them more work.

98915. Is it not possible that there may be chronic under-employment, and yet a positive shortage of labour in certain industries? It may be a mere matter of organisation, and you may have the capital lying idle and wanting to be used, but there is not the right sort of labour on the spot, and yet elsewhere you may have a stagnant pool of under-employment?—It is a difficult thing for employers to organise their labour, in some trades because some trade unions raise objections as to the division of work. I am on the Fair Wages Clause Committee, and there we have had evidence to show that some trade unions are adopting this policy—where you have, say, a certain article, part of which can be made by less skilled labour, they claim that the skilled man should do the whole.

98916. That is the case of a tendency?—Yes. I asked a witness the other day, a trade union official from the Midlands, about that. He said: "I do not see why unskilled men or women should come in and do the easy part; I do the difficult part, and why should I not have some of the easy work as well and be paid at the same rate for it?" I said: "I suppose you want some of the fat as well as the lean," and he said "Certainly, that is my point." If that is largely carried out, the unskilled man will be squeezed out, and the skilled man will do at a high rate of wages what an unskilled man can do at a lower rate of wages.

98917. But that is not a very large cause, is it? It only operates in certain industries, I suppose?—It only operates in certain industries, but it is a tendency of the skilled man; it shows the jealousy of the skilled man of

the unskilled. It is natural from his point of view, because if he once let in the unskilled man and so had a lower-paid man in the place, that would tend to reduce the wages.

98918. The whole tendency of industry has been, has it not, to divide the work up and to get the unskilled part done by the unskilled man, as in the boot and shoe trade?—Yes, on the part of the employers, but the skilled men are opposed to it. I cannot say that the skilled man helps that system; he is against it.

98919. Of course he is. But you would not consider that the amount of action which is actually taken by the trade unions in that direction is in itself a cause of under-employment, would you?—No; I do not suggest that.

98920. To go back to this problem of under-employment, what I want is to get an opinion out of you whether we have stagnant pools of under-employed labour which might be drained and the labour used by the capital which now exists in the country in a desirable way; for instance, agriculture is short of labour at certain periods?—I have always been of the opinion that steps might be taken to get more men back to agriculture; and I think it is worth trying. I do not say there is a large number of men who know anything about farm work on the streets of London, in fact I am sure there are not, but there are a certain number of men in under-employment in London, I have not the least doubt, who could work on farms, and yet there is no scheme at all that has ever been tried for bringing the man who is in London in contact with the farmer or the farmer with him. I am perfectly certain that that ought to be tried. I know a farmer near me in Herts, who, when he wants a man, advertises in *Lloyd's News*. It is no use advertising in the Hertfordshire papers, so he advertises in *Lloyd's News*, and he gets his men through advertising in *Lloyd's News*. That is rather an interesting thing.

98921. (*Prebendary Russell Wakefield.*) Does he want the men for a long time?—Yes. He is a Scottish farmer, and he gets practically all his men by advertising in *Lloyd's News*.

98922. His regular men?—Yes, his regular men.

98923. (*Mrs. Webb.*) There are also times in farming when you require a surplus, are there not?—Yes, that is so. Where I live our extra labour is secured sometimes by sending a man out to stand on the high road and ask the tramps to come in and do the hay or lift the potatoes. It would be much better to have some system of getting efficient men down. There is plenty of work in the autumn, lifting potatoes, for a lot of able-bodied men.

98924. If that is true about farming it may also be true about the South Wales industries, which are said to be short of men?—Yes, it may be; but after all there are very few occupations which are entirely unskilled and which a man can take up who knows nothing about them. If I was out of work and tried to black boots at the corner of the street, I expect I should black them very badly for the first month or two, and I should be unskilled at it.

98925. But a man might be trained?—Yes, quite so. Still, there are very few alternative occupations that a man can turn to at once if he has been thrown out of work, and so tide himself over the difficulty.

98926. Still, he might be trained?—Yes, he might be trained. For instance, we send out people to Canada, and they live there and do very well—they have got to. I remember when I was on the committee inquiring into emigration I asked a Canadian witness how it was that when we sent people out to Canada with no knowledge of agriculture at all they learnt it and did well at it. His answer was: "There is no Poor Law there, sir," meaning that if they did not work they would have to be buried—there was no other alternative.

98927. Supposing you had a system of labour exchanges all through the country, do you think it possible to make those labour exchanges in a way a drainage system which should take the under-employed labour from one part of the country and put it where it was wanted?—My own opinion is that it should be tried. I do not think that

labour bureaux have ever had a fair trial, because they have been organised too economically. To my mind the man who could really run a labour bureau is a man who could deal with employers and interest them. Not as at all the labour bureaux I have seen, a clerk who only enters people's names in a book; that is not at all my idea of working a labour bureau.

98928. Could you give us your view of the way of working labour bureaux?—I think so much depends upon the man who works them. You want a man who knows something about economics and statistics; you want a sympathetic man; you want a man who will ingratiate himself with all the employers in the district who will be on good terms with them, who can write to them and say he has got men, and ask whether they can take some of them, and so on. Then if you can get it—and I think you can—you want a voluntary committee of some of the employers and representatives of the workpeople, meeting once a week, say, and helping you with your labour bureau. I am sure the employers will often help in these things if you will interest them. It is to the advantage of the employers of this country not to have labour deteriorating.

98929. Would it be possible to adopt the plan which is adopted, I think, in the mercantile marine, of a compulsory labour exchange? You have a compulsory labour exchange there, have you not?—I do not know whether you could make labour exchanges compulsory throughout the country.

98930. Could you do that as an alternative to a legal minimum period of employment?—It would be a good thing if you could get a system of insurance in this country, and run your insurance and your labour bureaux together. If you had your insurance office as well as a system of labour bureaux, where you could be paying the men some out-of-employment benefit as well as finding them work, you would then have a very big organisation and you might be able to deal with the question. I do not say that you can do it on national lines now—I think it is perhaps too big a scheme, because the English people do not like big changes too suddenly. But if you did have a big national compulsory insurance scheme, there is a great deal of money in 4d. per week per employee. Supposing, for instance, that each worker paid 2d. a week—supposing that he had it deducted from his wages—of course, probably all this sounds rather autocratic, and I think the time may not be ripe for it; but if every worker paid 2d. a week and every employer paid 1d., and the State paid 1d., and the municipality paid 1d., you would then get 4d., and that would give you a fund of about £9,000,000 a year, which is a large sum, for dealing with unemployment. You would then be able to give about 430,000 or 440,000 people 7s. a week through the year, and you would have about £1,000,000 over for expenses.

98931. You would have in that case to clear up your under-employment first, would you not? You could not allow a man to be at work one day, and idle the next, could you?—There are all sorts of difficulties, and there may be a serious trade union difficulty too.

98932. But the first thing to be done would be to clear up the under-employment?—You could not touch your sandwich-man who was earning 3s. 6d. a week. You could only touch the man who has been out of employment for some little time; he would have to be out of employment for, say, four or five days before he could claim the benefit.

98933. And you would not touch the casual man at the docks, or the casual man in the building trade?—You would not touch the casual man as long as he was getting two or three days' work a week; but if you could take in everybody else who really had been out of work, say, for four days consecutively you would be doing a very big thing.

98934. Would it not be better to begin by clearing up this under-employment first, and so getting a sound basis?—It is very difficult to know how you could do that. After all, the people who are in want of bread must be dealt with. However much under employment there may be, and however terrible a thing it may be if there is a great deal of it, after all the man who is absolutely out

of work and has not got food to put into his children's mouths is the man who, for the moment, you have got to deal with.

98935. The man who is under-employed is not getting enough to put into his children's mouths, and he will always be under-employed; is he not almost a worse problem?—If you link-up such a system with your labour bureaux all over the country, and if you have a proper system of labour bureaux, that at any rate would be assisting people in getting work. That is why I should like to see the two things run together.

98936. (*Chairman.*) I understand that you would like to see the labour bureaux associated with employment rather than with unemployment?—With a system to get people work.

98937. And not to be associated only with the lowest class of work?—We hope to do something under the dock scheme for it. We have got a clause for setting up a labour bureau at the docks in Mr. Lloyd-George's Bill.

98938. (*Mrs. Webb.*) I gather that that will practically prevent under-employment, by preventing a man working for one day and then being off; you will dovetail the work?—Yes. (*Mr. McLeod.*) As far as possible.

98939. (*Chairman.*) This is rather interesting. I have not seen the Bill, but what is the clause—that all persons wanting labour shall apply to this bureau?—(*Mr. Wilson Fox.*) The clause amounts to this, that the authority shall promote the more convenient and regular engagement of the casual labourers.

98940. You have suggested a scheme, and you said it would produce very large results if every worker paid 2d. I assume that you would force everybody to go to the labour bureaux under that scheme?—I would exempt trade unions, if they wished it, who had a scheme of their own, and I would not force a man to get work at labour bureaux only. I would suggest that if he became unemployed he should take his card to the labour bureau which would be also his unemployment benefit head quarters, and his name should be entered for work at the bureau; but it would not be necessary for him to be there all the time and wait till the bureau had found him work. He would be at liberty to go and get work elsewhere; and it would be very much better for the bureau that the man should himself also look for work. I would suggest that he might travel as well. There is no reason why he should not travel, and when he came to the next town he could draw his 1s. a day or whatever he got, and if he could not get work there he could, in the same way, go on to another town.

98941. Where would the 2d. a week come from?—As long as he was employed his employer would deduct 2d. from his wages.

98942. The employer would do that?—Yes; I think that is the only way.

98943. (*Mrs. Webb.*) I was rather wondering whether it would be possible, in order to get over this great evil of under-employment, to say to every employer that he must either give a minimum period of employment, say a month or whatever period is thought desirable, or that he should do as they do at the Mercantile Marine Office, take his labour from the public exchange so that the public exchange could dove-tail the labour of the man?—You would give the employer that alternative?

98944. Yes, he would have the alternative to do one or the other?—You would say to him: "You have either got to employ a man for a minimum time—for a week say; or if you do not you must go to the exchange."

98945. Yes; and then the exchange could so dovetail the work that any man who was employed at all would have five days a week, or whatever the number of days that you thought fit. Is that not a possible social drainage scheme, so to speak?—Personally, I think there seems to be a good deal in that idea; but I dare say a great many employers would very much object to it.

98946. I would not force them to go to the exchange, if they were dealing with their labour in a way which was not demoralising?—I think there seems a good deal in your suggestion, if I may say so; but of course, if you do that, you are bound to give the employer a labour bureau pretty close to him.

98947. And you would be bound to keep a reserve of men, so to speak, on the premises, who could be drawn from?—Yes.

98948. You would have to have them of necessity there?—Yes. You could not cut off his supplies, so to speak, and you could not hamper him in his supply unless you gave him equal opportunities of getting labour quickly.

98949. That you do in the Mercantile Marine Exchange. You undertake to find a crew for every ship?—We offer both parties facilities.

98950. But you do not undertake to find a ship for every crew?—No. Of course, you would have to exempt certain trades—agriculture, for instance?

98951. Not necessarily. Why should not the farmer immediately write off to the nearest exchange?—Because you may get three wet days running in hay-time, and then a very fine morning, and then you would want to get a lot of men quickly in to come and turn the hay over at once.

98952. Surely the best way is to telephone or telegraph to the exchange and get them down?—You might lose half a day or more.

98953. (*Chairman.*) Would it be possible, do you think, to associate such an idea as Mrs. Webb has adumbrated (by which the employer must get labour at a certain exchange), with the option of getting labour outside provided he was made to pay an extra 2d., or whatever it might be, in the way of a stamp for each engagement?—Letting him contract-out for 2d.?

98954. Yes, if he chooses. Did you propose that the employer should pay the 2d. to the bureau direct?—Yes, 1d. for himself and 2d. for his employee.

98955. In the shape of stamps, as they do in Germany?—Either stamps or money. I think it would be a very big change, and I think there are all sorts of difficulties which would have to be discussed by a committee about the position of trade unions, and so on. I think that you must let a trade union contract out of such a scheme.

98956. (*Mrs. Webb.*) Out of the insurance scheme do you mean?—Yes, provided it could show that it had one of its own. I think you are much more likely to be successful by beginning the experiment with large boroughs, say, of over 200,000 or 300,000 inhabitants. You could start with a sort of trade committee, getting the employers and the workmen both in, doing it gradually. If you take the large boroughs and set up such a scheme as that, you will do much towards making a beginning; and if you do not make it compulsory to begin with, you can see how it will work. As you have seen, in the foreign voluntary schemes the class of people you want to get in do not come in; and if you do not have a compulsory scheme—and I think there are some objections to a compulsory scheme—you might at first get hold of a number of these men in under-employment, but when you get two or three mild winters their subscriptions will drop off, and you will find that it is only when the hard time comes that they want to subscribe. That is the experience in these foreign cases.

98957. That rather points to a compulsory system, does it not?—It does.

98958. (*Chairman.*) I suppose you would say it was essential, would you not, to any scheme of this sort, however it was started, if it was to be a success, that you should interest both employees and employers?—Yes.

98959. And, if possible, give them some control?—Yes. If you have got an insurance scheme connected with the bureau, and if you could get a committee to meet once a week or fortnight, composed of the employers and representatives of the municipality and of the trade unions, I think it might be done. The State would, I think, have to pay something, but it would be cheap at the price if it could get rid of the greater part of the unemployment question, and the municipality should, I think, have to pay something. Of course, the workman would have to be educated up to the point of paying 2d. a week, in order to insure his family against starvation in bad times.

Mr. Arthur Wilson Fox,
C.B.,
Mr. F. H. McLeod,
and
Mr. W. Harbutt Dawson.

6 April, 1908.

Desirability of allowing trade unions to contract out of labour exchange insurance scheme.

Desirability of giving interest and control to employers and employed.

Mr. Arthur Wilson Fox, C.B., Mr. F. H. McLeod, and Mr. W. Harbutt Dawson.

6 April, 1908.

Question of payments by workmen and by employed under labour exchange insurance scheme.

Deterioration caused by under-employment.

Question of regularisation of labour at docks.

The London unemployed.

98960. (Mrs. Webb.) You cannot get that from the under-employed man, can you?—The State might help him a little bit. It is not a very big thing for the State to pay $\frac{1}{2}$ d.; then the municipality would pay $\frac{1}{2}$ d., and then the employer and the workman have both got some inducement, at any rate, to subscribe. I think the employer might object to paying 1d. for each man per week. He would say: "I have now to pay for workmen's compensation, and under this unemployment scheme I am going to be hit as a rate-payer and taxpayer as well." On the other hand, I think the employer has got some direct responsibility to his workmen; he has got the responsibility of properly organising labour so that his workmen can be employed and will not deteriorate. It is a very great advantage to him that his labour should not deteriorate. Undoubtedly employers in this country have a very great interest in their labour not deteriorating.

98961. (Chairman.) Would you go so far as to say from your experience that the want of organisation in certain branches of employment has led to the physique in that employment deteriorating?—No, I cannot say that. Of course employers might tell one to mind one's own business, and might say they know their own business better; still, I think that in these trades where labour is not organised, in the case of the docks labour must deteriorate both morally and physically if a man is idle two or three days a week; he becomes an idle man, his habits become dilatory, and then he does not care.

98962. I will put it in another way: In your judgment must under-employment tend to deteriorate the physique?—I have no doubt about that. You have only got to go into a night shelter to see that.

98963. (Mrs. Bosanquet.) Could not the employers in casual and season trades be rated at a higher rate than others, in order to put pressure on them to regularise their trades?—They might be, but of course it would be very difficult. Take the docks, for instance; there are men hanging about there for perhaps a couple of days before they can get any work. Then a ship comes in to be unloaded, and they are working perhaps almost twenty-four hours at a stretch. It is very difficult to organise that sort of thing—it is extremely difficult from the employer's point of view as the ship has got to be cleared and sent out at once; but I think that with a proper labour bureau at the docks you could minimise a great deal of that. I will tell you what you could do—you could get rid of a lot of wretched poor people hanging about there who have never any chance of getting work, if you get a proper registry and there is a capable superintendent disseminating the labour all round the docks. A lot of these poor creatures who cannot properly be employed sometimes do get employment now, but we they will be staved out of it then; and then shall get another problem, and we shall have to deal with these men, but first, let us get them out of the ruck there. Sift the men at the docks, and then you will get the men who remain at the docks employed much more regularly.

98964. (Mrs. Webb.) So that if it were possible by any system to get everybody who is at work permanent employment, and then have a residuum with which you would have to deal, you would prefer that?—Much; it is a problem we could then deal with more easily, but I deprecate an able-bodied man being under-employed and being mixed up with these men who are what I call our social difficulty.

98965. (Prebendary Russell Wakefield.) They are men who could not be dealt with by any system of labour exchanges or anything else?—That is so. Remember, that in these unemployed statistics of ours, we are dealing with men who are artisans and who are ready to work when they are called upon, men who belong to a regular class of manual labour. But when you are dealing with the unemployed in London you are not dealing by any means wholly with the artisan who is ready to do work, and can do work when he has the opportunity; you are dealing with a vast number of people who by their own fault or their misfortune—illness, dishonesty or whatever it may be—perhaps they have all had their chance and some of them have missed it, and have had very hard lines too, I daresay—you are dealing with that class of men who do not belong to the industrial

class, you are dealing perhaps with the actor, you are dealing with the clerk, you are dealing with the school-master, you are dealing sometimes even with the clergyman, or the solicitor. They are not the artisan class, but they are the social failures. They are not the class Mrs. Webb is speaking of, but this class of man is all mixed up at present among the under-employed class, and he has nothing whatever to do with our trade union figures of unemployment.

98966. (Mr. Bentham.) Will you refer to your memorandum entitled "The Growth of Trade Unions, with Particular Reference to the Payment of Unemployed Benefit?" (See Appendix No. XXI. (C)). On p. 4 you give a list of the 747 unions paying unemployed benefits in 1906, and in order to construct Table IV. on the next page you take out of those, seventy of the principal unions which have paid one or more forms of unemployed benefit every year, also sixteen unions which have paid one or more forms of unemployed benefit in some years only, and in addition fourteen unions which have paid no unemployed benefits in any year. Do you consider those 100 unions the principal unions of the respective groups?—Yes, they are, as far as we can get the figures from them.

98967. In Table II. we see that the number of unions which did not pay unemployed benefit in 1906 amounted to 414, their total membership being 649,306?—Yes, that is so.

98968. These fourteen unions seem a very small fraction of the whole, in fact in one set of unions, that is mining and quarrying, there are unions with a membership of 319,262 paying no unemployed benefit at all. Which were the fourteen unions which you selected in Table IV. —Do you think they are over-represented?

98969. It seems to me that the fourteen principal unions, if they are taken as the principal unions, which do not pay unemployed benefit, ought to show a much larger membership than Table IV. shows?—(Mr. McLeod) We have to give the figures over a series of years, and we cannot pick them out so as to get an exact statistical proportion, because some of the unions do not keep their accounts in the same detail as the others.

98970. If that be so, would not the value of the return be very much reduced?—(Mr. Wilson Fox.) I think we are giving you all we can get from the trade unions. (Mr. McLeod.) We are comparing the same unions over the same series of years.

98971. In Table IV. will they be exactly the same unions that you have taken right away from 1892 to 1906?—Yes. One of our difficulties has been to get a continuous record of that time.

98972. Table IV. shows that there is a growth of 43·2 per cent. in the membership of the unions which pay unemployed benefit every year, of 32·8 per cent. in the membership of those unions which pay unemployed benefit in some years, and of only 22·9 per cent. in the membership of those unions which have paid no unemployed benefit; and I see since the year 1901 there has been a reduction in the membership of those fourteen unions which pay no unemployed benefit, and indeed the numbers have actually gone down considerably, whilst during the same years in those unions which pay unemployed benefit the numbers have risen considerably. What is the explanation of that?—It would vary with the different unions. You would have to consider them in detail.

98973. There is not a list of these 100 principal unions anywhere in this document, is there?—(Mr. Wilson Fox.) No, but we can let you have the names if you like. (See Appendix No. XXI. (C)).

98974. The value of these returns is somewhat problematical if we do not get the names of the unions and the number of members in each union, because one particular union might be responsible for the whole of this reduction?—It might make a considerable difference of course.

98975. If, for instance, there has been a strike, or any disturbance during any of these years in those same fourteen unions, that again would upset the figures?—It would have to be a strike in which the union was crippled very much. You see this table gives the membership of unions which either pay unemployed benefit or do not pay unemployed benefit. If there was a very disastrous strike and the unions, owing to that reason,

did not pay, and could not pay, unemployed benefit, that would affect the figures of course.

98976. The point is this; in times of a strike in a union where no unemployed benefit is paid, the secession of membership would be greater than in a union where there is unemployed benefit paid?—That would be so when the strike fails. (*Mr. McLeod.*) Unemployed benefit tends to keep the members together; it makes them very reluctant to go.

98977. It seems by these figures that a great deal of importance would attach to the payment of unemployed benefit?—Yes, certainly..

98978. Do you think any inducement in that respect—by way of grants say—would be advisable with regard to those unions which at present do not pay unemployed benefit?—(*Mr. Wilson Fox.*) I think that would be an inducement to men to join. Take, for instance, the Gasworkers' Union, which is a large union, of which Mr. Will Thorne is the secretary. They do not pay any unemployed benefit because they have got a class of men in their union who is earning low wages, and who does not subscribe. I think it would be a very good thing if the Gasworkers' Union did pay unemployed benefit, and if there were some inducement for them to do so I should be very glad to see it, because they are just the class of men you want to get in and who are affected by unemployment.

98979. Do you look with any favour on the principle of subsidising these unemployed benefit funds?—I would rather see them self-supporting; but the machinery would cost so much, particularly if you had a labour bureau connected with them, that I do not think, at any rate to begin with, that they would be likely to be self-supporting. I think there is some argument for subsidising them to some extent, but not to a large extent. I think in all these questions somebody has got to take the lead; we are in a great many difficulties about unemployment and poor people and pauperism, and all the rest of it, because nobody takes a lead in these things. You want organisation—half the battle is in organisation; and in some cases the State or the Municipality has got to do it. But it all costs money, at any rate to begin with, and you cannot start a big scheme without some initial expenditure as a rule.

98980. Of course these unions would be more or less unions of unskilled labour?—Yes.

98981. And therefore their membership would be more likely to be interfered with by fluctuations in trade. If they could inaugurate a system of unemployed benefit which might be subsidised in part by the State, there would be less fluctuations in the membership of these particular unions, would there not?—If they were subsidised?

98982. If they paid unemployed benefit—and I am assuming that they would pay unemployed benefit now, if they could?—Certainly.

98983. If they were aided they would be enabled to do so?—Yes, they might.

98984. Would it not favour the growth of unions for the unskilled class if part of the unemployed benefit was paid out of the Exchequer?—Yes; and that is one argument for a compulsory system. I do not say that I am particularly in favour of compulsion; but I say we have got the trade unions who have done a great work, but who, although they have got a voluntary system, have not dealt with the question over a very wide area. After all, there are 2,000,000 trade unionists, and we have only got 640,000 of those who are paying unemployed benefit relating mainly to the skilled trades; they have not covered the unskilled people, and one large union, which contains a great number of unskilled men, the gasworkers, have not got any unemployed fund at all, because they cannot afford it.

98985. We have been told by several witnesses that the inducement to join a trade union is not the unemployed benefit; but these figures do not show that, do they?—No. These figures certainly show that where unemployed benefit is given the membership increases. Of course a great many of these trade unions have got other benefits. I suppose that one of the main reasons why men join trade unions is to keep their wages up, I mean to say, it is a fighting organisation; but, of course, it is

very difficult to say in what proportion that reason influences them.

98986. That consideration applies exactly the same to those unions which do not pay, does it not?—That is so, but then it is these large unions which can best afford to support their men on a strike.

98987. (*Mr. Chandler.*) Is it not the fact that the unions you have selected do something more than pay the unemployed benefit?—Yes; and I have just said they do.

98988. So that the aggregate help that they give their members, apart altogether from the unemployed benefit would be an attraction?—Yes. There is sick-pay and other benefits.

98989. Probably this group of fourteen in your Table IV. have been formed largely to provide a war chest for strikes and so on?—I suppose so. It is an organisation which has for its main object the increasing of their pay—that is what it comes to. If they can do it without fighting, they do it.

98990. Does not your experience prove that where there is no agitation going on, the numbers generally decrease?—Yes, that is so. The railway people joined Mr. Bell's union, the Amalgamated Society of Railway Servants, by hundreds during the agitation last year.

98991. (*Mr. Bentham.*) It would be interesting to have the list of the unions you have promised, and the membership?—If the Chairman will allow us, I believe it is not too late to amend these papers by adding the list. (*See Appendix No. XXI. (C).)*

98992. The Return of unemployment which is published monthly in the *Labour Gazette* does not cover these same 100 unions, does it?—No.

98993. It only covers those unions which pay unemployed benefit?—That is all. We have got to take what we can get.

98994. The figures of unemployment then may not apply to precisely the same unions?—Our unemployed figures do.

98995. Do they?—Yes. We always get them in.

98996. Suppose there is a strike or a lock-out in a very important union in a group, those men would be excluded, would they not?—Yes, all of them.

98997. And the percentages would be taken on the reduced numbers of members?—Yes.

98998. But excluding that number might materially affect the percentage of the remainder, might it not?—Yes; but then on the other hand there is another element introduced, namely, that the strike throws out a large number of men indirectly in other trades in the district. If, say, the engineers are out, it may throw out other people in the district, and that would swell our unemployed figure.

98999. Will you turn now to your Memorandum on "Cyclical Trade Depressions?" (*See Appendix No. XXI. (B).*) On p. 5 you give a table based on continuous returns from sixteen unions showing the membership and percentages of unemployed from 1873 to 1906. How are these percentages arrived at? Is it by taking the percentages of each of the sixteen unions, adding them together and dividing by sixteen?—(*Mr. McLeod.*) We take the total number of members, the total number of employed, and we get the real average percentage in that way.

99000. Then the percentage is a percentage of aggregate numbers?—Yes.

99001. And not arrived at in the way the Chairman pointed out you dealt with the Table on the iron trades?—No. (*Mr. Wilson Fox.*) Those are all weighted figures.

99002. (*Mr. Chandler.*) The statistics compiled by the Board of Trade I know throughout the country are generally accepted and used as indicating the measure of unemployment in various trades; but I think this morning you have rather cast some doubt upon the value of these conclusions?—Do you mean as regards quantities?

99003. Yes; I do not doubt the facts?—As to the question whether over a series of years employment is going up or down, I think they are quite a good indication.

Mr. Arthur Wilson Fox,
C.B.,
Mr. F. H. McLeod,
and
Mr. W. Harbutt Dawson.

6 April, 1908.

What trade unions are covered by Board of Trade unemployment statistics as published in *Labour Gazette*.

Method of compiling certain percentages of unemployed from 1873 to 1906.

Extent to which Board of Trade statistics can be taken as an index of unemployment generally.

Mr. Arthur
Wilson Fox,
C.B.,
Mr. F. H.
McLeod,
and
Mr. W.
Harbutt
Dawson.

6 April, 1908.

99004. You have mentioned the building trade as an illustration; your Returns, of course, are very meagre, inasmuch as they only refer to trade unions in the building trade which pay unemployed benefit?—That is so.

99005. One would not think, therefore, that your figures afford any fair indication of the state of unemployment in the building trade?—You know much more about that than I do. My feeling about it is that it would not be fair to take the carpenters' and plumbers' percentage as an indication of the state of the whole of the building trade. It is possible for carpenters and the plumbers to be employed when the outdoor trades, I mean the masons and the bricklayers, are not employed; but of course in a prolonged period of depression they are also very considerably affected. They would not be affected, I suppose, very much in a short period of frost, as they might have work to go on with indoors.

99006. (Mr. Benthams.) But in taking the percentage of unemployment for the whole year, they would fall pretty much together, would they not?—Yes, if you take the whole trade together. If the building trade is bad, if people are not building houses, then there is no carpentering and joinery work to be done; but I suppose in a period of frost there would be a tendency for the carpenters and plumbers to be able to get more work than for the other men to do so.

99007. (Mr. Chandler.) Quite so, their work being inside; but as the trades are engaged in about equal proportions in the erection of buildings, taking a year's experience, the unemployed in the plumbers' and joiners' work being a given percentage, it is fair to assume that the bricklayers, the plasterers, and the labourers, would also have a very large percentage of unemployment, is it not?—Yes, but I should not like to go so far as to say that the percentages would be identical. I want to guard myself about this, because after all, we are taking carpenters and plumbers only in the building trade, which is itself one of the biggest trades in the country.

99008. (Chairman.) Still they would give an indication whether the building trade was going up or down, would they not?—Certainly; they might be, I suppose, a fair indication of what is going on in the whole trade.

How far
percentage of
unemployment
among
possible
trade
unionists can
be taken as
an index to
unemployment
among
non-
unionists.

99009. (Mr. Chandler.) Then again, your Returns of the unemployed are taken from those who are in receipt of unemployed benefit, and you have no means, I think, of knowing anything of the number of men who are out on the streets, and in the country with travelling cards, because they would not be returned as being in receipt of unemployed benefit?—That may be so occasionally, but not as a rule.

99010. They would tend to increase the number of the unemployed that you could show if you had those figures, would they not?—Yes, if one could get them, but they cannot be numerous.

99011. I think you said also that you question whether the percentage of unemployment in the ranks of non-unionists was any larger than that in the organised trade?—I said there is no proof of it. I would not like to say one way or the other. I should only be making a shot. (Mr. McLeod.) We have often discussed it in the Labour Department, and we cannot arrive at any definite conclusion, in the absence of any special inquiry, which, I think, would have to be a very big affair.

99012. (Chairman.) Is there much difference of opinion?—Yes, there is. (Mr. Wilson Fox.) I think there are arguments for and against. There are some reasons which induce one to think that non-unionists would be more unemployed than others; and on the contrary that unionists might in some cases be more unemployed than non-unionists.

99013. (Mr. Chandler.) My point—and I daresay it appeals to you—is this: From your experience of only the organised trades of this country, is there not a very fair chance that the non-unionists would show equally bad, if not worse, results?—Of course, it all depends on the trade. If the trade union is strongly represented in one trade, then the non-unionist in that trade has not got such a great chance as in some other trades, where he has a much bigger chance, because he can go and get work by under-selling the union men.

99014. That would hardly apply to the trades with which you deal in your Returns, would it?—There are some to which it would apply; for instance, there are some engineering employers who have hardly got any trade union men, strong as the Engineers' Union is. A man would go to a shop like that and get work—I mean it is possible for him to do it—whereas a trade union man could not go there; if he travels and comes to a place where there is a strike, he cannot go in there.

99015. I am only anxious about the statistics of the Board of Trade, because in my opinion they are a very fair reflex of unemployment of the country, and I was therefore sorry this morning to find that there is a doubt cast upon them?—The doubt I am throwing upon them is, that I do not think anybody is justified in applying the 4 per cent. or 5 per cent. or whatever our figure is, to the 11,000,000 workpeople of this country; and I do not think they ought to do it. I do not think you ought to take the figures for these 600,000 people and apply them to the 11,000,000, and I do not think statistically you could do it. But these figures, I think, are a very good indication of whether employment is going up or down; and I think we do get some very excellent information as to unemployment in certain trades. In some of these trades the figures are a very good indication as to unemployment, but I think some people want to read into our figures much more than they can really bear. Of course, I do not want to pour too much cold water upon our own figures.

99016. (Mr. Benthams.) Is there anything in the statement we hear sometimes that trade union secretaries do not always send to the Board of Trade the correct number of those unemployed—for the reason that they do not want the state of their trade to be known?—No, I do not think so.

99017. You really do not think so?—No; I do not think there is anything in that at all.

99018. (Mrs. Bosanquet.) I suppose the membership of a trade union is a very varying quantity, is it not, and the numbers go up and down?—In the year do you mean?

99019. Over a series of years?—The numbers fluctuate as between bad times and good, and they also fluctuate during times of strikes and excitement.

99020. I suppose a small and select union would be likely to have a much smaller percentage of unemployment than a large union embracing most of the trade?—I do not know, and I cannot say that. Take a union like the boiler-makers. They have a monopoly, so to speak; I do not say they dictate their own terms, but they can come to something near it, because people must have boilers and they have got to be made in a very skilled way. There is a great deal of unemployment among boiler makers if ship-building is bad.

99021. But then that would include the whole trade. Supposing a small union increased its membership very much, it would be likely also to increase its percentage of unemployment, would it not?—It is very difficult to answer that definitely.

99022. Seeing that the membership has increased considerably every ten years, it occurred to me that that might be responsible also for the increase in the percentage of unemployment—quite apart from the actual facts as to unemployment?—I should not like to say that. I have no positive information on the subject, but should not think that it was probable.

99023. You do not think it is likely that they have taken in a set of men who have added to the unemployment statistics?—I cannot definitely say.

99024. In regard to the question of universal insurance, it occurred to me from one table you have given us, showing the way in which different employments were busy at different times of the year, taking all trades, there would be no one season in which there was a great mass of unemployment as compared with the others, probably?—I think probably the best way to begin an insurance scheme would be to do it by trades, if you can. Go to a large town and try to organise a trade there, and get an insurance scheme in that trade; or you might get two or three trades to combine. If you could do it by trades I think you would be able to do it better than by having a general unemployment scheme. You would

thus come to know the risk of unemployment in each trade, and the State, if it made a contribution, would be able to ascertain what the risk of unemployment was in each trade.

99025. Supposing you worked two trades together, one of which was very busy in summer and the other very busy in winter, you would then want a smaller fund to work upon, would you not?—That is just one of the advantages of doing it by trades, it seems to me. Of course, the contribution would be made accordingly. But I think that if you had a national system, some of the workmen who were in regular work or very little out of work might object to having their funds taken to pay for men who were greatly out of work.

99026. Do you think from the figures you have given us that one could say safely that, taking all industries together, the bulk of unemployment would be about the same all the year round?—Do you mean on an average,

99027. Yes?—No, I do not think so. Certainly from the autumn to Easter, when in fact the weather is bad, the outdoor trades are always affected.

99028. You have a very large trade, the coal mining which is the busiest in the winter?—Yes.

99029. And you have the docks busiest in the winter?—Yes—generally. In the last year or two the coal mines have been busy all the year round, but the tendency is for them to be busy in the winter. I should say there is certainly more employment in the winter with them. But take the building trades; outdoor painting, and repairing, and so on, do not begin till about April 1st; and, after all, the building trades are our difficulty in most of the big towns, and even in the smaller towns. When the building trade begins to get busy, we expect to see the men who have been hanging about getting employment.

99030. Is your Paper, "On the Extent to which Female and Juvenile Labour has displaced Adult Labour in the last Twenty Years" (see *Appendix No. XXI. (H)*), based on the census returns?—I think I am right in saying that it is.

99031. In that case it is not liable to any of the doubts that occur on some of the other papers, because the results shown there are absolutely certain, I take it?—So far as the census is right, I suppose that our figures are right. But which is the particular table to which you are specially referring?

99032. Take, for instance, the statement at the beginning that female labour is not increasing in proportion to male labour?—That is from the census.

99033. The figures show a negative result, that female labour is not displacing adult male labour?—Yes, that is so.

99034. (*Miss Hill.*) Some suggestions have been thrown out, and I did not quite gather whether you agreed with them, to the effect that the responsibility of providing permanent employment might have thrown very much on the employers. That must be only within limits as there must be irregular labour, and irregular demands for labour, surely?—There must always be a margin between busy seasons and slack seasons, between good times and bad times. You have the seasonal trades, for instance.

99035. At the docks one would like to see employers endeavour to regularise the labour as much as possible, but you could not seriously propose to rate them higher if they had not a continual demand for labour, could you?—No, I do not think so. I think it is largely a question of organisation, and I think that has been felt at the docks. I think the employers there will welcome any system of giving the men more regular work and themselves a quicker supply. If you had a bureau there and a system of telephones, with people there selecting the men and getting a certain stamp, the employers would, I believe, welcome it.

99036. But, of course, there must always be irregular work. Taking quite small things, if your cook is ill and you want a charwoman for a day, you cannot be fined because you do not engage her for a month, can you?—No.

99037. If you want a shelf put up and you send for a joiner to come and put it up, you cannot be fined because you do not employ him for a month, can you?—No.

99038. Was not that what was suggested?—I did not suggest it.

99039. I know you did not, but I did not understand whether you agreed with it. In the same way you could not really compel people, could you, to take their workpeople necessarily from a labour bureau? They must have a selection, and if they know people that they wish to employ you could not make it compulsory that they should go to the bureau, could you?—I understood the question was whether you should compel a man to employ a casual labourer, say, for a week, or if he could not do that, to go to a labour bureau.

99040. (*Mrs. Webb.*) You have got that in the Mercantile Marine, that is to say, no employer in the Mercantile Marine can employ men in that trade except at the exchange?—That is so.

99041. (*Miss Hill.*) There are many employments in which you wish to select your own employees?—Yes, I suppose there are. But if I want a servant and go to a registry I can select my cook; of course I can see a couple of hundred if I like.

99042. You may know a cook who is not on the list of the labour bureau, and you may prefer to select her, and then you ought not to be compelled to go to the bureau?—But it would be possible even then to engage her through a labour bureau.

99043. (*Mrs. Webb.*) But you do that in the case of the Mercantile Marine? There they have absolute power of selection, but they must do it through the exchange, is that not so?—(*Mr. McLeod.*) The captain selects his own men, but they have to engage them in the presence of the superintendent.

99044. It has to be done in the superintendent's presence?—They have to be engaged in his presence, but the superintendent has nothing whatever to do with selecting the men.

99045. But it has to be done in the exchange, or whatever you call it?—Yes, the signing on.

99046. (*Sir Samuel Provis.*) In reference to the table in the Appendix to your Paper on the Method of Compilation (see *Appendix No. XXI. (A)*), the yearly mean of the unemployed does not necessarily show, does it, what is the actual problem to be dealt with in respect of the persons who are unemployed?—(*Mr. Wilson Fox.*) No, not at all.

99047. That must depend very largely, must it not, on the interval of unemployment in the particular cases?—Yes, certainly.

99048. Have you any figures showing what that unemployment was?—Yes. Of course, we have not got much, but what we have is, I think, valuable. In the case of the Amalgamated Society of Engineers, there was an investigation made in the books of the Leeds and Manchester branches from 1887 to 1895, which showed that, taking the mean of those years, 1887 to 1895, 13 per cent. of the total membership were idle for from three to four weeks, 4·65 per cent. were idle for from four to eight weeks, 2·76 per cent. were idle for from eight weeks to twelve weeks, and 9·27 per cent. were idle for over twelve weeks.

99049. They were not necessarily continuous weeks, I suppose, or were they?—No, these periods were not necessarily continuous. Those are the sort of figures that you are alluding to, and we should like to have them very much extended.

99050. There is not very much information, I suppose on that point, is there?—No, there is not; but we got that out from those books.

99051. (*Chairman.*) That I understand was for one particular union?—They were the books of the Leeds and Manchester branches of the Amalgamated Society of Engineers.

99052. Now we come to the question of insurance against unemployment, and I should like to state what I know is felt by the Commission generally; that we are very much indebted to the Board of Trade for the papers they have furnished us with: they have given us a great deal of useful information, and this particular paper on insurance against unemployment is admirably drawn, and is so good a paper that really I have very few questions to ask you about it (see *Appendix No. XXI. (K)*)?—I may say that as regards the foreign information much

6 April, 1908.

of what I know I have learnt from Mr. W. H. Dawson, who has come with me here: he has been abroad so much and knows Germany so thoroughly, and has seen some of these schemes actually in work there and in other foreign countries, that he can tell you about it much better than I can. Of course, any question you like to ask me I will answer, but you have here a man who has seen the schemes at work first hand, while I only have it second hand.

99053. When we get to details perhaps I had better put the questions to Mr. Dawson, but looking at this paper as a whole, the difficulties of establishing anything like an effective insurance against unemployment are very well stated on p. 2. Having regard to the risks run in each trade it is desirable to get solidarity, but you cannot push more than a certain number of trades into one form of insurance on account of the inequality of the risk?—I think that is so, and that is why it would be better if it were done by taking trades as the basis, as is done by the trade unions.

99054. The second part, which is pretty clear I think, is that wholesale subsidies have promoted trade union insurance and increased their numbers, but it does not seem to at all have solved the question of insurance of the casual or unskilled classes against unemployment?—No, it has not, and that is where much of this has broken down. They have just subsidised the trade unions, which although it has many disadvantages is perhaps another argument in favour of compulsion: you may only be able to get these people in by compulsion.

99055. I see in Strassburg (we have had some specific information on that point which entirely confirms this paper) that although they have a labour exchange there thoroughly well organised, they have been obliged to abandon the idea of insurance against unemployment for the lower class of unskilled labour, and they have annual relief works?—That is so. (Mr. Dawson) The Department received a letter a few days ago from Strassburg, and in that letter we were told that the operation of this system during last year, the first complete year, had not led in the slightest degree to any increase in the members of the trade unions.

99056. So it had not that stimulus even as regards skilled organised labour?—No, it had not increased the number of members.

Desirability
of labour
registration
in conjunc-
tion with any
scheme of
insurance.

99057. I think in some previous statement you said that any system of attempted insurance ought to be associated with labour registration?—(Mr. Wilson Fox) It would be very much better, because then there is a distinct interest in finding men employment who are on the funds.

Berlin labour
exchange.

99058. I do not know if any of you three gentlemen have any special knowledge of the working of the labour exchange at Berlin?—Mr. Dawson has.

99059. Could you tell us a little more about it. They charge a registration fee: it is the practice of the employers to go to this labour exchange?—(Mr. Dawson) In most trades they do, but in other trades the employers maintain their own registry. For example, in the heavy iron industries, at any rate, the employers do not profess to use the labour exchange, but have their own office; at the same time it is found that the work people often register themselves at the town exchange, in their trade union, and at the employers' registry as well. Many of the Berlin trade unions are affiliated to the Central Exchange and have their registries there.

Tendency in
Germany not
to charge
registration
fees at labour
exchange.

99060. It is said here, it being a powerful organisation they charge a small registration fee?—That is done, but it is very unusual in Germany. The tendency now-a-days is not to charge anything; to have no fee.

99061. Do you think it at all chokes off applicants?—I do not think it has much effect: as a rule now-a-days where a fee is charged it is charged to the employer, and not to the workman.

Combination
of insurance
scheme with
labour
exchange in
Germany.

99062. This paper says: A definite scheme for the development of this plan into an organised system of insurance resting upon the practical control of the labour market by the Exchange has been proposed. Should you say that that idea is at all likely to be adopted?—Do you mean the combination of insurance with it?

99063. A combination of an organised system of insurance associated with the control of the labour market by the Exchange?—It is an idea which is very much

discussed in Germany at this time; but hitherto Cologne and Strassburg are the only places where the two have been united.

99064. I understand in Strassburg the Corporation, who have large public works, was able to put a certain amount of indirect pressure on the employers, so that the employers came into the Exchange?—Strassburg for many years has taken a lead in social reform work. It has provided these relief works for the last ten years, it is not a new thing to have distress works at Strassburg; they are only carried on during the winter.

99065 In Paragraph 3 there is a contrast drawn between the percentage of unemployed allowances met by public or voluntary grants as opposed to members' contributions, first, as regards the whole fund; lower down in the same paragraph it is pointed out that at Cologne, Berne, and Basle these funds provide for a class rather above the unorganised seasonal labour, but still unskilled, and that at the other places, Ghent, Antwerp, and Milan, the subventions were to the skilled? Of course, the system is different in different places; in Cologne, for example, the unemployment fund is not a municipal fund at all, but a private one, and that fund deals largely with the building trade, whereas under the Ghent system, the municipalities subsidise only the unions; any unions of any class of labour that care to apply.

99066. None of these systems have, as far as you know, been successful in developing insurance amongst the unorganised labourers?—The whole of them have failed in that respect; that is really the weak point.

99067. As far as I could gauge the Belgians have developed that system more than any other country?—But still they have failed to touch the unskilled.

99068. If we take part of the paper which relates to Belgium probably we shall deal with the most sustained efforts to deal with unorganised labour?—Yes.

99069. The circumstances existing at St. Gall shew that you cannot push the organised trades or industries beyond a certain point?—That is the difficulty; the St. Gall scheme was killed by two main reasons, one was that in the first place it did not sufficiently differentiate between the skilled and the unskilled men, so that the skilled men refused to pay for the unskilled; and it broke down because the method of collection required that the men should pay their contributions into the central office, and they would not do it, so the money could not be collected, and the scheme really became insolvent. It is no longer carried on upon the original basis.

99070. Coming to the Belgian system, I suppose the Ghent system is the best system?—That is the representative application of the system of subsidising trade unions.

99071. There the assistance given has developed trade unions and unemployed benefits?—To a small degree, I think you will find.

99072. Only to a small degree?—A very small degree indeed.

99073. I said trade unions, that is organised trades? Yes.

99074. I understood that they had been developed?—It is true that a number of societies were formed when the scheme was begun in order to claim the benefit, but since the beginning there has really been no further advance. That has rather disappointed the municipal authorities. They thought it would have led to a continued increase in the unions claiming the benefits, but there has not been that increase since the beginning.

99075. When we come to the other side, as regards the unorganised workmen, the system has been of very little use?—It has quite failed; indeed Strassburg is not trying that system at all, because it recognises there is no hope of doing anything with it, and it deals with such men by relief works.

99076. As I understand, the inducement that was adopted at Ghent was to give a very high rate of interest?—In the case of individual thrift, yes. That is what it really amounted to.

99077. Fifty to 75 per cent.?—It came to that.

99078. Such a scheme is perfectly impracticable here with our savings bank?—Yes. Even in Ghent it has been

decided to reduce that high amount to the individual savers. It was recognised that it was not fair to the others.

99079. You seem to have given a good deal of study to these questions; what is your idea about the result of your investigations and experience? Supposing you had a free hand, do you think it is possible to organise some system of insurance for the unskilled workmen?—I think that the system which Mr. Wilson Fox developed this morning of taking trade by trade and possibly trusting to a combination with the trade unions, as they find it to their interest, might be made to work if the proper encouragement was given. I think it would need a stimulus.

99080. Let us follow that out. You would have a labour exchange, I suppose?—That is very desirable. That is the counsel of perfection, but by doing that, of course, you greatly increase your machinery, and increase too the expense of administration.

99081. We will put that on one side. How would you start your scheme without any labour exchange?—For example, you might take any particular trade in a certain town and get them to organise, then get the work people to insure through their employers, and have a special fund for that trade.

99082. And make it compulsory?—It is of course a question of policy whether you would begin with compulsion or first try a voluntary scheme and gradually work towards compulsion.

99083. It has been stated in certain of the evidence and printed documents that have come before us that in Germany the workmen are very much more stationary than we are: that they stop in the same trade and do not move about from place to place?—I should be rather inclined to doubt that; certainly in some trades it is not the case. I think there is a very great deal of movement.

99084. Would you work through organised unions or would you set up a scheme independent of them?—That would depend, of course, as to whether the local trade unions were willing to join. I should imagine in many cases they would be quite willing to throw in with the trade scheme, otherwise it would have to be tried independently.

99085. It is based a little on the German scheme, I suppose, the employer deducting a certain amount from the wage?—That is so, as in the case of the German sickness and accident insurance scheme. That is really the only possible way of getting the workman to pay his contributions: you cannot expect him to go and pay his penny or two-pence a week at some central place.

99086. It is done by stamps, is it not?—I do not think it is necessary to employ stamps: the employer might pay each fortnight or month in money.

99087. To whom?—To the central fund.

99088. Assuming the trade unions took it up, would the employer be prepared to pay to the trade union funds? The trade unions could hardly claim that, but if the trade unions did not fall in, then I assume they would be able to claim the same subsidy that the State might give and still keep on their old fund.

99089. It is subsidy plus the employer making a certain deduction?—I should think it would be very doubtful whether the trade unions would like to stand out of a trade movement like this.

99090. Do you propose that the employers should add anything to this?—That is, I think, part of the scheme.

99091. Do you suggest that, Mr. Fox?—(Mr. Wilson Fox.) I suggest that the employer might be asked to pay one penny per man, but I think if a trade union stood out of such a scheme and had their own scheme they could not expect the employer to contribute towards that.

99092. The amount which he deducted from his employees I suppose would go to that fund?—Yes, but not his own. He would only subscribe to what would be a sort of State or municipal scheme.

99093. What was the idea?—That the contribution should be a contribution from the municipal authority or from the State?—(Mr. Dawson.) The idea that Mr. Wilson Fox, I think, expressed was that both should con-

tribute, the State in the first place and the municipality, also because the municipality would be relieved owing to there being less drain upon the poor funds, so that it would probably not cost the municipality more than hitherto. (Mr. Wilson Fox.) A half-penny each.

99094. Putting the question of compulsion on one side for a minute that scheme might work as regards organised trades, or persons who were in continuous employment. When you come to these casual labourers there are great difficulties, are there not?—You could not do it with regard to the casual labourer working for different employers. You might possibly get hold of the dock labourer working four days a week, I do not know why you should not, but you would not get hold of the man who was working for different employers and was purely a casual man.

99095. I assume in docks you might get an organisation if there were central places where they were taken on, you might apply that system then?—Yes, if they had not to go and pay their own money (that is a great trouble to them), if they were given the opportunity of insuring themselves, and there was impressed upon them the great advantage of getting 7s. a week if they were out of work. Before talking of compulsion we might give them an opportunity to see if they will do it on their own account. If they will not we must consider something else.

99096. Take the next trade to dock employment, which is a very difficult one, the building trade: there would be considerable difficulty, would there not?—Of course, the building trade is the very trade in which these men ought to insure, because they are so liable to be thrown out of work by the weather. I do not know why in the large towns you should not be able to organise the building trade. I recognise if you had a national scheme it would be extremely difficult to organise the building trade, because there is building in every hamlet in the country, but I do not see why the building trade should not be organised in large towns.

99097. The term of employment in the building trade is very short; it is by the hour, is it not?—Yes.

99098. Would that not make it difficult, or is the hour merely a method not so much of employment, but of reckoning the wages?—Yes, it is reckoning the wages. The hours vary in summer and winter, according to the daylight.

99099. (Mr. Bentham.) The unemployed benefit would have to have some conditions attached to it, similar to those which the trade unions themselves attach?—Certainly, you would very likely have to put more restrictions on. Necessity of attaching restrictions to unemployed benefit under insurance scheme.

99100. If I understand aright, stonemasons get no unemployed benefit unless they walk so many miles a day, and sign the books to that effect; it is a sort of travelling allowance although they come back to the same town at night?—Certainly.

99101. They would not travel if they got the insurance till they had exhausted the whole of the funds; they would remain at home, would they not?—Yes.

99102. (Chairman.) When you come to anything like casual labour there would have to be very stringent conditions about unemployment, because it is so easy to pick up a day job here, and a day job there?—I think the man would have to report himself at the bureau every day at an inconvenient time—inconvenient as regards his getting work anywhere—eleven in the morning, or something of that sort.

99103. If we put a labour exchange on one side, I think we are all agreed there would be a greater difficulty in establishing any form of general insurance for the unskilled casual labourers?—Yes, I think it would be extremely difficult.

99104. Assuming that you had a labour exchange, would that facilitate matters, assuming you could attach conditions to it?—When you say the unskilled, do you mean the regularly employed unskilled, because there is no more difficulty about insuring an unskilled man in regular work, than a skilled man.

99105. Perhaps I should say those whose employment is intermittent?—I thought that was what you intended.

Mr. Arthur Wilson Fox, C.B., Mr. F. H. McLeod, and Mr. W. Harbutt Dawson.

6 April, 1908.

Difficulties of applying insurance scheme to casual labourers.

Mr. Arthur
Wilson Fox,
C.B.,
Mr. F. H.
McLeod,
and
Mr. W.
Harbutt
Dawson.

99106. Assuming that labour exchanges were established, and conditions could be connected to them, which would tend to push people into insurance against unemployment—I think in Strassburg they have to go to the labour exchange before they can get any relief?—Mr. Dawson tells me the men who are insured are given a preference before others.

99107. They are given a preference as regards employment?—(Mr. Dawson.) That is so.

6 April, 1903.

Preference
given at
Strassburg
Labour
exchange to
men who are
insured.

Difficulty as
to payments
of casual
labourers to
the insurance
fund.

Question of
requiring
employer to
use system of
stamps for
each man
employed by
him.

99108. That would be an inducement, but as regards this particular class, how are you to collect their share of the insurance funds?—(Mr. Wilson Fox.) Through the employer, if a man is employed at all regularly. Supposing a man only works for the same employer, you would get it from the employer; if he works for two or three employers, say two employers in a week, and is purely a casual man, then there is a difficulty, and a very considerable difficulty, unless the man pays in himself, and he is just the class of man who will not do it.

99109. You cannot have a form of engagement which the employer has to put a stamp on, can you?—I had thought of that, that for every day that the employer employed the man, he should put a special stamp against the day of the week. Of course it is throwing a very considerable burden on the employer, to be always sending these things into a central office, to show that he has insured "Jones." Supposing that man lives in a municipality and he chose to go and register himself at the labour bureau, then his name is down there, and the employer who employs his men regularly might send in a list of men that he employs regularly, so that they can get the money, but if he employs men casually, he would have to send in the name of a man every day he employed him, or at the end of the week, and it would be a considerable trouble to the employer of the casual man; that is the difficulty.

99110. I am told at the docks, for instance, there are at times 1,000 people paid off very hurriedly; it would not be possible to stamp their pay sheets for each day, it would take too long, would it not?—They might hand it to the man, and the man would have to go and present it at the labour bureau. That would always have to be done, signed by the employer, showing that that particular man was not employed by him any more. That would be the day from which he would begin to qualify for unemployed pay. He would have to qualify for four days.

99111. I do not know if it is possible, but supposing that system was established, and a stamp was put on their contract, I assume that the stamp would represent something payable into the fund, it would not be at the disposal of the individual?—No, I should make it a special employment stamp for the purpose, so that at the end of the month the central office could go to the post office and claim the money for those stamps. That is how they would get paid.

Objection in
Germany to
use of
stamps.

99112. That is how they do in Germany, is it?—(Mr. Dawson.) That is so.

99113. Every employer uses stamps?—Yes, and they complain very much; that is one of the great complaints.

99114. What was the complaint of, the time?—Yes, the trouble.

Desirability
of starting
insurance
scheme by
organising by
trades in the
large towns.

99115. We see the difficulties and are slowly trying to get out of them. You have adumbrated a scheme of 11,000,000 paying 2d. ?—(Mr. Wilson Fox.) That was on a national basis. I only began with that to show how large a sum of money could be got out of a national scheme, the State contributing a comparatively small amount; if you can get 4d. a man, taking 11,000,000 men, there is £9,000,000 a year, which is a very large sum of money; but that was only merely indicating that you could get up a very large fund. I think that the best way to begin, if it is done at all, would be to do it by trades in the large towns. You can get two or three trades to do it, and have it all done in the same office, and with the same organisation, and at the same time, if possible, have a bureau. Of course, it would all depend on whether the scheme in each town was big enough to carry a bureau with it, because the bureau is going to be the expensive part of it. If you can have a labour bureau and exchange and an insurance scheme, then the same man who did the bureau could probably do the insurance scheme if you have a good one: he could be working the two together, at least

he would be the head of the whole thing. Then you would have a committee for each trade, or a committee for the whole, to be formed of some of the employers and some of the workmen if possible: if you cannot get some of the workmen on, then no doubt they would be willing for some of the leading people in the district to do so, some of the municipal councillors or some philanthropic people in the district so that they would help to control the insurance and see that people did not mangle, and that sort of thing, and make all the necessary arrangements and also carry on a campaign to make the scheme popular, and bring it to the notice of the workpeople, hold meetings and so on, to get the workmen interested in it.

99116. You plan is to organise locally, that is not organising by trades quite, is it; there is a distinction?—I suggest that trades in certain towns should be organised for the purpose. You could not organise a whole trade in the country, I think, without having a national scheme.

99117. Supposing a man moved out of the circle or area he was in, he would lose his insurance, would he not?—No, I think not; he would take his card with him, and he would get his money in the next town in which there was an insurance office.

99118. The whole of the success of what you have suggested depends more or less on the regularity of employment; the man who is intermittently engaged would not be able to come into this scheme?—The man who is working for different employers every fortnight or month, would be very difficult to deal with; the man who is working for the same employer, but only working four days a week, I do not see why you should not deal with, so long as it is possible to extract 2d. a week from him.

99119. What would be the idea in the locality: would the trade unions be allowed to take the small weekly contributions from their own people under this scheme, and the labour exchange and so on take the contribution of the unskilled or the casual labourers?—I think an individual trade union would very likely very often stand out. They would say we have our own scheme and will go on with it, and they would take the Government contribution and if they wanted their members to subscribe more in order for them to get more, there is no reason why this should not be done.

99120. In that way everybody who is not unskilled would be able to insure?—Yes, he would have the opportunity. I have never worked any scheme out because there may be several ways of doing this, and first of all you have to make up your mind whether you are going to have compulsion or not, and whether you are going to have a national scheme, or a trade scheme or a town scheme, but that a scheme could be worked out at a certain price I have very little doubt.

99121. Except as regards the casual labourer?—Except as regards the casual labourer working for different employers. Whether the thing is a success or not voluntarily would remain to be seen.

99122. Assuming you have a labour exchange, do you think it is practicable to say or to try and enact that no one should be engaged except at this particular labour exchange?—I think it is very difficult. I think that many people would think they were being dragooned too much.

99123. Reversing it, assuming you did do it, would there not be a certain danger if a person did not get employment through that certain instrument; would there not be a danger if they thought the work ought to be found?—Yes, there might be that.

99124. Do you think that is a serious danger?—I think there would be a danger in suggesting that a man is bound to go to a particular place to get employment. It is a drastic way of attempting to decrease the amount of casual labour to expect an employer to go to a labour bureau if he does not employ a man say for a week. It might have to be done if the evil was so great, but I think there would be a great outcry about it, certainly as regards some trades. As a condition precedent a very elaborate system of labour exchanges would have to be created.

99125. You would have to define what is casual labour, and that would be very difficult, would it not?—Perhaps, to fit all cases.

Difficulty of
dealing with
casual
labour
work for
different
employers.

Probability
of trade
union
contract
out of
insurance
scheme.

Objections to
compulsory
engagement
through
labour
exchange.

Use labour exchange not compulsory on employers in Germany. 99126. In Germany is there any sort of compulsion on the employers to make use of the labour exchanges?—(Mr. Dawson.) No, it is absolutely voluntary.

99127. They have come in because it is convenient?—Yes, it depends; in many towns it has always been found that a labour bureau has to make its way slowly, but gradually the employers have come in. There is one exception, the iron trades; as a rule, they have their own bureaux.

99128. What is the largest?—The engineering trades

Municipal labour registries in large towns of Germany. 99129. Taking the biggest iron centre in Germany what is the system there?—In virtually every large town there is a municipal labour registry—almost without exception.

99130. And the employers of labour more or less use it?—To a very large extent.

99131. Has it been long in operation?—Many years.

99132. They bring in both representatives of the employers and the men?—As a rule there are half of each on a committee, and it works with absolute smoothness.

99133. I understand it is instrumental in deciding a good many industrial questions?—That is quite a subsidiary branch of its work; they are not formed for that special purpose, but it is believed that the fact of employers and workpeople working together on that committee has a good effect.

Method of checking men and labour exchange insurance system. 99134. (Miss Hill.) I suppose one difficulty if such a scheme were not worked through trades unions is that you have no machinery really for watching whether the people were in work or not in work; where a trade union is paying a portion of the out-of-work pay they would watch their men?—(Mr. Wilson Fox.) The only possible way of doing it is to make the man who is out of work call every day at the exchange. That is the only way to do it.

99135. Or several times a day, would it not have to be, because he might get broken work?—He would not get very much if he called from day to day at the time he was told by the superintendent to call; if he called at eleven o'clock one day and the superintendent said: We shall want you here at three to-morrow, and he did not know when he would be called.

99136. Do you think that would be a sufficient check?—It would be the only check; I cannot think of any other off-hand.

99137. Unless you do get something like a trade union organisation, where the trade union itself is paying a portion of the benefit?—That would be the advantage of doing it according to trades, where you would get it managed by the trade. That is one of the advantages of trying to organise per trade.

99138. (Mr. Chandler.) Do I understand the suggestion with respect to the insurance against unemployment is that the cost shall be divided between the workman, the municipal authorities and the State? Is that the suggestion?—It was only a suggestion as to the means of raising the money.

99139. That is what I mean.—Supposing you had a man not belonging to a trade union at all, and you had one of these insurance offices in a large town, if he paid 2d. and the employer paid 1d. and the State paid 1d. and the municipality paid 1d., you would get 4d. I think those amounts could be defended as a contribution from the various sources.

99140. In practice would not the workman pay more per week than your scheme provides for?—In what way do you mean?

99141. I mean that the employer's contribution would be deducted from wages, thereby making the workman's share 3d. per week instead of 2d.—I was Secretary of the Royal Commission on Local Taxation, and at the end of six years I gave up all idea of ever solving the question of the incidence of taxation, and have never attempted it since.

99142. But do you not think it preferable in a plan such as you have indicated to leave out the employer altogether?—As I have said before, I think that the employer has a direct interest in supporting a scheme calculated to avoid the moral and physical deterioration of workmen when unemployed. But I am not prepared to say how far contributions from employers could be obtained under a voluntary scheme.

99143. Have you formed any calculation as to the amount it would require for a scheme of that kind for a small payment per week to the unemployed?—It would vary in the different trades, because different trades have different risks; if you insured the 11,000,000 workpeople, and got 4d. for each, that would be 1s. a day all the year round for about 430,000 men.

99144. You would provide for that number on that basis?—Yes.

MR. JOHN BERNARD CONNOLLY, called; and Examined.

Experience. 99145. (Chairman.) You are Town Clerk of the Borough of Drogheda, and Honorary Secretary of the Distress Committee?—I am.

99146. You have been good enough to send us a statement relating to distress in the Borough of Drogheda, if you will kindly hand it in, we will treat it as your Evidence-in-chief?—Certainly. (The Witness handed in the following Statement.)

Numbers on register. 1. The Committee began its operations in February, 1907; 215 names were placed upon the register. This winter the Committee set to work in the third week of December; 231 men presented themselves for registration. All these men were of the labouring class. About 75 per cent. of them were young or middle-aged men of a good class, willing and anxious to work, and the remainder were about equally divided between old men and that class of man which I should describe as "never in constant employment."

As. 2. The operations of the Committee extended in the first year from the 14th March to the 25th April, but a "Coal Fund" Committee had been coping with the distress from the 12th January and the Corporation before that—from about Christmas. This year they have been in progress since the 22nd December, and are still being carried on. With the first class of men referred to distress has now become periodic, with the others chronic.

Prod of operations of distress committee. 3. I attribute the causes of the distress to the amount of land that is going out of tillage; to the great depression in the building trade, consequent upon general depression, and to an all-round decline in commerce in and around Drogheda.

4. The effects of the distress are a lowering of the moral status of the people of the working classes and a widespread impoverishment. Clothes and furniture are pawned to an abnormal degree; outdoor relief is sought and indoor relief too.

5. Prior to the passing of the Unemployed Workmen Act, the Corporation spent about £50 at Christmas in each year in giving a couple of weeks' employment to a more or less "unemployable class" at a low rate of wages.

6. The Distress Committee have only endeavoured to provide employment, and of a useful and substantial nature. They have not established a labour bureau, assisted emigration, or established labour farms or colonies.

7. The trades unions have contributed very liberally out of their funds to the relief of their members.

8. There is not any scheme of municipal insurance obtaining.

9. In my opinion the present remedy of providing work through the local distress committee is the best that can be devised having regard to local conditions.

99147. (Chairman.) The Distress Committee, I suppose, is composed in much the same way as they are in this country; are the guardians represented on it?—Yes.

99148. Are you on it *ex officio* as town clerk?—No, I am simply honorary secretary to the committee.

99149. The men that presented themselves for registration were mostly men of the labouring classes, were they of fairly good physique?—Yes.

Mr. Arthur Wilson Fox, C.B., Mr. F. H. McLeod, and Mr. W. Harbutt Dawson.

6 April, 1908.

Suggested division of cost of insurance among workmen, employer, State and municipality.

Question whether employer's contributions would not be deducted from wages.

Probable total cost of suggested insurance scheme.

Funds.

99150. Persons, whom an ordinary employer if he wanted a man of that stamp would employ—of physique quite good enough for that ?—Quite good enough.

99151. Did you at all go into where they were domiciled ; did they come in from outside, or did they belong to Drogheda itself ?—They belonged to Drogheda, and had lived in it for at least twelve months before making application.

99152. There are certain causes which have operated in recent years to cause a depression in Drogheda ?—Yes, trade is declining, and there is a general decline all round.

99153. There is a decline in your sea-borne commerce, is there not ?—Yes, there is a very great decline in the trade of the Borough of Drogheda.

99154. Did that trade employ many persons at the docks ?—It would employ a considerable number.

99155. On the quays ?—Yes ; for years back it has been steadily declining.

99156. There has been a depression in the building trade too ?—A great depression for the last couple of years ; In Drogheda at the present time there is not a single new building of any description going on. The president of the Trade Council at a meeting of the corporation said that out of thirty-one masons, there was only one employed.

99157. I am afraid this lack of employment has not suddenly come upon you, but it has been gradually increasing for some time past ?—It has been aggravated by the depression in the linen industry. The mills in Drogheda employ women mostly, and they help to tide the family over the winter period, and then coming into the spring and summer the men find something to do in the way of the building trade, and working on farms, and little odd jobs here and there ; but last winter, as you know, there was a great depression, and the mills ran short time, and the people found it very hard to tide over the distress of the winter.

99158. I suppose really in certain families, the women have been rather keeping the men ?—Yes.

99159. Is that at all on the increase in Drogheda now, should you say ?—No, I should not say it is on the increase.

99160. What sort of work did your Distress Committee find for these people ?—Deepening a new reservoir that was constructed about three or four years ago, the capacity of which it was thought was not equal to the wants of the town ; we thought by deepening that reservoir, and increasing the storage capacity of it, we were doing the most useful work we could put them on. Then we had the services of the officials of the corporation to superintend these men whilst they were working there.

99161. Does this reservoir belong to the corporation ?—Yes.

99162. Was it work that in the ordinary course of events you would have done, or would you not have done it, if it had not been for the distress ?—We would not have done it had it not been for the distress, because it was more or less to take precaution against the possibility of a short supply in a dry season that this work was done.

99163. What funds have you at your disposal ?—Shall I take up the first year of the operations ?

99164. If you please ?—In the first year, we got a sum of £91 19s. from the coal fund committee, and the corporation themselves had spent £91 14s. 3d., and when we had exhausted these amounts we went to the Local Government Board and we got a grant of £200 from them ; that was all the money that was spent in that year.

99165. What is the coal fund ; is it a local charity ?—Yes, it was called a coal fund ; it was a voluntary fund.

99166. It started originally I suppose to provide coal, and I suppose it became a sort of charitable fund ?—Yes, you might call it a charitable fund. There was £110 14s. 7d. spent upon supplying coal and generally relieving distress from the charitable fund, in addition to these sums which I have given you.

99167. Was this £200 part of the Queen's Fund ?—Yes.

99168. That was the first year, was it ?—Yes, then this year the corporation voted to the fund of the distress committee, the amount produced by a halfpenny rate,

which would be £50 roughly. We got £180 13s. in local subscriptions, and up to the present we have had £450 from the Local Government Board.

99169. Was the £50 that you raised out of the rates for the purpose of the administration ?—It was voted by the corporation for the purposes of administration, because legally it could not be applied otherwise, but I offered my services to the distress committee gratis, then they thought they would be justified in spending that money upon giving the employment, so that really the expenses of the administration will not be any more than the cost of advertising the subscriptions raised and so forth.

99170. Has the Local Government Board auditor passed it ?—He has not come along yet, but he has made me a little bit apprehensive with regard to the first year's work.

99171. (*Sir Samuel Provis.*) How does it appear in the accounts ?—The accounts have not yet been audited, so I do not know.

99172. You do not know ?—It will probably be surcharged, and we shall have to apply for a remission of it.

99173. (*Chairman.*) £180 is a considerable subscription, Voluntary is it not ?—It was a very good subscription from a town funds of the size of Drogheda.

99174. What rate do you pay the people you put on this work ; do they get the same rate as they would if they were in private employ ?—No, they only get 12s. a week, while the standard rate of wages is 16s. Then they have to walk out of a morning 3½ Irish miles to this work, and work all day from eight o'clock till half-past four, with half an hour off for dinner, and then tramp again into the town in the evening ; so it was pretty severe on them.

99175. Did many fall out, or did the same lot keep on ?—They kept on as long as we were willing to keep them on. We really could not cope with the distress effectively, and at times we had to knock off some of them and take others on in their place ; but any of them that were taken on I should say worked regularly and consistently as far as lay in their power.

99176. What was the total number that registered ? You put here 231 ?—Yes, 231.

99177. Will things be better this next year do you think ? Do you see any signs of improvement ?—Candidly I do not.

99178. It will be rather a permanent difficulty in Drogheda unless there is some development of trade ?—Yes, it is really due to a want of trade prosperity. The population, of course, is steadily going down, trade is diminishing ; and all round you see a decline.

99179. What is the population of Drogheda now ?—It was 12,760 at the last census, I should think it is a good deal less than that now.

99180. The trade unions have supported, quite independently of this, those of their members who belong to the union ?—The only information I can give you upon that is a statement that was made at a meeting. The Trades Council was charged with not contributing towards the local subscription fund of the distress committee, and their reply was that they had spent £442 10s. ; they had paid away that sum in relief to their own members, and it was made up in this way : Tailors, £52 10s. 6d. ; bakers, £95 18s. 0d. ; carpenters, £103 13s. 0d. ; painters, £100 9s. 0d. ; printers, £75 ; plumbers, £45 ; and masons, £25 ; but I should say that notwithstanding that they contributed a sum of £7 towards the funds of the distress committee.

99181. You think, looking at the circumstances with which you have to deal, that providing work through the local distress committee is the best method of meeting this distress ?—Yes, I do, because being a small town it is easy to become acquainted with the local conditions. You can have thorough supervision ; and personally I think it is about the best scheme that can be devised.

99182. Is pauperism high in Drogheda ?—Yes, I think it is.

99183. I think according to the Irish practice there have been very few able-bodied receiving poor relief ?—Very paupers. few ; but then, of course, their wives and families look for it, and that sort of thing.

99184. Should you say there was a distinction between the class that came to you for this class of work and those who apply to the Poor Law for assistance? Should you say it was a better class of people that came to you?—They would have been compelled to apply to the Poor Law Board if we had not taken them on. In the first winter we took on a lot of the persons who had applied actually to the Poor Law Board. The people were practically starving and could find no work to do. They had been pawning all their clothes, and that sort of thing, and they were absolutely driven to the wall. They had to fall back upon the outdoor relief system. Some of the women actually went into the house, and their husbands were prosecuted for leaving them upon the rates.

99185. The distress committee put a pretty stiff task on these people in the way of labour?—Undoubtedly they were well looked after and compelled to give a good return for the outlay.

99186. Had you good superintendence and so on?—We had very good superintendence.

99187. You are pretty confident there was not much shirking?—I am quite confident, because I went down there pretty frequently myself, and I always found the men were working well, and from conversations with the gangers, and that sort of thing, I am quite satisfied that the men worked well. Of course the uncertainty of not knowing how long they would be kept on, I should say would militate against their working as well as they would under ordinary conditions, and then working for less than a man who would be fortunate enough to get employment in the town would also tell against them.

99188. In your judgment I assume you think it is very important that the rate given should be rather below that which is given outside?—Not very much below, I should say, because I think it would have a demoralising effect upon them to make it too low: they would look upon it as charity pure and simple, and I do not think that would be a good thing.

99189. You would keep it so that there should be no inducement to people to come to the distress committee for relief or work when they could find it outside?—Quite so.

99190. Have any of these people who have received relief migrated to other parts of Ireland or emigrated at all?—No, they have not, so far as I know, with perhaps one or two exceptions.

99191. Is there any movement of the people now from Drogheda say to Newry or Belfast?—No, the general impression is that things are just as bad elsewhere. I think from the general outlook everybody more or less thinks that things in Ireland are not bright in any part of it, and if they go to any other town they will be just as badly off.

99192. I understand you are in favour of dissociating this work from the Poor Law, that is to say you think a distress committee is an advantage?—Yes, I do, because the people in Ireland look upon the Poor Law as charity, and they are very proud, no matter how poor they may be, and while they look upon the work of the distress committee, as not being charity, they look with very great disfavour upon the Poor Law system. It is a great slur upon anyone to be told that they had to resort to it.

99193. Does that apply even to outdoor relief in Ireland?—It does. They will only resort to that in the last instance, that is people who have any self-respect. Of course, when they let themselves down a bit, and that sort of thing, they will fall back upon it.

99194. (Mr. Bentham.) Do you think that the objection which people have to receiving Poor Law relief is rather a healthy sign than otherwise?—I do certainly.

99195. You would not like to make Poor Law relief free or easier to be obtained for that reason?—I would not.

99196. Do you not look upon this provision of work pretty much in the same way as relief only it has not attached to it that stigma which attaches to Poor Law relief?—Exactly.

99197. It is only for that reason, to ease the acceptance of it a little, that you prefer it to the other?—Yes.

99198. Really in essence it is the same, is it not?—It is, only they do not look upon it in that way.

99199. You would like to make it a little bit easier for them to get relief, that is the able-bodied who are able to work, than through the Poor Law?—I would, because then it does not tend to demoralise them as the Poor Law system does. If they once apply for outdoor relief my impression is that they are never the same afterwards: they lose their self-respect to a great extent. In this distress committee they recognise they are doing a day's work for a day's wage when they are not doing a day's work elsewhere.

99200. (Chairman.) Did the same people come on each year?—Yes, very much the same.

99201. (Mr. Bentham.) Do the people who come on to the Poor Law lose caste at all?—They do.

99202. Do you find that people drift into your town from the country, or is it the other way round?—There is a tendency to drift into the town certainly. Land is going out of tillage, and there is no work for people in the country; some of them came and applied for work, and we could not take them on because they were not resident in the town.

99203. There will be no provision of work for the unemployed in the country, will there?—No.

99204. If a provision is made in the town, will it not have a tendency to attract those people who are only half-employed in the country to the town?—I suppose it would have that tendency.

99205. Although they might not be eligible for twelve months they might as well live on somehow for twelve months in the town until they are eligible, and in that way they would qualify for unemployment work if it became the regular thing. Do you see any danger in that at all?—There would be a danger, I think, but very little.

99206. What are the main sources of employment?—Sources of They get employment on the quays, and at the building trade, and then they get odd jobs about here and there, taken on and off.

99207. Is there a large brewery near?—It is not a very large one. We have had two breweries, one has been shut up in the last couple of years, the other is still in being.

99208. Do they get their men from the town or do they prefer country men, do you know?—I think they get them from the town.

99209. It has been said that the work of the brewery being heavy it is very seldom that the men in the town are employed; they get the country men?—You see the physique of the men in Drogheda would be quite as good as men working in the country, because you have not the same conditions prevailing as you have here in the large industrial centres, which would not tend to make conditions of life not so good as out in the country.

99210. Is vagrancy very high in your town?—It is on the increase I am afraid.

99211. I suppose the town forms about half the population of the union. You say the town is of about 12,000 population?—I cannot tell you what the population of the union is, but I should say it was far more than one half.

99212. There are 26,000 in the union.—Is that so?

99213. From which district in the union do the paupers mostly come? Have you any knowledge of that, whether from the country districts or from Drogheda?—I should think more from the town; decidedly more from the town; as a rule in the country work passes on from father to son, and there is not so very much pauperism out in the country as there is in the town.

99214. It would be desirable, if a town is decaying, to have a sort of gradual migration from the town to some other places?—There is a migration from the town; the population is steadily going down. Any of the young people that can get away out of it do so. The one idea of the better class of young fellows is to get away from the town, if they can, because the outlook is not very promising.

Mr. John Bernard Connolly.

6 April, 1908.

Advantage of relief under the act in saving self-respect.

Recurrent cases.

Immigration into town from country.

Effect of relief in town on rural migration.

Mr. John
Bernard
Connolly.

6 April, 1908.

Standard
rate of wage.

Ages.

Land tenure
round
Drogheda.

Small
holdings.

Estate
Commis-
sioners.

99215. That means that what remains is really poorer still, the old people and children?—Mostly.

99216. And the more or less inefficient workmen will be left?—The inefficient worker will be left, but a lot of the efficient men remain on still; they are always so poor that it is with difficulty they can get away, but whenever they can get away they try to do so.

99217. Does the town council employ very many men?—About sixty.

99218. Only?—Yes.

99219. What would be the rate of wages for a labourer?—16s.

99220. That is the corporation price?—That is the standard rate.

99221. Do other people pay the same rate?—Recognised employers of labour do, but a man who only takes a person on for a few days would try and get him for a little bit less than that, probably 14s.

99222. (Mr. Gardiner.) Could you give us the ages of the men who presented themselves for registration. You say about 75 per cent. of them were young or middle-aged men. Have you any Return?—I have not that with me; we had the ages of them at the time.

99223. It would be interesting to see at what age they come. Will you kindly add that?—Certainly.

The witness subsequently sent the following note:—

I find on looking over the Register that there are—

95 men between the ages of 20 and 30 years.

48 " " " " 30 and 40 "

39 " " " " 40 and 50 "

41 " " " " 50 and 65 "

8 " over 65 years of age.

99224. (Mrs. Bosanquet.) What is the system of land tenure round you; is it small holdings or large farming?—Round Drogheda the farms are pretty large as farms go in Ireland.

99225. It is not held in small farms; there are agricultural labourers then?—We have not that system of small farming that they have in the West and South. The farmers generally speaking, are pretty well to do as a whole.

99226. And they employ wage-earners?—Yes.

99227. So you could not take these 200 men or so and settle them on small holdings?—Yes, you could in the County of Meath, where there are hundreds of acres given over to grazing. You could certainly do that with them.

99228. Are they men capable of that work?—They would be, because they work upon farms as a matter of fact on the outskirts of the town. Some of the farms come within the borough boundary, and when the spring sets in they start working again.

99229. It might be cheaper than spending this sum every year for them to make a capital outlay?—It might be. You have had a lot of outcry about the cattle-driving agitation round about the country.

99230. Do you mean you could not get the land?—You have the agitation going on at the present time, the people are crying out for the land and having these huge ranches split up into small holdings. There is a movement slowly going on at the present time for acquiring these large estates and splitting them up and putting the people on them.

99231. Is that being done by the county councils?—No, by the Estates Commissioners.

99232. Who are the people they put on; are they the same type of people that you are dealing with on these distress committees?—Not altogether; the sons of farmers and men who have been doing farm work and always been working about farms.

99233. If you applied to the Estates Commissioners for so many estates for your people would you get any help that way?—I do not think so. There are quite enough applications from the sons of farmers in the localities where they buy up these estates, more than enough to leave out Drogheda altogether.

99234. Have you any powers of acquiring land?—We have not in that way.

99235. Not even in the neighbourhood of the town?—No, no power whatever.

99236. (Sir Samuel Provis.) Have you in Ireland a rule that persons who have been in receipt of relief during the qualification past two years shall not be assisted under the Unemployed Workmen's Act?—No, we have not such a rule as that yet.

99237. Do you in fact find people who have been in receipt of relief applying to you for assistance?—I should not say so, the class of persons who apply for relief would be the very old men, and the wives perhaps of those men.

99238. Able-bodied men do not apply for relief?—Application by able-bodied men is exceptional. Except as a last extremity, or a man has become demoralised and let himself down.

99239. So that in point of fact you have not found that you have had cases of that kind come to you under the Unemployed Workmen's Act?—There were some men who had applied for relief, but, generally speaking, it was more the exception than otherwise.

99240. They had applied for relief; had they received it? You said there were some cases where the persons who had applied to you had applied for relief?—That is to get into the House. They would not think of giving relief to an able-bodied man, except in a very extreme case. It is only old men, and women whose husbands have died, and they have got children dependent upon them, and can find no employment.

99241. Supposing a man applied to the distress committee for assistance, it is a little time before you can give him assistance, is it not?—We try to give him assistance right away if we can.

99242. Do you give him money?—No, we put him on Ad and to work. I have an understanding with our foreman to advance 1s. or 2s. to any of these men, if he really is in need of it, to keep him going. As a matter of fact, when they begin working he has to make advances to them until they have been with us a week or so, then they are able to wait a week and take a week's wages.

99243. You do not as a rule pay them in advance, but you do it as soon as he is set to work?—I leave it entirely to the foreman, who knows these men intimately; he can judge very well whether it is desirable to give a man an advance or not.

99244. You do not have more men than you can provide work for?—It is really a question of funds more than of providing work for them. We do not know whether the Local Government Board will make an advance to us or not. We get £100 from them, and we are told that is a final instalment, and then we make a further application, and we may get another £100 from them. The men themselves just take as much interest in it as we do, they look forward to our being successful with the Local Government Board whether they will be kept on or not. As a matter of fact, as to the last contribution but one that I got from the Local Government Board, it was stated very emphatically in the letter accompanying the paying order that I was to take it that that was a final instalment, and the word "final" was underlined. Difficult of obtaining funds.

99245. But you wrote such a powerful letter in reply that they gave way?—I sent a telegram and said that the fund was totally exhausted, and then Sir Henry Robinson sent down his private secretary to inspect the work. He had the cheque in his pocket and he gave it to me. If the men had not been going on all right he would have taken the cheque back with him, but he saw we were making such genuine efforts to cope with the distress that he left the cheque with me. That is the worst feature of it, these men are taken on, and they do not know the moment they will be knocked off.

99246. The point I wanted to put to you was whether you have a larger number of persons on your register than you can provide work for?—Certainly.

99247. That being so, what do you do with them? What happens to those men when you cannot provide work for them?—Really I could not tell you, we only take on the best of them, the better class of men. There is a certain class of man who is upon the register and he is not so deserving of employment as another man will be because he is more or less of a loafer; he will work for a few days at an odd job, and then he will knock off and go about for a week or two and wait for another job. We do not encourage that man at all. We want the man who has formerly been in constant employment, and we want to keep him up to that if we can. Inadequate provision to cope with applications.

99248. Are you able to find work for all the men you think are suitable men for assistance?—No, we are not. We have to cut our cloth according to measure.

99249. And sometimes you do not find your cloth sufficient?—We could have put on more men at any time if we had sufficient funds to do so.

99250. What happens to those men you cannot provide for who are suitable men to be assisted?—We cast off the men who have been on for a week or two and take the others on and give them a spell, then take them off and put the others on again.

99251. You do not keep them on for any lengthy period, but give shifts of work?—We do.

99252. Do you find that answers?—It has a bad effect on the man naturally, because when he is taken on he does not know when he is going to be knocked off, and he has no heart in the work naturally. If the man knew he was going to be kept on constantly he would work much better.

99253. If you take them on in shifts in that kind of way you do not pay them enough in one week to keep them for a fortnight?—No, they only get the 12s., and that is about enough to keep them going the week. I do not know how they pull through in the meanwhile.

Mr. ROBERT GAGEBY, called and Examined.

99260. (Chairman.) You are a member of the Corporation of Belfast?—I am.

99261. You have been good enough to send us a statement which, according to our practice, we will take as your evidence-in-chief, if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

DISTRESS DUE TO UNEMPLOYMENT.

(1) EXTENT OF DISTRESS DUE TO UNEMPLOYMENT.

(a) Numbers, Classes, and Character of Persons Affected.

1. Out of a total of almost 30,000 workers employed in the shipbuilding, engineering, building, textile wood-working and furnishing and other trades, there were over 2,000 reported as being unemployed. It is difficult to ascertain the exact number of persons employed inasmuch as only those who belong to trade societies are recorded.

(2) PERIOD OF DURATION, WHETHER CHRONIC OR PERIODIC.

2. Period of duration usually lasts about quarter of the year. Unemployment is chronic so far as it affects numbers, but they are not always the same persons who are idle.

3. We have an unemployable class through weakness, etc., and these naturally go to swell the number of the unemployed. Owing to the shipbuilding and large engineering works in Belfast there is always of course surplus labour which is considered by some large employers as almost a necessity in times of hurry in getting contracts finished.

4. No doubt there is not sufficient work for all those who are able and willing to undertake it. We are constantly receiving into Belfast workers from the country districts.

(3) EFFECTS OF DISTRESS DUE TO UNEMPLOYMENT.

5. There is not so much unemployment in Belfast per family as is the case in most other towns, as there is usually work for both males and females and both are seldom, if ever, idle at the same time. Belfast is in a peculiar position as regards employment, there is so much outlet for female labour, 20,000 being employed in connection with the linen trade; therefore, unemployment does not press so heavily on families.

6. Bad habits such as drunkenness and laziness do not account for so many being unemployed. From the Belfast Poor Law Union returns for the month of March, it does not seem as if the bad state of trade has affected appreciably an increase in those seeking relief. The only increase has been in the case of the sick poor.

99254. What do they do in the alternate week they are not employed?—We have the Vincent De Paul Society, a charitable institution, that looks after them as best as they can to try and pull them through; some of them lead a very precarious existence indeed.

99255. They are practically kept on charity, is that it?—Almost that.

99256. (Chairman.) When do your works cease; do they go on all the year round?—We kept them on last year until April 25th. The fund was then exhausted.

99257. Are they going on now?—Yes, they are going on at the present time.

99258. What will happen to the people who are now working when they are knocked off these relief works, what will they do?—Some of them may go to other towns to look for work; they will get employment later in the year at the harvest, and that sort of thing, and if any building work begins a lot of them will be taken on at building work. Last year we had a fair share of building which kept them going after we had finished with them, but this year there is no sign whatever of building work going to be started.

99259. It really looks unless something turns up, as though you will have these people permanently on your hands?—Yes.

Mr. John Bernard Connolly.

6 April, 1938.

Mr. Robert Gageby.

6 April, 1908.

(4) REMEDIES FOR DISTRESS DUE TO UNEMPLOYMENT.

(a) Municipal Employment.

7. The corporation provided employment, some years ago when work was scarce, in the nature of relief work in the public parks, through not urgent yet desirable, prior to Act. for instance in making boating lakes, etc., widening roads, where the work was excavating, etc. leaving the skilled work such as paving, etc., over until required. The men engaged at any one time never exceeded 150; still, 850 men were passed through this work.

(b) The Unemployed Workmen Act, 1905.

8. Distress committees, labour bureaux, provided work, emigration, etc.

9. A distress committee was formed by the Belfast Corporation in 1906, consisting of members of the corporation, board of guardians and others, 800 persons registered themselves as unemployed and willing to work at any employment, but as no funds were forthcoming, though an appeal was made for such, the committee were unable to render any assistance. Labour bureaux—we have nothing of the kind in Belfast, though an effort was made some time ago to establish such, but it fell through.

(c) Labour Farms or Colonies.

10. I have no experience of these, as such has not been attempted in Belfast.

(d) Trades Union Unemployed Benefit.

11. If the Government would give a subsidy to the trades unions that pay unemployed benefits this would assist these in extending the number of weeks to out-of-work members or enable them in paying those who are not in receipt of this benefit because of arrears, etc. It would to a large extent lessen the effect of the distress due to unemployment.

(e) Municipal Insurance (e.g., Germany).

12. I have no experience, but am inclined to the opinion it would hardly be a success if introduced into Belfast, the workers are so much interested in their various societies, both trade and friendly.

(f) Any other Remedies as to which the Witness has Special Knowledge or Conviction.

13. There should be an attempt on the part of the local authorities to start work that would, as far as possible, be reproductive, without entering into competition with a well-established and fairly paid industry. Such work as could easily be expanded or contracted according to the condition of the labour market. For example, the canals require cleansing, freeing them from

Mr. Robert
Gageby.

6 April, 1908.

weeds, and in some cases deepening to permit the traffic to be carried on more easily and economically. Owing to the increase in traffic, motors, etc., on the leading roads of the country, many of these require remaking, and in any case it would give more manual labour in the way of general attention to fences, etc. This kind of work would give employment to a large number of men during slack seasons.

14. There should, however, be some kind of machinery for the administration of affairs in connection with unemployment.

15. Registration of those unemployed who are willing to work, distress committee for the purpose of advising where work is to be had, directing and controlling the business in connection with the Unemployed Workmen Act.

Number of
skilled
workers
unemployed.

99262. (Chairman.) In Paragraph 1 you assert that there are about 2,000 persons out of 30,000 workers who are reported as being unemployed?—Yes.

99263. Most of those, I suppose, would be skilled workmen?—Nearly all are organised workers.

99264. The trades which you mention are all skilled or organised trades?—All skilled trades. There may be a few included in the number belonging to organised trades, not necessarily skilled workers, because we have organised trades in Belfast of working people, both male and female, that cannot be termed skilled workers.

Unskilled
unemployed.

99265. Besides these 2,000 who are mostly skilled workmen, are there many persons of the casual or unskilled classes, who are in want of employment?—I would say that there are more than twice as many, say 4,000, at the present time of that class.

99266. Is it unusual that you should have so many skilled workers wanting employment in Belfast?—It is.

Causes of
high pro-
portion of
skilled un-
employed.

99267. Have there been any exceptional causes which have contributed to that?—Yes, the linen trade, for instance, at the present time is bad, and that more or less affects very many of the industries in the city. It has no application whatever as far as the shipbuilding and engineering is concerned, but on the other trades, the building trades and such like, it has a very bad effect.

Short time

99268. (Mr. Bentham.) Are the factories running short time?—At present all the mills and factories (in Belfast the mill is the spinning mill and the factory is where the weaving is done) are working only thirty-seven hours per week.

99269. (Chairman.) How long has that been going on?—The thirty-seven hours has been going on since February. In November the mills and factories were noticed to work forty-four hours per week. That was not sufficient for the employers' purpose in keeping down the stock, so in February they started all the concerns to work thirty-seven hours per week, a reduction of seven hours more.

Effect of
female
labour in
linen
industry on
employment
in family.

99270. It is very unusual, is it not, in Belfast to have so large a reduction in hours?—It is unusual. Employment as a rule in Belfast is fairly good, and if you will allow me to say so, Belfast families are not affected the same as families are in some of the other industrial centres through unemployment. What I mean is, that there are supposed to be about 20,000 females engaged in the textile trade. It is said, I have no data for it, that there are between 65,000 and 70,000 families in Belfast, and that it hardly ever occurs—(it has occurred at this time)—that the employment for both the male and the female has been bad at the same time, and therefore there was employment for some one or two members of the family at any time previously that I am aware of.

Shipbuilding.

99271. Is the shipbuilding trade bad just now?—It is dull in this way, that there is a larger number of persons at the present time unemployed through scarcity of employment than I have remembered for some time. At Harland and Wolff's, where there are probably usually employed almost 12,000 persons, at the present time work is scarce. I do not know whether that arises from the want of orders, or on account of the improvements that have been made in one shipbuilding yard, or the additional yard established at Southampton, England; probably all combined make the work scarce at the present time. I might say they are engaged in making slips suitable for larger steamers than any they have yet built, and as a result I understand they are making three slips into two,

and that undoubtedly has an effect, and I am sure will have a further effect in reducing the hands.

99272. Is employment in Belfast seasonal, or does it go on as a rule all the year round?—It is seasonal so far as it affects the outdoor trades. It is not seasonal as affecting, for instance, the shipbuilding and engineering and the textile trades, as I have already told you there is a very large number of people employed in the textile trade.

99273. Really it has no special seasonal trade, though some of the out-trades are affected, as all out-trades are, by the weather and by winter?—Yes, the staple trade, that is what we call the linen trade, is not affected by seasons, but the present, I might say, "dullness" in connection with that largely arises from the difficulties in America at the present time. You see of our foreign trade in connection with the linen export trade, I suppose the United States will take almost three-quarters, and when any financial difficulty arises in America it affects us very quickly.

99274. And you are now affected in that way, are you?—We are now affected in that way. I think of course employers do not care about speculating and laying up stock against an improvement in the trade, and consequently they have resorted to short time. In addition to that I may say the purchasers in a falling market (and the price has fallen considerably) do not care about purchasing until prices come to what we might term bottom prices.

99275. You would say just now that Belfast is rather abnormally unemployed?—Yes.

99276. You constantly receive people from the country into Belfast?—Yes. To give you some idea of that, in 1870 the population of Belfast was about 174,000, to-day it is calculated at 380,000 and the valuation of the city has increased in proportion. Of course the cost of living in the city now, as far as the working-class people are concerned, is more costly than in the time that I mention when the population was less.

99277. I suppose the attraction to the people from the country is the mills and the higher wages that they can get?—Undoubtedly there is a great attraction in employment being constant as well as the better wages.

99278. And there is also the chance of a little amusement?—And there is another thing I think, that somehow or other heads of families take into consideration and I admire them for it, although it tells against us in the City, that if they are in a city like Belfast their children will have a better chance in life, that is that they would have a better start. The advantages there for improvement, from an educational point of view as well as from a business point of view, are vastly superior to those which they would be likely to obtain in the country.

99279. They get more facilities all round for the employment and promotion of their children?—Yes, for instance, the municipality has been doing a great work. I suppose so far as technical education is concerned, we have one of the finest institutes from an equipment point of view; it has received the praise of all experts in connection with it. That has been largely due to the efforts of the municipality, and Primary Schools have been helped considerably by the interest that our ex Lord Mayor, Lord Shaftesbury, took in it. He takes a very great interest in matters of that sort.

99280. In Belfast do the men and the women work at much the same work, or is it generally the custom that in a family the man would be employed in one particular trade and the woman in another?—Yes, I will give you an approximate idea of the numbers. We calculate that there are about 26,000 people employed in connection with the linen trade. About 6,000 of that number are men and boys. The work in connection with the textile trade is carried on largely by women and girls, and the men are largely employed in engineering, building, printing and various industries of that kind, the same as you will find in any other industrial centre, and we have a great variety of them.

99281. You do not think that drunkenness is a contributing cause to any considerable extent to unemployment in Belfast?—I suppose we are not any worse nor any better than our neighbours in that respect. It might contribute, but in the very smallest degree, because I

have known hundreds of men who would be only too glad to obtain employment, respectable men, who can find none. There are people who are not willing to work, some people call them "shy-workers." They may be that, but a large proportion of the unemployed so far as I know, and I have a very long experience of the City of Belfast and those people, are only too willing to be employed. Let me illustrate that. The corporation are large employers and pay fair wages. The corporation own their gas works, they own the tramways, and there are the street works and parks, and all things like that employ a considerable number of men, and at the present time I should say there was not less than 1,000 applicants for work on the books of the corporation.

99282. (*Sir Samuel Provis.*) Are all those people out of work who are applicants for work under the corporation, or are they at present in other employment?—They are out of work. As a member of the corporation with some experience of that kind of thing, I am sorry on account of the number of applications for employment which are made by people who were in better circumstances. The corporation pays a rate of wages to its labourers higher than is paid by any of these private employers in the city, but of course, and I suppose it is but natural, the corporation, or rather the officials of the corporation, naturally expect to get the best of the men, that is physically the best I mean.

99283. There has been no increase, apparently, from the Poor Law returns, in the number of those seeking relief. How do you account for that?—I am greatly surprised about that; no one was more so when I made enquiries on Friday when I knew I was to come here. When I applied to the Poor Law Board they very readily placed their facts before me, because I was a little sceptical, for this reason, that I thought on account of the present distress due to unemployment and the bad trade in connection with the linen trade especially, that the number of applicants for relief would have been very large; but I found that there was no appreciable increase in the number of applicants, save in respect of what is termed the aged and infirm, that is, people who are over sixty years of age. The clerk to the Poor Law Board said to me: Why, we find it difficult to get what is called the able-bodied men in sufficient numbers to do the work in connection with our union that is always done by what is called pauper labour. Those are two things which I had put before me that I could not very well gainsay, yet I came away surprised, but, of course, I could not account for that.

99284. The first statement which you made to me might explain it inasmuch as you think that the persons who are out of employment are mainly skilled labourers, and they would be reluctant to go to the Poor Law?—I was going to explain it in another way. My experience of the people of Belfast, and I find it applies to most of the respectable poor, is that in their mind the idea of going and seeking relief from the Poor Law Board is so degrading and so demoralising that they would not for the world let anyone know that they made such an application. I do not know whether it is pertinent or not, but in Belfast some years ago we had no infectious diseases hospital; and the difficulty that we had in compelling people who were suffering from infectious diseases to go to the hospital that we had attached to the Poor Law union was so great that the people refused to go, and consequently it made it more difficult for the health authorities to deal and grapple with infectious disease, so much so that the corporation built a new hospital for this particular purpose at a cost of £75,000 in order that the people should go to it without having any stigma of pauperism on them at all.

99285. The corporation have actually built a hospital for infectious diseases?—Yes; I am a member of that sub-committee and committee. It was at a cost of £75,000; and it is likely to be added to in order to get the poor to go to this infectious disease hospital, so that there should be no connection in any way with the Poor Law board.

99286. The corporation some time back did provide a certain amount of relief work in connection with the public parks. How long back was that?—I think it would be about five or six years ago.

99287. Was that done regularly every year?—No, once in that year. Since then we have been very fortunate in giving employment to unskilled men because of the works that have been undertaken by the corporation.

Mr. Robert Gageby.

6 April, 1908.

99288. Was the employment you gave special employment, or was it employment which the corporation in the ordinary course of events would provide?—I think the corporation would not have undertaken it, but some members of the corporation brought it especially before the members, with the result that this work was done. It has added considerably to the embellishment of the park, to the amusement of the people, and the roads that were widened have since been availed of, and property adjacent to it has been placed there with advantage both to those who want to live further out of the city and to the corporation generally from a rateable point of view.

99289. Going back to your first statement, on whose report do you assert that there are about 2,000 people unemployed?—The *Labour Gazette* is supplied to me regularly, and from the Board of Trade Returns I gather about that number, it may be more or less, but somewhere about that.

99290. It is not a local Return, it is a Board of Trade Return?—It is not a local Return, because we have no means of knowing only through the respective trade unions. They can give it; but any attempt at stating the figures is purely approximate.

99291. You had a distress committee formed in 1905, Failure of but you had no funds placed at your disposal?—No. I distress was a member of that distress committee, and very much disappointed because we were not provided with funds. I have a minute here which will give you at once the history of the Belfast Distress Committee. The first meeting of the distress committee was held on December 19th, 1905. The distress committee was composed of about fifteen members of the Belfast Corporation, seven members of the board of guardians and other people interested in matters of this kind. The first meeting was held on December 19th, 1905, when the form of procedure was settled upon and a secretary appointed. The secretary that was appointed on that occasion was one of the clerks in connection with the corporation, a Mr. Harris, and instructions were given to him to have all necessary books, forms, etc., provided. These were obtained and at the next meeting, held on December 28th, the committee arranged to wait upon the corporation on January 1st for the purpose of asking the Lord Mayor to open a fund to enable the committee to give work to the unemployed. The committee accordingly waited upon the corporation on January 1st and were sympathetically received. They also subsequently waited upon the works and improvement committees of the council, those are the two committees of the corporation that do all the street works, and urged the starting of works to provide employment, and also communicated with the other public boards on the same subject. An office was opened on January 9th to receive applications from those seeking employment relief, and a clerk and superintendent were appointed to receive and investigate the applications. A labour exchange was also opened. An appeal was issued to the public for funds and to employers for their co-operation by consulting the committee's lists when requiring labour. The response, however, to this appeal was practically nil. Application was also made to the Local Government Board for a grant from the Queen's Unemployed Fund, but up to March 7th, 1906, when the committee adjourned no definite reply had been received. In the meantime applications for employment were coming in and at the end of January, 902 had been received, and this was increased to 928 at the end of the following month. 262 cases were investigated and out of these seventy-two were found ineligible or not suitable for treatment under the Act, while thirty-two applications were cancelled, the applicants having subsequently obtained employment, the number remaining on the register at the end of February being 824. Up to March 7th, 1906, fifty-four applicants for employment were registered with the labour exchange, one inquiry only was received and that was filled. The committee met on March 7th, 1906, and having reviewed their position passed a Resolution expressing their disappointment at the failure of the Act in so far as the non-provision of funds to provide employment relief was concerned, and expressing the hope that the Government would endeavour to have the Act

Mr. Robert
Gageby.

6 April, 1908.

amended in this respect, and a copy of the Resolution was forwarded to the Prime Minister and other members of the Government. The committee also arranged to pay off their staff and close operations and this was accordingly done on March 19th, 1906. The corporation made a grant of £100 to the committee under Section 1 of the Act and your committee's expenses paid out of that grant were as follows: Salary and wages, £32 10s.; printing and books, £24 6s. 5d.; advertising, £17 17s. 6d.; making a total of £74 13s. 11d.; and leaving a balance in hand of £25 6s. 1d.

99292. How was it that there was no response to the appeal for subscriptions in Belfast?—I cannot account for it other than that frequently in Belfast there are appeals made for philanthropic purposes. There are very many institutions, and there are very many people giving. I might say I suppose the same class of people are always giving; but I think that somehow or other they thought that it was something both for the Government and the municipality to do without appealing for funds from private individuals.

Labour
exchange
abandoned.

99293. You had a labour exchange established, had you?—Yes, at that time.

99294. Is it given up now?—Yes, I read how many applications there were, there were fifty-four applicants for employment registered at the labour exchange, and one enquiry only was received, and that was filled. My experience of employers in Belfast is that they prefer, on account of having the power to pick and choose, that the men should come themselves.

Government
subsidy to
trade unions.

99295. Your suggestion is that the Government should help trade unions as regards their unemployed benefits? Are the trade unions well organised now in Belfast?—The trade unions are well organised in Belfast, but why it was that I gave that answer was that I was not exactly sure of the meaning of the question, because I thought if there were to be a distributing agency for any assistance that the executives of trades unions would be enabled to do it, and do it systematically and in all probability prevent it from being abused, the accounts being subject of course to a Local Government Board auditor. May I say in this connection (I overlooked it probably in the hurry) that the question of insurance is a question we have not discussed very fully, and as representing the Corporation I do not like to commit the Corporation to my individual opinion. Seeing that an insurance fund might be compulsory there would be great difficulty in getting the workmen, and I suppose an equal difficulty with the employers to establish anything like an insurance fund. In the Corporation we have established what is called a Provident Fund, that is that the employees of the Corporation contribute 2½ per cent. of their wages to that fund, the Corporation has agreed annually to put £400, that is I think £200 half yearly, for the purpose of assisting this fund. Up to the present 900 of the employees have made application to become members of the Provident Fund. I am a member of the Finance Committee that has to deal with that; their meeting is being held to-day in one of our large halls, and I do not know how it will go, so I could not speak as to it, except to merely mention that the Corporation have been doing this with respect to its employees.

Reproductive
and non-
competitive
relief work.

99296. You suggest that it would be as well if the local authorities were to try and start work that as far as possible should be reproductive, without entering into competition with well established and fairly paid industries. It is rather difficult, is it not, at times to find that class of work?—That is the difficulty that we had before us in the city corporation on the introduction of the Unemployed Workmen Act, that we did not want to enter into competition with a well established industry, simply for the sake of providing employment, because we are, as it were, competing against the ratepayer, at the same time asking the ratepayer to meet the additional cost.

99297. Therefore it would be almost necessary if a local authority had any power of starting works of this kind, that they should be very careful what the class of work was that they started?—Yes, in my opinion.

Relief wages
below
standard
wage.

99298. When the Corporation employed these people before, did they pay them the standard rate of wages?—They did not.

99299. What is your view upon that?—I think that the labour was according to the payment, very small. I

think the result was not anything at all but what we might have expected. Of course there were about 850 men employed, taking the number of men engaged altogether, but these men were not employed constantly. So as soon as a man was employed one or two weeks, we asked him to go, and brought on some other necessitous cases, and gave them a share.

Shortfalls
of relief
work.

99300. That is not altogether satisfactory is it?—No, so far as I myself am concerned, I am opposed to that sort of thing. If men are to be employed they should not consider that that employment is just next to charity, and at the same time I think that the work that they do ought to be reproductive, it ought to be useful work, work which might benefit the corporation.

99301. And there is a certain amount of work which you think might be done in connection with roads and canals, and so on?—On my way down from Heysham or Fleetwood, coming through the Midlands, I have always admired your waterways, and the sight of those waterways always brought before my mind the sad condition of our waterways. I thought many a time that if men could be employed in ridding our waterways of weeds, deepening and widening them, that I believe it would be a cheap and inexpensive mode of transit, because our provincial towns in the north of Ireland are situated very commodiously for that kind of traffic, and I have often thought that men could be usefully employed on that work, and a very large number too.

World
roads and
canals.

99302. For the future would you like to continue the distress committee in Belfast?—I would not like the continuation of the distress committee under the same circumstances, because it was very humiliating. We had a number of applications from decent respectable men, and they thought we were fooling them, that is what they put it at, on account of how frequently we told them to wait, and to wait, and at the end of their waiting nothing came of it, so that I think anything of the kind again, unless on a very different basis, would hardly be undertaken.

Failure of
distress
committee.

99303. What has happened to those people who did not get employment; have they stopped in Belfast?—Yes, they would stop in Belfast, and there was nothing for them but to either live upon their friends, or to go about trying here and there, where they best could knock out a sort of existence, or make application to the Poor Law authorities.

99304. But they have not done that, have they; they have not come to the Poor Law?—No, they have not done that in this instance, and in the present depression of trade they have not gone to the Poor Law, but then out-relief is only given in Belfast to those old and infirm people who are unable to earn anything, or who have no members of the family to depend upon. At the present time the distress in Belfast is fairly keen and in a family, (and I am sorry to say that they are numerous) where a girl probably was earning anything between 10s. or 12s. a week, and keeping some member of the family, that person's earnings has been reduced by one-third, consequently the wages that were coming into the house, which at the best was barely sufficient for the purpose of maintaining the father or mother as the case may be, and the daughter herself, has been reduced so low, that really I cannot understand how some people are living at all without seeking relief. That was my amazement when I went to the Poor Law Board.

No in-
crease in
applications
for Poor Law
relief.

99305. (Sir Samuel Provis.) I am not quite sure whether I rightly understood, that you dropped the distress committee after the first year? Did you?—We had a meeting of the distress committee at the beginning of the present winter. As we were reviewing the past, of course, it was anything but a pleasant meeting. We made an application for something to begin the winter with, and that application was wet-blanketed, with the result that the distress committee dissolved itself without any resolution.

Failure of
distress
committee.

99306. So that you have not practically had a distress committee the last winter?—No, nothing except what I have already said; we had a meeting at the beginning of the winter to take into account the condition of affairs with the approaching winter, but with no result, and we have not had a meeting of that committee once.

99307. Did you do anything the previous winter?—Nothing further than I have stated; that was the first year of the distress committee.

99308. That was the first year, the Act passed in 1905?—This was in December 1905, and then we continued in 1906.

99309. In the winter of 1906 did you continue?—We began in December 1905 and continued it through till the end of March or beginning of April in 1906.

99310. Then we come to the autumn and winter of 1906; what happened then?—What happened was this, the linen trade, or the staple trade as we call it, was booming. Employment was exceptionally brisk, and wages were increased twice, viz., May and February to mill-workers only. The price for yarns I never remember being so high before during that winter, and down to October of last year, and then the slump set in.

99311. So that practically you had no occasion to do anything in 1906-7?—Yes, and in addition to that, we had no local application from any bodies, other than individuals coming to us and seeking for employment, those were all the applications we had in a matter of that kind.

99312. In 1907-8, that is this last winter, you applied to the Irish Local Government Board for something or other, did you?—I think that we applied through that Board to the English Board for some of that money that I noticed the other day has been so widely distributed amongst yourselves. Unfortunately we were left out.

99313. The Irish Local Government Board had a separate fund, and separate payments from the Treasury?—They think we in Belfast are too rich.

99314. If I rightly understand you, you did not get anything from the Queen's Unemployed Fund?—Nothing.

99315. What reason did they give for not giving you anything?—We had the usual official acknowledgment, and that is about all.

99316. Did they give any official reason?—I cannot remember.

99317. Did they say they did not think you wanted any?—No, but we have a reputation over there of being a queer kind of people, and we do not get things of that kind, they think we ought to provide things for ourselves. They often say: "Why should wealthy people like you, with so much money amongst you, be continually begging." We do not get anything for the begging.

99318. (*Mr. Chandler.*) I think that outside Belfast there are no shipbuilding or large engineering works worth speaking about in Ireland, are there?—No; they started shipbuilding in Londonderry, I do not know with what success, and now they have (but I think it is more in connection with repair work for the Navy) in Cork Harbour and Queenstown. Some of our artisans have been sent there, on big jobs, that is when there were not sufficient men at Cork Harbour to do the work.

99319. It would be in a very small way, I suppose?—Very small indeed.

99320. There would be a large number employed in the shipbuilding industry in your city?—I think in Harland and Wolff's alone there are men and boys to the extent of about 12,000 employed there, when they are going fairly freely, and they have been for some time working busily, executing large orders; besides there are 7,000 employed in Workman and Clark's.

99321. When they are busy there is always a surplus, as you mention in your statement?—That is true. May I put it in my own way. I think when men come to be over forty-five it is known that more men are sent away on that account. For instance, some firms in Belfast have, since the Autumn of last year, adopted the method that all men in their employ had to fill in particulars with regard to their age and their pedigree, so to speak, before getting employment, and very many of those who were employed and who stated accurately their age and any physical defects they may have had are now going about unemployed.

99322. In times of depression in the shipyards and engineering works, when hundreds are thrown out of employment, what becomes of those?—With the exception of the unskilled, they are very well organised, that is

to say they are nearly all connected with trade societies for instance, not only the engineers, boilermakers, joiners shipwrights and such like are in societies, but the unskilled men are, as a rule, in the national Amalgamated Labour Union, so really they are pretty well organised in that way.

99323. There are no other firms in Ireland of a similar character they can go to; they simply wait on their unions until Harland and Wolff or Workman and Clark's can take them again?—Unless, as they frequently do, the unskilled apply to the corporation for a job, or get members of the corporation to use their influence in order to get them jobs. On account of Belfast improving so rapidly and extending so widely there are always improvement schemes, sewage schemes and such like being carried out in Belfast, and at times numbers of these men find employment.

99324. Are they artisans?—I do not say the artisan class, but the better paid, what one may call unskilled workmen. In the shipyards there are unskilled labourers, if you call them so, that is, the kind of men who are holders up and such like, who will earn for a full week's work anything between 25s. and 32s.

99325. You do not find that the workmen when slack in this branch of the industry, shipbuilding and engineering, come across here?—I was going to say the only places for them are Newcastle-on-Tyne, on the Clyde or north-east coast; that is where they do go. We have had in Belfast since our industry became so extensive a large number of English and Scotch workmen who came over and who have remained, but when employment becomes scarce they go to other shipyards on the Clyde and so forth.

99326. You said in answer to the Chairman that the 2,000 unemployed in Belfast was taken from the *Labour Gazette*, and he said that it was not local information. Would it not be information conveyed to the Board of Trade through your Belfast Labour correspondent?—Yes.

99327. So it would be local information conveyed to the Board of Trade?—Yes, it would be local in that sense, because there is no other way whereby they could obtain returns.

99328. He is specially appointed to collect this information and convey it to London?—Quite so.

99329. I see you state that the Corporation many years ago when work was scarce instituted relief works in your parks, and you mentioned that you were only able to employ about 150 men, but still 850 passed through that work?—Yes.

99330. That is a strange figure, it corresponds so closely with your experience in 1906 on your Distress Committee, where again you say you had some 800 persons registered?—Not only were the members of the corporation interested, but our officials fortunately were interested in it too, and in cases where they saw there was no other income coming into the family but what the men earned on the relief works, they gave them the best chance, and where there were earnings coming in by some other members of the family working they differentiated between them.

99331. Had your appeal for funds been responded to in order to provide wages, you could have found a scheme of work for these 850?—Yes, because Belfast, being a comparatively new City and not like any of your well established industrial centres here, we are always wanting improvements, and the difficulty is to get those improvements carried out because of the complaints of the ratepayer that he is already over-taxed, and he complains against the corporation on account of providing things that he considers wholly unnecessary.

99332. (*Mr. Bentham.*) You say that the period of duration of unemployment usually lasts about a quarter of the year, that is when unemployment is rife. Does that mean that it is recurring year by year?—Yes, it does, and I will try and explain why. I think it is getting more acute because Belfast at the present time is over-built. At the present time, I suppose, in Belfast there are 6,000 vacant houses.

99333. That is purely an estimate, I suppose?—But it is an estimate handed in to the corporation during the

Corporation relief works.

Duration of period of unemployment.
Over-building.

Mr. Robert Gageby.

6 April, 1908.

last two months by the police authorities. I will tell you why. There was a difference of opinion in the corporation respecting the number of ratings that were in the City, and there was an opinion outside that there were more vacant houses in Belfast than the corporation were aware of. The corporation asked the assistance of the police authorities with the result that the police authorities returned 6,000 houses as vacant. That does not mean that the same 6,000 houses are always vacant, but it is the interchange in the continual going backwards and forwards which goes on in a City like Belfast in order to suit employment, so that that gives us at the present time about 6,000 houses more than are inhabited.

Seasonal unemployment. 99334. To what do you attribute the seasonal character of employment? The linen industry is practically a staple industry and is busy all the year round, except in times of trade depression?—Yes.

99335. In what kind of labour is the seasonal work most?—Painters are in the winter season, as far as outside work is concerned, almost completely debarred. I was talking to a master painter who is a member of the corporation about a fortnight ago, and he said: We are affected every season, but never any season in my memory to equal the present one.

Slackness in building trade. 99336. They are very busy in summer, I suppose?—They are not so well employed as they used to be I am sorry to say, on account of the slump that there is in the building trade.

99337. What other trades would be affected in that way?—I do not think there would be any other trades affected from a seasonal point of view except those I have already mentioned, except the ordinary out-door labour.

Dock labour. 99338. What is the slackest time at the docks?—I do not think I could say any season of the year was actually slack, because we are going on extending and expanding, with the result that I do not think there was ever more trade done at the docks for a number of years than has been done recently. The work last year through the trade dispute, of course, was dislocated for a while.

Sufficiency of wage in seasonal trades and provision of relief employment. 99339. As painting is more or less a skilled trade, it is expected, of course, that painters will get sufficient wages during their summer employment to provide over the winter, and then they have their trade organisation to assist them besides, so that really there is no need for unemployed work for seasonal labour like that, is there?—It is this way, unfortunately we have a class that supposing they do earn 35s., 36s. or 38s. a week, they are not careful to make provision; and then we have another class of workers who are careful and thoughtful and prudent, who are rearing their families, and endeavouring as best they can to give them a better chance in life than their fathers had, and it takes it all to provide for the family, and the family's education, and otherwise.

99340. It is rather a dangerous thing to say that a certain class of the community cannot exist throughout the year when they are well-paid employees, and that the community should be doing something to provide them with employment during the slack season. That is rather a dangerous thing, is it not?—What I have said by way of explanation is based on my own experience, and it is, I think, the experience of every industrial centre; because the cost of living in towns is so great that there is a difficulty in saving money where there is a family of five or six to provide for. If he lives in any kind of decent house, and a man who is earning 35s. to 38s. a week will be expected to do so, if he wants to educate his family and provide for them and give them a start in life it would make him very busy; but unfortunately there is a class which makes no provision for anything of the kind; and these people are stranded when slack seasons come.

99341. If provision is made in a desirable manner for those, there would be no incentive to thrift on their part, would there; they would say: The corporation will provide work during the winter, why should we take any thought during the summer?—I have an opinion with regard to that question, and probably a very strong one, but I do not like to give expression to it because I did not take the opinion of the corporation upon it, and I do not want to express the opinion that I have without taking any direction upon it.

99342. Amongst the numbers who registered in the winter, say in February 1906, out of 928 registered we are told there are only seventy belonged to skilled trades and 830 were general labourers?—Yes. Proportion of skilled and unskilled register.

99343. Do you know what kind of labourers those were that registered as general labourers?—The general labourer in Belfast is the street labourer, or the man who is employed in corporation employment—or builders' labourers.

99344. There are very few skilled men amongst those who registered themselves?—Very few, because they are nearly all organised, they are connected with their trade unions.

99345. Do you see any way of organising the remainder in a way that would tide them over these acute times; have you thought of that at all?—Do I see any way of organising those who are unorganised and do not belong to the skilled trades? Organisation of the unskilled.

99346. Yes.—So far as Belfast is concerned there are two societies, one called the National Amalgamated Labourers' Union, and the other the Municipal Employees' Society; and both those societies are organised for the purpose of taking in all unskilled labourers; but they find that owing to one cause or the other very many of the men, whether they are unemployed or not, are not inclined to become members, because probably of what it would cost them, that is, that they do not join the union, as in my opinion they ought, to make provision for the bad times. On the whole, a labourer in Belfast is not so well paid as a labourer in England; but I suppose there is no other place in Ireland where the wages are so high. Wages of unskilled labour.

99347. What would be the wage for a general labourer in the building trade?—18s.

99348. What do the corporation pay their labourers?—The corporation have a minimum of £1. All men who are employed by the corporation, who are fit to do a fair day's work, have a minimum wage of 20s.; and the wage rises in some of the occupations as far as 23s., 24s. or 25s. a week. For instance, in the public health department they pay 22s. 6d. a week, and in the gas department they pay a higher wage on account of the severity of the labour.

99349. Do you get many labourers from the country seeking employment?—We do.

99350. Do they get preference over town men?—No, I do not think they do. There is one case, I do not know whether you will take it as evidence or not because I have no knowledge of it, but applications have been made to me by men who work at the quay, who are at present unemployed, to get them work in the corporation, and the reason that they give me for being unemployed is that they are displaced by country men. That is not my own experience, that the country men come in and make application to the employers on the quay, and that these country men are being given preference and other men are being displaced. Whether that is true or not, those are the statements made to me when applications are made by these men. Immigration of country labourers.

ONE HUNDRED AND FIFTY-EIGHTH DAY.

Monday, 11th May, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
The Right Hon. Sir HENRY A. ROBINSON, K.C.B.
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. C. S. LOCH.

Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
The Rev. Prebendary H. RUSSELL WAKEFIELD.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.

Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).
Mr. E. J. E. CRAVEN (*Assistant Secretary*).

Mr. J. F. L. BLANKENBERG, called; and Examined.

Mr. J. F. L. Blankenberg.

100020. (*Chairman*.) I should like on behalf of the Commission to thank you very much in their name for your courtesy in coming here, and also for the valuable information which your Statement contains concerning the working of relief in Holland. Our practice is to take this paper and to ask you questions upon it, if you will formally hand it in?—Certainly. (*The Witness handed in the following Statement.*)

8. I was one of the founders of the Amsterdam Association of Charitable Institutions (Vereeniging van Armbesturen), and now I am taking an active part in the foundation of a General National Association of the same nature, including all the associations of charitable outdoor relief. 11 May, 1908. Title and qualifications of witness.

II.—THE DISTINCTIVE FEATURES OF THE DUTCH POOR LAW.

(Act of June 28th, 1854.)

I.—PERSONAL.

1. I have been engaged in voluntary charitable work for about 38 years. In 1871 I was one of the founders of an institution of private charity—an institution not only meant as a society for the distribution of relief, but even more as one of charity organisation. This society is called "Liefdadigheid Naar Vermogen," and I may be allowed to refer to a paper of mine describing it, published in the August number of 1906 of the Charity Organisation Review. (For reprint of paper, see *Appendix No. XXII. (A).*)

2. Formerly an honorary secretary, I am now the honorary president of the society, a position which I have held for the past eight years.

3. In 1885 I was elected a member of the Amsterdam Board of Guardians (Burgerlijk Armbestuur), and resigned at the end of 1907, after 23 years' service.

4. In my capacity of member of the Town Council of Amsterdam I principally devoted my attention to matters of public assistance, public medical relief, organisation of local public charity, municipal care for the unemployed, co-operation between public and other charities, and so on.

5. The experience so gained of public and private charity led me to the conviction that the poor-law system of my country wanted thorough reform and improvement. I therefore took an active part in promoting such reform—first of all in publishing, along with two friends of mine (Dr. H. J. de Dompierre de Chauffepié and Sir H. Smitsaert), a complete record and description of all the public, church, and private charities existing in Holland.

6. It is a kind of descriptive register of all the existing charitable organisations, numbering 7,476. Its title is, "Gids voor de Nederlandsche Weldadigheid" ("Guide to the Dutch Charitable Institutions"), 1900." Prior to this publication, a general report on the reform of charity, drawn up by Dr. H. Goeman Borgesius, Dr. A. F. K. Hartogh, Dr. R. J. H. Patyn, Dr. H. J. de Dompierre de Chauffepié, and myself, was published in 1895.

7. In 1900 a weekly paper was founded, entitled, "Tijdschrift voor Armenzorg" ("Charity Review"), of which Dr. H. J. de Dompierre de Chauffepié, Sir H. Smitsaert, and myself are the editors. The "Review" is now in its ninth year.

9. The principle set forth in the Dutch Poor Law is that of leaving all poor relief in the hands of churches and private charities, public administration only intervening in cases where these two latter groups do not help. This principle is laid down in Sections 20 and 21 of the law, as follows:—

Sources from which Dutch poor relief springs.

(20) The relief of the poor is left to the charity of the ecclesiastical and private institutions, subject to the regulations of this Act.

(21) No public administration is entitled to give any relief to the poor unless it has as much as possible evidence that they cannot receive the same from ecclesiastical or private charitable institutions, and then only in the case of absolute emergency.

10. The cost of public poor relief is paid out of the funds of the Communes; there is no general poor rate in Holland, every municipality paying its own charges for the purpose out of the municipal taxes.

11. The law relates only to charitable in and out door relief, and does not apply to the prevention of poverty.

12. Four groups of poor relief are recognised by law:

(1) Relief by the State, Provinces, or Communes.

(2) Relief by churches, and to the benefit of their own members.

(3) Relief by private institutions.

(4) Relief by mixed bodies, i.e., by institutions governed by public administration in connection with churches or with private charities.

13. Every municipality is bound to have and maintain a register of all the charities existing in the registration locality, and divided into these four groups. Every institution is bound to send in to the municipality its rules and regulations and to intimate every alteration made in them. If they do not, every member of their board is liable to penalty.

14. Yearly, every charitable institution must send in to the Home Department statistical figures as to its work in the form prescribed by the Home Secretary. These statistics are the basis of the Yearly Report on Poor Relief in the country.

Mr. J. F. L. Blunkenberg.

11 May, 1908.

Municipal registration of charities. Distinctive features of of Dutch relief.

Percentage of cases relieved by charity and public administration.

15. The law obliges every charitable institution to give evidence to the municipal authorities, when asked, whether any person applying for relief to such authorities can be assisted by the former.

16. There exists no legal right on relief; the decisions of the bodies administering municipal relief are without appeal.

17. All expenses resulting from municipal relief given to a poor person form a charge upon the locality in which he is residing.

18. The cost of in and out door relief to a poor person is recoverable from himself should his position improve, from his relations to a certain extent, and after his death from his estate, if this proves to be sufficient.

19. Private charities may receive, under circumstances, allowances from the municipality.

20. The principle of the Poor Law being the non-interference of public administration, it is evident that the lead should be taken by church and private charities; but in the event of these latter not being able to take care of the poor as they ought to do, the public administration is always present to give its support.

21. However, the aim of this legislation has not been attained. If it was, the percentage of the total cost of poor relief spent by public administration should have fallen.

22. But the contrary is the case, as will be seen from the following statement of percentages:—

Year.	Public.	Churches.	Private
1854	40·1	50·4	9·5
1857	40·4	50·4	9·5
1869	48·4	42·2	9·4
1890	42·8	44·7	12·5
1896	41·8	43·4	14·8
1900	44·7	41·9	13·4
1903	47·6	39·1	13·3

23. Contrary to the aim of the law, public administration paid more than either the churches or private charity.

24. In order to give a summary of the existing charities I may state that there were at work:—

OUTDOOR RELIEF.

Municipal institutions	-	-	1,198
Charities of 40 different churches	-	-	3,057
Private charities	-	-	1,041

INDOOR RELIEF.

Old people	-	-	-	710
Orphanages	-	-	-	360
Destitute and fallen women and children	-	-	-	69
Hospitals	-	-	-	712

GENERAL RELIEF.

Employment	-	-	-	223
Special cases	-	-	-	72
Foreigners	-	-	-	24

(1898.) 7,476

25. The indoor relief is for the larger part in the hands of the churches. Some municipalities have their homes for old men and women, also orphanages and hospitals. Private charities do the same, but, generally speaking, the churches are the chief dispensers of this kind of assistance.

26. Municipal indoor relief is, of course, also limited to what is strictly necessary. This means that it has a somewhat different character from the indoor relief as provided by the churches and private charities. It is more restricted, elementary, and does not give much comfort to inmates.

27. An exception is made by municipal hospitals, for the very plausible reason that these institutions are mainly established for the sake of public health and the recovery and nursing of the sick and suffering, which involve a more generous scheme of support.

28. In Amsterdam there are two municipal hospitals, which are always overcrowded. But the municipality has made an arrangement with several other hospitals belonging to different churches and private associations under which sick poor, if they so wish, must be received by these hospitals, subject to a fee of 1s. 6d. per day per patient being paid by the municipality. A system of control is arranged in order to prevent abuses, which could easily occur in unduly lengthening the stay of the sick poor in these hospitals at the cost of the municipality.

29. Poor lunatics are a charge upon the municipalities, but the provinces have to provide for the establishment of asylums as far as no other asylums exist.

30. Outdoor medical relief at the home is, generally speaking, a charge upon the municipalities. In Amsterdam, the largest town and capital of Holland, this administration was thoroughly reformed some six years ago. Under the management of a Central Direction, this part of public service is organised in nine districts. Every district has charge of the sick poor inhabitants of the district. Serving in every district are two doctors (one being the local district manager), one surgeon, one obstetric doctor, two nurses, and from two to four midwives.

31. Every district has its office, open daily at an early hour, for the purpose of receiving and attending poor persons suffering from slight ailments. Serious illness is attended to in the homes of the poor, and the cases are nursed by the municipal nurses. The Central Direction has to supervise the efficient and careful attendance of the poor sick by the municipal medical men. This system is working admirably well, and is of great benefit to the poor, as well as being of advantage to the hospitals, which would prove to be of insufficient capacity if this service did not exist.

32. The statistics of poor and poor relief, I am sorry to say, are very incomplete and rather unreliable, on account of the want of uniformity with which the different institutions make their statements to the Government. There is an astonishing misapprehension between these institutions as to the character of the poor to be reported. Some give the number of families, others the number of the total individuals (members of families) supported. Others, again, report the number of cases; several do not take notice of relief to the same families receiving help also from other institutions. In themselves the existing statistics are not quite reliable, but I think that, nevertheless, some general information may be derived from them if we compare them for a series of years, because the same errors are reproduced every year, and this neutralises the defects to a certain extent, at least.

33. The number of assisted poor (outdoor relief) amounted to the following figures:—

Year.	All the Year Round.	Temporary Relief.	Total.	Population.
1887	95,207	130,251	225,458	4,390,857
1892	106,817	147,001	253,818	4,669,576
1896	100,612	135,764	236,376	4,928,658
1901	95,304	85,391	180,695	5,263,232
1902	94,695	89,052	183,747	5,347,182
1903	91,348	85,761	177,109	5,430,961

34. The cost of administration of poor relief (expenses for employment excepted) by all the different institutions together amounted in :—

		Population.	Per head.
	£		s. d.
1887 to - - - - -	1,002,343	4,450,890	4 8
1892 „ - - - - -	1,193,617	4,669,576	5 1
1896 „ - - - - -	1,153,736	4,928,658	4 8
1901 „ - - - - -	1,482,146	5,263,232	5 7
1904 „ - - - - -	1,582,500	5,509,659	5 9

The increase is only a slight one.

III.—A COMPARISON BETWEEN THE FIGURES OF DIFFERENT TOWNS.

35. A comparison between the figures of different towns cannot be given on a large scale, but the following figures, regarding the *Municipal Relief*, may prove of interest.

TOTAL Cost per Inhabitant.

Year.	The Kingdom.	Communities, having a Population of					
		Under 2,001 inh.	From 2,001 to 5,000.	Under 5,001.	From 5,001 to 20,000.	From 20,001 to 50,000.	Above 50,000.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
1898 - - -	1 9	-	-	1 0	1 9	1 9	2 9½
1901 - - -	1 11	0 10	1 2	1 1	1 8½	1 9½	3 3½
1904 - - -	2 1	0 10½	1 2½	1 1	1 9	1 11½	3 10

36. In comparing the cost of municipal relief, as between towns of more than 50,000 population, we arrive at the following amount per inhabitant :—
Year 1904. General cost in towns of more than 50,000 inhabitants :—

	s. d.
As above - - -	3 10
Amsterdam - - -	5 2
Arnhem - - -	1 10½
The Hague - - -	2 9
Groningen - - -	4 10
Haarlem - - -	2 8
Leiden - - -	1 10½
Rotterdam - - -	3 7½
Utrecht - - -	2 6

I intentionally omit giving the absolute figures of relief, being of opinion that the cost per inhabitant will be of higher interest for the purpose of the Commission.
If wanted the absolute figures can, however, be given also.

37. The amount of the total expenses per inhabitant for poor relief (with the exception of employment) in the years undermentioned were as follows :—

	1898.	1901.	1904.
	s. d.	s. d.	s. d.
Municipalities - -	1 9	1 11	2 1
Churches - - -	2 1½	2 2½	2 2
Private - - -	0 10	0 9½	0 9
Total - - -	5 5	5 8	5 9½

38. These expenses per inhabitant in towns with a higher population than 50,000 were, for the year 1904, as follows :—

	Municipal.	Churches	Private.	Total.
	s. d.	s. d.	s. d.	s. d.
Amsterdam -	5 2	3 10	2 0	11 0
Arnhem -	1 10½	4 2½	0 7½	6 8½
The Hague -	2 9	3 7	1 5	7 9
Groningen -	4 10	2 5½	0 3	7 6½
Haarlem -	2 8	5 7½	1 3½	9 7
Leiden -	1 10½	2 10½	0 6	5 3
Rotterdam -	3 7½	2 9	1 2½	7 7
Utrecht -	2 6	3 2½	3 1	8 9½
The average -	3 10	3 5½	1 7	8 10½

IV.—VAGRANTS AND VAGABONDS.

39. Vagrants and vagabonds are committed by the Courts to a system of hard work, not in workhouses, but in so-called colonies.

Mr. J. F. L. Blankenberg. Were present in such colonies in the year :—

11 May, 1908.	Number of vagrants in colonies.	Men.	Women.	Total.
1887	- -	2,036	—	2,036
1888	- -	2,832	—	2,832
1889	- -	2,578	—	2,578
1890	- -	3,686	242	3,928
1891	- -	3,663	229	3,892
1892	- -	3,389	205	3,594
1893	- -	3,428	170	3,598
1894	- -	3,416	165	3,581
1895	- -	3,625	138	3,763
1896	- -	3,463	135	3,598
1897	- -	3,563	140	3,703
1898	- -	3,611	148	3,759
1905	- -	6,332	138	6,470

40. By far the larger part of these people are committed on account of vagrancy ; the smallest part being on account of drunkenness.

Ghentsystem of unemploy-ment assur-ance in vogue 41. As to the unemployed, no reliable figures are at hand. In the larger cities (Amsterdam, for instance) the Municipality has organised a scheme of assurance against unemployment, on the Ghent-system. But this has only been done lately, so that no statistics of any value are available.

Number of unemployed relieved since 1877. 42. The yearly Government reports state the number of unemployed relieved, as follows :—

—	In Work-shops.	Other-wise.	Total.
1877	1,476	2,926	4,402
1878	1,456	2,896	4,352
1879	1,561	3,172	4,733
1880	1,687	3,533	5,240
1881	1,486	3,205	4,691
1882	1,136	2,790	3,935
1883	1,159	2,512	3,671
1884	1,103	2,646	3,749
1885	1,247	3,128	4,375
1886	1,336	3,206	4,542
1887	1,375	3,203	4,578
1888	1,479	3,327	4,806
1889	1,475	3,250	4,725
1890	1,677	3,290	4,967
1891	1,813	3,071	4,884
1892	1,679	3,215	4,894
1893	1,653	2,961	4,614

—	In Work-shops.	Otherwise.	Total.	Number of unemployed relieved since 1877.
1894	1,483	3,022	4,505	Statistical er.
1895	13,538	3,085	16,623	
1896	18,370	2,745	21,115	
1897	21,269	2,069	23,338	
1898	18,029	1,673	19,702	
1901	2,499	1,261	3,760	
1904	2,273	1,134	3,407	

The figures for 1895 to 1898 are of no value, being the result of a big mistake made in the official returns. They represent the amount of days during which the unemployed have been employed in workshops, instead of the number of unemployed.

V.—THE ELBERFELD-SYSTEM.

43. Although in later years public sympathies are tending towards this system of care for the poor and distribution of the gifts, it is not yet adopted by public services of Holland. The Poor Law in this country makes the adoption of the Elberfeld-system rather difficult.

44. Several private charities have, however, adopted it for some years. I may be allowed to refer to a short paper published by me in the "Charity Organisation Review" of August, 1906 (a copy of which is added to this statement (*see Appendix No. XXII. (A)*), and dealing with the leading private association in Amsterdam, called Liefdadigheid Naar Vermogen. Similar associations, whose working-plan is also based on the Elberfeld-system, are at work in Haarlem, Utrecht, Leeuwarden, Arnhem, Breda, Alk-maar, The Hague and Rotterdam.

45. In my opinion, the Elberfeld system is the only means by which, in large cities, poor relief can be given on a naturally large scale without incurring the danger of pauperisation.

46. This, indeed, is the greatest evil to be avoided, but also the most difficult to avoid. In dividing a large "agglomeration" into as many smaller ones as the number of poor to be assisted will render necessary, and in placing the decision of applications for assistance in the hands of the smaller body (district), which is personally acquainted with the case, the evil or danger of red tape and unsound decisions is entirely eliminated.

47. The fundamental principle of the Elberfeld system is very simple and logical, bringing help from man to man. This system, however, wants two main essentials :—

(a) A considerable number of voluntary workers.

(b) The sense in each of them of disciplined work, i.e., the willingness to serve in an organisation, and to follow the instructions and general rules laid down by the central managing body.

48. The application of this system in Holland is still young, having only been in operation for some 15 years. But experience has shown that, although the Dutch mind does not so easily accept the direction of others as Germans do, nevertheless no serious difficulty has arisen, and I may state that it is working admirably.

49. The system being, of course, perfectly known to the Royal Commission, I think a detailed description will be unnecessary.

VI.—POOR LAW REFORM IN HOLLAND.

50. As already stated in Part II. of this memorandum, the Dutch law wants thorough reform. It is a most unhappy feature that such reform is mixed up with politics, which in reality have nothing to do with the case.

51. The problem which a Poor Law has to solve and regulate being mainly concerned with the best and least costly way in which the poor have to be supported, I fail to see where politics have to be introduced.

52. But it cannot be denied that politics do enter into the situation, and the deplorable result of it is that reform is always put off and that at every change of Government the Poor Law reform is brought to nil.

53. In the last 10 years we have had three different Cabinets, each of which has prepared a Bill, but before it could be submitted for discussion a new Cabinet had come into power, and withdrew its predecessor's scheme.

54. So, poor (and philanthropic workers) have been waiting ever so long. But in the meantime some results have nevertheless been attained by public discussions in papers and at meetings, promoted principally by the advocates of private charity. These discussions have brought about an average "communis opinio."

55. The main points round which a future reform will probably centre are the following:—

- (1) In every town an association of all the existing charities (public, church, and private) to be established, in order to secure co-operation and efficient organisation.
- (2) In every town a central register to be instituted, in which all the names and addresses of the assisted poor shall be recorded for consultation by all the associated charities.
- (3) Public relief to be organised on the Elberfeld plan.

J. F. L. BLANKENBERG.

Amsterdam, April 12th, 1908.

100021. (*Chairman.*) The Act regulating the Dutch Poor Law was passed in the year 1854, I understand?—Yes, a little more than half a century ago.

100022. There exists no legal right to relief in Holland, does there?—No.

100023. And there is no appeal to a court of law?—There is nothing of that sort.

100024. The peculiar feature of your system seems to me to be that indoor relief is largely in the hands of the churches?—Yes, that is so.

100025. In indoor relief do you include medical relief?—No, we do not include medical relief in that; we mean the relief given in old age and to orphans and so on.

100026. You mean the relief given to children and old people?—Yes.

100027. In Amsterdam there are two municipal hospitals, you say; is the treatment there free?—Not quite. For the down-right poor it is free, of course, but anyone who is on the edge of poverty has to pay something according to his income.

100028. That, I suppose, is settled by the authority?—Yes, by the town authority.

100029. Does that practice work well?—It does work well. If the patient could not pay himself, his relatives might pay—his father or his son, for instance.

100030. Outdoor medical relief, I understand, is a free charge on the municipality?—Yes.

100031. Is that relief generally free?—That relief is quite free. It was instituted only about six years ago, with a view to relieving the burden on the hospitals.

100032. In every district I suppose there are doctors and nurses?—Yes.

100033. And each district has its office?—Yes, there is a small office in each district.

100034. It is open every day?—Yes, from half-past eight till eleven o'clock in the morning.

100035. Is all the medical relief there given free?—Yes, it is given all free.

100036. May anybody apply for this relief, or must they have a limited income?—Everybody can get relief, but before relief is given gratuitously an inquiry is made by the paid officials of the town, whether the applicant is or is not able to pay something; if, on this inquiry, it turns out that he cannot pay, then he receives the medical relief free, but if it turns out that he can pay something, then, of course, a small amount is charged.

100037. If a man who is ill or whose family is ill was to go to one of these offices and receive medical relief, and afterwards it appeared that he could afford to pay, would he be made to pay?—Yes, he would.

Mr. J. F. L. Blankenberg.
11 May, 1908.

100038. To use a common expression, the doctors of the district office would treat him first and then inquire afterwards; is that what would happen?—No. The inquiry is made first. At the beginning of the year, anyone can apply for the right to medical relief in the case of himself or his family becoming ill; then inquiry is made by the paid officers of the town, and he is put on the list. If his name is placed upon the list, then he can get his medical relief for nothing by going to one of these offices.

100039. But if he is not on the list, he could not get it free?—No.

100040. Are the lists revised every year?—They are revised every half-year.

100041. Your statistics of poor relief are not very complete, I think you say?—No; I regret to say they are not.

Unreliability of Poor Law statistics.

100042. Therefore, we must not attach too much importance to the figures which you give us?—Not too much, but, of course, a comparison spread over a series of years is of value.

100043. Do the figures you give us in Paragraph 33 include the number of times a person has been relieved—because a person might be relieved two or three times in the same year—or do they only include the number of persons relieved? Obviously the column headed "All the year round" answers itself, but in the column headed "Temporary relief" the same person might have been relieved more than once, and might be counted more than once?—Assistance is given up to a maximum of one year, but we may give them assistance for two months or three months or four months or any other number of months, and then no relief is given perhaps until two months later, when relief has again become necessary. Those cases would come under the head "Temporary relief."

100044. So that a man might be counted twice?—In that case, yes.

100045. Therefore, the figures in that column would be rather in excess of the actual number of persons relieved?—They would be in excess of the number of physical persons relieved, when you are dealing with temporary relief.

100046. Now taking the cost of the Poor Law, and the number of persons relieved; your experience is, I think, that more persons are relieved in the towns than in the country?—That is the case with the big towns. You will see from my Statement that Amsterdam, which is the biggest town, has the highest percentage.

Comparison of rural and urban pauperism.

100047. Are there any districts in Holland which have no towns and are purely agricultural?—No. The towns are spread all over the country.

100048. But the pauperism is less in the rural districts than it is in the towns?—Yes.

100049. As regards vagrants and vagabonds, they are committed, you say, by the courts to a system of hard work in colonies?—Yes.

Deterrent effect of labour colonies.

100050. Are the colonies public colonies or are they undertaken by private persons?—There are two sorts of them; there are two which are maintained by the authorities, and there is one other which is maintained by a private charity.

100051. In Germany there are colonies which are private colonies, in the sense that they are superintended by private individuals; and then there are penal colonies which are associated with the Poor Law, and the penal workhouse is, I understand, more severe than the labour colony?—That is so.

100052. Is it the same in Holland?—Yes.

100053. If a vagrant or a vagabond is found, he is committed by a court of law?—Yes.

100054. Not by a Poor Law authority, but by a court of law?—Yes, by a regular court.

100055. Does your system of labour colonies answer very well?—It does remarkably.

Mr. J. F. L. Blankenberg. 100056. It does reclaim people, you think?—Yes, it does reclaim them. They hate it very much, and they do not want to be put in there again. But we have not many vagrants, if you will allow me to say so—not many men who wander along the highways.

11 May, 1908. Drunkenness and its effect on pauperism. 100057. A vagrant or a vagabond is committed to one of your labour colonies for a certain time, is he not?—Yes; it depends upon the case.

100058. When he comes out, is he given any money as representing the work he has done?—Yes. Whilst he is there some money is put by for him, and when he comes out, he gets a certain amount. I do not think very highly of that system, because when he gets out he spends it pretty much in drinking.

100059. But, on the other hand, if he had no money he could not support himself?—That is right; but I should prefer a system which would not hand him his money all at once. The longer he has been in the colony, the more money he has in his pockets when he leaves it, and the more he drinks. If we could establish a system by which the payment of the money was spread over some months, I think that would be better.

100060. Is drunkenness a great cause of pauperism in Holland?—Yes, it is a most dreadful cause.

100061. Is it one of the main causes?—Yes. But I am glad to say that drunkenness in Holland is going down. In former times, about twenty years ago say, in Amsterdam we were constantly seeing drunken people, but now we do not see so many. Happily, there is an improvement in that respect; and we have had lately an Act passed to deal with the subject.

100062. As regards the unemployed in Amsterdam, I think the municipality have organised a system of insurance against unemployment, based on the Belgian system?—Yes.

100063. Have you watched its working at all?—Yes; I have taken part in it myself as a town councillor. It has only been in existence for two years, so I cannot give you many particulars about it. It has not taken much root in Amsterdam as yet.

100064. It seemed to me that this system would be of use to the organised and skilled trades?—Yes, it would.

100065. But that it does not touch the unskilled trades?—No, it does not touch the unorganised trades; and that is the great difficulty. However, it may induce the men to join a union.

100066. I suppose you have in Amsterdam a good many of what we call the casual class, that is, persons who are employed in loading and unloading ships?—Yes.

100067. The classes who are not in constant employment are an improvident lot as a rule, are they not?—That is right.

100068. That is your experience?—Yes, that is so.

100069. This scheme would not touch them, would it?—It is only at its beginning to-day in Amsterdam.

100070. Although it is a benefit to the better-class workers and to those trades which are organised, it does not really touch the most difficult class of all?—No, not yet.

100071. Do you think it will?—I fear very much that it will not. It only means that some of the labourers will be induced to join an organisation; and they will do so of course in their own interests.

100072. It may, in that way, indirectly do them good by inducing them to join a union?—Yes; but perhaps after five or six years it will be otherwise.

100073. I suppose the difficulty is that you cannot get this class to pay weekly subscriptions?—No; they do not pay anything.

Adoption of Elberfeld system in Holland. 100074. As regards the Elberfeld system, I understand that in Germany the authorities are able to put some pressure on individuals to join?—Yes.

100075. Are you able to put any pressure of the same kind in Holland?—No, you cannot do that in Holland; we have not the same power in that respect.

100076. Has the Elberfeld system worked well in Holland?—As I say in my Statement, it has only been adopted by private charity. As far as Amsterdam goes, I am the President there, and it works admirably.

We have a staff of 400 or 500 workers, and it has gone on very well for the fifteen years that it has been established.

100077. Can you get sufficient workers?—At present, yes. We have had more; we have had 600, and now we have only about 400, so that it has gone backwards a little bit. But we have always got people; we have not had any difficulty in that respect.

100078. The Elberfeld system applies only to charity in Holland, does it?—Only to charity.

100079. Charity plays a larger part in dealing with pauperism in Holland than in most countries, does it not?—I do not think so.

100080. (*Miss Hill.*) Not if you count the churches in? The churches play a very large part in your system?—Yes.

100081. (*Mr. Loch.*) Does that not in some way qualify your answer, that the churches play a smaller part in the whole business than the official relief? If we take the three, the municipality, the churches, and the private charity, the total intervention represented by the last two is larger than the intervention represented by the municipality alone, is it not?—Yes.

100082. (*Chairman.*) When I used the word "charity," I meant both the charity of the churches and private charity, and from the Appendix A. (*See Appendix No. XXII. (A)*) which you have handed in, it would seem that the percentage of charitable relief in that sense is greater than the percentage of State relief?—Yes, it is so. The object of the law has been to take as much as possible of this work out of the hands of the State. That aim has not been attained yet; the State has always to do more and more, while the churches are going back.

100083. There has been a difficulty about passing a law to reform the Poor Law in Holland, and in the last paragraph of your Statement you enumerate what are the points upon which future reform should be based. Your first proposal is that there should be an association of all the existing charities (State, church, and private) in order to secure co-operation and efficient organisation?—Yes.

100084. Your next proposal is to have a central register in every town, in which the names and addresses of the assisted poor shall be recorded?—Yes.

100085. I suppose now there is no central register of all the persons who are helped by charity?—At present not throughout the land, but in Amsterdam we have succeeded, by hard work and by always keeping to this point, in forming an association of the charities; but that is only in Amsterdam. There we have a register. Every one of the charities gives the names of their assisted poor to the keeper of the register; and so everyone in Amsterdam who is concerned in charitable work, when taking up a case, goes at once to the register and looks to see if the name is there, and if so, by what charity it has been put on the list, and then he goes to get the particulars from that church or charity, and so on.

100086. Did the charities dislike giving that information at first?—Yes, very much. With the churches we had very hard work. The churches said—I can speak frankly of course—"You do not want to know whom I am assisting; if I assist a brother of mine, I never tell what I give my brother." But that is all very well when that brother is going to another charity and asking for more money; then, of course, both parties have an interest in knowing from whom he already gets something. By persuasion and continuous work, we have at last succeeded in forming such a register, and at present there is only one church that does not agree; that is the Calvinist. We have forty churches in Holland.

100087. Your third and last proposal is that public relief should be organised on the Elberfeld plan?—Yes, that is so.

100088. The Elberfeld plan means that each person should be visited constantly, does it not?—Yes.

100089. Do you attach much importance to that constant visitation?—I attach paramount importance to it. Each of our visitors sees very few poor—at the most five families; so he can look after them all.

100090. (*Prebendary Russell Wakefield.*) With regard to the money that the churches have; is that money which they collect year by year, or is it money that they have in

endowment?—It is both. The principal churches in Holland are rich, but their wealth has gone down, because the churches are not so much attended as they used to be. The Catholic Church, of course, does well, but the other churches are not so well attended as they were in former times, so they do not give much, as they have not much money to give. They collect every Sunday in the churches, but, of course, when the people do not go to church they do not collect much.

100091. I suppose the wealthier churches are those that have not now so large an attendance?—Yes.

100092. Unless there was this system of combination between the various bodies, the churches, the State, and the private charities, some people might get help in three directions?—Yes.

100093. And those, of course, would be the least deserving?—Yes. That is what the register is meant to deal with. I had a case lately where a person came to my society and said he was a Protestant, and then he went to another society and said he was a Catholic. If you do not mutually aid each other in this respect, you will be deceived, of course.

100094. With regard to your labour colonies and the giving of money to these people when they go out, in Belgium they find very often that a person is anxious to get out directly he knows he has a fair amount of money, in order that he may have a thorough drinking bout; do you find the same sort of thing in Holland?—With us he cannot get out when he likes; he must stay for the due time.

100095. But when he has, so to speak, amassed money through the work that he does, is not the good conduct that he shows sometimes due to the fact that he desires to get a good character, in order to get a permit to go out as early as possible?—I do not quite follow your question.

100096. What happens in Belgium is this: They find that a man works extremely well in the colonies, and when he has got a certain amount of money put by, he is given a permit to go out, and he then goes and has a drinking bout and then he passes on to another colony, and changes his colony so to speak?—Yes, that is so.

100097. Sometimes they find he goes to Brussels and gets his drink there; then he goes for the night into the poorhouse which there is there for travellers, and then he goes back to the colony?—Yes.

100098. Does that kind of thing happen with you?—Yes, we have had that also.

100099. Should you say that there is a real reformation of character, nevertheless, produced by the colonies as a rule?—No. I only consider the colonies as a means of locking them up.

100100. And keeping them away from temptation?—Yes.

100101. You think that practically the continuous detention is almost the only safeguard for that sort of person?—Yes, I think so. You cannot alter the character of the man, you see.

100102. You say that all expenses resulting from municipal relief given to a poor person form a charge upon the locality in which he is residing?—Yes.

100103. You say many of your towns are small and they are mapped all round the country; does that mean the town or the commune?—The town itself. For instance, in Amsterdam a poor man comes from, say The Hague or from Rotterdam; when he gets to Amsterdam he is poor, and Amsterdam must relieve him.

100104. Is the fact that indoor relief is, for the larger part, in the hands of the churches, due to the fact that in the past days the buildings were put up by the churches?—Yes.

100105. But they find it is more difficult every year for them to keep their institutions going?—Yes.

100106. Have you any simple labour registries or labour bureaux in Holland?—No, we have not.

100107. You have nothing of that sort?—No. Last week in Amsterdam we founded a kind of municipal exchange for labourers who are in search of work to come to, and for employers to come to for labourers.

100108. You have just started one then?—There was one in Amsterdam under private enterprise, but now the town has taken it over. *Mr. J. F. L. Blankenberg.*

100109. It is a municipal one now then?—Yes, since last week. *11 May, 1908.*

100110. Up to the present, do you believe that it has done good work?—Yes; still it is very small in amount; it has not been of much importance so far. *Municipal labour bureau.*

100111. They want to be more known, I suppose?—Yes.

100112. Do the employers go to it themselves?—Yes; the employers go there as a rule.

100113. (*Mr. Nunn.*) Referring to Paragraph 39, does that table give the actual increase in number of vagrants and vagabonds sent to the colonies in each succeeding year?—Yes. *Cause of increase in labour colony men.*

100114. Is that in proportion to population; in other words, has the population increased proportionately?—I give the population in Paragraph 33.

100115. The increase shown in Paragraph 39 is out of all proportion to the increase in population, I see?—Yes.

100116. How do you account for that increase yourself?—You see the larger part are men; so I think the laws against drunkenness are now being more stringently taken in hand and applied. Drunken people are more often put into these colonies now than they were in former times.

100117. This increase shown in Paragraph 39 then is due to increased vigour of administration?—That is what I think. *Causes of increased Poor Law relief by State.*

100118. Now taking the figures which show how the public assistance has gradually increased, may I ask you to account for that?—There are two main reasons. In the first place, as I told you, the assistance given by the churches has been reduced, and on the other hand we have been more liberal in later years, and we frequently assist people whom we would not have assisted thirty years ago.

100119. In what direction is there that increase of public assistance? Are fresh classes of people brought in?—No, there are no other classes introduced, but more money is given.

100120. More is given in each case?—Yes. In Amsterdam, for instance, the poor relief of the town is limited to 5s. per week, and in former times the average was only one florin, that means 1s. 8d.; but that average of 1s. 8d. has been raised to, I think, about 2s.

100121. Are the percentages given in Paragraph 22 percentages of expenditure or of persons relieved?—That relates to money.

100122. You have no corresponding table of the number of persons, have you?—I can send it over, if you like.

100123. That would be very interesting; perhaps we may have that?—I will send it with pleasure. (*See Appendix No. XXII (B).*)

100124. May I ask whether any of the money voted by the municipality is taken to the poor in their own homes by the voluntary workers?—In Amsterdam it is. *Despatch of municipal relief by voluntary workers.*

100125. The municipal relief is taken to their own homes by voluntary workers, and not by the officers?—That is so; the municipal relief is taken to the houses themselves by the voluntary workers. That is a very good system.

100126. Has that always been done?—That system is only four years old. In former times we had large rows of people standing outside the office, and that was a very bad system. Now that is all changed, and every penny is taken into the house of the man or woman who is assisted, by the voluntary workers—even the municipal relief. That is a very good system; indeed it is a very great improvement.

100127. May I ask how the municipal authority get the voluntary workers?—The town has made an arrangement with the different churches, so that, for instance, a Catholic poor person can be helped by his Catholic organisation. These organisations are established especially for the purpose. *Organisation for co-operation of voluntary and municipal relief.*

100128. Does that involve any meeting between the various societies?—Yes. That is quite a new system,

Mr. J. F. L. Blankenberg. but there will be a general meeting of all the workers all round. Then, in addition to that, the boards of guardians come together and meet separately every association—the Catholics, the Protestants, the Jews, and so on.

11 May, 1908.

Organisation for co-operation of voluntary and municipal relief. 100129. Have you a separate conference of the municipal authority, the charities, and the churches in Amsterdam?—Yes.

100130. In each of the nine districts into which Amsterdam is divided?—No.

100131. Then the conference is for the whole of Amsterdam?—Yes.

100132. That must be a very large meeting, must it not?—I think it means about 500 people. When the board of guardians meet every association separately that is where the work is done. The other meeting, the big meeting, will only be a kind of social function, so to say.

100133. How often are the smaller meetings held?—It is intended to have them twice a year; but this is only a new organisation, as I told you, and the larger scale was only introduced about half a year ago.

100134. It is very general in its work, I suppose, and does not deal with individual cases?—No, of course not. It is intended to deal with the general functions, the way in which improvements can be introduced, and so on. The church organisations, for instance, can make known their wishes, and everything they ask can be considered. The object is the improvement of the system.

100135. Does the municipality pay any of the working expenses of the charities?—No.

100136. Nor of the churches?—No. It is all done by voluntary self-sacrifice, I might say.

100137. Referring to Paragraph 26, is there a clear line of demarcation between the classes assisted by the charities and those assisted by the municipality?—No, there is not a clear line of demarcation.

100138. Those who are assisted by the municipality are not the more destitute?—No, they are not. The municipality gives assistance where a man is starving, even if he has been a drunken man, for instance; it gives him assistance in the shape of bread, coal, and so on, but it does not give him money, and, of course, it does not allow a man to starve. The private charities, of course, have another consideration in their action, and that is the desire to better the man.

100139. And to prevent the causes?—Yes. My impression is that a drinking man never can be bettered and that once a drunkard ever a drunkard. That is my experience. We have now a colony in the north of Holland which has been established for the purpose of improving drinking people, and my experience is that it does not help much unless the man stays longer than a year—then it might be of some use. But, generally speaking, the people who have been there for less than a year fall back into their old habits.

100140. You say in Paragraph 18: "The cost of in and outdoor relief to a poor person is recoverable from himself should his position improve;" does that apply to municipal relief only?—Yes, only to municipal relief.

100141. And not to charity?—The law does not permit it in the case of private charity, but the law does permit it in the case of municipal relief.

100142. It is recovered by legal process, then?—Yes; sometimes it is done. In my career as a member of a board of guardians we have done it twice, and we got back our money.

100143. (*Prebendary Russell Wakefield.*) In how many years is that?—Twenty-three years.

100144. (*Mr. Nunn.*) Have you given the population of Amsterdam in your Statement?—No. It is now about 600,000.

100145. You speak of the registration of relief in each individual case; that must be done in districts in Amsterdam, I suppose?—We have a central office for that; it is a private association of all the charities.

100146. One central office for a city with 600,000 persons?—Yes; but not every one of those is poor. In the central part of the town we have a small office, and every week all the different charities send in their lists.

100147. Is it done quite voluntarily?—Yes, and every name is entered in the register. Therefore, any voluntary or paid officer who has to examine into a case, first goes to the register and ascertains whether an applicant is known, and if he is known, then the officer applies to the charity to which the applicant is known. It works admirably well.

100148. When they find that a case is being assisted by two charities, do those two charities meet together?—Yes, of course. State supervision charity

100149. What sort of a decision do they arrive at—that both shall not help, or that they shall co-operate?—That is left to them personally to decide. The system has only been working for a few years now.

100150. Have you any meetings arranged for that?—Yes; we have a meeting every two months. I hope it will come to this, that when a man or a family has applied to more than one charity, those charities will arrange with each other only to send one person to inquire into the case. I consider it a very great evil to send several visitors from different charities to the same family; one says: "You look black," and the other says: "You look white," and so on. Therefore, the charities do not get any protection in that way. I hope it will come that in such a case the charities will delegate the visiting to one man and only one man, or one lady.

100151. And that one lady might represent two or three charities?—Yes. I think the worst thing you can do is to send two or three visitors to one family. I think that is a great mistake.

100152. Did you say that the municipal authority met the representatives of the charities every two months?—No. I said the associated charities in Amsterdam meet every two months, and we discuss different matters. That is a very good arrangement. We do not always speak about the individual poor we assist, but we speak about general questions—about, for instance, the interest we have in commerce, about the assistance we give in food, coal, and so on. Then we have meetings at which the subject of poor relief generally is discussed. Everyone can collect money in Holland for these purposes, but there has just been presented by the Government to Parliament a Bill regulating the collection of the money. We have had that Bill under discussion, and so on. Then we have discussed different methods of assistance in our association. Until last month we have not had in Holland a general society for the whole of the country, such as they have in Germany; but on April 27th, in Amsterdam, we established a society of that character, I am happy to say. But on the matter of a new Poor Law coming into force in Holland, I do not think I shall be alive when it is introduced; there is too much politics in it.

100153. In Paragraph 13 you say: "Every municipality is bound to have and maintain a register of all the charities existing in the locality, and divided into four groups." Can the municipality take any action upon the reports sent in by the charity?—No; it can do nothing at all.

100154. It is a mere registration, then?—Yes. If these charities do not register, they cannot receive money given to them by testament and so on. They must be on that list.

100155. Must they send in their accounts of income and expenditure, too?—Yes; there are general forms for that.

100156. Is there any rule about the accounts being audited?—The State officials and the town officials cannot make any remarks upon the accounts. They only hand them in. We have eleven counties in Holland, provinces we call them; and every province collects all these different statements from the town and makes a general statement in a yearly report to our Queen. Every year there is a report printed and published to the Queen on the position and the assistance which is given to the poor in Holland, and it consists of the information which is collected by these eleven provinces.

100157. (*Mr. Phelps.*) Have you a Socialist Party in Holland?—Yes, we have. Housing of poor and official inspection thereof

100158. What are its aims?—To have the assistance given by the State.

100159. Do you find in Holland that wealth is very unevenly divided?—Not so much as in England, I think.

Differentiation of classes relieved by charity and State.

Recovery of relief.

Registration of charities.

100160. The difference between rich and poor is not so great?—No, it is not so great.

100161. Do you find that the position of the poor is improving?—Generally speaking, no; I cannot say that I find it to be so.

100162. Do you think that their homes are better than they were?—Yes, the homes are better. We have a movement for the improvement of the homes in Holland. Generally speaking, the poor are poor on account of their own faults, and sometimes their own vices.

100163. Does the State take an active part in improving the homes?—Not the State, but we have now an Act which allows the towns to do so.

100164. The municipal government does it then?—Yes; the town council in Amsterdam at nearly every meeting condemns different homes of the poor.

100165. Do they inspect the houses of the poor?—Yes, a special Commission goes out and inspects them.

100166. Do they build houses for the poor?—Not yet; but there is a plan before the town council for doing so. The law authorises the town to do so, and the State will lend the money to the towns for it.

100167. Is the building of houses likely to be undertaken?—Yes.

100168. Do you find that people come from the country into the towns in Holland?—No, not so much. They are gaining a good living in the country—better than in the towns, I should say.

100169. You have, I think, some colonies of long standing, and you plant people out in the country from the towns?—Yes,

100170. One of them Frederiksoord?—Yes. I know the Frederiksoord colony.

100171. How is that working?—Admirably.

100172. It is doing well?—It is doing very well.

100173. Do you think they have got people to stay there?—Yes.

100174. As small peasant proprietors?—Yes; not in a great many cases, but there are some.

100175. Is anything of that kind attempted at Ommer-schans?—That is part of the same organisation.

100176. And at Veenhuizen you have the same thing?—Yes, there is the same thing at Veenhuizen also.

100177. Which is the colony to which beggars are sent?—Veenhuizen.

100178. Does the State manage that, or is it managed by private charity?—It is managed by the State.

100179. After a man has been there a certain time, is he given a piece of land?—No; he is given a bag of money and he goes away.

100180. They do not attempt to settle them in the country?—No.

100181. Has that ever been proposed?—No, it has not been proposed. But I do not think much of it, because they are quite destitute.

100182. Are they a different class of people to those who go to Frederiksoord?—Yes; I think the Veenhuizen people are the worst.

100183. But at Frederiksoord the experiment is successful, I gather?—It is very successful there, but not on a large scale—the scale there is small.

100184. Does the State supervise that?—Yes, the State supervises it.

100185. And supplies the money?—The money is raised by subscription, and so on.

100186. Have they a large endowment? Have they money invested, do you know?—I do not know exactly, and I cannot give you a definite reply to that.

100187. Do your charitable societies emigrate people across the sea at all?—No. The Salvation Army in Holland send every one out to Canada.

100188. Do they send any people to the Dutch Colonies in the Indies?—No; they would not be admitted.

100189. Do they send any to South America?—No. Those that are sent to our Indies must be self-supporting. It is only natives who can work in our Indies—not the white men.

100190. Do they send them to Guiana at all?—No.

100191. Only to Canada?—The Salvation Army only sends them to Canada.

100192. Is the Salvation Army working in common with you?—Not on a large scale. The Salvation Army has a kind of colony of its own.

100193. Whereabouts is that?—In the province of Overijssel.

100194. Would that be near to Arnhem?—It is higher up.

100195. Have you noticed much difference between North Holland and South Holland?—Are people poorer in the one than in the other?—I should say that in South Holland they are a little bit poorer.

100196. That there is more destitution in South Holland?—I think so, but not much.

100197. Can you account for that at all?—No. In the northern part of Holland every one gets on very well, so there are not so many poor.

100198. And they do pretty well there?—Yes.

100199. The manufactures of Holland are mostly in Amsterdam, are they not?—No. In the eastern part of the country, in Overijssel, for instance, there is a big industrial district.

100200. Do the manufactures attract people from the country?—No. People who do not know any business or any trade come to Amsterdam and to Rotterdam, just to pick up a florin here and a florin there.

100201. To get casual work and not regular employment?—Yes. That is very bad; but you see they do not know any trades.

100202. Have you tried to send them back?—Yes. Then we have technical schools; but there are too few of them. A movement is going on to have more of these schools.

100203. In order to teach people trades?—Yes; to teach them, for instance, to be carpenters, blacksmiths, and so on, when they do not know a trade very well. To live, you must know your trade.

100204. Does the town government do that or the central government?—A special society largely subsidised by the town.

100205. The town of Amsterdam?—Yes.

100206. Is that movement spreading through Holland?—Yes. Nearly every big town has such schools, but there are too few of them.

100207. (Dr. Downes.) I understand you prepare lists of people who are entitled to medical relief at the cost of the municipality?—Yes.

100208. Are those lists limited as to the wages of the people who apply?—No, but if their income exceeds a certain amount, so that they are able to join a club, they don't get gratuitous medical relief.

100209. May any person be put on them?—Yes.

100210. Have you any clubs to which a labourer may subscribe to obtain medical attendance?—Yes, we have clubs both for medical attendance and for burial. The burial clubs are spread all over the country.

100211. Are those clubs flourishing?—Very much so. If you want more information about these clubs, I can send it over.

100212. If you can do so without trouble, I should be glad?—I will do so with pleasure. (See Appendix No. XXII (C)).

100213. Supposing that a man has not got his name placed on the year list, and he requires a doctor in a case of emergency, would the doctor go?—The doctor would go at once, because he could not leave the man, if he had no money and was sick, to starve and die. The doctor gives his assistance, and then afterwards they make inquiries into the man's financial position. If it turns out that he could pay for himself, then he must do so.

100214. Is there anyone to supervise the outdoor medical relief?—Yes. There is the general manager, and he always goes round to all the district offices. He goes personally to their homes if necessary.

Mr. J. F. L. Blankenberg.
11 May, 1908.
Emigration of Dutch poor.

Need of more technical schools in Holland.

Extent to which medical relief is gratuitous.

Administration of outdoor medical relief.

Mr. J. F. L. Blankenberg. 100215. Is he an officer of the central government ?—No, he is an officer of the town.

11 May 1908. 100216. Does the central government control the medical relief at all ?—No; but in every province or county there are medical inspectors.

100217. In what way is a patient admitted to a hospital in Holland; is it on the recommendation of a doctor ? Yes.

100218. And if the doctors of the hospital think he is a suitable case they take him in ?—They take him in at once, and he is attended to. Of course the medical director of the hospital the next day or some later day may take another view of the case; but he is given help at once.

100219. To those able to pay is any charge made ?—Yes. We have a kind of tariff which in Amsterdam is founded on the local income-tax, a deduction being made for every child.

100220. If a man who can pay does not pay, do you enforce the payment ?—Yes, we do.

100221. How do you enforce it ?—We have a regular law on the point, and very often we find a way of doing it without that. But in case of emergency we have to go before the Law Courts.

100222. Would you send him to prison if he did not pay ?—I know that is the law. It may be done if he does not pay.

100223. Do you deprive them of their vote if they do not pay for their treatment ?—No, we have no right to do that; but everyone who is assisted by charity has his name struck off the list of voters. Every year every charity—my society and every other society—examine the list of voters sent to them for that purpose by the municipality, to see whether there are any assisted people on that list or not; and we always pick them out.

100224. If a man cannot pay all, would you allow him to pay part of the cost ?—If he earns so much then he pays so much, and if he earns so much more he pays so much more. There is a tariff for that.

100225. On a sliding scale ?—Yes.

100226. (*Mr. Gardiner.*) In Paragraph 47 you tell us that you have a considerable number of voluntary workers; what steps do you take to train those workers ?—We have weekly meetings. We started the Elberfeld system in Amsterdam about fifteen years ago, but our society had already been twenty years in existence, so we had disciplined workers to our hand. We have thirty-five districts in Amsterdam, and we had thirty-five visitors who were made presidents of the districts when we started the Elberfeld system. They gave the education and the training that was needed. The president goes first with his people to the house of the poor, and shows them what to do, and tells them what questions they are to ask. Then every week there is a meeting at which every case is systematically gone through and discussed, so that theoretical training is given at the meeting.

100227. But that means that you depend for the training of your voluntary workers on the presidents of the districts only ?—Yes.

100228. Is there any method of supervising the presidents of the districts ?—Yes, the central board does that.

100229. How does the central board test the efficiency of the district president ?—Every week the business of the districts is looked after by the central board with a view to examination. There are seven of us on the central board.

100230. Are they criticised if the board think their decisions have been wrong ?—Yes.

100231. In regard to the officers of the municipality who are concerned with the distribution of relief, are they trained in any way ?—They consist generally of old workers in charity, and of people who have had many years service in the old church organisations; so that they are on the average good officers.

100232. Therefore, you recruit your officials from the ranks of the voluntary workers ?—Yes.

100233. When they become officials, I suppose they are paid ?—No.

100234. They are not ?—The Amsterdam Board of Guardians has twenty-four paid officers, but they do

the rough work. All these people who go into the houses of the poor and bring them their money, are not paid; municipal office they are voluntary workers.

100235. How are these twenty-four officers who do the rough work trained ?—They are trained by a gentleman who is the manager.

100236. I suppose he is what we should call the clerk or the superintendent ?—Yes, something like that.

100237. Have they any examination of any kind to pass ?—They have not to pass an examination, but they have a very good manager. They hand in their reports every day, and they are working in the same office. Amsterdam is not a big city like London; it is a comparatively small city, and the distances are not very great, so all these paid officers are at the central office with the general manager, and he looks into their reports, and in that way trains them.

100238. But there is no examination of them before they begin ?—No, there is not.

100239. (*Miss Hill.*) With regard to these colonies to which your vagrants are sent, they, of course, are in the hands of the municipality or of the State ?—Yes.

100240. I understand you do not think that many of the people are reformed there ?—No, not many.

100241. Have you any colonies in the hands of charitable people and supported by private charity ?—Yes, we have two.

100242. Do they succeed in reforming the people sent to them, do you think ?—No, not very much.

100243. In the colonies which belong to the State, the vagrants return, I suppose ?—As soon as they have made another mistake, they are committed again. As a rule, they go back very soon.

100244. So that really they are useful as keeping the people out of the way, but not as improving them ?—That is so. I know people who have been sent to a colony about twenty-four times.

100245. Do you think these colonies are deterrent, in the way of preventing people becoming vagrants ? It is difficult to say perhaps ?—It is very difficult.

100246. How long have they been established ?—These colonies have been established about sixty years. If you want any information about these colonies, I can send it over to you.

100247. Thank you; I do not know that I need trouble you. Do you strike people off from the list of voters who receive help from private charity ?—Yes, if they receive help from any organisation. Each society receives from the town the list of voters, and strikes out the names of everyone assisted by them.

100248. It is the same then, whether it is private charity or public charity ?—Yes; no one who is assisted can vote.

100249. (*Chairman.*) There are the church charities, as distinguished from the private charities; would the receipt of church charity in the same way disqualify ?—Yes.

100250. (*Mr. Nunn.*) On what ground is that law supported ?—Because we do not want assisted people to vote, or to have any influence in politics.

100251. But they do not vote for the church committee or the private charity ?—No. When I speak of voting I mean voting for the Parliament or the town council. We do not give the vote in Holland to assisted people.

100252. (*Miss Hill.*) How long are they kept off the list of voters ?—As long as they are assisted.

100253. As long as they are receiving charity ?—Yes.

100254. But when they no longer receive charity, can they then be restored to the list ?—Then they can vote.

100255. I suppose you think people who cannot manage their own affairs, cannot manage the affairs of the nation ? Yes, that is a way of putting it.

100256. (*Mr. Loch.*) I should like to ask a question or two as to what the outline of your scheme might be as it is worked at present. Your first proposal, I suppose, clearly is that all charities should be registered ?—Yes.

100257. Then you attach certain conditions to the existence of these charities, so that if they do not fall in with those conditions they cannot collect any money.

Payment according to relief in hospitals and enforcement thereof.

Training of Elberfeld workers.

Training of municipal officers.

Training of municipal office

Colonies for vagrants and result effect on character.

Disfranchisement of the charity assisted

Relief of the municipality and compulsory

I understand according to the article which you wrote in the *Review* the insertion of their names on the municipal list is necessary in order that the institutions may enjoy their civil rights, and if they do not appear upon the list, then the managers cannot appear in Courts of Justice, nor can they receive legacies, nor can they make collections?—That is right.

100258. So that practically you not only register these charities, but you impose conditions upon them by which they are more or less forced to come into union?—Yes. The aim of the law of 1854 was to know everything that was being done in a charitable way; and to prevent them not inscribing their names on the list, the law prescribes that they cannot make collections and cannot accept money or do anything unless they do put their names on the list—that they cannot exist so to say, otherwise.

100259. Taking that position with regard to the charities themselves, you throw on them definite obligations?—Yes.

100260. You oblige them, for instance, to give evidence to the municipal authorities when asked as to whom they are relieving?—Yes, they must do that.

100261. And you oblige them also to report to you and to send in accounts to you?—Yes, every year.

100262. And also you throw upon them the responsibility of dealing with the cases in the first instance?—Yes.

100263. So that if possible no obligation in regard to relief should fall on the municipality?—That is the first thing we look after.

100264. In carrying out these proposals, you find that your public relief, which you call municipal relief, has increased to a great extent?—Yes.

100265. And parallel to that, what you have called the private non-ecclesiastical relief?—Yes.

100266. Therefore, the tendency of this movement would appear to be that two lines more and more co-operate—the line of public relief and the line of private non-ecclesiastical relief?—Yes.

100267. So that these two bodies are, as it were, bearing the brunt more and more?—Yes.

100268. Then allied to these two bodies are a set of private voluntary visitors?—Yes.

100269. Both dealing with the separate municipal relief and with the separate private relief?—Yes.

100270. So that your paid staff is very small, comparatively?—Yes.

100271. Inquiries are also made by the voluntary visitors?—Yes.

100272. Is it your opinion that those inquiries are well made?—Not at first, of course, when the visitors want some training; but afterwards I think they are well made, because the visitors have plenty of time, they devote themselves to this work, and each one has only a few families to look after, which is the main thing.

100273. You also adopt the plan of having part of the inquiry made by the central body, do you not, through special officers?—Yes. I should think that in a large town—Amsterdam is not so large, of course, as London, but still it is rather a large town—it would be well to have the first inquiry made by a trained paid officer. At present, that is not done, but I think it would be better that it should be. It would help also in the education and training of the voluntary worker if he were to see how the trained paid officer did it.

100274. Do you ask the police for information?—No, never.

100275. When you come across cases of vagrants, are those referred to the police?—Yes; the vagrants go to the police.

100276. Then neither the municipal body as a relief body nor the private charities in their capacity of administering charity deal with vagabonds?—No. We do not want them; we have nothing to do with them; and we cannot improve them, you see.

100277. The whole question of vagrancy is not a Poor Law question at all, but is a police question?—It is a police question.

100278. And the police arrange to submit the case to the magistrate, who sends the persons to Veenhuisen, or wherever it may be?—Yes. We have a magistrate, called by the French a *juge de paix*; he himself hears every case, and he has about 300 a day sometimes.

100279. Acting on this plan, do you find it difficult to obtain the money you want for relief purposes in individual cases?—I cannot say so. My own society has been in existence now for thirty-seven years; I do not say that we can get all the money we want, because we could do with twice as much more as we have had, and we could spend it very well. But of course there is a limit to the power of the charitable. In our society in Amsterdam we receive every year about £18,000, which is rather a big sum.

100280. Your theory is to work your charitable society parallel to your municipal body, and not to merge one in the other?—Yes, that is so. I hope to come to this, though it is a long way ahead, of course—that every charity in Amsterdam will combine and have one plan for dividing the city, so that every charity shall have the same limits to every district. That will make the work much easier than it is when each of them has its own plan of dividing the city.

100281. Turning now to medical relief, all the gratuitous medical relief is municipal, is it not?—Generally speaking: yes, although some churches do also give some.

100282. When the patient has to be admitted into a hospital does the municipality pay, or is it a private matter still? Suppose a person is in receipt of outdoor relief, or is likely to be in receipt of outdoor relief from municipal funds, and then falls ill; in such a case does the municipality pay for the patient if the patient himself cannot?—Yes, the municipality pays for it.

100283. Would those cases that you have counted in your totals rank as receiving indoor relief?—No. The medical relief is kept quite separate, whether it means money or medical support in the family.

100284. If one wanted to ask you the total number of paupers in receipt of relief in Amsterdam, would one get a return of those in receipt of outdoor relief only?—I do not catch your question.

100285. I want to know how far in your returns the relief given to people in institutions was counted as Poor Law relief?—Not at all; because, generally speaking, indoor relief is given by the churches.

100286. Then it would not be recognised as pauperising?—No.

100287. (*Mr. Nunn.*) But the people would be disfranchised, I understand.

100288. (*Mr. Loch.*) Yes, but I was thinking of the question from the point of view of the funds—that this was relief which could not be attributed to the municipal fund.

100289. (*Sir Henry Robinson.*) Is the system of relief in Amsterdam successful in keeping down mendicancy, or are there many beggars in Amsterdam?—There are very few, but there used to be many more than there are at present.

100290. Would the police prosecute them for begging in the streets?—Yes; you are not allowed to beg in Amsterdam. Then the man comes and sells you a box of matches, and if he does that ten times he is considered a beggar.

100291. (*Sir Samuel Provis.*) With regard to the disfranchisement, would the receipt of medical relief only disfranchise?—Medical relief is not considered as a reason for not being allowed to vote.

100292. Therefore, if you gave medical relief to a person, or took him into a hospital, he would still be able to vote?—Yes.

100293. Both for the local authority and also for Parliament?—Yes, for the town council and for everything else.

100294. There is no legal right to relief, is there?—No.

100295. Does that produce any difficulties? Are there any cases where relief ought to be given where it is not given?—No. There are so many charities in Holland that that case does not present itself.

100296. (*Mr. Nunn.*) In Paragraph 19 you say: "Private charities may receive, under circumstances, allowances from the municipality;" is that largely done?—

Mr. J. F. L. Blankenberg.
11 May, 1908.

Adequacy and proposed combination of charities.

Extent to which medical relief is gratuitous.

Mendicancy in Amsterdam.

Medical relief carrying no disfranchise.

treat-
of vag-
and
onds.

Mr. J. F. L. Blankenberg. It is never done. The conditions are as follows: When any local charity wants any allowance from the municipality, it must prove first that it has got all the money from its members that they could possibly give. That is the first difficulty, because you can never say your members have given everything they could. Then, they have to hand in reports of the last year, and the budget for the next year. I do not know what you think about it, but I think it is very difficult to make up the budget of a charitable society. So that, at any rate, not a single society has ever applied. There is another reason. At a meeting of my society one of the members proposed to ask for some kind of recognition from the municipality, and then in the next moment ten members said, If you ask for gifts from the municipality I will withdraw my contribution. We should get very little from the municipality, and we should lose more money from our subscribers than

we should get in cash from the municipality; so it is never done. The law provides for it, but it has not occurred in a single instance.

100297. (*Chairman.*) What proportion do the numbers receiving outdoor relief bear to those relieved in institutions? Are there more people, do you think, in receipt of outdoor relief than the people who are relieved in institutions?—There are far more outdoor than indoor. If you want to have the exact figures, I could send them over.

100298. I would be obliged if you would?—Yes, I will with pleasure. (*See Appendix No. XXII (D).*)

100299. (*Mr. Nunn.*) None of the indoor relief is State relief?—No, because public charity always emanates from the municipalities.

Dr. Emil Muensterberg

11 May, 1908.

DR. EMIL MUENSTERBERG, called; and examined.

100300. (*Chairman.*) I should like to introduce to the Commission Dr. Münsterberg, who has very kindly come over from Berlin, where he has for many years been the head of by far the largest board for the administration of poor relief in the German Empire. He has given us the benefit of his experience and advice in a very excellent paper, which, I think is in the hands of the Commission. (*To the Witness.*) I propose to take this Statement of yours as your Evidence-in-chief, if you will permit me?—Yes. (*The Witness handed in the following Statement.*)

1. In the following remarks I have added to the inquiry put by the Royal Commission the questions introduced by Mr. C. S. Loch. I pass over those points which are already clearly set out in the printed accounts of German legislation and of particular German States. I would remark also that it is impossible to answer all the questions with absolute completeness without writing a large book. I venture to assume that the Royal Commission desire to see examined only in the most compressed form some of the weightiest points which are of special importance for Poor Law reform.

2. I must permit myself to preface the reply with some general observations. In the first instance, in no province is, in my opinion, the legislation alone of so trifling importance as it is immediately in that of poor relief. The law itself is of no importance when it is not carried out by sound administration. It is not too much to say that, in fact, in this sphere, good administration counterbalances the want of good laws, but that good laws do not make up for bad administration. For my part I have always held the English laws of 1601 and 1834 to be very good laws, under the provisions of which, when they shall have been slightly modernised, public poor relief can still to-day be successfully conducted, provided that it succeeds in organising a suitable administration.

3. A distinction must first be made between large and small administrations. In the country, and in the small towns, the burgo-master, the local magistrate, the clergy, and private charitable persons, and indeed the general body of parishioners are the persons best acquainted with particular cases. When it fails of success, it is due mainly to the want of financial support. It is therefore in the well-understood interest of law and administration that the smaller villages should be so ordered that they can really meet their own burden. In the experience of all civilised countries the best arrangement is found to be one by which small communities are united with bigger ones, so that help is given to the overburdened villages, and for secure, technical, difficult and costly institutions of poor relief the larger districts of the county or the province should provide. In Germany the complaint about poor relief in the country is very general, that the system of relief by doctors, midwives, and nurses is very inadequate, so that the tendency in Germany is, first and foremost, to provide better for the country in this direction, through the medium of provincial and State arrangements.

4. In the larger villages, specially in the big towns, it is so far from failing for lack of funds that large sums are, through public relief as well as by private charity, provided for distribution and frequently wasted. Hence only such an organisation of poor relief can be of assistance as sets itself to deal well

and carefully with each individual case, and such arrangements as render possible the combination of private charity with public relief.

On the several questions I may offer the following observations:—

1.—THE ELBERFELD SYSTEM.

5. It is a common error to say that the Elberfeld system is the invention or discovery of the town of Elberfeld. The groundwork of the system is the individualised treatment of each separate case. This is attained by the division of the town into a number of not too large districts, each of which is provided with a sufficiently large number of "helpers." On the Elberfeld plan not more than two to four cases will come under the care of a single "helper." Moreover, the "helper" is supposed to remain in permanent and close relations with the needy person, so that at all times he is fully acquainted with the circumstances of the case. For this reason, even where the need continues for a long period, indeed for many years, relief is never allowed for more than two weeks at a time, so that the "helper" is pressed each time again to acquaint himself with the circumstances, and to form an opinion of the case as to whether the relief should be continued in the same form, or should be given in a different form, whether special circumstances (such as sickness in the family, loss of work, etc., a rise of pay or the reverse, the regaining of the man's working powers, the loss of his faculties and similar incidences) render necessary the reduction, or even the entire cessation of relief. These provisions are revived in a modern and efficient fashion in the Elberfeld Ordinance of 1852. But they already form the groundwork of relief in the old Christian communities, and of the poor relief ordinances of the Reformation period, and always have been repeated at each reform of poor relief in the German towns, as they were, for instance, in a very efficient manner in the Relief Ordinance of Hamburg of 1783.

6. Thus most of the German towns, long before the Elberfeld system, carried out a division of the town into districts, with a sufficient number of "helpers." Only, of course, the constant necessity for readjustment was not followed up with the same care, so that in Hamburg itself, in a period of 100 years, the number of the needy had grown out of all relation to the "helpers," and the reform of 1892 was principally an endeavour to restore the proper relation between the two. This has succeeded abundantly. Some 1,600 "helpers" have been obtained in place of the former 400, appropriate districts have been carved out, and the point has been reached at which each separate case can be investigated with the utmost care. The moral and financial results have been very marked, but on these I shall have something further to say in reply to Question 4. The Hamburg Ordinance of 1892 fails, however, as a real example of the Elberfeld system, since under it continuous relief is permitted to be granted for a period of a whole year, and thereby a very material inducement to undertake fresh investigation of the case is lost. Yet a safe counterbalance is provided, in that each "helper" has personally to pay the relief to the poor who are allotted to him week by week, and consequently four times a month, and by this means keeps up the opportunity of personally seeing and speaking to the poor. In general, the results of the present Hamburg relief system will be

Excellence and adequacy of Poor Law of 1601 and 1834.

Pre-existence of Elberfeld system in many towns.

Defects of Elberfeld system carried out in Hamburg and Berlin.

regarded as thoroughly successful when these difficulties begin to show themselves similar to those which have manifested themselves in a very acute and dangerous form in Berlin, and which must equally be investigated. In the case of Berlin also the town was, long before the Elberfeld system, divided into districts, and each district was provided with a president and a sufficient number of "helpers." Their duty likewise is quite honorary. The instructions given to the "helpers" require them, as in Elberfeld and Hamburg, continually to keep in touch with the needy and to examine and watch over their established relations with them. In Berlin, too, the grant of continuous relief for a whole year is permissible; but important defects are manifest, in so far as payment of relief is made once a month only, and not always by the agency of the one "helper" to whom the pauper concerned is allocated. Consequently there is no security that the case is continually watched, so that very important changes may supervene without the poor relief district having knowledge of them. Another defect is that it is hard to get a sufficient number of "helpers" for the newly-constituted districts in the suburbs, and particularly to act as "helpers" (as has hitherto been successfully managed in Hamburg), the various circles, especially the inhabitants belonging to the higher classes. Berlin, which at present employs nearly 4,000 helpers in some 400 districts, should, to completely meet the poverty, have some 8,000 to 9,000, a number exceedingly difficult, if not impossible, to raise. Finally, the need of adequate education makes itself felt in the demands on the intelligence made by poor relief duties. Hence in the consideration of reforms a subject very vigorously discussed is the completion of the work of "helpers" in two directions, one of which is through a vigorous introduction of women, which is now legally permissible, but encounters strong opposition among the male helpers. On the other hand, the suggestion is made to associate socially educated "helpers" with the relief districts, to stand by the ordinary "helpers" and advise them, and to undertake inquiries of a special kind, the conduct of which offers difficulties to the honorary "helpers." Such an association of paid officers, which up to the present has been only theoretically discussed, introduces, however, very big difficulties, for the reason that the honorary "helpers" are in this respect very sensitive, and readily apprehend, in the association of paid officers, the setting up of a controlling authority, and thereby some diminution of their prestige. Further, we lack arrangements for the education of social workers such as is provided in the philanthropic schools of America.

7. If I dared to apply this development to arrangements which have been otherwise made in England, I might say that the carrying-out of poor relief through paid officers calls for serious consideration. In any case these officers must not in future be appointed from the class of inferior officials; especially must they be socially educated persons, who can understand the domestic circumstances of the poor and their social needs. In other words, they must be generally "social workers." Women have shown themselves of such a character in a high degree, and their strong co-operation in the work such as is provided for to the fullest extent in the law of 1894 seems to me eminently desirable. But it seems to me to be also essential that the parishes should not only be provided with honorary officials, but also that as the necessary powers for the purpose can be obtained, the exercise of relief should be entrusted to the honorary workers in conjunction with the above-named "social workers."

2.—CO-OPERATION OF PUBLIC RELIEF AND PRIVATE CHARITY.

8. There exists, so far as I can see, in no civilised country a doubt that a co-operation of the different functions of public relief and of private charity is not only useful, but even essential. It will not be centralisation which confounds all tendencies and means together, but rather a systematic co-ordination of the different organisations. In Germany the new type of "Central bureau for private relief" is in existence, which, especially in Berlin and in Frankfurt-on-the-Main, has been attended with good results, just as the Charity Organisation Societies in England and America. These central bureaux serve in the first place to supply information to the charitable about persons who have petitioned them. Still, they have extended

their operations and have taken pains to remain in constant association with the municipal relief and with other charitable organisations, so as to prevent the misuse of charity on the one hand, and on the other to promote a common working. Of course, the organisation in small villages offers no difficulties where the supporters of relief and those of charity can come to an understanding very easily with each other. The problem develops its own difficulties, just as in the case of public relief in the larger towns and in the capital. In my opinion it can only be satisfactorily solved by the association being upheld uniformly from all sides, and by ranging alongside of the central office a corresponding number of helpers corresponding to the density of the population, among whom again the socially-educated "helpers" are working with voluntary officials.

9. The experiments which have been made in recent times in this direction in Liverpool, Birmingham, and Halifax appear to me to be most hopeful. In America I had an opportunity to learn the methods of the Charity Organisation Societies in New York, Boston, Chicago and Philadelphia. I acknowledge highly the activity of the Charity Organisation Society in New York; but the numbers of the districts controlled by it is far too small for that huge town, and the lack of voluntary helpers is to be deplored. On the other hand the division of Boston into districts is thoroughly good; and there are some 1,000 voluntary helpers to assist the trained officials. Moreover, a close association with public relief is well guaranteed by the arrangement by which its administration and the Associated Charities have their offices in the same building.

3.—OUTDOOR AND INDOOR RELIEF.

10. It is a fact that in Germany outdoor relief completely preponderates. Indoor relief is, according to the judgement of nearly all authorities, to be confined (a) to the "workshy," the vicious and drunkards, in the form of institutions for enforced labour; (b) to aged friendless folk, in the form of "aged poor homes"; (c) to the sick, in the form of hospitals; (d) to the defective, in the form of lunatic asylums, blind asylums, deaf and dumb institutions, idiot asylums, and similar institutions. In other words, indoor relief is to be employed in those cases where either enforced labour under supervision is shown to be necessary, or where better technical methods of treatment, relief and support are to be provided. The reason that hitherto outdoor relief in Germany has been employed on the whole without danger, lies in the fact that in all the bigger towns a system similar to the Elberfeld system has been carried out, i.e., generally public relief is administered in small districts with a corresponding number of helpers. I hold outdoor relief to be generally the right system where the practice of an "individualised" relief is securely established, that is, where care is taken that by means of thorough investigation and watching, and of friendly co-operation of the helper with the poor, misuse is, if not entirely obviated, at any rate reduced to a minimum. It must be pointed out as thoroughly desirable that those who are not unworthy poor should be able to keep their households going. This holds good especially in the case of widows with children, for old people, who do not actually need institutional relief, for cases of temporary loss of employment, where there is no doubt of the man's willingness to work, or for persons who through temporary sickness find themselves in urgent need. Hence, in Germany, opinion is altogether opposed—and in my opinion rightly so—to requiring the workhouse test in all cases, quite apart from the fact that the erection of institutions in sufficient proportion to the need would be extremely expensive. In general, sure experience shows that where the workhouse principle is vigorously applied, private charity is needed to fill up the lack, though it works with even insufficient means and cannot possibly expand its powers as public relief can.

11. Above all, where in some way a want of good will to work is suspected, the offer of institutional relief shows itself as working well. We in Germany desire for—a point to which I shall return in connection with Questions 7 and 8—sharp compulsory measures and punishment for the "workshy," and for heads of families who leave their families in want of public help.

Dr. Emil
Muensterberg

Extent of
outdoor
relief in
Berlin and
Hamburg.

Cost of
relief in
German
centres.

12. For support by way of outdoor relief in Berlin and Hamburg may be given: (1) money simply, (2) fuel, (3) soup, (4) articles of use, (5) free medical treatment, (6) special sick diet, *e.g.*, milk, wine, and so forth, surgical appliances such as trusses, spectacles, bandages, artificial limbs as well as baths and disinfectants, (7) assistance in confinement and subsequent treatment, (8) free burial.

4.—COST OF RELIEF. PRINCIPLES OF RELIEF.

13. As has been shown in the preceding section, the centre of gravity of public relief in Berlin and Hamburg lies in outdoor relief, and the cost of it is very considerable. In Berlin the cost of the total relief, wherein is included the care of the sick, insane and infirm in institutions, amounted to:—

	£
1906 - - - - -	1,300,896
1905 - - - - -	1,199,405
1904 - - - - -	1,155,283

These figures include for outdoor relief alone:—

	£
1906 - - - - -	557,581
1905 - - - - -	546,521
1904 - - - - -	532,136

In Hamburg the cost of outdoor relief for the last three years amounted to:—

	£
1906 - - - - -	96,455
1905 - - - - -	98,100
1904 - - - - -	99,321

And the average cost for each individual case of relief, to:—

	£	s.	d.
1906 - - - - -	10	9	6
1905 - - - - -	10	8	5
1904 - - - - -	10	8	1

14. As to the amount of relief in Berlin the decision rests entirely with each poor relief district, on the basis of Articles 50 and 51 of the Instructions as to Outdoor Relief, which read as follows:—

“(1) Public relief must confine itself to the provision of what is absolutely necessary for the support of life. Only so far as the person's own income is insufficient for the purpose, is the deficiency to be made up by relief. (2) The pauper shall not be placed in a better position through relief than the person who provides for his own support by free labour. On the other hand relief shall be afforded for the one object, that an existence worthy of a human being shall be made possible for the person in need, and that he shall not merely be prevented from starving by the grant of entirely inadequate relief. (3) In settling the amount of relief, must in the first place be taken into account the profit derived from the man's earnings. Earnings of dependants living in the house of the applicant for relief are, according to the circumstances, to be reckoned in their entire sum or for a portion. As a rule children up to the full age of sixteen years will have to give up their entire earnings to their parents, in return for their lodging, care, and clothing. In the case of children over sixteen years of age, consideration should be given to the fact that by too high demands they will be easily inclined to leave their parent's home.

“It must also be left possible for them to save something for themselves, with the object of bettering their own position, marrying, etc. It is also desirable that some pocket-money for reasonable amusements should not be denied them if they work very hard. On the other hand, it is not necessary that children contribute to their parents merely the amount which they would have to pay strangers for their board. It will be the work of poor relief to strike the happy mean in this matter and to contribute towards the strengthening of the relation between child and parent. If there are many grown-up children in the household the entire maintenance of the rest of the family will be expected of them rather than that one alone should bear the whole burden. (4) Steady pensions, given by public corporations, such as the State or municipalities, are to be brought into account at their full

amount in determining the relief to be given. (5) Allowances from associations for legal insurance, such as sick pay, invalidity, accident and old age pay, are in the same way to be taken into account. If the insurance allowance commences after the necessitous person has already entered on continuous poor relief, it must be considered whether the relief can be reduced or stopped altogether. If the circumstances are in no way changed, then the reduction will, as a rule, be so arranged that one-half of the insurance allowance will be taken in deduction from the amount of relief given up to date. (6) Of material importance in the decision as to the grant of relief are also such considerations as the age of the necessitous person, the conditions of health of members of the family, the number of children in the household, etc. In the case of old people living with their children, to whom they are of assistance in the household, consideration must be given to this fact, and to the obligation of the children to give their parents lodging.

“Fixed allowances from charitable endowments, societies, and special private charity are always to be taken into account in their fair proportion in determining the grant of relief. Yet the case shall never be so dealt with that such an allowance is simply withdrawn from those who have hitherto received and have accepted also public relief to a greater extent than was necessary, in order that private charity may not thereby be disheartened and its beneficent object altogether be disappointed. Further, in the case of needy and worthy persons, such as widows with several children, to whom public relief can only provide the bare minimum, private assistance which serves for the better bringing up and education of the children is highly desirable. On the other hand, when a person receiving assistance obtains by way of supplement through an allowance of this kind—as not infrequently happens—more than public relief can ever give him, or at any rate so much that he can in different ways support himself without help from public relief, it is desirable to discontinue the public assistance. The decision will always be given case by case, and with careful regard to the relations of public and private relief. To promote the latter in all respects, and to maintain it in constant touch with the work of public relief, is to be regarded as one of the principal objects of the officials of public relief.”

15. The position is altogether similar in Hamburg. The free judgment of each poor relief district is, just as in Berlin, only limited to this extent—that if prescribed points are overridden the assent of the central administration is necessary. For the rest, no limits have been set, so that relief to the amount desirable, according to the size of the applicant's family and the existing emergency, is allowable. In fact, in case of the complete incapacity for work of the head of the family and of a very large number of children in the family, relief is given to the extent of £4 to £5 a month.

16. In contrast with the method of free judgment stands the system of a prescribed tariff of relief, which is employed in Elberfeld, Frankfurt, Mainz, Mannheim, Düsseldorf, Mülheim-on-the-Rhine, Königsberg, Leipzig, etc. By the tariff system is meant that a fixed allowance for the need of a family is established, and the “helper” has carefully to reckon whether the scheduled amount is reached by the relief or not. In no case will more be given than the tariff allows, so that the relief given has the character of a contribution (*Zuschuss*), which corresponds with the circumstances of the family. The question which of the two is the superior system has been very often discussed in Germany. There can be no doubt that the tariff system is theoretically far superior to the system of free judgment, since the amounts allowed have not been altogether arbitrarily arrived at, and can be accommodated to individual needs. In practice, however, the result is that the employment of the tariff is only possible where the “helper” calculates quite regularly and with the utmost care the total income of the family, and reckons according to the shifting receipts of the family the necessary addition to correspond. To carry this out ordinarily in practice is very difficult, if not impossible. Besides, there are many other points in the calculation, such as the greater or less capability of the wife, together with the existing income at her disposal for housekeeping, the share of grown-up members of the family in the housekeeping, temporary sickness, loss of employment, and so forth. Hence one has serious apprehension in

out-rel-

the application of the tariff system to Berlin and Hamburg that the "helper" would be occupied for a longer time with the single reckoning that he has allowed for his first allowance of relief, and that consequently the additional grant may be a little too high or too low, without following closely the changing circumstances of the case. Here also we see again that the employment of sound principles is less a question of legislation and regulations than of good and ever-careful administration.

17. I wish to mention another most important point. In all German Poor Law administration, and especially in Berlin and Hamburg, the employment of good and adequate case-papers is considered essential. In these forms and records are embodied all the information that a careful "helper" needs to form an opinion on each individual case, such as the circumstances of age, health, and income of the head members of the family, the number and age of the children not yet grown up, the allowances from rents, insurance, and so forth, the existence of relatives not living in the pauper's household, and their obligation to provide support, and so on. In my judgment, good case-papers are quite indispensable for such a work, so as to guide the insight of the "helpers" at once in the thousand and one recurring circumstances to the exact points at which it is essential to arrive. They must also be freely revised to meet current circumstances, so that there is no danger of the "helpers" trusting to old records. In Hamburg this risk is avoided, and with good results, by the use of the so-called "Personal Book," which provides a compact account of the whole family, and in which also statements are provided for showing the results of repeated investigations, and the money and allowances that have been provided in consequence, together with a note of removals to institutions, etc.

18. In Berlin also a similar "Personal Book" is kept, but the regular upkeep of it is not so exact here as could in the interests of administration be desired—a matter which is connected with the circumstances to which special attention was called in Section 1.

5.—THE PROCURING OF MEANS.

19. The means required for the practice of public poor relief are covered almost entirely by the general receipts at the disposal of the municipal administration for all purposes. The poor relief administration appears as a section of the general municipal administration. The principal receipts on which the budget of the parish is based are the municipal income-tax and the taxes, which are either levied directly or as additions to the State taxes. There are often supplementary taxes on dogs and on amusements. As receipts for the special benefit of poor relief administration, there are in addition those sums which are refunded by the paupers themselves or the institutions which are liable for them, especially insurance allowance for sickness, accident, and invalidity. In isolated cases also it happens in Germany that the poor relief administrations have such large means placed at their disposal from old foundations that they can therewith defray the cost of public poor relief.

6.—THE RIGHT OF THE POOR.

20. An actionable right of the poor to poor relief is not recognised by German legislation. The legal conception is that every community is obliged in the interests of public order to grant the relief requisite in individual cases. So far as, in the opinion of the poor person, this obligation is not satisfied, he has the right to complain to the authorities set over the community, which as a rule decide on the grounds of the report of the Poor Law administration. This procedure has the great defect that it is very clumsy, and the decision, even if it is in favour of the poor persons, is often made known too

late. On the other hand, it follows from the nature of the poor relief, as assistance granted without payment in return, that objection cannot well be raised to a claim having a hard and fast legal definition, concerning which decisions could be made in the usual legal procedure. If this is an evil it can in any case only to be obviated by the Poor Law administrations being made to satisfy their obligation, and the continued supervision by the controlling authorities of the execution of this duty.

7.—LOSS OF THE ELECTORAL VOTE.

21. The receipt of public poor relief debars the recipient from the active and passive electoral vote both in regard to the German Parliament and the State Parliaments, and in regard to the great majority of the other public corporations. It is often a matter of dispute as to what is to be understood by public poor relief, so that a variety of practice in the treatment of the matter prevails in Germany. The German Parliament has, in agreement with the most distinguished expert representations, repeatedly asked the State Governments to give clear provisions, and especially to designate as inoperative on the electoral vote those kinds of public relief in which it is not a question of the loss of economic independence, but only a question of unmerited and temporary circumstances. This applies especially to the granting of medical treatment, medicines, maintenance of the head of the family, or his dependants, by admission into a hospital or nursing institution.

8.—POOR RELIEF STATISTICS.

22. General German poor relief statistics have only been collected once (for the year 1885), so that information of such completeness and reliability as that issued by the Local Government Board for several years for the English administration does not exist in Germany. By means of the statistics of 1885, the observation made equally in all civilised countries that it is not the poorest parishes that have the highest poor relief figure, but, conversely, the more prosperous the neighbourhood the greater the relief, was confirmed. Thus it appears that in 1885 in urban parishes the relieved persons formed 5.24 per cent. of the inhabitants, compared with 2.16 per cent. in the rural parishes; in Prussia the proportion was even more unequal—5.31 to 1.99; in Alsace Lorraine even 8.09 to 2.36; while in Bavaria, with a preponderating rural population, it was 3.86 to 2.46. The large administrations, especially the towns, publish regular administrative reports, in which also usually the figures for earlier years are compared with those for later ones. In Berlin the following were the figures for 1906:—

Recipients of relief (persons receiving permanent relief - - - - -	33,813
Female recipients of subsistence money (women, especially widows with children) - - - - -	7,440
Other persons relieved (persons relieved but once or temporarily) -	4,924

25. The following figures group by age the first of the above groups:—

20-50 years of age - - - - -	4,238
50-65 " - - - - -	9,722
65-70 " - - - - -	6,607
Over 70 " - - - - -	19,438

24. It should be of interest to learn in this connection that wherever new poor relief regulations in accordance with the Elberfeld system were carried out, there were good financial results, which showed themselves in a considerable decrease of the number of persons relieved, with a simultaneous increase in the payments made per case. For example, the following is the result for Mainz:—

Year.	Cases.	Total Expenditure.	Expenditure per Case.
		Marks.	Marks.
1893-4 - -	1,689	123,977	73'40 } before
1894-5 - -	1,761	129,401	73'50 } reorganisation.
1895-6 - -	1,432	106,258	167'34 } after
1896-7 - -	1,182	88,206	191'33 } reorganisation.

Dr. Emil
Muensterberg
11 May, 1908.

Disfranchise-
ment, and
need of
legislative
reform
thereto.

Incomplete-
ness of
German
poor relief
statistics.

Dr. Emil Muensterberg 25. In Mannheim, whose poor relief was reorganised in 1898, the contribution of the municipal fund has gone up; nevertheless it remains with 2.22 marks and 2.35 marks per head of the population in 1899 and 1900, considerably behind the rates for 1885 and 1895 (2.90 marks and 2.55 marks. In 1901, which was a very hard year for all poor relief administrations, the ex-

penditure rose to 2.70 marks. On the other hand, with the exception of 1901, the increase in the expenditure falls considerably short of the increase in the population.

26. The following are particulars for Erfurt, whose poor relief was reorganised in 1893:—

Year.	Cases.	Total Expenditure.	Expenditure per Person Relieved.	Expenditure per Head of Population.	Percentage to Total Population of Persons Relieved.
		Marks.	Marks.	Marks.	
1893 - - - -	1,549	128,622	83.04	1.70	2.05
1894 - - - -	1,681	133,960	79.69	1.74	2.18
1895 - - - -	1,606	117,956	73.45	1.51	2.05
1899 - - - -	1,263	112,887	89.38	1.33	1.50
1901 - - - -	1,278	106,636	83.44	1.22	1.47

27. Finally, Hamburg is designated as the most striking example of the working of individualised poor relief. The example is of greater importance in that, with its population of close on three-quarters of a million, it presents much harder circumstances than any other poor relief administration except Berlin. The reorganised poor relief has, on the occasion of its tenth

year of existence, published a report which, apart from the textual explanations, contains a series of very instructive tables. One of these shows the position of the organs of relief before and after 1893, and, with the number of poor shown in another place, and the particulars of expenditure on public poor relief, combines to give the following interesting results:—

Year.	Population	Number of Poor Persons Relieved	Number of Persons Relieved.	Average Number of Persons Relieved per District.	Number of Helpers.	Number of Persons Relieved per Helper.	Percentage of Population formed by		Expenditure for Outdoor Relief.	Per Person Relieved.
							Persons Relieved.	Poor Population.		
										M.
1885	470,744	53	6,425	121	291	22.0	1.51	3.20	1073.108	155
1892	580,855	79	8,932	113	440	20.0	1.55	3.29	1675.516	191
1893	585,671	90	9,178	102	1,535	6.0	1.53	3.27	1637.732	204
1896	633,535	104	9,117	88	1,546	6.1	1.44	3.05	1876.152	203
1898	666,420	108	9,290	86	1,569	5.9	1.40	2.96	1928.802	200
1900	696,502	108	8,851	82	1,561	5.7	1.32	2.69	1866.256	213
1902	727,721	108	9,066	84	1,563	5.8	1.25	2.54	1899.638	210

9.—UNEMPLOYMENT.

28. The problem has been recently discussed in so comprehensive a manner, especially in Percy Alden's book and the reports of the Board of Trade and the Distress Committees, that I will not go further into the theoretical side of the question. In Germany we are of the opinion that in the question of unemployment four possibilities come under consideration:—

(1) *Labour agencies*—i.e., the obtaining of work actually existing.

(2) *Insurance Against Unemployment*, which, according to our previous experiences, only promises success on the principle of the Ghent system—i.e., in junction with trade organisations. In Germany an experiment in this direction has hitherto only been made by Strassburg, in Alsace.

(3) *Provision of Work*.—In Germany the activity that has been organised in England on the strength of the Unemployed Act has been actually practised without legal compulsion in numerous towns so far as intense distress existed. In the towns public works which were not urgent, but were yet necessary for the parishes, have been undertaken. At such work are employed, either principally or exclusively, persons who have

already lived and worked in the parish concerned a long time. This distress activity (concerning which the book, "The Regulation of Distress Works in German Towns," produced in the Labour Department of the Imperial Statistical Office, 181 S., Berlin, Carl Heymann, 1905, gives detailed information) has in hard times been not without its advantages, although it has been unable to solve the real problem. In my opinion the problem is absolutely insoluble by the provision of work by the parishes. If work often stops or declines in the economic market, it is a self-contradictory process to call forth artificially work which the natural labour market does not supply. Such an endeavour leads in its consequence to the results of the Ateliers publics (public workshops) of 1848, or the allowance system, which in England called for Gilbert's Act at the end of the eighteenth century. So far as I can survey the state of the matter in England from the reports of the Distress Committees, people in England are quite conscious of these limitations. In this matter only economy, self-insurance, and legislative and administrative measures which seek to avert unemployment at the start can be of help.

(4) *Poor Relief*.—As I have already specially pointed out in Section 4, the poor relief administration cannot and

Need of preventive rather than curative measures for unemployment.

Distress of ref. city.

completely abstain from relieving persons industrially capable, and can safely do this so far as the individual case is sufficiently clearly put and its range known. So far as work-shy persons are concerned, the measures discussed below are to be employed. Moreover, in Germany the assistance of deserving persons industrially capable is often looked upon as a useful exercise of private charity, which, by loans, granting of tools, granting of means for travelling in search of outside situations, etc., can be of more extensive help than public poor relief.

10.—COMPULSORY DETENTION.

29. The question as to what measures can be taken against persons who abuse poor relief, and, above all, against those who desert their families, leaving them destitute, forms also in Germany the object of incessant debates and gravest complaints. The desertion of the family is considered an ever-increasing social evil of the gravest kind. At present it is a question of no less than 3,000 in Berlin, and of rather more than 1,000 women with children who have been deserted by their husbands and fathers in Hamburg. Against this three remedies are employed, of which the first rests on Imperial Law, and is applicable throughout Germany, while the second and third have only been introduced or can only be introduced by legislation of the individual States:—

(1) *Penal Measures*.—According to Section 360 of the Imperial Penal Code, drunkards, idlers, beggars and tramps can be punished if in consequence of their conduct they or their families must be relieved out of public means. The punishment consists of fines or imprisonment; besides this, the assignment to compulsory labour in a workhouse up to a period of two years is permissible. The administration of this penal provision, however, on account of the difficulty of its application, leaves very much to be desired. Moreover, the regular courts are for the most part not familiar with the social premises of these cases, so that they very often desist from the much-dreaded punishment of assignment to the workhouse. Moreover, this provision does not affect those heads of families who, without being idlers or drunkards, leave their families in the lurch.

(2) *Administrative Measures*.—In Prussia there was a law of 1855 on the grounds of which persons industrially capable could by administrative procedure be assigned to the workhouse if they deserted their families, leaving them destitute in such a way as to force relief to be given. This law has, to the great regret of all experts, been repealed, and not replaced by other provisions. On the other hand, a few other States, especially Wurtemberg, Anhalt, and recently Hamburg, have issued new laws, whose tenor is substantially that of the former Prussian law. Quite recently, in Hamburg, the question has been thoroughly examined from all points of view. From the social side the opinion was especially expressed that, instead of the legal procedure provided with the requisite precautions, an arbitrary administrative procedure should be introduced. Against this the Hamburg law has sought to ensure by provisions the exclusion as far as practicable of any arbitrariness. Section 21 of the law runs:—

"Whoever himself or in the person of his dependants (Section 12, paragraph 1) is relieved by public means can, so far as this is requisite for the removal or lessening of the existing need, be made by decision of the Committee for Relief Work (Kommission fuer das Armenarbeits-wesen) to execute work suitable to his powers. Should the relieved person refuse to execute the work assigned to him by the Committee, the decision of the Committee can be put into effect by the employment of direct force. For this object a relieved person can also be lodged in a poor relief workhouse against his will. In the case of need caused by only temporary circumstances, these provisions do not apply.

"The Committee consists of a Senate member of the Poor Law Board as President, and two members of the Board elected by the citizens, and two heads of the poor relief district or helpers as assistants. At least one of the assistants must possess qualification for a judge's office. The members of the Committee are appointed by the Poor Law Board for the period of

a year. In like manner the requisite number of deputies shall be appointed, and it shall be decided in what succession the deputies shall take the place of members who are prevented from being present. Fresh elections required in the course of a year through the withdrawal of members or their deputies hold for the rest of the year. The Committee is only competent to pass resolutions if all members, or in the place of members prevented from being present, deputies of corresponding number, are present. The decision of the Committee is made on the grounds of oral discussion. The Committee is authorised to examine witnesses, and put them on their oath. Before the decision is made, opportunity for speaking shall be given the person relieved against whom the proceedings are directed. The person relieved is authorised to appear in the proceedings with counsel. The provisions of Section 157, 2 PO, apply to the counsel in a similar way. For a decision establishing the enforcement of work, a majority of four is requisite. Complaints against such decisions (which shall be furnished with grounds) shall be made to the Senate; they shall also be disputable by way of action before the regular courts. The action is to be directed against the Poor Law Board.

"The execution of the decision is carried out by the Poor Law Board. The police administrations are obliged to grant any aid requisite for such execution. The execution shall not be delayed by the laying of the complaint before the Senate or the bringing of the action before the regular courts. After the bringing of the action before the court, the court can on proposal, or on its own initiative, order the cessation or the postponement of execution.

"The execution of the decision shall cease as soon as the legal grounds for it have disappeared, or in the opinion of the authorities the maintenance of the labour compulsion is no longer requisite. The person relieved against whom the decision is directed can at any time propose to the Committee for Poor Relief Work the postponement of execution of the decision. But the Committee is only obliged to decide on such proposal if at least three months have elapsed since the formulation of the decision or since the refusal of a proposal to abrogate the decision. If the relieved person is lodged in a workhouse, and such lodgment has lasted a year, the Committee, before establishing the continuance of the grounds for the obligation to work, shall, by means of a cessation of the lodgment for at least six months, give the relieved person opportunity of proving that the grounds for the execution of the decision no longer exist. The provisions of paragraph 3 apply to the procedure and the contesting of the decision in a similar way.

"The resulting earnings, so far as they are not required for covering the cost of lodging, shall be used for the maintenance of the family dependants, and in case such do not exist shall be given to the pauper on his discharge."

(3) In addition to these coercive measures in some States, especially in Prussia, the Poor Law Administrations are given authority to execute an administrative procedure against the next of kin, husband (wife), as against a wife (husband), children and parents, refund the relief granted their dependants, so far as they are in a position to do this. It is frequently sought to make use of this measure. The difficulty lies in the practical execution, because those concerned very often change their working places, and thereby evade the execution. Notwithstanding this, the procedure must be commended, since it completes the other measures in a suitable way.

11.—VAGRANCY.

30. I have expressed my views on this question in a Labour letter which I wrote at the desire of the National colonies Conference of Charities and Correction to their for vagrants. reporter, Mr. Lewis, 1906.

The letter ran as follows:—

"It is not easy to answer your questions briefly. The literature and the material on the subject

Dr. Emil Muensterberg

Intention of
German Poor
Law as to
vagrants.

have increased in Germany remarkably. The modern movement for the treatment of itinerant begging by work stations and labour colonies is about thirty years old.

"The German Poor Law prescribes that necessary relief shall be granted to every needy person, of whatever origin or nationality, at the place where he is at the moment of need. If this law were actually enforced, every large city and small town would have to support all needy persons, even transient wanderers, according to their individual needs. This has never been considered the intent of the law, and cannot be so considered, because needy wanderers require quite different relief measures from those adopted for temporary treatment. Poor relief funds, particularly in small communities and in the country, are not at all sufficient for this kind of aid.

"We understand by wayfarers able-bodied persons who go from one place to another in search of work. This form of wandering corresponds to the old German custom. If it were only a question of persons who honestly seek work, the problem would not be very hard to solve. In reality, there are, in addition to those who seek honest work, very many others who knock around the country on the pretext of seeking work; there are also those who long since lost the work habit, live by begging and by occasional theft, robbery, or even worse. Prisons and workhouses are constantly discharging persons who do not find their way back to honest work. There are still others who originally sought work, but who, seduced by the easy life of the road, have not found their way back to work, and gradually have become beggars and vagrants.

"We distinguish, therefore, fundamentally between the first category, those who really wish to work, and the second category, those who have under this pretext devoted themselves to begging and vagrancy. The assumption that all wayfarers are more or less work-shy has not proved tenable, because under unfavourable industrial conditions, as in 1902 and 1903, the number of vagrants increased very markedly, and fell off again with more favourable conditions from 1904 on. Practical aid is therefore particularly difficult, in the absence of a distinguishing mark by which we can determine whether the able-bodied man belongs to the first or the second category. One can determine illness and injury by medical examination, and age speaks for itself as a cause of relief, but we need a touchstone to determine, in the case of the able-bodied person, whether the lack of employment is his own fault. In other words, whether we have to do with a work-seeking or a work-shy person.

"The only possible test is the offer of work. This thought, which has a certain relation to the English workhouse test, led to the establishment of institutions equipped to offer such work. The work, however, had to be so arranged that the needy person should not be prevented from gradually travelling on to some place of permanent employment. The work should require but a short time to do, and no special previous training. On the other hand, the work should not be paid for in cash, because of the temptation to use the money wrongly, particularly for drink.

"So arose the desire to aid not in cash, but in 'kind' (Naturalien)—that is, food and lodging. The wanderer must gradually get to his destination, so any lengthy care in lodging and meals was not to be permitted. The places thus aiding the wanderer were brought into communication with each other, and each place thus acquired the character of a station, just as in the case of railroad stations. And because these stations gave relief in 'kind' (Naturalverpflegung), in return for work, the name 'Naturalverpflegungsstation' soon became current.

"Treatment by these stations differentiates itself from that of other local relief institutions, in that they are not established in every community, but, by agreement, within a certain larger district, similar to a county. The authorities and the citizens were asked not to aid relief-seeking wanderers directly, but to refer them to the stations. Thus developed in a series of counties a network of relief stations, which united in 1884 in an Association

of German Relief Stations (Gesamtverband deutscher Verpflegungsstationen). However, these series of stations exist actually only in those parts of the German Empire where the stream of wayfarers is greatest. The eastern portion of the Empire has taken little part in this movement.

"The network of stations should be practically without gaps, so that the wanderer should not, for instance, go immediately from a territory well provided with stations into one where there are no such institutions. Recently those whose experience gives their opinions authority have advocated a regulation of the matter by law. States and provinces should be empowered to establish network-like series of stations, and to require their maintenance by the communities and counties concerned.

"Very many stations were at first established that actually increased the chances of begging instead of diminishing them. To meet this situation a system of concentration has been developed recently, particularly in the district of Bielefeld and the province of Westphalia. Stations, not too frequent, are established, with good opportunities for work, offering a forenoon's work and immediate further wandering in the afternoon. The railroad is made use of to a considerable extent for the wayfarer's transportation, the ticket, but not the cash fare, being furnished him. A definite itinerary (Wanderordnung) serves to ensure a definite plan of work, and a way-ticket (Wanderschein) serves for his identification. The number of stations has decreased, due in part to lack of funds; however, unnecessary stations have been discontinued and amalgamated. There are at present in Germany about 1,200 stations.

"The most important development of the station is its connection with the Labour Registry (Arbeitsnachweis), an arrangement by which an employment bureau is established at the station itself, or in communication with it. This movement is supported very actively by Government funds.

"The labour colonies developed from the experience of the stations, the first colony being established in 1882, at Bielefeld. The purpose of the labour colony is to win back to work those wanderers who in consequence of a protracted life of begging or vagrancy have lost the energy to work. There are at present 33 colonies, receiving in 1906 9,113 colonists; the number of days' work in all colonies was 826,931.

"The Home Inns (Herbergen zur Heimat) developed out of the old apprentices' inns and serve a somewhat better grade than the real wayfarers. In some places the stations and the inns are united. There were in all Germany, in 1905, 462 home inns; total number of lodgers, 2,307,830; total lodgings, 4,089,093.

"Opinions are very varied as to the success of the above-mentioned institutions. Some feel that the stations and the colonies have developed for begging and vagrancy, an opinion not shared by most specialists. On the contrary, the conviction has grown that the legal provisions at present are not adequate, and that an organisation adapted to the treatment of this special condition is necessary. I share this opinion. Although I grant that the institutions mentioned are not free by any means from misuse, and that they have not rid the land of all begging and vagrancy, I do feel that, judging from our experience, they are the only practical means of bettering conditions.

"One must differentiate carefully between two categories of wayfarers mentioned above. The first class must be served by the stations, in connection with organised labour registries, thus enabling the wandering, unemployed man to move in a regulated fashion from place to place, without the necessity of begging, until he has found work. He must, however, pledge himself to take offered employment if it is at all fitted to him.

"Whoever refuses offered work, and declines without reasonable grounds the station work, should be counted in the second category; he should not be aided, but handed over to the police, and dealt with by the law. We need a much better set of penal statutes, so that the really work-shy will be recognised as parasites of human society,

sentenced to hard labour, and when found to be recidivistic and incapable of reformation, rendered permanently harmless to society.

"The labour colonies have proved themselves a means of now and then restoring to work persons unaccustomed to work. But the number of the really improved is comparatively small. Nevertheless, the labour colonies are for precisely this class a very welcome supplement to ordinary poor relief, for the men really work during their stay in the colonies, and refrain from drink. Thus they are protected, and society is protected from them. A very large number of persons roam the highways, who, because of their manner of living, and particularly because of drink, are actually no longer capable of work.

"These, as well as aged persons, must be received for permanent care in the proper hospitals, institutions, or homes for the aged."

12.—MEDICAL SERVICE.
